No. 778.—VOL. XXVIII.] SATURDAY, JANUARY 5, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## THE PROSPECTS OF 1856.

PEACE is not likely to herald in the New Year. Fortunately for mankind peace is always possible; but, unfortunately, it is not always probable. If we survey, at the close of 1855 and the commencement of 1856, the indications—whether they be slight and nebulous, and of the character which statesmen and diplomatists can understand and appreciate, or of the broader and more palpable cast which appeal to the comprehension of plainer men, and of the multitude in all countries—we shall come to the conclusion that the nations are not likely to sheathe their swords until the war shall have assumed much larger proportions than it has yet exhibited. Proposals of peace have been submitted to the Emperor of Russia—not by the Allies, who rely upon their Might no less than upon their Right; but by that great and vacillating Power which detests the war, but detests still more strongly the necessity of taking part in it. The public mind of Europe is made up as to the answer that is to be expected. Russia will not accept the terms offered. It did not need the insulting interpretation of the famous Third Point of the Vienna Conferences, which has just been notified by the Russian Government to its diplomatic agents, to convince the public that the Czar had not yet come to his senses; and that coercion, stronger and more continuous than he has yet suffered, and defeat at the north as well as at the south—at Cronstadt, as well as at Sebastopol and Kinburn—were required to bring him to a humble and a wholesome state of mind, and to a sense of his true position. The Czar, Autocrat as he is, has probably as little, if not less, power to influence the decision of his country than a constitutional sovereign would, under similar circumstances, have in more fortunate countries. He is a tyrant, mighty to punish individuals, but not strong enough to warp from a foregone purpose the judgment and the pride of the classes who allow him to govern; and who conceal under the garb of his autocracy a despotism more stringent than his own. Though the chief of the State, he is but part of a great machine—a machine on which he may safely ride if he will conform himself to the law of its movements; but which will inevitably explode and cast him from it, a wreck, if he attempt to give it too suddenly a direction contrary to that in which it has received a powerful and long-enduring impetus. He

has been beaten and humiliated; but the defeat and the disgrace have not been sufficient to make resistance hopeless. He is still strong, and has many chances in his favour. They may not be of a nature to promise him the ultimate victory; but, as he speculates not simply upon the strength of his armies for aggression or resistance, but on the chapter of accidents—on the disunion of his foes—on the conversion of neutrals into allies—of secret friends into avowed supporters, and upon the events of Asia and America, no less than upon those of Europe—he is content to try the fortune of battle yet a little longer.

The world can scarcely blame, though it may deplore, this policy. It is not alone necessity—but, considered in a Russian point of view, it is worldly wisdom which dictates to the Czar the rejection of the terms which Austria has offered. By far the greater portion of the blame of his refusal must be transferred from his shoulders to those of the two great Sovereigns of Germany. Had they been bold and wise—had they cordially united their armies with those of the Allies—had they told the Czar, in language not to be mistaken that his refusal of peace would involve immediate war with them—the Czar would have had in the eyes of his subjects, and in those of the world, the excuse and the pretext for that dignified and timely surrender which he now wants. Had they been honest, and aided with their strong right hands the cause to which they gave the cowardly support of their fair words and their secret conscience, peace might have been long ago restored. Upon Prussia and Austria lie the guilt and the responsibility—a guilt that will not wipe off, and a responsibility that will too surely be exacted. On Prussia more especially sit the shame and the crime of all the unnecessary misery and ruin that will yet track the progress of this devastating war. In times of national perplexity and peril the weakest King is the worst, and infinitely more to be reprobated for the mischief he causes than the boldest of the bad Sovereigns who ever disgraced a throne. For this reason the avenger of blood will haunt the purlieus of Berlin and Potsdam.

The Sovereigns of Prussia and Austria both play at the game of chance, and are quite as much addicted to it as Russia. They would like Russia to conquer her opponents. They hate England for a variety of reasons; and they dread the Emperor Napoleon far more than they dread the Czar. The supremacy of Great Britain and France is the supremacy of the popular element in Europe; and that supremacy is to them revolution, dismemberment, segregation, and perhaps dethronement; while the supremacy of the Czar is the triumph of their system of government, and a renewed lease of dominion and splendour. Were England thundering at Cronstadt and besieging St. Petersburg, with the certainty of driving the Russian Government into the safe impenetralia of Moscow, they might perhaps pluck up courage, jointly or severally, to notify to Russia that persistence in the war would array Germany on the winning side. It will be the duty and the policy of the Allies to drive them to this extremity. Their offers will then be met with the fatal cry of "Too late!" and they and their subjects will have to settle an account which will greatly edify, but not otherwise concern, the people of this country.

From all these indications, and from every other that we can see or hear, war, deadly war, seems to be the prospect of Europe during the coming year. We wish it were otherwise. But, reliant on justice free from the guilt of ambition and self-seeking, with the purest of causes and of motives, the great British nation will accept the struggle with all its perils and responsibilities. Yet if the ruling classes amongst us do not accept it in the same spirit; if they do not awaken to the consciousness that it is no child's play in which the State is engaged—and that on our success or failure depend not simply our credit and our honour, but our rank among the nations, and our very existence as one of the leading Powers of the world—there will be in this country, as well as in others, a heavy account to settle between the people and those who have thrust themselves into, or been allowed to assume, the offices of Government. We must not only cease to play a merely secondary part in military affairs, but we must prove ourselves to be what we were from the days of Blake to those of Nelson—the first and greatest naval Power in the world;—second to none in military prowess, superior to all in maritime daring and dominion. The nation must win laurels both in Asia and in the Baltic, or it will be roused to exact a heavy penalty from the incompetency, the obstinacy, or the treachery that shall impede or prevent its triumphs. It does not begrudge its blood or treasure in a cause that it knows to be just, and in a conflict that it feels to be inevitable; but, being itself in earnest, it expects that those who govern in its name shall be in earnest also.

## THE HARBOUR OF SEBASTOPOL.

OUR Special Artist's Sketch, engraved upon the preceding page, shows an interesting portion of the vast stronghold of the Russians in the Black Sea. The Harbour is the most important feature of Sebastopol, and has been compared to that of Malta. The principal bay is about three miles and a half, with a width of three-quarters of a mile at the mouth, widening to nearly a mile, and then narrowing to six or seven hundred yards at the head. The average depth at the mouth is not above ten or eleven fathoms; as far as the ancient village of Akhtiar it is about nine fathoms; and from there diminishes gradually towards the two ports to three fathoms. There is not a rock nor a shoal in the whole harbour, except opposite the Severnaïa Kossa, or northern point, where there is a small sandbank, which ships entering the bay have to avoid, and where the sailors find abundance of fish.

The entrance of the bay is defended by strong batteries placed at the extremity of the two points of land that form the bay. Besides these there is another fronting the town, and two more on the double point on which the town stands, with a redoubt higher up. The larger harbour, as well as the lesser, is perfectly protected from all winds by the chalk rocks which surround it, and which rise to a greater height more inland, so that it is only on the rare occurrence of a tempest from the west that any damage can be occasioned to the shipping in the bay. About a mile from the mouth of the bay the grand port for vessels of war forms a sort of small arm, running in a south-west direction. This arm, which the Tartars used to call Kartali-Koeh (Vulture Bay), is now called Yujnaïa-Bukhta or South Port. It is upwards of a mile-and-a-half in length, with a width of 400 yards at the entrance, and has a little narrow creek of about 600 yards in length, in which ships can be laid up in ordinary in perfect safety. On the other side of the town, in Artillery Bay, there is a similar creek, used to careen vessels of war, for the purpose of cleansing and scorching their bottoms.

The smaller Illustration above the view of the Harbour, sketched by our Special Correspondent and Artist, is the locality referred to in his letter, at page 146 of our volume just completed. It shows the gate of the Phoros Pass, in advance of Baïdar. The Pass of Phoros is also engraved at page 488.

## THE WAR IN THE CRIMEA.

*(From our Artist and Special Correspondent.)*

CAMP, SEBASTOPOL, Dec. 22, 1855.

NEVER since the occupation of the Crimea by the Allies have they encountered such severity of weather as marked the past month. The heavy gales and deluge of rain, the snow and frost with which they were alternated, were more continuous and lasting this winter than last year, and the Siberian days of the present week are without precedent within our knowledge. On the 18th, after a tremendous gale from the north-west, which lasted twenty-four hours, and covered the ground with upwards of a foot of snow, the wind shifted to the north-ward and eastward with a violence almost surpassing that of the southerly storms to which we have been accustomed. The snow, which had warmed the atmosphere during the early part of the day, began to drift shortly after the onset of the gale, and, whirling in wreaths over the Camps, penetrated the chinks and crannies of the huts, drove its way into the most hermetically-sealed tents, and froze every thing before it. Beer, wine, spirits, tea after leaving the pot, with every thing in the shape of a liquid, became ice in a marvellously short time. All the warm clothing in Camp was suddenly put in requisition, and failed to impart the desirable warmth. As the night advanced the cold increased, mercury in the thermometer falling gradually to two degrees above zero of Fahrenheit, and becoming then inappreciable by falling into the bulbs. A few sentries on the hills and in Camp were frozen to death or were severely frostbitten, whilst many soldiers in both Camps died of cold in their beds. In the 30th Regiment, close to my hut, a private was found dead of cold on the morning of the 19th; and the sergeant-major had one of his ears frozen. Several men of other regiments went into hospital on the 19th and 20th, suffering more or less from the effects of cold. The usual animation and high spirits of the men seemed to desert them; and, where parties had been seen assembled to play at snowballs or erect giants of snow, nothing was seen but forlorn and shivering sentries. The night of the 19th-20th was equally cold; but the wind abated in the morning, and a splendid sunshiny day succeeded. At sea the wind had been so great that no ships could come into port, and great anxiety was felt as to the fate of the French mail-boats, two of which (due on the 14th and 18th) had not yet made their appearance. In the evening of the 20th the usual flags announced the arrival of a mail; but it appeared that the boat due at Constantinople on the 12th had not arrived there when that of the 17th left for Kamiesch. This day, the 22nd of December, is well nigh past, and no signs appear of the arrival either of the mail due on the 12th, or that which should have reached us on the 20th.

Notwithstanding the severity of the weather and the extraordinary cold of 30 degrees, large fatigue parties from the regiments which still remain unhutted have been daily sent to Balaclava, from whence they bring, with much labour and on foot, the various pieces of wooden houses which are required. This labour has become more continual in consequence of the enormous losses suffered by the Land Transport Corps during the severe weather. No less than 1100 mules and horses have perished within the past week from exposure to the weather, and the wretched Turks and Armenians are dying daily in their thin and ragged tents: a melancholy result this of the delay in sending out wood to roof the stables—of which the masonry was long since erected—with the necessary covering of planks.

Fortunately for the French army encamped on the Tchernaya, the cold was many degrees milder there than on the heights above Sebastopol; but, notwithstanding this advantage, there is no doubt of the sufferings encountered by our allies, whose preparations for hutting were delayed after the capture of Sebastopol by the impression prevalent in Paris that the occupation of the town would supersede the necessity of housing the troops elsewhere.

The natural result of this unusually hard weather has been to stop most of the amusements of the Camp. Dog-hunts, frequent in the early part of the winter, have been given up in consequence of the unwillingness of the game to give sport. Wild as these animals are—lying *perdu* in the rocks and ravines which surround the Camp—there are very few of them that will afford the hunters any sport; and, notwithstanding all the halloaing and whipping of the riders, I have seen the wretched hound lie down and turn looks of pity towards its persecutors, instead of flying from them. The inhumanity of running down a beast who thus appeals in dumb show to the better feelings of his pursuers has, perhaps, produced the abandonment of the sport. A far more amusing and inspiriting game was invented later:—Two or three officers on horseback proceed from a given point laden with bags of paper shavings, which are strewed along the ground to form a track; and, twenty minutes' start being given, a vast hunt is organised on the principle of "Follow my leader." At a brook formed near the Monastery of St. George, on the steeplechase course, no less than seventeen falls occurred on the last day of the meet; General Eyre leading the successful chase to the last with great spirit and applause. General Barnard has been amusing himself with a little sleighing, but the roads are rather rough for the amusement.

In the mean while a successful experiment has been made to test a new method of propelling guns in bad weather. An artillery carriage of the largest size, fitted with five flat beams moving on pivots fixed to the wheel, is found to act extremely well in wet and slippery weather, the beams being so arranged as to transform the carriage into a sledge where the nature of the ground requires it.

The works commenced long since for the destruction of Sebastopol docks have been actively carried on since the frosts under more favourable circumstances than before. The wet weather and snow of the previous weeks impeded the engineers in their progress by filling their shafts with water. It will not be long now before the mines are ready for springing, and we shall then witness the destruction of the most compact and well-built naval docks ever constructed. I may notice cursorily the fact that, though numerous and well built, these dry docks are not of the large size suited to the wants of armed vessels of the greatest size, being smaller in their dimensions than those in our great naval arsenals.

Sir Edmund Lyons, in the *Royal Albert*, has left Kamiesch for Malta, taking with him General Della Mamora, the Commander-in-Chief of the Sardinian forces.

---

The deliberations of the Council of War at Paris will, no doubt, give rise to a good deal of speculation as to what is to be done in the Crimea. Sir Edmund Lyons, Admiral-in-Chief of the English Black Sea squadron, and General La Marmora, Commander-in-Chief of the Sardinian army, arrived at Marseilles on Sunday last in the *Cavadoc*, and took their departure for Paris the next morning. This steamer will, no doubt, await the return of these two personages to convey them to Malta, whence they will proceed to the Crimea on board the *Royal Albert*. The Consuls of England and Sardinia accompanied Sir Edmund Lyons and General La Marmora to the railway station.

### RUSSIAN DIFFICULTIES.

Recent letters from St. Petersburg state that the conduct of the Musulman population on the banks of the Volga is giving much uneasiness to the Russian Government. Many Musulmans have been arrested and sent to Siberia. It is also said that there is considerable excitement in Finland, and it appears probable that such is really the case, as the Russian Government has refused to permit any of the Finnish families to go to Sweden to pass the winter.

The Emperor Alexander II. has ordered a special Court to be formed at Kieff for trying captured Poles and Hungarians. The former are to be punished according to the military law of the country; but the latter are to be delivered over to the Austrian authorities.

The prices of saltpetre continue to rise beyond all calculation and control; all restrictions have been removed from its production in Russia, and the Government has offered high prices to be paid in ready money for almost unlimited quantities.

In the mean time financial matters became more and more embarrassing; there have been reports sent to the Government which show that, in spite of the strict *surveillance* exercised at the frontiers, the smuggling of specie of the country is being organised as a regular and lucrative trade: it is stated that the smugglers earn no less than four per cent for all roubles or imperials they can convey out of the country from the exporters, and an equal amount from the receivers. The long-existing smuggling of tea, and similar articles of considerable value and small bulk, has trained a numerous population to this lucrative trade.

### THE PEACE PROPOSALS.

The following is a statement, from an Austrian source, of the contents of the "proposals" which Count Esterhazy is to lay before the Cabinet of St. Petersburg; they are described to be the "result of a perfect understanding between the Western Powers and Austria, both with regard to the tenour of the conditions of peace which are to provide the necessary guarantees, and to the common action of the Allies in case of their being rejected."

The proposals contain:—

1. The relinquishment of the Russian protectorate over the Danubian Principalities, and the conditions essential to a securing of a new order of things there. This difficult point, which is already in process of being carried out, is drawn up so decisively and clearly, that, in case of its acceptance, every prejudicial influence on the part of Russia on the deliberations as to the regulation of the affairs of the Principalities is excluded at once. Russia is required simply to give her assent to the arrangements about to be made without participating in any deliberation or in any discussion on the subject.

2. Cession of a portion of Bessarabia, to such an extent that Russia would be not only removed from the delta of the Danube, but would have to give up her entire position on that river. The geographical line for the future Russian frontier is traced on a map appended to the papers, and according to that the Russian frontier would be considerably thrust back.

3. Neutralisation of the Black Sea, without any Russian fortresses and arsenals on its coasts; at the mouths of the Danube, however, there is to be a station for vessels of war of small burden, for the purposes of marine police.

4. Common protection of the Christian subjects of the Porte.

All the above points have been proposed by Austria; the following have been added by the Western Powers:—Admission of consuls into the harbours of the Black Sea, and an undertaking on the part of Russia never for the future to erect any fortifications on the Aland Isles. The term allowed to Russia by Count Esterhazy, who is expected to arrive in St. Petersburg on the 24th or 26th, is very short, and in ten days the decision must be made. Should the proposals be rejected, the immediate breaking off of diplomatic relations between Russia and Austria would ensue.

### SWEDISH PREPARATIONS FOR THE NEXT CAMPAIGN.

If the intelligence contained in the following letter from Stockholm (Dec. 24) may be relied on, Sweden evidently intends to play an important part in the next campaign in the Baltic:—

The extraordinary activity prevailing in our naval and military arsenals and other departments points to the presumption that there is more going on behind the scenes than is considered needful to make public, at least for the present. It is clear that in this hyperborean climate, with the thermometer at twenty degrees below zero, and sea and land covered several feet deep with ice and snow, the Christmas holidays would not be employed for any energetic work unless there was some good reason for it. It is more especially the army and naval clothing establishments that are so exceedingly busy in preparing uniforms and other articles of dress and accoutrements. Very large quantities of leather for boots, cross-belts, and pouches have been purchased at Hamburg, and arrived here just before the frost set in. Regimental commanders have received strict orders to put their corps in the greatest possible state of efficiency. These orders are called "private," but are, as a matter of course, of such a nature as to prevent their being kept secret. Officers who have applied for leave of absence at head-quarters have received flat refusals to their requests. Here at Stockholm the belief is general that we are preparing to take part in the war in the spring; and, although the partisans of Russia declaim against it, public opinion in general is greatly in favour of it, and a war with Russia would be a very popular measure.

### THE CAPTURE OF HERAT.

The most important news received by the last Overland Mail is the statement that the city of Herat has been taken by the Persians. There was a time, eighteen years ago, when a similar attempt on the part of the reigning Shah, made under the influence of Russian diplomacy and his own lust of conquest, was thought by the rulers of India to be of sufficient importance to warrant an armed interference in the affairs of Central Asia, and the presence of a British force in the defiles of Affghanistan. Then the tidings of the fall of Herat were daily looked for, and with the gravest anticipations. But—as in these days, and against a more formidable enemy, at Silistria and Kars—the place was saved by British energy and skill, and the public attention, long riveted on its gallant defence, was turned to observe, first the successes, and then the overwhelming disasters, of the English army of occupation. The fear of an invasion of India, then so prevalent, has long since been allayed by a calmer view of the difficulties that must attend it; nor at this juncture, when the Czar has so much on his hands in Western Asia and Eastern Europe, is it likely to be revived. The news, therefore, that Herat has fallen into the hands of its old enemy will probably meet with little attention. Yet, as indicating the designs of Persia—whether with or without Russian prompting—against a country of which the chief has lately become our ally, the Calcutta correspondent of the *Times* thinks it worth taking into account by English statesmen:—

Some of the most far-sighted politicians in India (he remarks) consider the interference of the British Government in Persia only a question of time. Herat is the key of Northern India. Any first-rate Power in possession of that fortress can pour an army through Affghanistan into the valley of Peshawur; they might be attacked by the mountaineers, they might lose their baggage and part of their artillery, but they would arrive; and it is their arrival rather than their strength that we have cause to dread. The restless Mussulmans of the north would half with delight anything which promised them excitement and a change of masters. If that "anything" came in the shape of a Persian army of Mussulmans led by Russian officers, the excitement might reach a point most dangerous to our supremacy. It is true the invaders would be annihilated before they had crossed the Indus, but in the interim we might have Northern India to reconquer. Such are the views which I know to be current among men who deserve to be heard, and who will have no small share in determining the policy to be ultimately adopted.

The means of preventing such a result is obviously to compel the Shah to resign the conquest. This coercion can be exercised without difficulty. We have sufficient men, guns, and ships on the Bombay side to throw a force of 15,000 men into Bushire in six weeks from the issue of the order. The Commander-in-Chief of the Bombay Army is active, experienced, and comparatively young. To a force so composed and so led the Shah has literally nothing to oppose. He has no infantry who will not cross bayonets with the Sepoys—no cavalry whom Colonel Jacob and his Scinde horse would not ride down like corn. He must yield, as he yielded before, and give back Herat to its chief, a man who performs for Central Asia the function performed by the Sultan in Europe—viz., holding a city too important to be trusted to any one with power to employ its capabilities.

### CAPE OF GOOD HOPE.

*(From a Correspondent.)*

THE Cape Parliament terminated its second session at the beginning of last June, with perfect harmony between itself and the Executive. The Governor gave his assent to fifteen bills, the most important of which is one for encouraging the importation of European labourers. In bygone years some landed proprietors went to considerable expense in procuring farm servants, particularly Germans, who, after their arrival, broke their contracts, because they found out that they were not binding unless made within the colony. By the new bill this disadvantage is removed, and labourers henceforth arriving at the Cape will be compelled to fulfil engagements made by them in Europe.

Many people thought that the Cape Parliament would prove exceedingly unmanageable, but as yet it has discharged its functions with sense and moderation. Whether such would have been the case, had the late John Montagu lived and continued to be Secretary to Government, is a question: notwithstanding his great abilities, and the wonderful improve-

ments he effected, Mr. Montagu was unpopular with a strong party in the colony. It was, therefore, fortunate that the Parliament commenced its duties in connection with a new secretary, against whom there is neither prejudice nor bad feeling. One thing, however, which might have been anticipated is taking place, the result of a poor and straggling population, spread over a vast extent of country. The members residing on the outskirts of the colony are gradually resigning their seats, and after a few years the whole representation will be in the hands of persons who live within a reasonable distance of Cape Town. In fact, there are no men at the Cape of independent fortune who can afford to absent themselves from their ordinary occupations for the length of time necessary to attend Parliament.

During the last eight months the colony had been suffering under the horse distemper—some twenty years ago that dreadful scourge carried off in one season more than 80,000 horses. How many have died on this occasion I cannot say; but in a small part of the colony, thirty-five miles long, by ten broad, the farmers have lost between eight and nine hundred. Another scourge imported from Holland, called the lung sickness, has been spreading devastation amongst the horned cattle. Many failures, too, have taken place in the mercantile class, arising from over-speculation to the Australian diggings. Notwithstanding, however, these drawbacks, the colony is steadily advancing in prosperity. It may be compared to a vessel which, though occasionally impeded by storms and contrary winds, still makes way and holds upon her course.

You have no doubt heard of Sir George Clerke, who was considered an able man in India. He was very near being Governor of this Colony, but most fortunately his appointment did not take place. During the time he was High Commissioner on the Cape frontier he severed the country called the Sovereignty from the dominion of England, and gave it up to be erected into an independent government. Thus, instead of trying to further the grand object of making the colonists one united people, he has raised up another barrier between the Dutch and English, and laid the foundation of future wars which will cause generations yet unborn bitterly to regret the folly of his measures.

Matters are quiet at present on our frontier. The Kaffirs had made preparations for an attack on the colony, expecting that all the troops would be sent away; but owing to the wise precautions of those in authority peace has been preserved. I see that £40,000 has been voted by the English Parliament to be expended on public works in British Kaffraria. Some people at home may not like that, particularly at the present time; but you may depend that it is a very wise measure, and will prove the most efficient means of introducing civilisation amongst our barbarous neighbours

## AMERICA.

The steam-ship *America*, which left Boston on the 19th ult., arrived at Liverpool on Monday last. At the date of the departure of the steamer the House of Representatives had been still unable to elect a Speaker. Sixty-four ballotings had taken place, and thirteen days had been consumed in an unsuccessful effort. The following is the state of the last balloting. Banks, 106; Richardson, 73; Fuller, 38; Lester, 2. Pending a motion offered by Mr. Thorrington, Black Republican, of Iowa, to adopt the plurality rule, an adjournment was agreed to. The friends of Mr. Banks feel confident that the rule will be adopted, and that their favourite will be elected.

In reference to the probable choice of Speaker the *New York Times* says:—

Our advices from Washington do not lead us to anticipate a speedy organisation of the House. The nomination of Mr. Banks by a regular caucus of the Opposition members seems to have effected a thorough triangulation of parties. Unless some of the middle-men, who are voting for Mr. Fuller, give way, it seems to us that the dreary monotony of calling the roll and declaring the result may go on until 4th March, 1857, as one of the Democratic members declared on Saturday that he preferred to do, rather than abandon the candidate who represented his principles.

The *New York Herald* states that the President will recommend in his Message the purchase of the rights and possessions of the Hudson Bay Company on the north-west coast of the continent. These rights and possessions are exercised and held within the territory of Oregon, a large portion of which formerly belonged to the old Pacific Fur Company.

The Washington correspondent of the same journal, writing on the 16th ult., says:—

The President, with much earnestness, assured a member of Congress last evening that he should have two messages to transmit to Congress upon its organisation; adding that his original message, prepared for the opening of the session, would need further alterations, in consequence of the intelligence brought from Europe by the *Arabia*.

A correspondent writes from Washington, on the 14th ult., to the *New York Herald*, re-pecting the disputes between this country and the States:—

Mr. Buchanan's papers set forth a settled determination, on the part of the British Minister, Lord Palmerston, to offer no further terms of explanation or conciliation than those already made known to the American Government. His language to Mr. Buchanan is that the American Government can expect nothing further through our exertions to get the redress demanded by diplomacy. This sentiment is not intended to convey hostility on the part of Great Britain; but it applies as a fixed determination not to make further apologies, those already made being deemed all that the case called for. It would seem that Mr. Marcy and the President have agreed upon the one point that in the event by the next arrival (which proved to be the *Baltic*) there should be no alteration in the British Minister's course towards the United States upon the subject of her demand, which was a satisfactory apology, or the displacement of her Minister, the subject should be referred to Congress for immediate action. The Message on this point will not probably undergo any material change

Accounts from Kansas represent the inhabitants of that territory as being under arms, in response to the call of Governor Shannon. Three thousand men are said to be already in the field to put down the opponents of law and order, and a violent collision is looked for between the belligerents.

Advices have been received from Havannah to the 12th ult.; but there is no news of importance. A correspondent writing on the 10th notices a grand religious celebration which took place in the church of San Carlos, with the view of impressing more firmly on the public mind a belief in the doctrine of the Immaculate Conception. A three days' pageant was closed on Sunday with cock-fights, bull-fights, and military parades

Advices from Vera Cruz to the 8th ult., and the city of Mexico to the 6th, have been received. A conspiracy has been discovered, the object being to make General Uruga President. Negas, Padre, Miranda, and Col Ascollo, had been arrested for being concerned in the affair, which caused great excitement. Col. Robles had been appointed to succeed Senor Almonte as Minister to Washington. It was rumoured that Comonfort would retire from the Ministry. The Church was opposed to the existing Government, and things were generally in great confusion

The *New York Daily Times* of the 13th ult. says that President Pierce has.. l.ices of the absolute overthrow of the Alvarez Government in Mexico The effect of this is favourable to the American assignees of the three millions indemnity.

## THE RECENT OCCURRENCES IN NICARAGUA.

We have received from a Correspondent at Greytown, San Juan Nicaragua, the following document, which has been transmitted to the Congress at Washington, on behalf of the French residents:—

Greytown, Nov. 15, 1855.

From the delegate of the French population of Greytown to the American nation and its new Congress:—

Gentlemen,—At the solemn moment when a new Congress, composed of the *élite* of your young and admirable nation, is about to be opened, I am called upon to fulfil a duty which my quality of delegate of the unfortunate French population of Greytown to the honourable members of your Congress will sufficiently justify. In addressing the entire Union, which includes so many enlightened minds—in addressing the new Congress, which consists of citizens chosen from among the best—I indulge the hope that my voice will be heard. It cannot, indeed, be otherwise, since the shades of the great men who established the Union are still among you; and surely, gentlemen, the virtues of those distinguished citizens ought to be propagated in a proportion equal to the extension of territory and dominion. I therefore address with confidence, and in all humility, the people of the American Union, to demand justice; and I sincerely trust, as much for their sake as for our own, that it will be completely rendered.

The nation, which in less than a century has sprung from a small colony into a mighty empire, and, which is at the present time one of the three great Powers of the globe, ought to be the first to desire a sincere and cordial union with France and England. From such a union not merely America but the whole of the civilised world would reap incalculable advantages. But wherefore is an idle shadow allowed to eclipse the splendour of this prospect? Alas! the reason ought to be told. It is because, on the 13th July, 1854, a lamentable and frightful event was accomplished at Greytown by the military and naval forces of your powerful Republic.

Gentlemen, it is far from my thoughts to wish to excite ill-feeling among my fellow-townsmen. On the contrary, I pray God that he may direct my pen while I endeavour to state our case moderately, leaving to you the care of unravelling this mysterious affair

The American Transit Company of Nicaragua, which, aided by Mr. Fabens, Consul of the Union at Greytown, has for the last four years obtained an anti-social monopoly, complained to your Government of an imaginary injury inflicted on it by the 500 peaceful and inoffensive inhabitants of this town. A frigate (the *Cyane*) was therefore sent to Greytown, where it arrived on the 11th July, 1854. On the following day a proclamation from Consul Fabens was placarded in the streets, informing the inhabitants that the town would be bombarded on the morrow if they did not immediately pay the Transit Company the sum of 24,000 dols. The inhabitants, convinced of the revolting injustice of this demand, and terrified by the coward y threat, abandoned the town early on the morning of the day specified. At nine o'clock a severe fire from the frigate commenced, and continued unabated till three o'clock in the afternoon. As none of the houses had suffered any serious damage, the Commander of the frigate sent a body of fifty armed men, with standard and officers in full uniform, to complete the ineffectual work of destruction. M. Fabens, now ex-Consul of the Union, but at that time in the full exercise of his functions, also joined the invaders, who, each with a lighted torch in his hand, deliberately set fire to the town, house after house. Before six o'clock this melancholy and cowardly deed, which plunged 500 persons into misery, was consummated. But this was not all. For seventeen days afterwards, during which the rain came down in torrents, these unfortunate 500 human beings were without shelter and without provisions, and suffered indescribable and hitherto unheard-of privations

Since the Greytown event took place it appears—or, at any rate, it is reported—that the Government of the United States never issued any such orders to the commander of the *Cyane*. The inhabitants of Greytown would be glad to believe this to be the case. Nevertheless the outrage has been committed, and an immense amount of property has gone, to the English, French, Sard.nian, Spanish, and German merchants, as well as to several merchants of Nicaragua, Costa-Rica, and the United States, has been entirely destroyed. In addition to this a great number of commercial houses of Paris, Lyons, London, Manchester, Liverpool, Genoa, New York, and New Orleans, have sustained considerable losses.

Why, in the name of Heaven, did the naval and military forces of your respected Republic commit these atrocities under the shadow of the national flag? Why this show of hostility against a town which offered no resistance, and especially when the grounds of dispute were a trifling sum of 24,000 dollars! Why, when the scared inhabitants had fled before the cruel menace of Messrs. Fabens and Mullins, why did they not respect the warehouses of Messrs. Barrual and Co., or of M. Jean Messnier; of M. Angel Solari; of Messrs. Mancho Frères; of Messrs. Roman Rivas and Cleto Mayorga; or of M. A. Knipping?—in each of those warehouses the representatives of the United States might have found, not 24,000 dollars merely, but even 500,000 dollars' worth of merchandise, and in some of them upwards of 100,000 dollars in money.

Gentlemen, I must pause here. I beseech you to study the reasons why certain imprudent and guilty persons have not hesitated to bring upon an innocent population the sufferings to which I have alluded. You will have more especially to examine the value of the inquiry which has been made by M. Fabens, Consular Agent of the United States, and which—worthy of the shameful deed of which it is the pretended examination—attempts to prove that the town has scarcely suffered

I repeat what I said before. I should be happy to believe in the good faith of the United States. If the Republic is guiltless of these crimes, it also, like Greytown, has been wofully abused. All that is required of it is to acknowledge its error openly and entirely; and this can only be done by a complete reparation of the injury.

As to this appeal which I make to the American people and its honourable Congress, it is my firm conviction that it will have its effect, and that in one of its first sittings the new Congress will clear away the cloud which, since the 13th July, 1854, has eclipsed the splendour of the American constellation. In the hope, and in that of seeing your country allied to Great Britain and France, I am, gentlemen, your very humble servant,

PHILIPPE AUGUSTE DE BARVERT BEAUVERT,
The Delegate of the French Population of Greytown.

## *METROPOLITAN NEWS.*

THE COMMISSIONERS OF SEWERS.—On last Monday the powers of the Commissioners of Sewers expired, and the duties were transferred to the new Board of Works. All rates made by the former are to be enforced under the Local Management Act.

THE NEW OMNIBUS SCHEME.—The project for the formation of a new omnibus company has met with a sturdy resistance on the part of a great number of the regular "Bus-men," and placards of a very exciting nature have been for some days posted in the City, to counteract what is considered to be a "foreign innovation." As every available point is posted with these bills, the consequence is that the conscientious jeering of the "Bus men" have created such a perfect nuisance, that the police were diligently employed on Wednesday in preventing more bills being posted, and in pulling down and defacing any already put up.

THE CLOSE OF THE OLD YEAR.—On Monday night, in all the Wesleyan chapels in the metropolis, in most of the Congregational chapels, and in many churches in connection with the Establishment, special services were held for the purpose of "seeing the old year out and the new year in." In all cases service commenced at ten o'clock, or shortly after, and as twelve o'clock approached, hymns were sung, in which occupation the various congregations were engaged when the striking of twelve told them that the old year had gone. They shortly afterwards dispersed.

FIRE AT THE PRINCES TAVERN, SOHO.—Shortly after six o'clock on Monday morning a fire broke out on the premises of Mr. Whall, Princes Tavern, Princes-street, Soho. On the inmates endeavouring to effect their escape they found that all egress by the usual means was cut off. The fire-escape was sent for, and the conductor succeeded in saving the lives of Mr. and Mrs. J. Whall, three children (aged twelve, nine, and seven years), and the two servants. After some exertions the fire was extinguished, but not until the bar-parlour and bar were burnt out, and the first and second floors, with the rest of the house very considerably damaged by fire and water. The contents were insured in the Royal Exchange, the building in the Globe.

FURTHER REDUCTION IN THE PRICES OF FOOD.—On Tuesday morning a general reduction took place in the prices of every description of provisions, with the exception of bread, which continues to be sold at 9½d. to 10d. per 4 lbs., in the city of Westminster, although in the same quality may be obtained at the east end and in Southwark, at prices varying from 8½d. to 9½d per 4 lbs. The prices of butcher's meat have declined considerably, and mutton of excellent quality sells, by retail, at the following prices, viz, breasts, 5½d.; shoulders, 6d. to 6½d.; and legs, 7½d. per lb. Beef, roasting pieces, 8d. to 8½d.; boiling and salting ditto, 6½ to 7½d.; and steaks of the leg of mutton pieces, 8d. per pound. Bacon and Berwick pork have declined fully 1d per pound in value; and the price of dairy-fed pork is less by 1½d. per pound than it was sold previously to Christmas. The poultry left in hand at Leadenhall and Newgate markets is so abundant, that turkey poults, of good size, may be purchased at 4s. each; and turkeys, from 7s. 6d. to 15s. each. Geese are so plentiful that the salesmen, to effect a market for them, are obliged to raffle them at 4d. to 6d. per member. The retail grocers have reduced the price of sugar another half-penny; inferior Brazil sells at 5d., and West India at 5½d. per pound. Good loaf can be had at 6½d. per pound.

THE CASE OF THE REV. DR. VAUGHAN AND HIS LATE SEXTON.—At the Lambeth Police-court, on Monday, on the case of the Rev. Dr. Vaughan against his late sexton, William Mally, for perjury, being called on, a professional gentleman, on the part of the prosecution, applied for another adjournment, as it was thought that the reverend doctor should not appear as a prosecutor against Mally until his own case was disposed of. The defendant said he would much prefer having the case heard at once to an adjournment. The attorney for the prosecution said he would be satisfied with defendant's own recognizance. The presiding magistrate said, as the defendant was not a consenting party to the adjournment, he must discharge him for the present, and leave the prosecutor and his friends to take out a fresh summons, or adopt any other course they thought proper. The summons was then dismissed, and the parties left the court.

By the death of Harriet, the beloved wife of Henry F. Richardson, Esq., F.L.S., the Governesses' Benevolent Institution acquire the sum of £12,000

AN EARTHQUAKE IN AUSTRALIA.—A letter from Melbourne says:—"On Monday morning, the 17th of September, at 2.45 a.m., a shock of an earthquake was felt in Melbourne, of greater force and duration than others which have been felt here. In the night it roused every one; doors and windows shook; in the case of loose wooden houses the knockers took to knocking *sua sponte*. The whole vibration lasted 35 seconds, and was preceded by a rushing sound, and accompanied by a rumbling. It was felt at Geelong, forty miles off in a straight line.

The opening of the railway to Paramatta, by Sir W. Denison, the Governor-General, took place on the 26th of September. The event was celebrated by a general holiday, and everything passed off satisfactorily.

## *NAVAL AND MILITARY INTELLIGENCE.*

THERE are ten officers in the Kerry Militia that measure six feet; and there are four more that measure from six feet two inches to six feet four inches.

THE Castle Hill House at Winchester has been taken by Government, the Guildford additional hospital accommodation for the troops stationed in the garrison until the new hospital is built.

A COURT-MARTIAL was held on the 11th ult. on Mr. Deheny, second master of the *Lynx*, on a charge of cowardice during the action against the forts of Kinburn. He was found guilty, and sentenced to be hanged.

AN immense gun is in course of construction at the Mersey Steel and Iron Works, Liverpool, which, when finished, is expected to weigh 24 tons, will be 15 feet long, 13-inch bore, and will project a ball of upwards of 600 lb. at a distance of five miles

IT is intended by the Government to effect a further increase in the Army Works Corps. This contemplated augmentation will consist of 750 men, comprising persons of every trade, but principally masons, bricklayers, carpenters, bakers, butchers, smiths, wheelwrights, collar-makers, and excavators. There are at present ready for embarkation upwards of 900 men for this corps.

LIEUTENANT and ADJUTANT CHADWICK, of the 17th Lancers, who was severely wounded at the battle of Balaklava, and taken prisoner, has been appointed Adjutant to the Royal Military Hospital, Dublin, in succession to Captain Hort, deceased. Mr. Chadwick was twelve months a prisoner at Moscow, and recently exchanged.

IT is intended to remove the examination of the accounts of the Commissariat officers to the department of the War Minister, under whose supervision they will, when the arrangements are complete, be in future audited and passed, instead of by the Commissioners for Auditing the Public Accounts

A NOTICE has been issued by the War Department that the examinations for appointments to provisional commissions in the Royal Artillery will commence on Monday, the 21st instant, and that those appointed will be placed under the Director of Artillery Studies at Woolwich. Candidates are to transmit their certificates, &c., to the War Department by the 10th instant; and must, previously to the examination, lodge £5 at Messrs. Cox and Co.'s, the Army agents, towards the expenses of the examination. No candidate will be eligible for the competing examination who does not exhibit a reasonable proficiency in draw ng—namely, elementary geometrical drawing, including the use of drawing instruments; and either machinery, architectural engineering, or landscape drawing. The examiners will be appointed by the Secretary of State for the War Department.

THE surveying-steamer *Firefly*, which arrived at Woolwich about ten days ago from the Baltic, has been docked for the purpose of ascertaining the amount of damage sustained by the explosion of the Russian infernal machine. Several sheets of her copper are blistered on the spot struck, and some are ripped up. The concussion, as described by the officers of the *Firefly*, must have been very severe. The damages were principally internal, and repaired at the time by the carpenters of the fleet.

MR. PENROSE JULYAN, an officer in the Commissariat service, has recently introduced a new method of preparing field forage, which, besides its advantage in other respects, is likely to prove of much importance in facilitating the mobilisation of the army. He mixes up the hay, bruised oats, and bran, or whatever other descriptions of food are considered wearable, in certain proportions, and then subjects the whole mass to so enormous a pressure as to get the ton weight into fifty cubic feet of space. It then becomes so solid that it can be cut like wood by a circular saw into square blocks of a given size without any trouble. Each block contains half a day's ration for a horse, and not only is an immense economy in freight and land transport effected, but, being at once fit for use, it does away with all the waste and inconvenience attendant on the old system.

A COMPILATION made from the official *Navy List*, published on Tuesday, shows a number amounting to 455 ships and vessels of every denomination comprising the British fleet. Of this force 301 ships and vessels are in commission and employed in various ways, as 121-gun line-of-battle ships down to the 1 gun mortar or gun boat, and the steam-yacht reported to have no armament at all. Ten years ago we only had 223 vessels as a grand total of all classes in commission, and nearly all those were sailing vessels; now the character of the service is so thoroughly changed that nearly all are steamers, and such few sailing vessels as are yet doing duty are being set aside as fast as their terms of commission expire. Thus this week we have that noble three-decker, the *Neptune*, 120, Captain Key, laid up in ordinary, to make room for the more modern steam-bulwark, the *Marlborough*, 121; and so the work of change will progress, until a sailing man-of-war will become a great a novelty in the British fleet at sea as was the steamer at the time of the "venture" of the Little *Comet*. It is estimated that we may count upon having this summer, available for the service of war, 50 or more line-of-battle ships and heavy frigates of the right class, upwards of 20 corvettes and heavily-armed sloops, and upwards of 170 gun and mortar boats and batteries. The Baltic alone, in the event of declaration of war, will show those of hostilities might there were 3776 Lieutenants on the *Navy List*, we have now, when in the midst of another war, but a total of 1976; of this number 778 only are represented as on the active list.

According to a recent return there were converted into spirits between the years 1838 and 1849, in the Prussian monarchy, 178 millions of hectolitres of potatoes, and 2C millions of rye, wheat, and barley. The quantities thus employed are estimated to be equivalent to three years' consumption of the whole inhabitants (18 to 17 millions in number) of the potatoes, and one year's of the corn

Such is the demand for cured provisions put up in hermetically-sealed tins, canisters that one establishment (the Messrs. Hogarth, of Aberdeen) are killing as many as sixty fat cattle a day, besides sheep and lambs as quantity of fish. The French Government receives most of its supplies from this establishment.

The Danish Government, in order to prove that it does not wish to protract the conferences on the question of the Sound Dues, has fixed the time of meeting for the 2nd of January, instead of the 20th, as was at first decided.

A very considerate hotel-keeper at Geelong, advertising his "Burton XXXX," concludes the advertisement in the following manner:—"N.B. Parties drinking more than four glasses of this potent beverage at one sitting carefully sent home, gratis, in a wheelbarrow, if require.."

## WASSAILING ON TWELFTH NIGHT.

WASSAIL! wassail! noble master, at the birth of the New Year!
The heir to many teeming hopes and many an anxious fear.
This good to give the welcome with a merry and pleasant mirth,
As we'd hail the heir of this good house the moment of his birth.

The dead year had its sorrows to mingle with its joy,
But purest gold derives a strength from that which doth alloy;
So are our chastening sorrows sent to make our trust more strong,
To follow out the good in life and to eschew the wrong.

Wassail, my noble master! drink from the poor man's bowl!
The cup, though homely in its brew, will glad a good man's soul;
For, as you quaff, each gracious wish that fills your kindly heart
A fragrance more than Indian spice will to the draught impart.

M. L.

ONE of the characteristic ceremonies of Twelfth Night was, even to our own time, Wassailing, whence the night was commonly called Wassail-eve. Barnabe Googe, in his "Adaptation of Nageorgen," has these lines:—

And being shrods their Wassel Bawles, who well rewarded bee,
With cakes and cheese, and great good cheere, and many pleasaunties.

The bowl was usually filled with spiced ale, in which floated roasted apples, which were taken out with a spoon. Sometimes the bowl was accompanied by a fiddler, who played during the revels. Indeed, the bowl was carried about to mansions, as well as farmhouses, when a trifling largess was expected. The large illustration upon the following page, drawn by Mr. John Gilbert, presents us with the Twelfth Night visit in an age of more picturesque costume than the present one. In this instance the bowl was filled with spiced wine, and carried to the houses of the gentry and others. From whom was expected a hospitable reception, and calling their bowl Wassail, to "drink wassail" to their entertainers.

Some thirty years since wrote William Home, in his "Every-day Book."—"These merry sounds of mirth and music are not extinct. There are still places wherein the wandering blower of a clarinet and the poor scraper of a poor a fiddle will this evening strain their instruments to charm forth the rustic from his dwelling, and drink to him from a jug of warm ale spiced with a race of ginger, in the hope of pittance for their melody and their wish of wassail."

Since Home wrote the festal custom has greatly declined; but, perchance, it may still linger at this moment in some remote corner of "merry England."

THE TWELFTH-NIGHT

MR. GORDON CUMMING'S SOUTH AFRICAN ENTERTAINMENT.—VIEW ON THE RIVER LIMPOPO, WITH A HERD OF HIPPOPOTAMI.—PAINTED BY RICHARD LEITCH.

## MR. GORDON CUMMING'S SOUTH AFRICAN ENTERTAINMENT.

MR. GORDON CUMMING has added to his collection or the Christmas holidays, two new pictures, illustrative of two of his most exciting hunting adventures in the far interior of South Africa. We have engraved one of these holiday novelties—a view of the river Limpopo, near its junction with the Lepalalak, with a large herd of hippopotami in the foreground. The picture has been painted by Mr. Richard Leitch, and is a highly-meritorious work. The reader will, we dare say, recollect Lander's description of hippopotami bellowing about his boat, Mr. Cumming's adventures are alike stirring

Dividing the interest with the pictures in Mr. Cumming's collection, and especially attractive to the holiday visitors, are the hunting trophies, native arms, and costume. The immense variety of tusks, antlers, horns bones, skulls, teeth, &c., are interesting to the sportsman, to the naturalist, and to the every day observer. Each of these represents a select specimen of some fierce and formidable, or shy and wary animal, and most of them were obtained by undergoing extraordinary perils, hardships, and fatigues. The elephant's tusks alone are the finest ivory, their value in the ivory market varies from £40 to £80 each.

BREAKFAST-ROOM IN THE LATE MR. ROGERS'S RESIDENCE, ST. JAMES'S-PLACE.—(SEE NEXT PAGE.)

## THE LATE SAMUEL ROGERS.

(*Continued from the* ILLUSTRATED LONDON NEWS *for Dec. 22, 1855.*)

MR ROGERS had a catholic taste in art, with a sympathy for all schools. Within his bachelor's abode—the house of a man whose income probably never exceeded five thousand pounds a year—were to be seen choice examples of the several Italian schools, of the schools of Flanders, Spain, France, Holland, and his own country. That "Virgin and Child," by Raphael, and that "Noli me Tangere," by Titian, would give reputation to any collection. That "Triumphal Procession," by Rubens, would shine as a Rubens at Blenheim or Munich. Then those Rembrandts would be additions of moment to the Dutch collections of King George IV., of Sir Robert Peel, or Mr. Hope. That "Arcadian Mill," by Claude, and that grand Landscape, by Poussin, would "tell" in the great French collection at the Louvre. If we turn to the English school, we have the "Puck" and the "Strawberry Girl" by Sir Joshua, a choice Richard Wilson, a choicer Gainsborough, and "bits!" that will bring high prices, by Wilkie, Turner, Stothard, and Leslie.

In his ninetieth year his memory began to fail him in a manner that was painful to his friends. He was no longer able to relate his shortest stories, or welcome his constant companions with his usual complimentary expressions. He began to forget familiar faces, and at last forgot that he had ever been a poet. It was impossible, however, even when Memory had at length deserted the poet who had sung her charms, to look upon him without a feeling of veneration. Faces of other times seemed to crowd over him as he sat, and what that now vacant mind had once known, what those now lifeless eyes had once seen, and what that now faltering tongue could once relate so well, were the thoughts uppermost in the minds of all who knew him. On the morning of the 18th December, 1855, the Tithonus of living English poets was taken from among us. He died in his own house, surrounded by the works of art which his fine taste had brought about him. "He expired," writes Dr. Beattie, the physician who was with him, "at half-past twelve this morning. A more tranquil and placid transition I never beheld. His devoted niece closed his eyes, and his faithful domestics stood weeping round his bed. Some of the attendant circumstances reminded me of the death-bed of Campbell; but *this* was more calm, solemn, and impressive quite in keeping with the scene in his 'Human Life.'"

His face is said to have been prepossessing in his youth, and the drawing of him by Sir Thomas Lawrence, from which so many engravings have been made, seems to support such belief. His eyes were blue in colour and large, and his nose long. His complexion must always have been pale. His height was about five feet five inches.

As he advanced in years the colour retreated altogether from his face, and the satire of Byron was then true to his appearance. His looks afforded, of course, a fine field for sarcastic comment. Theodore Hook, who was often merciless at his expense, recommended his friends to induce him to abstain from attending Lord Byron's funeral. He stood in danger, he said, of being recognised by the undertaker as a corpse he had screwed down some six weeks before.

The eminent by position and genius, his opinion was frequently sought by authors and by artists. He was shy of praise—shy of censure. In an age when almost every poet of any name was a reviewer Rogers was not a reviewer. When in the presence of the painter of any picture, he had constant recourse to the safe and general criticism of Sir Joshua: "Pretty, very pretty," were the words that conveyed satisfaction to the eager ears of many a clever artist.

The critic who annoyed Mr. Rogers in the *Quarterly* was never more in the wrong than when he asserted that his author was a hasty writer. A man of letters and of fortune from his birth, whose literary life extended over sixty years, cannot be called a hasty writer when the produce of his life can be placed with ease in an ordinary pocket volume—for such is the shape his works assume in the latest edition. The fact is that his were hard bound brains, and not a line he ever wrote was produced at a single sitting. This was well exemplified in a favourite saying of Sidney Smith:—"When Rogers produces a couplet he goes to bed, and the knocker is tied, and straw is laid down, and the candle is made, and the answer to inquiries is, that Mr Rogers is as well as can be expected."

Pointed axioms and acute replies fly loose about the world, and are assigned successively to those whom it may be the fashion to celebrate. How many smart sayings are assigned to Sheridan and Selwyn, to Jekyll and Rose, to Walpole and others of Walpole's contemporaries, which, in truth, they never uttered. Many were, and are still, assigned to Mr. Rogers with which he had nothing whatever to do. In the early days of the *John Bull* newspaper "Sam Rogers" was fathered with many a smart saying, and many a clever and many a stupid jest. It will be the business of Mr. Dyce to select the genuine from the false—the smart from the dull—of the many sayings attributed to Mr. Rogers. A few, most truly and unmistakably his, will not be out of place in these columns

Sir Thomas Lawrence and Mr. Phillips have both very great merits as painters of female portraits. When Rogers was asked to distinguish their different excellences, he replied, "Phillips shall paint my wife, and Lawrence my mistress."

Of the late Lord Holland, whose face was full of sunshine, he observed most happily, "Lord Holland always comes down to breakfast like a man upon whom some sudden great fortune has just fallen." On another occasion he exclaimed (alluding to the same nobleman)—

> His was the smile that spoke the mind at ease.

A line, I believe, of his own composing, though not included in his works.

He could be severe upon his own friends. Of the same nobleman he observed, "Painting gives him no pleasure, and music absolute pain."

In Italy he said, "The memory sees more than the eye."

"I envy no man of my time any saying so much as I envy Lord John Russell that admirable definition of a proverb—'The wisdom of many and the wit of one.'"

"What a lucky fellow you are," he said to Moore; "surely you must have been born with a rose in your lips, and a nightingale singing on the top of your bed."

"I cannot admire Mulllo to the extent that is now in fashion. The end, good and ordinary nature of his figures and faces always offends me."

"There are two parties before whom everybody must appear—the Hollands and the police."

"Lady Holland was always lamenting that she had nothing to do—that she did not know what to be at—how to employ her time. She was one day worse on this subject than ever, and I could not resist recommending her to 'try a novelty—try and do a little good.'"

"When Croker wrote his review in the *Quarterly* of Macaulay's 'History,' he intended murder, but committed suicide."

Of Sydney Smith he observed—"Whenever the conversation is getting dull he throws in some touch which makes it rebound and rise again as light as ever. There is this difference between Luttrell and Smith: after Luttrell you remember what good things he said after Smith you merely remember how much you laughed."

On somebody remarking that Payne Knight had become very deaf—"'Tis from want of practice," replied Rogers, "he is the worst listener I know."

"An old gentleman asleep before the fire was awakened by the clatter of the fire-irons at his feet. 'What! going to bed without one kiss?' he exclaimed. He mistook one nose for another."

"When Dean M observed in my hearing that he should read no more prose translations from poets, 'What!' I exclaimed, 'not the Psalms of David to your congregation?'"

"That was a happy reply of Sydney Smith. When I began to light my dinner table from the reflection on the pictures about me I was not very successful. The light was thrown above the table and not on it. I asked Sydney what he thought of the attempt. We were at dinner at the time. 'I do not like it at all,' was his reply; 'all is light above, and all below is darkness and gnashing of teeth.'"

"I was pleased with what I saw you about this morning," he observed once at Broadstairs to an artist, who naturally expected from such a commencement some reference to the labours of his pencil; "I was greatly pleased: I saw you brushing your own coat. A gentleman who can brush his own coat is very independent."

"Sir Walter Scott told me this story, and, as I copied it down soon after, I will read the story to you:—

There was a boy in my class at school who stood always at the top, or could I with all my efforts supplant him. Day came after day, and still he kept his place do what I would, till at length I observed that when a question was asked him, he always fumbled with his fingers at a particular button in the lower part of his waistcoat. To remove it, therefore, became expedient in my eyes; and in an evil moment it was removed with a knife. Great was my anxiety to know the success of my measure; and it succeeded too well. When the boy was again questioned his fingers sought again for the button, but it was not to be found. In his distress he looked down for it, it was to be seen no more than to be felt. He stood confounded, and I took possession of his place, nor did he ever recover it, or ever, I believe, suspect who was the author of his wrong. Often in after-life has the sight of him smote me as I passed by him, and often have I resolved to make him some reparation; but it ended in good resolutions. Though I never renewed my acquaintance with him, I often saw him, for he filled some inferior office in one of the courts of law at Edinburgh. Poor fellow! I believe he is dead; he took early to drinking.

This, the writer of these imperfect memoranda once observed to him, was hardly original. "Ah!" he exclaimed, evidently surprised, and with an air of doubt. I then asked for a copy of the *Spectator*, and read as follows:—

When I was a young man, and used to frequent Westminster-hall, there was a counsellor who never pleaded without a piece of pack-thread in his hand, which he used to twist about a thumb or a finger all the while he was speaking. The wags of those days used to call it the thread of his discourse, for he was not able to utter a word without it. One of his clients, who was more merry than wise, stole it from him one day in the midst of his pleading; but he had better have let it alone, for he lost his cause by his jest.

He made a mark in the volume, and said, with a smile, "I will say what Sydney Smith always said when he heard a good thing for the first time—'*booked*.'"

"Sheridan told me that he was aware he ought to have made a love-scene between *Charles* and *Maria* in the 'School for Scandal,' and would have done it, but that the actors who played the parts were not able to do justice to such a scene."

"I met Sheridan very often, but never in his own house."

"J. T. Smith told me that the little landscape by Claude hanging near the Puck, for which I gave at West's sale 200 guineas, was bought by West at an old-iron shop for ten shillings and sixpence."

"When I knew Scott first, he was living in Albemarle-street—on the left hand as you go up—a little way up."

"Whenever Lady Holland hears that a person of any consequence has said an ill word of her she immediately invites him to dinner."

"Mr. West told me that Beckford called upon him before he went to Spain to borrow two small pictures to take in his carriage with him wherever he went, and that the two pictures he selected were the little octagon 'Claude' you see there, and the 'Domenichino,' at the end of the room."

"Campbell wrote to Sir Robert Peel, asking for the Laureateship, and Campbell was angry, not unnaturally, that he got no answer. But Peel, I say, did give him an answer (with a sneer)—he helped to bear the pall at his funeral."

"Lord Holland came to Lord Lansdowne a short time before his death and showed him the epitaph he had written on himself. It ran in this way, 'Here lies Henry Vassall Fox, Lord Holland, with all his titles, who was drowned sitting in his elbow-chair.' This was in some degree true. He died of water in the chest."

"Lord Holland read to me his character of Sheridan. The wind-up I particularly remember—'He died with great Christian resignation, joining fervently in the prayers that were read to him when the sacrament was administered.' Now I asked Howley, the present Archbishop of Canterbury, what Sheridan's end was like; 'He was insensible,' said Howley. 'Mrs. Sheridan put his hands together in the attitude of supplication, and I read the prayers.'"

"There is a couplet in Cowper which I admire exceedingly:—

> Knowledge is proud that he has learn'd so much,
> Wisdom is humble that he knows no more.

When I am at Fine Arts Commissions, where good paper and pens abound, I copy out these lines for the people who trouble me for my autograph. 'How much he improves,' was the remark of one who mistook them for mine. These lines (and they are very good)

> Oh! if the selfish knew how much they lost,
> What would they not endeavour, not endure
> To imitate, as far as in them lay,
> Him who his wisdom and his power employs
> In making others happy!

I transcribe it in the same manner."

"Lady Holland, who was always inquisitive, was particularly anxious to have Sir Philip Francis asked if he was Junius. She would not ask him herself, and it fell, I know not how, to my lot to ask him. I asked the question, and met with this brief answer:—'Ask that again, Sir, at your peril!' This was strong. Now I saw Lady Holland, she asked, 'What success—is Francis Junius?' To which I replied, 'I don't know whether he is Junius, but I know he is Brutus.'"

"I was observing one day to Sydney Smith that I should not sit again for my portrait because I was taken in an attitude of prayer. 'Yes,' said Sydney, 'who was even readier than Luttrell—yes, with your face in your hat.'"

"Here is Hallam, who has spent a whole life in contradicting everybody, is now obliged to publish a volume to contradict himself." [Mr. Rogers referred to the supplemental volume to the "Middle Ages."]

I have said that the verses on Mr. Rogers which Byron "threw off" in a bitter mood are very severe, and not in parts untrue. I will, therefore, now transcribe them, as they are not included in Byron's works, and but very little known:

LORD BYRON'S VERSES ON MR. ROGERS, IN QUESTION AND ANSWER.

QUESTION.

| | |
|---|---|
| Nose and chin would shame a knocker, | Save the liver, and that's rotten); |
| Wrunk as that would puzzle Cocker; | Skin all sallow, flesh all sodden— |
| Mouth which marks the envious sconner, | Form the Devil would frighten God in. |
| With a scorpion in each corner, | Is't a corpse stuck up for show, |
| Turning its quick tail to sting you | Galvanised at times to go? |
| In the place that most may wring you; | With the Scripture in connexion, |
| Eyes of lead like bus. and gummy; | New proof of the resurrection! |
| Carcase pick'd out from some mummy; | Vampyre, ghost, or ghoul, what is it? |
| Bowels (but they were forgotten, | I would walk ten miles to miss it. |

ANSWER.

| | |
|---|---|
| Many passengers arrest one, | Darting on the opportunity |
| To demand the name for question. | When to do it with impunity: |
| Shorter's my reply, and franker— | You are neither—then he'll flatter |
| That's the Bard, the Bean, the Banker. | Till he finds some trait for satire: |
| Yet if you could bring about, | Hunts your weak point out, then shows it |
| Just to turn him inside out, | Where it injures to disclose it, |
| Satan a self would seem less sooty, | In the mode that's most invidious, |
| And his present aspect—Beauty. | Adding every trait that's hideous, |
| Mark that (as he masks the bilious | From bile black, and blackening over |
| Air, so softly spreads the sallow | Rushes through his Stygian liver. |
| Chastened bow, and meek humility, | |
| Almost awkward to servility; | Then he thinks himself a lover:— |
| Hear his tone (which is to talking | Why I really can't discover |
| That which creeping is to walking; | In his mind, age, face, or figure; |
| Now on all-fours, now on tiptoe), | Viper-broth might give him vigour: |
| Hear the tales he lends his lip to; | Let him keep the cauldron steady, |
| Little hints of heavy scandals; | He the venom has already. |
| Every friend on turn he hands as: | For his faults, he has but *one*— |
| All which women or which men do, | The but envy, when all's done. |
| Guides forth in an unbiased, | His but pays the pain he suffers; |
| Clothed in odds and ends of humour— | Heraid of each passion rank'ning |
| Herald of each passion rank'ning | Lights which ought to burn the brighter |
| From divorces, down to dresses, | For this temporary blighter |
| Women's frailties, men's excesses, | He's the cancer of his species, |
| All which tide towards evil | And will eat himself to pieces: |
| Make for him a constant revel. | Plague personified, and famine; |
| You're his foe—for that he fears you, | Devil, whose sole delight is damning! |
| And in absence hints and scans you: | |
| You're his friend—for that he hates you, | For his merits, would you know 'em? |
| First caresses, and then baits you; | Once he wrote a pretty Poem. |

What he thought of these verses I never heard. He was silent about them, while he would turn with satisfaction to the following entry in the diary of Sir Walter Scott:—"At parting [they were at Holland House together] Rogers gave me a gold-mounted pair of glasses, which I will not part with in a hurry. I really like S. R., and have always found him most friendly."

The eldest brother of Mr. Rogers was, we are now informed on the very best authority, not Mr. Henry Rogers, as stated in our memoir, but Mr. Daniel Rogers, who resided on his estate in Worcestershire, called "Wassel-grove," where he died about twenty-six years since. Miss Martha Rogers, who closed the poet's eyes, is the daughter of Mr. Daniel Rogers.

On Thursday, the 27th of December, the remains of the poet whose position and talents have indeed me to preserve these brief memorials of his table-talk were interred in the once rural churchyard of Hornsey, not far from Stoke Newington, the place of his birth. Some lines which he loved, "worth all the fine writing (he was wont to say) that the world ever produced," will not unfitly conclude this notice:—

A GRAVE BENEATH A TREE.

> When my soul flies to the first great Giver,
> Friends of the Bard, let my dwelling be
> By the green bank of that rippl ng river,
> Under the shade of yon tall beech-tree
> Bury me there, ye lovers of song,
> When the prayers for the dead are spoken,
> With my hands on my breast,
> Like a child at rest,
> And my lyre in the grave unbroken.

### CALENDAR FOR THE WEEK.

SUNDAY, Jan 6.—Twelfth-Day. Epiphany.
MONDAY, 7.—Fenelon died, 1715.
TUESDAY, 8.—St. Lucas. Fire Insurance due
WEDNESDAY, 9.—Archbishop Laud beheaded, 1645.
THURSDAY, 10.—James Watt born, 1736.
FRIDAY, 11.—Hilary Term begins.
SATURDAY, 12.—Cambridge Term begins.

### TIMES OF HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING JAN. 12TH, 1856.

TITLEPAGE and INDEX to VOL. XXVII.

THE NEW VOLUME of the LONDON ILLUSTRATED NEWS, bound in cloth richly gilt, is now ready, price 18s. This volume contains a Series of Illustrations (many the size of one and two pages) of the War in the Crimea, and the Campaign in the Baltic, from Sketches by the Special Artists of the ILLUSTRATED LONDON NEWS. The Visits of the King of Sardinia to France and England, and all the leading events of the last six months, are also copiously illustrated in this volume.

THE FRENCH IMPERIAL GUARDS.—Next week we shall illustrate the Grand Entry of the French Imperial Guard into Paris, in a Series of Sketches by our own Artists.

THE CHRISTMAS DOUBLE NUMBER, WITH THE COLOURED SUPPLEMENT, has been reprinted, and may be had, by order, of any Bookseller.

## THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, JANUARY 5, 1856.*

THE Parliamentary Session of the past year was a Session of war, and we had no right to expect much legislation from an assemblage whose chief business was to devise the means of conquering the Emperor of Russia. But some few feats of law-making were performed, and one in particular, to the results of which, as the first experimental period of its working is over, it is desirable to call attention. We allude to the Newspaper Stamp Act.

The alteration of the law itself, so far from injuring the respectable newspapers in which capital and character were embarked, has worked advantageously for them. This was not the object of its promoters. The Manchester politicians who had charge of it took no pains to conceal their animosity against the existing press, and their desire to swamp it in the universal deluge of miscalled "cheapness" which they expected would rush over the land when the mystic penny was no longer exacted by the Stamp-office. The public was for a short time amused and perplexed at the number of penny and twopenny journals that sprung up in every part of the country; but the newspaper-buying world would have done discredit to its teachers if it had long encouraged such productions—inferior in every way to the journals which they strove to supplant, even while they lived upon their labours. But, although hundreds of such journals—purporting to be cheap, but in reality being dear at a penny, or at half the price—have been dying off every day for the last two or three months, till there seems a probability that not one of them will be left by the meeting of Parliament, Mr. Bright, the great father of the measure, has not conque red his affection for the penny press. "What a wonderful thing," he burst out at a provincial assemblage the other day, "is one of these penny newspapers! It is as well written, and in as good tone and morals, as one of the old costly papers we have been accustomed to see." And he proceeded to dilate upon the mass of news, from all parts of the world, which this wonderful penny sheet contained. Jonathan Wild might say with equal justice from his point of view: "What a wonderful thing, too, is, or was, the market for stolen pocket-handkerchiefs in Field-lane! The handkerchiefs there sold are as well printed, are as good in pattern, and of as fine a texture, as the old and costly articles in the shops of Ludgate-hill and St. Paul's Churchyard." And it would be strange if they were not, seeing that they are all stolen. It would be equally strange if Field-lane journalism had not some of the best characteristics of the respectable press, seeing that the good writing, and the news from all parts of the world, are simply "adapted" by means of a pair of scissors and a pot of paste.

The public has often been deluded with a semblance of cheapness when the reality itself was absent; but sounder notions

have, fortunately, begun to take root. The lowest-priced calicoes of the Manchester manufacturers are not the cheapest. This fact is well understood in many foreign markets where English fabrics were formerly in high repute, but where, in consequence of the "devil's dust" which Manchester men, over hasty to grow rich, have too largely intermingled with the genuine fabric, they now bear a character that will drive them out of commerce unless they reform the evil before it be too late. Nothing is cheap that is bad. The smallest price is cent per cent too large for an article that is pernicious or unserviceable. Whatever may be the moral or political worth of the penny papers of America, we have only to look at one of the penny papers in this country produced by the Act of last Session, and to compare it with the *Times* at fourpence, to be convinced that the *Times* is infinitely the cheaper of the two. The objects of those who undertook to procure a change in the law were purely spiteful. The old press supported the Manchester school of politicians when they advocated the repeal of the Corn-laws. The success that attended them would not have rewarded their efforts had the press been against them. Unluckily for their own reputation, the Manchester politicians were spoiled by the importance into which the press had hoisted them. They expected independent journals to be on their side when they were in the wrong—to support them on all occasions as the only representatives of the popular will and the popular wisdom, and to shout in their wake wherever they went, and whatever they said. But they were egregiously out in their reckoning, and so annoyed at their mistake, that Mr. Cobden came to the conclusion, after much cogitation on the subject, that the proper function of the press was to report speeches—Mr. Cobden *verbatim*—and to refrain from expressing any opinions of their own. The greater the number of blunders made by this class of public men, and the more these blunders were exposed by the press, the stronger became their determination to punish the old newspapers by the substitution of a new press that would ruin them by the competition of ultra cheapness. The attempt was made and signally failed. The old press stands more firmly than ever in public estimation; and the new press, after a short and spasmodic existence, is fast dying away, leaving no trace behind it. This result was not foreseen by any one. The conductors of the established press anticipated it as little as any other persons, and reaped unexpected benefit from the blow that was intended to destroy them. On merely commercial grounds it would ill become the existing journals to express any exultation; but for political and social reasons, and for the character of the press and the people, we think it matter of rejoicing that the press of England has not been debased and vulgarised by the change in the law; but that it stands where it stood before—at the very head of Literature—free, honest, able, and incorruptible. It has its faults and defects, like all things human; but, with them and in spite of them, it is the shield of English liberty, the champion of right and justice; sees further ahead than many statesmen and legislators who admire even while they hate it; and is a shining light to the nations amid the political darkness that enshrouds the rest of Europe.

It is an ancient and wise maxim in political government that the State should provide for its own servants, and that those servants should provide for their own families. Ministers of the Crown, functionaries employed in the diplomatic service and in the judicial departments, officers in the Army and Navy, even artisans and mechanics in the Royal dockyards, after a certain period of service retire upon pensions; but are never required to contribute one farthing to any superannuation fund. The same rule used to apply to the clerks in the Government offices, who are collectively described as the "civil servants of the Crown;" but a Treasury Minute, dated the 4th August, 1829, and the 27th section of the Act 4 and 5 William IV., c. 24, directed "abatement of salaries to be made for the purpose of reducing prospectively the charge incurred in providing for superannuation allowances." To effect this object the civil servants of the Crown were divided into two classes—one including all who had entered the service prior to the 5th of August, 1829; the other embracing those who joined after that date. The former still receive their salaries in full without any abatement, except for income-tax; the latter not only pay income-tax, but five per cent on their salaries if they exceed £100 per annum, and two-and-a-half per cent if the salary is below £100. Neither class can claim retirement as a right, nor are they entitled to retire from the service on superannuation under sixty-five years of age, unless incapacitated in mind or body to discharge their duties. The first class may retire, if so incapacitated, after ten years' service, upon a pension equal to four-twelfths of salary; but under similar circumstances the second class only receive three-twelfths. The first class are entitled to an additional amount of pension equal to one-twelfth of salary for every five years' service; but to enjoy the same privilege the second class must serve for seven years. After fifty years' service the first class receive a pension equal to the full amount of salary; but the second class cannot, under any circumstances, receive more than two-thirds of the amount of salary, whatever may be the length of service.

The total number of persons in the civil service of the Crown amounts to 16,353. Taking the whole body, the average salary of each is £141; but two-thirds of them only receive £86. These rewards certainly do not invite talent, and the smallness of the pay may to some extent explain why private firms are better served than Government. It appears from a Parliamentary return, printed in 1822, that the average salary paid to the officials of the Bank of England amounted to £225 each, while 193 pensioners enjoyed £161 each. The contrast is striking.

Since the Treasury Minute of 1829 was passed, to which we have referred, a diminution has been made in salaries of £282,272, but we may question the wisdom of an economy which cuts down the reward of those already underpaid, for cheapness and efficiency are never identified. From 1829 to 1853, when the last calculations were made, the aggregate abatement from salaries amounted to no less a sum than £568,000. Had it been invested as a fund, at three per cent compound interest, it would now have amounted to about £700,000, yielding an interest at three per cent of £21,000. What has been the amount of superannuations paid to those persons who have contributed through abatement on their salaries? About £8000 a year only, or not one-half of the annual interest on the aggregate capital which ought by this time to have accumulated.

At present the clerks pay into the Exchequer £55,000 annually, and it is estimated that, in 1837, they will pay £74,000 annually; as the exempted first class are gradually dying off, and all who replace them under the new system must contribute. In 1873 the fund ought to swell up to two millions and a half, when the interest will be £75,000.

The Act of 1834 reduced the superannuation allowance to one-half. The old retiring pension was £153; therefore the new is only £76 10s.

The contributors ask, and the public also have a right to ask, where is the fund which ought to have accrued from the abatements on salaries? We do not affirm that it has no existence, but that is a very general opinion. Recollecting the history of sinking funds, it would be gratifying to be officially assured that the money already paid has a visible and tangible existence. Is it deposited in Consols? or is it an illusion?

It appears that a vast majority of those who contribute have petitioned Government to change the system, so that the assessments levied on their salaries may be converted into a "Civil Service Provident Fund," or secured on the principle of life assurance. If a clerk now dies in active service—that is to say before he is sixty-five years of age—the whole of his contributions is lost to his family. Under the plan now proposed by the civil servants of the Crown, each of its members would be able to make a certain provision for his widow and children, as is the case by the rules observed in the Bank of England and the East India Company.

## THE REVENUE.

An Abstract of the Net Produce of the Revenue of the United Kingdom, for the Year and Quarter ended December 31, 1855—showing the Increase or Decrease thereof.

## THE COURT.

The Queen has been receiving company during the past week at Windsor Castle. Yesterday se'nnight, after a banquet—at which the Duchess of Kent, the Belgian Minister and Madame Van de Weyer, the Earl of Clarendon, and other distinguished guests, were present—Madame Goldschmidt (Jenny Lind) attended and sang several favourite morceaux.

On Saturday the Prince of Wales and Prince Alfred came to London, and attended Mr. Faraday's lecture at the Royal Institution. On the same day Sir Charles Eastlake, President of the Royal Academy, had an audience of her Majesty

On New-Year's-day the band of the 2nd Life Guards assembled on the East Terrace at seven o'clock, and performed a selection of favourite airs. Her Majesty's annual distribution of food and clothing, to upwards of 600 poor persons of the Windsor and Clewer parishes, took place in the Riding-house of the Castle.

The Prince of Wales and Prince Alfred went to London on Tuesday, and visited the Duchess of Gloucester, at Gloucester House. Their Royal Highnesses afterwards attended Mr. Faraday's lecture at the Royal Institution.

Sir George Grey was sufficiently recovered from the effects of his recent severe accident, while hunting in Berkshire, to attend at the Home-office on Wednesday.

*The range of temperature during the week* was 19·6°.
*The weather* dull, with occasional light rain, mild.
*The direction of the wind* was S.E. and S. till 6 p.m. on 26th, then became S.W.; was W.S.W at 8 a.m. on 27th, and S. at 10 a.m. on 27th, in which quarter it remained, till 12 a.m. of 29th, when S.W.; becoming S.S.W. at 3 a.m., changing to W.S.W. at 1h. 30m. a.m. on 30th, was S.W at 2 a.m., S.S.W. at 3 a.m., S. at 9 a.m., S.S.W. at 10 a.m., S.W. at 11½ a.m., W.S.W. at noon, S.W. at 2 p.m., S.S.W. at 4h. 45m. p.m. (of 30th); becoming, on the 31st, S at 3 a.m., S.S.E. at 5h. 40m a.m., S at 6 a.m., S.S.E. at 2 p.m., and S.E. at 4 p.m.; changing to E.S.E. at 4h. 45m. a.m (Jan. 1), and again to S.E., at 7h. 30m. a.m., in which quarter it remained.

E. J. LOWE.

*For the month of December* the mean reading of the barometer at the level of the sea was 29.823 inches, and the range was 1.173 inch. The highest reading of the thermometer by day during the month was 52°, on the 28th; and the lowest by night was 13°, on the 22nd; the range of temperature during the month was therefore 46°. The mean of all the highest by day was 41°, and of all the lowest by night was 29·69°; the mean daily range of temperature during the month was therefore 11·4°. The mean temperature of the month was 35°·-being 3½° *below* the average of the corresponding month during 38 years. The mean temperature of evaporation for the month was 34½°. The mean temperature of the dew point was 32·1°. The mean degree of humidity was 87 (complete saturation being represented by 100); and the fall of rain during the month was 1·1 inch (one inch and a tenth).

The instruments by which this series of observations have been taken are as follows —

The barometer is a standard made by Barrow, its diameter of tube is a little more than three-tenths of an inch; specific gravity of the mercury, 1·3.

The thermometer for highest temperature is Negretti and Zambra's patent maximum. That for lowest temperature is one of Rutherford's construction, made by Negretti and Zambra.

The dry and wet bulb thermometers were made by Negretti and Zambra.

All these instruments were compared with standards before use, and all necessary corrections have been applied in the reduction of the observations.

All observations have been checked by others simultaneously made in different parts of London, and the results may be considered to represent those of London just beyond the immediate influence of the river Thames.

## LATEST INTELLIGENCE.

### THE WAR.

Accounts from Constantinople of the 24th ult. state that the Ottoman Government was seriously intent on devising means to obviate the fatal consequences that might attend the fall of Kars, should all further advance of the Russians on the Turkish territory not be immediately checked. The plan of the new campaign was agreed upon at a council of war, convoked for the purpose, and at which the Allied Generals Mansfield and Larchey, Colonel Chiesa Della Torre, and the first dragomans of the English and French Embassies assisted. Ten thousand men are to be detached from the army of Omer Pacha, and conducted by General Mouklis Pacha, from Soukoum Kaleh to Trebizond, where the other troops about to operate in Asia are to assemble. On the 22nd intelligence reached Constantinople that Omer Pacha, meeting with insurmountable obstacles, had renounced marching upon Kutais, and was in full retreat upon Soukoum Kaleh. Although the failure of his expedition was long since anticipated, the event, nevertheless, produced a painful sensation on the Porte and the public.

The *Invalide Russe* publishes a proclamation by General Mouravieff, calling the entire population of Imeretia, Guriel, and Mingrelia, to wage a war of extermination against the enemies of the Cross. It is this measure which is supposed to have induced Omer Pacha's retreat.

From Berlin we learn that the Muscovite, or War party, appear to be in the ascendant at St. Petersburg. The appointment of Prince Menschikoff to be Governor-General of Cronstadt is considered a decided proof of this. The report grows confirmed that General Mouravieff will replace Prince Gortschakoff in the Crimea. The Prussian Cabinet exhibits great uneasiness at the independent attitude assumed by Bavaria and Saxony.

The *Weser Gazette* states that an additional article touching the Third Point has been added to the Treaty of December 2nd, between Austria, France, and England. It does not, however, impose on Austria the obligation of taking part in the war upon the eventual refusal of Russia to accept the Third Point as interpreted by Austria and the Allies.

### NAPLES.

According to the latest intelligence from Naples, the King of that country has treated the French Envoy in a manner the reverse of cordial or respectful. King Bomba is, moreover, making considerable additions to his military establishments.

The *Italia e Popolo* of Genoa states that "eight British vessels of the line have appeared off Messina, with a view to enforce the execution of a contract for the delivery of 1300 mules, entered into with a Sicilian contractor. It is added that 500 of those animals had already been shipped off, when a Royal order arrived, stopping the further exportation of them."

### WEST INDIES.

The West India mail has arrived, with accounts from Jamaica of the 11th ult., and 3,156,213 dollars in specie. The cholera had broken out at Porto Rico, and yellow fever at Martinique. The sugar crop at Trinidad promised more than the usual average. Gold had been discovered in large quantities in Southern Chili.

VIENNA, DEC. 31.—It is believed in official circles that the Emperor of Austria, as a mark of consideration for his allies, will not permit any very heavy punishment to be inflicted on M. Iurr. Yesterday the first sitting of the Administrative Council of the Credit Bank was held, and Prince Schwarzenberg was unanimously elected President of the Company, and Baron Rothschild and the Privy Councillor Count Francis Zichy, Vice-Presidents. The following persons were also elected members of the Financial Committee:—Count Chotek, Baron Louis von Haber, Baron Rothschild, M. Rougswarter, and M. von Lammel. The Archduke Albrecht is expected back to-day from his Italian journey. The cholera has again appeared with extreme violence at some cotton mills at Trumau, near Baden, a small town about thirteen miles from Vienna.

THE EMPEROR OF THE FRENCH AND THE NEAPOLITAN GOVERNMENT.—The Emperor, at the last levée, made a few but strong remarks to the Neapolitan Ambassador on the sympathy shown by his master with the cause of Russia. The Ambassador, who is very deaf, muttered some unmeaning excuse. It was thought that the papers would allude to the matter, but an intimation has been sent to them not to do so, as it would serve no object to canvass the matter by giving it publicity. The Paris papers have therefore said nothing on the matter.

ARRIVAL OF ADMIRAL LYONS.—Admiral Lyons arrived in London late on Thursday night. On Friday morning, at an early hour, the gallant officer had an interview with Sir C. Wood at the Admiralty; after which he proceeded to the War-office, and had an audience with the Duke of Cambridge, Lord Hardinge, Lord Panmure, and other distinguished personages.

THE BALTIC.—Letters from Kiel, Dec. 31, state—"The weather is mild—no ice to be seen here—and the thermometer stands at 38 Fahrenheit.

THE RUGELEY MURDER.—It appears that Palmer's wife was the daughter of Colonel Brooke, who died very suddenly, leaving his wife a large amount of property; the latter also died suddenly, having previously made a will in favour of her daughter, Mrs. Anne Palmer, whose husband at her death received £1800 from the insurance-office in London. It is not true that arsenic has been discovered in Mrs. Palmer's body, except so much as may be generally detected upon analysis in the human frame. But there is little doubt she died from the effects of poison. The surgeon's certificate described the cause of Mrs. Palmer's death as English cholera. Palmer's own life is insured in London to the extent of £15,000, but who holds the policy does not as yet appear. The accused seems to have had an extraordinary influence over the legal profession in the county of Stafford, as some of them have inconsiderately been "referees" in the various "attempts" on the numerous insurance-offices both in London and in the provinces. The inquest on Mrs Palmer and on Walter Palmer will be resumed on Wednesday, the 8th instant. The following insurances were effected on the life of the late Walter Palmer, of Rugeley: Athenæum, £10,200; British Equitable, £500; Brunswick, £500; Caxton, £500; Era, £2900; Falcon, £500; Magnet, £2500; Prince of Wales, £5000; Saracen, £200; Security, £500; an office not named, £500: total, £23,450. The deceased was brother to William Palmer, accused of the murder of Cooke. A copy of this list was furnished so early as September last to the different insurance-offices of London. Proposals were, it is said, also made to the Gresham and other offices, which, however, were not accepted. The medical examiners employed in the insurance-offices could find no trace of organic disease in the deceased Walter Palmer, but some of them observed a stupor for which there was no means of accounting. Some extraordinary letters have been intercepted, showing the extent of the gambling transactions between the prisoner Palmer, the deceased (Cooke), and other persons, which, when made public, are likely to create a still greater sensation in sporting circles than the case has already produced.

DECLINE OF HAND-LOOM WEAVING.—The latest enumeration taken by the trade last autumn gave only some 2400 weavers in Paisley, actually 500 less than the return of the trade six months previously. Since the autumn return it is well known there has been a very considerable diminution. What a contrast within the last twenty years! On good authority we state that no fewer than 7000 weavers' names in Paisley were obtained by trustworthy hands in two days to a Reform petition, and these did not then embrace all the weavers of Paisley.—*Paisley Herald.*

## THE "JORDAN" EPIPHANY CEREMONY IN ST. PETERSBURG.

THIS ceremony is held, in commemoration of the baptism of Christ, on the 6th of January, on the ice of the Neva, in front of the Imperial Winter Palace. On a richly painted dais are assembled the dignitaries of the church, the Metropolitan of St. Petersburg, the Archimandrit, Archireys, Popes, Protopopes, Deacons, &c., &c.

Precisely at twelve o'clock, on the arrival of the Emperor, the commencement of the ceremony is announced by the firing of a few guns from the citadel. The general mass or Divine service being over, the Metropolitan descends a few steps to where a hole has been cut in the ice, and, immersing his cross into the water, blesses it amidst the full chant of the chorus and the clergy on the platform.

He has no sooner retired than there is a rush of the people to get the holy water. Pails, jars, jugs, bottles, vessels of every description and size, are held in preparation, and filled with the holy water. This water is held by the superstitious Russian to possess the power to banish by its presence alone the *domovoi* (or the black spirit) of which every house is considered to have one. It is likewise a universal medicine for any illness, both of body and mind. Those who have obtained larger quantities generally retail it, and in some instances a capital fetched as much as 25 cop sil. or 10d To the right of the illustration is seen part of the Admiralty Boulevard, that leads to the grand Palace-bridge on the Neva

THE JORDAN" [illegible] (USTOM AT [illegible] [illegible] [illegible] READING PAGE.]

## GENERAL SIR COLIN CAMPBELL.

THIS gallant officer left England a few days ago on his return to the Crimea, where his brave Highlanders will joyfully welcome their beloved chief, who has so often led them to victory. To give even a sketch of Sir Colin Campbell's military career would be to pass in review some of the most glorious events in the military annals of Great Britain. In every part of the globe where British valour has earned renown we find the gallant Scot in the van. In the Peninsula Sir Colin served in the 9th Regiment, and was present at Vimiera; in the advance and retreat of the army under Sir John Moore, at Corunna; at Barrosa; and at Tarifa. At the celebrated siege of St. Sebastian he received two severe wounds; and was again severely wounded at the passage of the Bidassoa. He was attached to the army of Ballesteros at the latter end of 1812, and was sent on the expedition to relieve Tarragona. In 1814-15 we find him in the 60th Rifles, serving in America. In 1823 he acted as Brigade-Major of the troops engaged in quelling the insurrection in Demerara. In 1842 he commanded the 98th Regiment in the expedition to China, and was present at the capture of Chinkiangfoo and the subsequent operations near Nankin. He commanded the Third Division of the Army of the Punjaub throughout the campaign of 1848-49, including the battle of Ramnuggur, the passage of the Chenab, the affair of Saveolapore, the battle of Chillianwallah (where he was wounded), Goojerat, and the final operations. He was constantly employed in 1851 and 1852, when Brigadier-General commanding the Peshawur districts, in operations against the Hill tribes surrounding the valley, including the forcing of the Kohat pass under Sir Charles Napier; and repeated affairs with the Momunds, who finally made terms, after their defeat at Punj Pao by a small detachment of cavalry and horse-artillery under Sir Colin Campbell's immediate command—the combined tribes numbering upwards of 8000 men. In 1852 he commanded an expedition against the Ootmankhail and Ranazai tribes, whom he attacked in their valleys, and destroyed the strongly-defended village of Nowadund and the fortified village of Pranghur; and he finally routed them with great slaughter at Iskakote, where they mustered 8000 men, while the force under Sir Colin was under 3000 men. For these and subsequent distinguished services Sir Colin received the war medal with five clasps, the Chinese medal, the Punjaub medal with two clasps; and after the Punjaub campaign he was made a K.C.B., and recently a G.C.B.

Forty-seven years' active service in the field has in no manner dimmed the energies of this distinguished soldier, and in the list of the many brave men whose names are engraven on their country's memory for their services against the oppressor of Europe that of Sir Colin Campbell holds a prominent place.

In nearly every battle in the Crimea Sir Colin Campbell's brigade has been engaged.

On the 20th of September, 1854, was fought the ever-memorable battle of the Alma. It will be remembered how the First Division, composed of the Grenadier, Coldstream, and Scots Fusilier Guards, with the Highland Brigade, consisting of the 42nd, 79th, and 93rd Regiments, crossed the river to support the Light Division, and, with fixed bayonets, charged the Russians who were advancing; and how, when the latter heard the English cheer, and the fierce yell of the Highlanders, they turned and fled. Then ensued that noble struggle of emulation between Guards and Highlanders as to who should be first in the Russian redoubt—Sir Colin, at the head of the latter, far in advance of his men, shouting, "We'll hae none but Highland bonnets here!" It was this splendid charge which decided the day.

The battle of the Alma gave a prestige to the English arms which proved of the highest service in a later portion of the campaign. In a moment of enthusiasm Canrobert exclaimed, "All I ask of fortune now is that I might command a corps of English troops for three short weeks; I should then die happy!"

On the 25th October, at the battle of Balaclava, when the Turks abandoned the redoubts and the Russian cavalry dashed onwards, confident of success, towards Balaclava, the 93rd Highlanders, under Sir Colin Campbell, formed to meet them. On came the Russian horse, thinking to ride down that gallant regiment. The 93rd awaited the shock in line, disdaining to form in square, and when within an easy range poured a rattling volley into the ranks of the enemy. The Russians hesitated, received another volley, and then wheeled sharply round to the left, not daring to confront the bristling bayonets of this one Highland regiment.

GENERAL SIR COLIN CAMPBELL, G.C.B.—FROM A PHOTOGRAPH BY MAYALL.

On the day of Inkerman, that terrific struggle so glorious to our arms, the Highland Brigade was intrusted with the defence of Balaclava to repulse the flank attack of the enemy.

It would be superfluous to follow Sir Colin Campbell throughout the whole of the Crimean campaign. By his kind manners, as well as by his bravery, he has endeared himself not only to his own men, but to the army in general.

It was supposed that a still higher command than that which he actually holds would have been conferred upon Sir Colin. It was even said that his return to his native land was connected with it. This is now disproved. Like Bayard, Sir Colin is *sans peur et sans reproche*. He returns to earn new laurels with the true heart of a British soldier.

Sir Colin's reception in England has been what was to be expected. The honoured guest of his Sovereign at Windsor Castle,—other compliments awaited him in his native land. It having been presumed that a dissolution of Parliament was likely to take place, a letter was addressed to the gallant General by a large number of the constituents of Glasgow, expressing the wish that he would come forward as a candidate for that ancient city. The General's reply is characteristic of the man. Since the age of fifteen, he said he had devoted his best energies to the profession of a soldier, and had therefore had no time to give to the consideration of those subjects in which the prosperity of so great a commercial city as Glasgow is concerned. Feeling that he could not do justice to the position which he might obtain through the good opinion of the electors, he purposed, as long as it pleased the Almighty to give him health and strength, to persevere in the profession to which he was ardently attached and devoted.

The Highlanders in Glasgow have presented to their gallant countryman a gold-mounted snuff-horn and a gold Quaich, or Drinking Cup; and a subscription of all the citizens has been opened to present him with a sword of honour. The sword will be a Highland basket hilted dress one, of the value of £200. But more satisfactory than these testimonials of respect and esteem on the part of his countrymen, however flattering they are, is that conscience of the brave and upright soldier who knows that he has ably done his duty to his Queen and his country, and who has also the satisfaction of knowing that, when he is once more with his brave troops, fighting the cause of justice against oppression, thousands of miles distant from his native land, there is not one man that does not own that where Sir Colin Campbell commands, there at least "the right man is in the right place."

By direction of her Majesty, General Sir Colin Campbell has sat to Mr. Mayall, the eminent artist of Argyll-place, Regent-street, for a photographic portrait in the General's undress uniform; and Mr. Mayall has succeeded in producing a fine and very characteristic likeness. The portrait has a peculiar interest from the fact of the General having hitherto resisted all applications to sit to an artist. By the graciously-accorded permission of her Majesty we are enabled to present the accompanying Engraving from Mr. Mayall's photograph.

We understand that a portrait of Sir Colin Campbell, by Mr. Roger Fenton, has just been added to his Exhibition of Photographic Pictures of the Seat of War in the Crimea, at 15, Pall Mall.

## THE RIGHT SIEGE-TRAIN,
### THE MORNING AFTER THE EXPLOSION

THE scene here represented by our Artist in the Crimea is the right siege-train in front of the commissariat stores at Inkerman, as it appeared on the morning of the 16th November. It was on the afternoon of the previous day, about half past three o'clock, that the terrible explosion took place. As soon as the first alarm was over, when it had been ascertained that the Windmill itself, which forms our main magazine in that part of the Camp, and contains some hundred and eighty tons of powder, had escaped, General Straubenzee, who commands the brigade, hurried up to the tents of the 7th Fusiliers, and asked if any of the men would volunteer to mount the wall of the mill, and cover the roof with wet tarpaulins and blankets as a protection against the thickly-flying sparks and burning wood. The concussion had literally thrown the roof off the old building, leaving it in the very centre of the spreading flames, exposed every minute to a thousand chances of instantaneous destruction. Hardly anything could exceed the danger attending such a labour as the General proposed, but notwithstanding, Lieut. Hope (senior) and twenty-five men at once responded to the Brigadier's appeal and proceeded to the powder-crammed building. A sergeant and some men of the Rifles, with a party of the 34th Regiment, were induced to accompany them; and, within ten minutes from the first great blow-up, Mr. Hope was on the walls of the mill piling the wet coverings over the exposed powder-boxes—exploding shells and burning wood flying through the air in perfect storms the while. Whilst the officers and some half-dozen of the men were thus employed, the remainder carried water to throw upon the blankets and the bare rafters of the mill, and in little more than half an hour this vast pile of powder was as well protected from the thickly-flying sparks and rockets as it could be short of entire removal from the scene of the conflagration.

THE MORNING AFTER THE EXPLOSION AT INKERMAN MILL.

## NOTES OF THE WEEK.

THE grand military spectacle with which the Emperor of the French has been delighting Paris recalls historical associations of the utmos interest; but it also does something better—it elicits a well timed and valuable contradiction to the rumours so sedulously spread about by the tools of Russia, to the effect that France is less hearty in the prosecution of the war than England. The enthusiasm which greeted these noble troops, from whose ranks there was no keeping back the people, eager to embrace and to congratulate, is the best answer to the vilify suggestions which the hired scribes of the Court of St. Petersburg continue to put forth. The heart of France beats as warmly as that of England for the great object before both nations; and if it be true that the magnificent pecuniary resources of England are more easily developed, in the hour of need, than those of her ally, owing to our improved commercial and financial machinery, the merit of France is the greater that she submits, not only cheerfully but gladly, to the inconveniences incident to an incomplete but gradually advancing system. Russia may be well assured that it is not a financial question that will cause France to turn aside from the path of honour; and though it may suit the policy of the Russian party abroad and at home to affect to foresee for our ally difficulties which already exist, in a frightfully multiplied degree, in Russia herself, the authorities in France see no cause for the slightest apprehension, and Europe generally attributes the inventions in question to their proper source. Even the gold which at present hires German princes and German newspapers may ere long, petty as the sufficing price is, be wanted at St. Petersburg for more essential objects. A Government that finds or thinks it necessary to help itself before Europe, by purchasing the puffs of the mendacious American who has just eclipsed Barnum and amused the Allies, must be in a perilously unhealthy condition. We know that Russia is advancing to insolvency ad misery; and each successive spasmodic effort she makes, and each needless piece of insolence she displays, are unmistakable symptoms in the eyes of those who are steadily watching her. It need not be supposed that the cessation of actual fighting is a cessation of the ruinous damage she is receiving. In another sense than that of the poet, "Peace has her victories;" and, though hostilities are postponed, the internal condition of semi-barbarous Russia daily becomes more disastrous; while the Allies have, as yet, scarcely had to call upon the elastic systems of civilized communities for an unusual effort. We should like to know what is thought, in St. Petersburg, of the Financial Statement with which England closes the year, and in which the war is thrown into the bill with the composure of those who know they have the means to deal with such an item. We, too, should like to see as near an approach to a balance-sheet from Russia as a corrupt bureaucracy can furnish. It would be strangely suggestive, even if drawn up by a Yankee Munchausen.

The only complaint which can be urged against Admiral Dundas is, that he has done next to nothing during the second expedition of the most noble fleet that ever went forth from a harbour. The great pyrotechnic display at Sveaborg was a praiseworthy demonstration, as far as it went; and, no doubt, if the Russians had come out to fight, they would have been crushed by the terrible war-ships—now, we are happy to recollect, safe at Portsmouth. The Admiral's friends will, of course, say for him that he did all he could, and that he had no gun-boats which could enable him to close with the enemy. The plea is perfectly valid; but, somehow, we have been accustomed to read of Admirals who did not want pleas made for them, and who went in and did their work—doubtless, in a rough-and-tumble manner, and with scrambling, shouting, and swearing, highly offensive to a genteel officer; but, on the other hand, the enemy's forts were knocked to pieces, and the enemy's ships set blazing or sent to the bottom. We have no right to find fault with our careful and genteel commanders, who never do anything that cannot be justified in the most Parliamentary manner; and we can only repeat that, as it is to the British Navy that we all look for the glories of 1856, we do not regret that the cautious Dundas, who succeeded the cautious Napier, hauls down his flag; and we do not greatly desire to hear that his successor is another officer highly distinguished for his extreme—prudence.

The Senate of Sewers, duly elected by the parishes, and having itself elected a chairman, Mr. Thwaites, has met for business, and seems likely to conduct itself in a business-like fashion. The chairman, remembering that many of his constituents were vestry favourites, deemed it expedient to remind them that they did not assemble for speechification, but for work; that they had better not indulge in garrulous small talk, but speak once, and without popular allusions; and his hints were not unfavourably received. Among the matters with which the assembly has to deal are the drainage of the whole metropolis and the purification of the Thames. They have ample powers, and the public has a right to expect that, as the chairman said, these gentlemen will, while exercising economy, deal with subjects in a bold and comprehensive manner. It is not discourteous, at this stage of their official history, to express a hope that the press, which does incalculable mischief by jotting down every word that falls from every man, wise or silly, will condense their reports of these meetings in such a way that a speaker shall receive all credit for his matter and none whatever for his manner. It is not altogether a bad omen for the success of the Senate that it is deprived of the oratory of Sir John V. Shelley, who retires, as he was not made chairman.

Apropos of chairmen, Mr. Waddington has put forth his promised reply to the report of the Committee of Investigation appointed by the shareholders of the Eastern Counties Railway. The tremendous exposure made by that report is fresh in the recollection of our readers, who will remember that such a series of charges of misgovernment, dishonesty blundering, jobbing, and general incapacity, was never launched against railway or other authorities. Mr. Waddington declared that he would reserve his reply until he could make it complete; and he has issued it in 107 folio pages, with accounts, a coloured map of the line, and correspondence bearing upon the charges. He has met his assailants full front, retorts upon them with allegations of "perverse mis-statements and wanton assertions made in coarse and violent language." He defends his policy, by which, as he shows from figures, the company has gained a large addition of revenue, amounting to a tenfold increase in four years. He utterly contradicts the committee in their statements as to the Tilbury Line and Lowestoff Harbour; and, in going into details, in reference to the other accusations, charges the committee with having adopted "vindictive evidence," given by three persons "whose purpose to fill their pockets at the cost of the shareholders" he states that he had previously "prevented"; declaring that he has satisfactorily answered every charge against him, though "rancour and malice" will not be satisfied. There can be no doubt that Mr. Waddington has met his enemies with great boldness and ability; but until the committee reply upon him, as they are now preparing to do, and enable us to decide whether his figures have merely been skilfully manipulated, after a fashion not unknown in other days, upon the Eastern Counties line, or whether they really and truthfully represent the state of the case, the public must suspend their verdict in regard to the chairman himself. The tone of his answer will probably not diminish the acerbity with which the committee will return to the charge, and we do not see much prospect of any peaceful arrangement of the company's affairs Let us add that it was a petty feeling which induced the deputy chairman, Mr. Bruce, to refuse to circulate Mr. Waddington's reply among the shareholders. What could be more important and interesting for the company to hear than what their chairman had to state to them of his official conduct?

## OBITUARY OF EMINENT PERSONS.

### REAR-ADMIRAL F. J. THOMAS.

REAR-ADMIRAL FREDERICK JENNINGS THOMAS expired on the 16th ult. at his residence near Southampton, at an advanced age. The gallant veteran entered the Navy early in life, and was Midshipman on board the *Prince of Wales* in Calder's action. He served under Nelson, being Acting-Lieutenant of the *Spartiate* at Trafalgar. In 1812 he was second in command of the Cadiz flotilla; and was at the storming of the batteries, at the spiking or capture of several hundred pieces of ordnance, and at the capture and destruction of one hundred and fifty sail of vessels. He became a Captain the 8th Dec., 1813, and a Rear-Admiral the 1st Oct., 1845: he received the silver naval medal and one clasp for his distinguished conduct

### LADY BURRARD NEALE.

THIS lady, who died on the 22nd ult., at Lee, Kent, in the eighty-third year of her age, was the widow of the late Admiral Sir Harry Burrard Neale, Bart., G.C.B. and G.C.M.G., and was the daughter and coheiress of the late Robert Neale, Esq., of Shaw House, near Melksham, Wilts, and half-sister to the present Sir George Duckett, Bart. Sir Harry Burrard (who assumed the name of Neale) enjoyed the particular friendship of George III., and to him and Lady Neale his Majesty and Queen Charlotte addressed their miniatures as a proof of their esteem. Lady Burrard Neale was also in constant attendance upon the late Princess Amelia, as Lady of the Bedchamber.

### JOSIAH CONDER, ESQ.

THIS able and industrious writer, who was for many years editor of the *Patriot* newspaper, died on the 27th ult., at his residence, St. John's Wood. Mr. Josiah Conder was born in London, the 17th Sept., 1789; and was the son of Mr. Thomas Conder, bookseller, and grandson of Dr. John Conder, President of the Old College, Homerton. At an early age Josiah Conder manifested that poetical genius and literary taste which subsequently so distinguished him. His juvenile poetical contributions to the *Athenæum* (Dr. Aikin's) and other publications having attracted favourable notice, he published, in 1810, a small volume, entitled "The Associate Minstrels," as the joint production of several friends. This book passed through two editions. In 1814 he became proprietor of the *Eclectic Review*, being at that time a publisher and bookseller in London. In 1819 he disposed of his business to his successor, Mr. B. Holdsworth, and for long afterwards resided at Watford, in Hertfordshire, retaining in his own hands the management of the *Eclectic Review* till 1837, when he transferred the proprietorship to Dr. Thomas Price. During the three-and-twenty years of Mr. Conder's editorship of that monthly journal, he enjoyed the assistance, as regular or occasional contributors, of John Foster, Robert Hall, James Montgomery, Dr. Pye Smith, Dr. Chalmers, Isaac Taylor, Dr. Wardlaw, D.D., Dr. Vaughan, Charles Marsh, and many other literary celebrities. In 1818 Mr. Conder published his well-known work on Protestant Nonconformity. In 1824 he entered into an engagement with Mr. James Duncan, of Paternoster-row, to edit the afterwards well-known clever series, entitled "The Modern Traveller:" undertaking, in the first instance, to furnish the volume on Palestine only. Ultimately, after several unsuccessful attempts to divide the labour, he found himself compelled to carry on the whole set. In four or five volumes alone had he any literary assistance. The collection of thirty volumes was completed in 1830; but "Italy," in three volumes, was added in 1831. In 1832 Mr. Conder was induced, on the application of the gentlemen who had recently established the *Patriot* newspaper, to become the editor of that journal: an office which, for nearly twenty years, he continued to fill, for three-and-twenty years. For a long period he took an active part in the public movements of the Protestant Dissenters of the metropolis, without, however, renouncing his attachment to literature. He married, in 1815, Joan Elizabeth, daughter of Mr. Joseph Partridge, Esq., of Southgate. Mr. Conder leaves surviving his widow and five of their children, one of whom is a daughter The four sons are—Mr Francis R. Conder, well known as a civil engineer and railway contractor; the Rev. Eustace Conder, pastor of the Congregational Church at Poole; Mr. Josiah Conder, of the Bank of England; and Mr. Charles Conder, who is associated in professional pursuits with his eldest brother.

### THOMAS CUBITT, ESQ.

MR. THOMAS CUBITT, of Thames-bank and of Belgravia, one of the most able and successful of metropolitan builders and contractors, was born at Buxton, near Norwich, on the 26th of February, 1788. He was at the time of his father's death but nineteen years of age, and was then working as a journeyman carpenter. His abilities, however, with a view to improve his circumstances, took a voyage to India and back as carpenter's mate. On his return to London, being then about twenty-one years old, he, with the savings he had put by, commenced a small business in the metropolis as a carpenter. After six tolerably prosperous years, he married Miss Mary Jones, and Gathorpe in Gray's-in-road, upon which he erected large workshops, and carried on a very considerable business. This establishment was afterwards relinquished to his brother, now Mr. Alderman Cubitt, who had been for many years associated with Mr. Thomas Cubitt's earlier works, while in Gray's-inn-road, was the London Institution, Moorfields. About the year 1824 he entered into engagements with the Duke of Bedford and Lord Southampton for the tracts of ground on which Tavistock-square and Gordon-square, with Woburn-place, now stand. Between the years 1824 and the close of the same year and the beginning of 1825 he engaged with the late Marquis of Westminster and Mr. Lowndes to cover with houses large portions of the Five Fields and grounds adjoining. Of this engagement, Belgrave-square, Lowndes-square, Chesham-place, and other ranges of houses are the splendid results. He subsequently contracted to build over the vast open district lying between Eaton-square and the Thames, now known as South Belgravia. He also carried out similar extensive operations in Clapham, Kemp Town, Brighton, and other places. Through life Mr. Thomas Cubitt was the real friend of the working-man; and among his own people he did much to promote their social, intellectual, and moral progress. He established a workmen's Library, a savings-bank for their children; and, by an arrangement to supply generally to his men soup and cocoa at the smallest rate at which these could be produced, he aided in accustoming them to a happy system of temperance, and in superseding, to a great extent, the dram-drinking which previously wrought ruin and misery among them.

Mr Cubitt died on the 29th ult., at his house, Denbies, Dorking. He leaves two brothers—viz., Mr. Alderman Cubitt, M.P. for Andover; and Mr. Lewis Cubitt, the architect of the Great Northern Railway terminus. Sir William Cubitt, the eminent engineer, though a native of the same county, is not a relative. It may be worthy of remark that the large engagements as to Belgrave-square, begun in 1825, have been completed in the present year; and Mr. Thomas Cubitt's own dwelling-house, on his estate at Denbies, in which he died, is only just finished and ready for the future residence of the family.

### JOSEPH DUTTON, ESQ.

THIS gentleman died on the 23rd ult., at Burland Hall, Cheshire, aged eighty-eight. The Duttons claim consanguinity with the ancient blood-royal of England, being descended from Rollo, first Duke of Normandy, through William Earl of Eu, who married a niece of William the Conqueror. Mr. Dutton was the twenty-fourth in direct lineal descent from Rollo, and eldest heir male of the fifth Earl of Eu. Sir Peter Leycester, who compiled the Dutton pedigree up to the year 1666, observes that "the family is one of great worth, with almost a constant succession of knights." Ancestors of the present Lords Sefton, De Tabley, Cholmondeley, and Delamere, and of the Lords Warren, Bulkeley, and Rivers of Rodeavage (extinct), have married into this family; and from Elinor, heiress of Thomas Dutton, who married Lord Gerard, descend the present Duke of Hamilton, the Earl of Derby, and the Earl of Kilmorey From a younger branch of the family descended Sir Ralph Dutton, whose only daughter and heiress, Anne, married James Sager; and their grandson, having assumed the name of Dutton, was created Baron Sherborne, who was the father of the present Peer. The late Mr. Dutton married Miss Cawley, of Swandley, and has left several children.

### JAMES YECKSON, ESQ.

JAMES YECKSON, a member of the firm of James Yeckson and Co., of Gothenburg and London, was born at Montrose in the year 1784, and in early life he established himself at Gothenburg, which at that time possessed but little trade. Yeckson, with a shrewdness and clearness of intellect surpassed by few, was the first to see that Sweden possessed in her vast forests, which, with the exception of the neighbourhood of the ironworks, had never resounded with the sound of axes, a source of wealth unknown and unthought of. Yeckson acted accordingly, and he may be said truly to have been the father of that timber trade which for the last thirty years has proved so vast a source of wealth to Sweden, and has created a commerce between England and Sweden equally beneficial to both countries. Swedish ships are now found in every part of the world freighted with deals, and particularly in our Colonies, where timber adapted for floorings and interior fittings of houses does not exist. James Yeckson, to the deep regret of his family and numerous friends, died on the 17th of last November at Gothenburg, leaving a fortune which even in England would be considered colossal.

### MICHAEL VOROSMARTY.

THE famous Hungarian poet, VOROSMARTY—whose name, though but little known on the banks of the Thames, had a long and loved renown on the broad plains where the Theiss and Duna flow—has recently died in his retirement, near Stuhl. Michael Vörosmarty—or, to use the Magyar form of designation, Vorosmarty Mihál—was born in 1800, at the little village of Nyek, in the county of Wiessemburg. His early life was devoted to tuition, and he numbered amongst his pupils the General Percsel. Vörösmarty, in 1816, proceeded to Pesth to study philosophy and law, and in due time obtained his diplomas as an advocate; but the popularity of the poet Karoly Kisfaludy gave another direction to his enthusiasm. In 1821 Vorosmarty published his first considerable work, "King Solomon," a tragedy from the legendary time of Hungarian history. This was followed by "King Stephen," a drama, and by "Kort," another tragedy. In 1826 he wrote a popular romantic poem, entitled "The Fairy Valley;" and in 1828 an epic, "Kger u Erlau," descriptive of the glorious defence of that place against the Turks in the sixteenth century. Another narrative poem, "Csongolin," devoted to the victory obtained by the Hungarians in the thirteenth century over the heathen Kumans, won a wide popularity, as did his chief epic work, the "Zulan Fusaen," or flight of Zulan, the story of the Bulgarian Chief Vangrohl, in the first times of the Magyar conquest. He wrote, besides, many lyrics which have long been household treasures in Hungary. Some specimens of his earlier effusions have been translated by Dr Bowring, in his interesting volume on the Magyar Poetry, entitled "Poetical Scourge," or Appeal, by Vorosmarty, which has been termed the Hungarian Marseillaise, was long the national song of Hungary, and was sung at all festive and patriotic gatherings. The song has been translated by Mr. William Jaffray. Vorosmarty was one of the authors of the Hungarian grammar and dictionary published by the Academy. He was much connected with the periodical literature of his country; and it may be mentioned, for our special regard, was an enthusiastic Shakspearean student and critic. Several of the dramas of our great poet were translated by his hand. Vorosmarty took an active part in political agitation. He was engaged in the insurrection of 1848, and was a member of the Diet and of the Ministerial party. He was, however, included in the amnesty, and he passed his latter days in seclusion in a little village near Pesth.

### COUNT KRASINSKI

COUNT VALERIAN KRASINSKI, one of the most distinguished members of the Polish Emigration, died in Edinburgh on the 22nd ult. On the breaking out of the Polish insurrection in 1830, Count Valerian Krasinski was sent by the then chief of the National Government, Prince Adam Czartoryski, to England, as a member of the diplomatic mission dispatched from Poland to this country, and he continued here in this capacity until the fatal catastrophe of 1831, when he, with so many others, became a penniless exile from his country; for which, however, up to the day of his death, he never ceased to labour He wrote several volumes of history and some translations of Polish literature. In 1848 he exchanged for a time the pen of the historian for that of the political pamphleteer, and the result was a series of pamphlets on the Polish and Russian question, such as Panslavism and Germanism, Russia and Europe; Russia, Poland, and Europe; Opinions of Napoleon the First regarding Poland. His very last days were employed in correcting the proofsheets of a pamphlet entitled "The Polish Question," of which he has not lived to see published; and a "History of Poland," which he had commenced publishing in monthly numbers, also remains unfinished. On subjects not connected with his own country, Count Krasinski has contributed to English literature a translation of Calvin's "Treatise on Relics," and several small works on religious subjects, which, though published anonymously, had a very extensive circulation His high intellectual qualities, his wonderful store of historic knowledge, and his extraordinary memory, together with the integrity of his character, the nobility of his sentiments, the gentleness of his dispositon, and the courtesy and elegance of his manners, rendered Count Valerian Krasinski ever a welcome guest in all the most refined circles of London, where he spent the first twenty years of his exile; and of Edinburgh, where the last five were passed.

WILLS.—The will of Lieut.-General Sir Thomas H. Brown has been proved under £7000 personality; Lieut.-Colonel Nathaniel R. Harrison, Artillery, Scutari, £4000 personalty; Colin Rogers, M.D., Dorset-square, £20,000; William Day, surgeon, Isleworth, £14,000 within the province of Canterbury; John Brown, Esq., Cheltenham, £40,000; David Smith, Esq., of Greenwich, £30,000; Thomas A. Shaw, Esq., of Holly-lodge, Kensington, £30,000; Leopold J. Lardner, of the British Museum, £2000; the Rev. Thomas C. Fell, B.D., Prebend of Lichfield and Wolverhampton, and Rector of Sheepey, Leicester, £2000. The charitable bequests under the will of the late Miss Elizabeth Royton, of Dover, noticed in this paper on the 9th ult., are only given on the contingency of a young lady, yet unmarried, dying without issue.

## *CHURCH, UNIVERSITIES, &c.*

TESTIMONIALS.—The inhabitants of St. John's Wood have presented to the Rev. Daniel Butler, M.A., on his resignation of the curacy of St. John's-wood Chapel, where he has officiated for fifteen years, a very handsome silver centre-piece for the table. It is composed of three figures in the purest silver—Faith, Hope, and Charity; and an oak tree forming the stem, surmounted with a basket, &c. On one compartment of the tripod is the following inscription:—"Presented to the Rev. Daniel Butler, M.A., by friends and members of the congregation of St. John's Chapel, St. John's-wood, as a testimonony of their fleitonate regard and estumation of the value of his ministrations, Dec. 1855. Manufactured by Lawrence Williams, late Catchpole and Williams, 223, Oxford-street."—Sir Henry Muggeridge, Alderman, late Sheriff of London and Middlesex, has presented to his Chaplain, the Rev. Thomas Gregory, M.A., of Trinity College, St. John's Wood, a beautiful silver claret ewer, "as a token of regard and esteem, and in remembrance of the happy associations of the Shrievalty 1854-1855."—A very handsome testimonial consisting of a silver ewer, cake-basket, and other valuables), presented by the congregation of Trinity Church, Mile-end, to the Rev. Charles J. S. Russell, Incumbent of St. John's, Walthamstow, and late Curate (in charge) of Trinity district.—To the Rev R. Bingham, Curate of St. Mary's, Bryanston-square, a superb silver inkstand, manufactured by Mr. W. Edington, 80, Baker-street, and presented by friends and members of Mr. Bingham's ministry. The Rev. R. Bingham is the lineal descendant of the learned Joseph Bingham, the well-known author of the "Antiquities of the Christian Church," a new and improved edition of whose entire works has just appeared from the Oxford University press, in ten volumes, octavo, under Mr. Bingham's editorship.

APPOINTMENTS.—*Rectories:* The Rev. J. Kirkman to Field Dalling, near Holt; Rev. G. Stokes to St. Stephen's, Ipswich; Rev. E. Herbert to the rectory and Chancellorship of Rathkeale; Rev. H. Howes to Spitworth, Norfolk; Rev. H. M. Roberts to All Saints', Saltfleetby, Lincolnshire; Rev. R. S. J. Shirreff to Woodham Ferrers, Essex; Rev. C. H. Wilson to White Roding, Essex; Rev. Henry Venning, M.A., to the Rev. J. Todd to Ardleigh, Essex; Rev. G. C. Tuffnell to Takeley, near Bishop's Stortford; Hon. and Rev. W. Byron to Pyrton, Oxfordshire; Rev. W. Blow to Layer Breton, near Colchester. *Incumbency:* The Rev. Mr. Gardner to St. Matthew's, Brixton.

THE Bishop of London has sanctioned the formation of a new ecclesiastical district out of the parish of St. Martin-in-the-Fields. It embraces a considerable portion of Long-acre, together with many of the streets north and south of it—north towards the parish church, near Trafalgar-square, and south to the adjacent parish of St. Giles-in-the-Fields.

THE Rev. C. J. D'Oyly, M.A., of Trinity College, Cambridge, formerly assistant minister of Grosvenor Chapel, South Audley-street, has been appointed the first Incumbent of St. Mark's Church and district, in Audley-square, to which will henceforth be vested in the Vicar of St. Martin-in-the-Fields.

EMIGRATION FROM LIVERPOOL.—The emigration returns for last year exhibit a diminution in the number of persons sailing from this port to the extent of nearly one-half, as compared with the previous year's return. The total number of ships which have sailed hence for all foreign ports during the year, including "short ships," or those which do not come under the surveillance of the Government officers, has been 576, carrying altogether 132,489 souls; against 967 ships, which took their departure hence for all foreign ports in the year 1854, with 219,782 souls on board. Of this number about one-half, or 66,000 souls, proceeded to the United States, and about 27,000 to the Australian colonies, the bulk of the remainder being equally divided between Canada and the Brazils and Mexico. 113,062 of the above were in passenger ships under the inspection of the local emigration agents, and of that number 58,026, or more than one-half, were Irish; 29,108 English; 14,643 Scotch; 10,285 Welsh; and 1,000 Germans, &c. The remainder, 19,427, were cabin passengers, in whom no classified, were natives of other countries, but chiefly Germans. Of the crews who sailed in the above vessels 2,048 were Irish, 1,252 English, and 1,252 Scotch, leaving about 1,000 of other countries. It is expected that as the spring there will be a considerable increase in the number of emigrants leaving Liverpool for the purpose of going to the United States and Canada.

A CROOKED RAILROAD.—The *Pottsville Journal* says that one dark night, last week, an engineer of a lengthy freight train on the Catawissa Railroad, to his horror, perceived a light rapidly approaching, as he thought, upon the track. He sounded the alarm, and the brakes were at once applied, when he discovered that it was the signal upon the rear car of his own train, which, from the great curvature of the road, was often full upon him! It is related of a railroad somewhere in Virginia, that the engineers give themselves no uneasiness when they run off the track, confident that they will come upon it again before they go a dozen rods. Perhaps this is the same road.—*American Paper.*

THE *Northern Daily Times*, the first cheap daily paper started in Liverpool, has raised its price from 1d. to 1½d.

## EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Lord Canning will not be in Calcutta till about the 1st of March, as Lord Dalhousie does not intend to resign his office earlier. To consume time the new Governor-General will stop at Ceylon and Madras on his way out.

The Duke and Duchess of Nemours arrived at Turin on the 26th ult., from Genoa, and returned thither the same day, after paying their respects to the King of Sardinia.

A matrimonial alliance is understood to be concluded between the youthful Marquis of Lothian and the Lady Susan Ramsay, eldest daughter of the Marquis of Dalhousie.

Count Valentine Esterhazy did not reach St. Petersburg until the evening of the 26th ult. Such vast quantities of snow had fallen that the Austrian Minister had thirty-six hours on the road to Warsaw, where he passed a day, and visited Prince Paskiewitsch.

Mr. William Rose, brother of Major-General Sir Hugh Rose, is about to form a matrimonial alliance with the Hon. Miss Thellusson, daughter of the Lady Rendlesham, and sister of the Lady Walsingham.

The Duke of Sotomayor, formerly Ambassador at London and Paris, committed suicide on the 26th ult. at Madrid. He had been suffering for many years from violent attacks of gout.

By an Imperial order of December 20, Prince Menschikoff has been nominated Military Governor of Ironstadt.

The intended marriage of Sir Robert Peel, Bart., M.P., with Lady Emily Hay, youngest daughter of the Marquis and Marchioness of Tweeddale, and sister of the Duchess of Wellington, which was to have taken place on Thursday, is postponed for a fortnight.

The Birthday of the Empress Elizabeth of Austria was celebrated on the 24th ult., at the Imperial Palace, Vienna, in a strictly private family circle.

Count Buol, Baron Bach, and Count Leo Thun have received permission from the Emperor of Austria to wear the Grand Cross of the Pius Order, which they received from the Pope as a reward for the complaisance they displayed in the matter of the Concordat.

On Christmas-eve Mr. Monckton Milnes, M.P., delivered a lecture on poetry at the Wakefield Mechanics' Institution.

Baron Prokesch-Osten, the Austrian Internuncio, arrived at Constantinople on the 17th ult., and had his audience at the Porte on the following day.

Messrs. Baring issued a circular on Tuesday last stating that Mr. Edward Charles Baring, son of the late Mr. Henry Baring, and Mr. Henry Bingham Mildmay, son of the late Mr. S. St. John Mildmay, have been admitted into their firm.

M. Massimo d'Azeglio arrived at Turin from Marseilles, viâ Genoa, on the 27th ult.

Cluny Macpherson, the Chief of Clan Chattan, has sent to Glasgow £12 10s. 6d., being a subscription from the district of Badenoch, collected in shillings, in aid of the fund for the purchase of a Sword of Honour to be presented to Major-General Sir Colin Campbell, G.C.B.

A Russian convert to the Church of Rome (Father Djunkovsky) has just left Rome, decorated with the title of "Apostolic Prefect of the North Pole Missions," which was recently conferred upon him by a congregation of Cardinals, deputed by his Holiness, together with a yearly salary of 20,000 fr.

The rumoured death of Mr. Joseph Barker, lately of Leeds, turns out to be untrue. He is lecturing in Philadelphia and New York.

Mdlle. Taglioni has quitted Vienna for St. Petersburg, after a stay in the former capital of two months.

The Municipal Council of Turin had appointed a commission to report on the project of a Universal Exhibition at Turin. According to the plan proposed, the Crystal Palace is to be constructed round the Castle del Valentino, which will thus form its central structure.

The *Manchester Daily Telegraph*—the first cheap or penny newspaper established in the provinces—was put up for sale by auction last week, at the King's Arms Hotel, King-street, Manchester, after an existence of fifteen months. It was knocked down for £100; but the deposit money not being forthcoming the sale was declared null and void.

A letter from Havannah announces the arrival at that port of her Majesty's ship *Soland*, from Vera Cruz, with 2,200,000 dollars for England—600,000 was on account of dividends.

The Melbourne people are not half so extravagant as formerly, and many are reducing expenses to meet their business, which is falling away. Rents have fallen at least seventy-five per cent, and many who visited England rich, have gone back poor, in this sudden change.

Shipbuilding on the Clyde is very flat. In Greenock no fewer than 600 men have been paid off by three establishments.

The new line of railway from Vienna to Raab was opened to the public on Christmas morning.

Large quantities of grain which the Government had stored up at Cracow, Lemberg, and Olmutz, for the supply of the third and fourth armies when they were called on a war footing, are to be sold by public auction.

Last term 125 attorneys were admitted, and in Hilary Term a number of fresh applications will be made. The number in town and country is about 10,000.

Upwards of 60,000 hectolitres of wheat (the hectolitre is rather more than 2¾ bushels) have arrived at Marseilles during the past week, principally from Algeria, Spain, and the United States.

On Friday night a pile of warehouse buildings, extending from High-street into Marsden-square, Manchester, was destroyed by fire. The property is valued at £12,000 to £15,000

The steam-ship *Empire City* has arrived at New York with more than a million dollars' worth of gold-dust.

Oliver King and Warren C. Ayres—the first named recently a hotel keeper in Lowell, Mass., and the latter formerly a broker in Boston—were arrested on the 14th at Lawrence, Mass., charged with having committed a robbery of 50,000 dollars in gold from the American Express Company.

Baron Parke has not been gazetted, and there are said to be doubts whether he will take the title of Lord Ampthill. It is believed he will take his title from some place in the north of England.

Colonel de Manteuffel who arrived at Dresden last Sunday at noon from Berlin, was received by the King at a private audience, and then invited to dine with his Majesty. He set out again at night by the express train on his return to Berlin.

Lord Panmure has directed that the title of Secretary at War be no longer used; and that in all future communications and correspondence his Lordship is to be addressed only as Secretary of State for War.

The Czar has written a letter of thanks to General Mouravieff, and also sent him the decoration of the Order of St. George, second class, which is held in rare esteem in Russia, as an acknowledgment of his great services before Kars.

Previously to the departure of the King of Sardinia from Windsor her Majesty was pleased to present the King with one of the finest and most valuable thorough-bred mares in the Royal stud at Hampton Court, viz., the Fire.

The French Government has demanded of the Cabinet of Vienna an explanation of the toast which had been drunk in honour of the Russian army at a banquet given to Marshal Baron Hess, to celebrate his fiftieth year of military service.

The managers of the dispensary of Maximilian, St. Petersburg, announce that wounded officers who may be staying in the capital will be gratuitously attended to, and that warm and light apartments are at their service.

The *Calcutta Englishman* says the Marquis of Lothian and the Hon. Mr. Egerton are visitors at Lahore, having accomplished the grand tour of Ladak and Kashmeer

No fewer than eleven columns of the *Moniteur* of Tuesday are occupied with lists of promotions in, or nominations to, the Legion of Honour.

King George of Hanover has just abolished trial by jury for political offences in his dominions by his most decree.

The East India Coal Company obtained its certificate of complete registration under the Limited Liability Act of 1855 on the 27th ult., and the 2 cwt.-engines and machinery for working the mines on a large scale are now in course of shipment to Calcutta.

Mr. Drummond's late speech at Guildford is reprinted conspicuously by the *Journal de St. Petersburg*.

Mdme. G. Sand has had a comedy accepted at the Français, entitled "L'Ircsole." When read before the committee the members were equally favourable, four against—in French case, it seems, the literality of the regulations give the decision in favour of the author.

The Academy of Inscriptions and Belles-Lettres, at its last sitting, elected the Rev. Mr. Cureton, Canon of Westminster, a corresponding member.

The six arched entrances of the Louvre at Paris, opposite the Rue de Rohan, are now all open to the public, who may thus traverse the Place Napoleon III., and closely inspect the decorations of the pavilions and the statues of celebrated men which ornament the terraces.

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

MR. JOHN FORSTER, the author of the "Life and Times of Oliver Goldsmith" and other works destined to live hereafter, has just been appointed Secretary to the Commissioners in Lunacy. One of the Commissioners is a well-known poet, Barry Cornwall. Th folly of thinking that literary men are unfit for business habits is happily fast dying out. The appointment of Mr. Forster is one that will give satisfaction.

The Rev. William Cureton, Canon of Westminster, distinguished for his Oriental learning and his successful labours towards settling that *vexata questio*, the genuineness of the Ignatian Epistles, has just been elected a member of the Académie des Inscriptions et Belles Lettres of the Institute of France, to supply the vacancy caused by the death of Dr. Gaisford, the celebrated scholar and Dean of Christ Church.

When once we fall in love with that bewitching art, poetry, we take it for better or worse. It never quits us. This was said by Prior, alluding to Waller's passion for writing poetry in his old age. Mr. Rogers was a still more striking example. He was actually writing verse in his ninety-first year. Here is one of the latest droppings from his pen:—

TO A FRIEND ON HIS MARRIAGE

Forth to the altar, and with her thou lovest—
With *her* who longs to strew thy path with flowers;
Nor lose the blessed privilege to give
Birth to a race, immortal as your own;
That, trained by you, may make a heaven on earth,
And tread the path that leads from earth to heaven.

S. ROGERS, *Æt.* 91.

The above lines were composed by Mr. Rogers, at Brighton, within the last two years. "I sat (says our Correspondent) beside his chair watching their progress, and here quote them as they dropped from his own lips. There are others in MS. of a still more recent date."

The Irish Schools of Design which were lately at open war with the Department of Science and Art have reconsidered their grievances. The school at Limerick is again open, the Cork school is to reopen on the 8th of January, while the committee of the Belfast school, which some eighteen months ago issued an able report of their differences with the Board of Trade, have agreed, under protest, to commence operations under the new system. Mr. David Wilkie Raimbach (son of the eminent engraver), late master of the Limerick School of Art, and formerly second master at Belfast, has accepted the head mastership of the Cork School of Design.

It is not very generally known that Mr. Marshall, R.A., modelled, in 1844, a bust of the late Mr. Rogers, with his usual skill and care. The poet used to sit for a couple of hours after breakfast, and Mr. Marshall was permitted to have as many sittings as he chose. This, we believe, was the last bust for which the poet sat.

Mr. C. H. Cooper, of Cambridge, distinguished for the accuracy of his researches into University history, has just issued a prospectus for a work that is, indeed, much required -an "Athenæ Cantabrigienæ." Cambridge has nothing like Anthony Wood's great work. Mr. Cooper will have, we trust, every assistance which the heads of colleges can afford to so laborious and useful an undertaking.

On the back yard -once a garden of Evans's Grand Hotel in the Piazza of Covent-garden—a grand singing-hall has just been built, from the designs of Mr. Finch Hill. We have seen the room, and can speak of it as a most creditable specimen of modern architecture, in which utility has not been made to give way to ornament; and yet there is ornament enough, and that of a good kind. The new room was opened some three weeks ago.

The admirers of Addison will be glad to learn that the new edition of the works of that delightful writer, just published by Mr. Bohn, contains the letters of Addison—some two hundred and fifty in number—now brought together for the first time. Many of these are new, and of interest, though they will not add to his literary reputation.

Who does not recollect the low, dirty, and inappropriate piece of tasteless wainscot-work by which one was introduced into Westminster Abbey from Poets' Corner? That unsightly thing of the worst period of our skill in carpenter's work has just been removed, and a pair of doors erected in keeping with the architecture of the Abbey. Mr. Scott has done this good service.

The much-celebrated twenty-five thousand copies of a recent History are said to hang a little in the trade—but then money is scarce, and the season has not been one in which people have been at all prone to spend much on books. The trade, however, do not complain.

Mr. Sotheby, the well-known auctioneer of literary property, has just had executed a most interesting plate in connection with the celebrated Byron forgeries. On one quarto sheet of paper he has had copied with marvellous skill several examples of the handwriting of the forger; and below, on the same page, several examples of the forgeries themselves. The plate is designed to illustrate a chapter on Antiquarian and Literary Forgeries. One of the forged letters is now in the British Museum.

The following curious paper, illustrative of Travelling in the Environs of London, when George III. was King, has been sent us by a Correspondent. The original is before us while we write, and is now published for the first time:—

MEMORANDUM.

Sir John Fielding has desired Lord Rochford to submit to the King whether it might not be advisable that a Horse Patrole should be appointed every night between the Queen's House and Kew during their Majesties' residence at Kew

Sir John proposes that six of the Horse Grenadier Guards or of the Light Horse, with a sergeant, should be appointed every night for their service; two to cross each other between the Queen's House and Kensington; two others from Kensington to the further part of Hammersmith, and the other two from thence to Kew-bridge or to the Palace at Kew. Sir John will give the names of the several constables to be found in the different parts of the road, and a description of the people who are most likely to rob on that road during the course of the summer. Sir John thinks that even the name of a Patrole will be of great service to prevent that Road being infested with footpads and Highwaymen as it was last year, and he is very desirous that the King would be pleased to approve of the Night Patrole during their Majesties' residence at Kew, in which case Sir John will afterwards submit to his Majesty his whole plan.

The Queen's house stood on the site of the present Buckingham Palace. The date of the document is about 1780.

Her Majesty has been pleased to grant a pension of £25 a year to Mr. Joseph Haydn, author of the well-known "Dictionary of Dates." There is nothing in the warrant, we are glad to observe, about "distressed circumstances." The sum is too small.

## THE THEATRES, &c.

DRURY LANE.—A professional squib was adventured on Monday, directed professedly in good humour against the Wizard of the North. It is called "The Great Gun Trick," and Mr. C. Mathews personates the Original Magician of the Lyceum. The conjuring feats are connected by a kind of narrative, founded on the heroine of Valérie-sur-Somme in the sea-green bonnet, touching whom *soi-disant* posters and placards, and some amusing incidents, are introduced. Mr. C. Mathews acted the part with much lightness and self-importance, and performed the various tricks with manifest adroitness and finish. The audience seemed to doubt at first the spirit in which such an entertainment was conceived, but gradually "ontoned" towards the joke, and the whole may be said to have been successful. With a hundred nights' practice, Mr. Mathews, as he stated, hoped he might be able to rival Mr. Anderson himself; but it is not to be expected the public will afford even so firmly-established a favourite so prolonged an opportunity.

The Melbourne people are not half so extravagant as formerly, and many are reducing expenses to meet their business, which is falling away. Rents have fallen at least seventy-five per cent, and many who visited England rich Lave gone back poor, in this sudden change.

## MUSIC.

ON Monday last, New-Year's-eve, Madame GOLDSCHMIDT LIND sang in "The Messiah" for the first time in London. This was the most complete test which has yet been afforded of her powers as an oratorio singer. We in England have always regarded this masterpiece of Handel—the most sublime effort in music hitherto made by human genius—as belonging peculiarly to ourselves. For us it was written; Handel himself taught the performers of his day how it ought to be executed; and his instructions have been handed down by an unbroken series of traditions, from his own time to the present, a period exceeding a century. To this day it is only in England that "The Messiah" is thoroughly known. The French know nothing, or next to nothing, about it. You may now and then hear in Paris a chorus or an air extracted from it; but we may pretty safely affirm that it has not been even once performed entire in that *soi-disant* metropolis of the arts. The Italians once knew something about it; now, we believe, its very name is forgotten among them. In Handel's native country it is performed, of course; but it is not heard in Germany once for a hundred times in England; and the Germans themselves have the candour to admit that they must come to England to hear the music of Handel. When German singers essay this music in England, the most intelligent among them put themselves in some measure to school again they have recourse to our English masters, who are able to communicate to them the Handelian traditions and the Handelian style. In this way our veteran instructor, Sir George Smart, has done good service to many. Madame Rudersdorff, the last German who has distinguished herself as a singer of Handel, prepared herself by studies with Sir George Smart; and we are gratified to learn, as a further proof of Jenny Lind's admirable good sense, that she has been availing herself of the same assistance. There can be no doubt that Jenny Lind's own genius and knowledge would enable her to give beautiful expression and effect to any description of music; but it is equally well known that there are certain peculiarities which come to be recognised as constituting a peculiar style, and which cannot be intuitively acquired: and it is evident that Jenny Lind's mastery of Handel's style has been gained by her studies and attention to the performance of his works during her sojourn in England.

On Monday night this incomparable singer not only interpreted the text of the mighty master with a purity which has not been surpassed by any of her precursors—in our day, at least—but exceeded them all in the effect she produced on the immense assemblage, who were evidently entranced and spellbound by the majesty and beauty of her performance. It is not easy to analyse the elements of her superiority, but it is not the less certain that it was acknowledged by every one, not as the result of any critical process, but of instinct and heartfelt conviction. It cannot be ascribed to any particular qualities, but to a union of qualities found in no one else. Others have had voices equal to hers—as sweet, as clear, as powerful; and others have sung with equal execution. Nay, in quality of voice and volubility of throat some may be named who positively surpass her. Others, too, may perhaps rival her in intelligence and artistic attainment. But to these qualities, all of which she possesses in a high degree, she adds an indescribable gift, derived immediately from nature, which enhances their value a thousandfold. It is the *sacro fuoco divinoir*, the sacred fire of genius, which may be cultivated, but cannot be given—which may be fanned, but cannot be kindled, by any human power. In giving voice to the language of Handel her soul burns with Handel's own fire. She pours out his strains with the same fervour which conceived them; they flow from the depths of her own heart, and penetrate to the heart of every hearer. Where voice and execution only are demanded, other singers may come up to her. In "Rejoice greatly" Handel has admirably expressed the feeling of the words by a stream of brilliant roulades. Jenny Lind sang them splendidly, but without any marked superiority over one or two of her most highly-gifted rivals. But when she came to "I know that my Redeemer liveth"—that divine effusion of deep and fervent faith—her rapt, enthusiastic expression might have warmed a heart of stone. Equally remarkable, but in another way, was her melting tenderness in the heavenly air "Come unto me all ye that are heavy laden," which thrilled the audience with their sympathy and devotion. In short, we are inclined to resolve Jenny Lind's magic into expression. It is because she feels that she makes others feel—it is because her melody comes from the heart that all hearts are penetrated by it.

The performance of Monday, as a whole, is entitled to very high praise. The able director, Mr. Benedict, had evidently bestowed the utmost care in its preparation. We never heard Miss Dolby sing more beautifully. Her "O thou that tellest good tidings" was charming; and her "He was despised and rejected" was full of deep and evidently heartfelt pathos. The tenor part was divided between Mr. Lockey and Herr Reichardt. Lockey sang the opening recitative "Comfort ye my people," and the air "Every valley," with great power and effect. Reichardt (who has made himself by his studies and practice in England, an excellent oratorio singer) acquitted himself admirably, especially in the fine air "Thou shalt break them in pieces," which he delivered with great energy. The chorus and the instrumental orchestra were excellent.

MUSIC AT COURT.—On the evening of New-Year's-day there was a very fine musical performance at Windsor Castle, in the presence of their Majesty and Prince Albert, and a large and brilliant party. It consisted of Mdhui's sacred drama of "Joseph;" an exquisite piece, which, as a whole, is not sufficiently known to the public. It was originally produced at the Opéra Comique, there being no objection on the Continent to scriptural subjects on the stage; and is, in its original form, a little pastoral opera, in which the dialogue, simply spoken, is intermixed with airs and concerted music. In this country it cannot be brought on the stage; and in the concert-room the music is not intelligible, from the want of the connecting dialogue. To remove this obstacle the prose dialogue has been turned into poetical recitative by the skilful pen of Mr. Bartholomew, and clothed in music by Mr. Cusins, the organist of the Queen's private Chapel. The recitatives are masterly, and preserve all the animation and interest of the original dialogue. In this form the music was admirably performed, the principal parts being sustained by Madame Clara Novello, Mr. Sims Reeves, Mr. Weiss, Mr Benson, Mr. Montem Smith, Mr. W. Cooper, and Mr. Thomas. There was an orchestra nearly 140 strong, comprising her Majesty's private band, and a selection of performers from the Philharmonic Society, the Royal Italian Opera, and the Sacred Harmonic Society; the whole being under the direction of Mr. Anderson, the director of the Queen's private band. The performance was eminently successful; and Mdhui's chef-d'œuvre, thus arranged, will, we trust, soon be brought before the public.

A GRAND vocal and instrumental concert was given at the town of Stourbridge, on the 27th December, under the superintendence of Mr. George Wharton; the orchestra being conducted by Mr. Shargool, of Birmingham. The music, which was entirely of a sacred character, consisted of selections from "The Creation," "The Messiah," and Spohr's "Last Judgment," together with the whole of Beethoven's "Hallelujah Chorus." The principal vocalists were Mr. and Madame Weiss, Miss Mahlah Homer, and Mr. Cooper. The aria, "But Thou didst not leave," was executed by Madame Weiss with great beauty and pathos, and was boisterously encored. Mr. Cooper's singing was very correct as far as the mechanical arrangement of his voice was concerned, but it wanted energy and expression. Miss Mahlah Homer sang with extreme grace and feeling, and was loudly applauded in the airs "How beautiful are the feet," and "With verdure clad"—in the former of which she was encored. As to Mr. Weiss, it is only necessary to say that he was equal to himself. We know of no higher comparison. Whether he be regarded as a baritone or a bass, he stands unrivalled among English singers. The chorus, consisting entirely of amateurs, was admirably drilled, and performed their parts with much precision. The concert was fashionably and numerously attended.

## ADELPHI THEATRE.

THE pantomime at this theatre is distinguished from the general character of these performances by the introduction of Madame Celeste as *Harlequin*, and she is a most graceful representative of the motley hero. The *Columbine* is played by the pretty and clever Miss Wyndham; and those playgoers who only are acquainted with these ladies in connection with their more serious histrionic delineations will be greatly surprised and gratified at witnessing their Terpsichorean efforts. The tableau selected by our artist is one of the most striking in the pantomime, and represents a group which might have been painted by Watteau. It is the most charming stage effect we have ever seen, and should of itself at once attract public attention. The *Clown* and *Pantaloon* are played by Mr. Garden and Mr. C. J. Smith—two gentlemen very favourably known

SCENE FROM "JACK AND THE BEAN-STALK," AT THE ADELPHI THEATRE.

to the requenters of the Adelphi as actors of considerable merit, and who have, in conjunction with Miss Wyndham, upon this occasion gone out of their way to support their excellent directress in her new and arduous undertaking.

## THE DOVER SAILORS' HOME.

THE Dover Sailors' Home was inaugurated on the 29th of November last by Captain Hall, R.N., of her Majesty's ship *Blenheim*. This gallant and much-respected officer, it is well known, has always taken a very praiseworthy interest in the welfare of institutions having for their object the social or moral amelioration of the sailor's condition, and, as foremost among such, has invariably lent all the aid in his power to the establishment of Sailors' Homes. It was mainly owing to his suggestion, we

THE DOVER SAILORS' HOME.

believe, coupled with the untiring energy of the Rev. W. Yate, of Dover who in his interest in the seafaring population, so far as we can judge, yields the palm to none, not even to the gallant Captain himself - that the Sailors' Home in Dover has been reared. From a small though comfortable receptacle for shipwrecked and distressed sailors, it has now become a permanent, as well as one of the most useful and important of our local institutions. The Dover Sailors' Home is a very handsome edifice exteriorly, and, what is of much more importance, its internal resources are all that can be desired in an institution of this sort. Besides having forty beds at disposal, it comprises a refreshment-room, reading-room, smoking-room, bath, an excellent kitchen and convenient offices; in a word, it is complete, and reflects the greatest credit on the architect and the builders.

The ceremony of opening the Home took place in the reading-room, which was filled with a very influential assembly, including a great number of ladies, among whom were Lady Torrington and Mrs. Hall. E. R. Rice, Esq., M.P., the Mayor of Dover and members of the Corporation, Admiral Harcourt, Admiral Mortier, Capt. Noble, Capt. Macilwaine, Montague Gore, Esq., Lieut. Mudge, W. Cocke, Esq., W. Hakes, Esq., E. T. Way, Esq., were also present.

## STANSTEAD COLLEGE.

LAST week it was recorded that letters of administration had issued from the Prerogative Court, under the will of the late R. Dixon, Esq., of Stanstead-park, near Emsworth, Hampshire, who, during a long and honourable career as a port-wine merchant, had amassed a fortune to the great amount of more than one million sterling. The document, dictated shortly before the demise of the testator, exhibits much of the characteristic traits by which he was distinguished through life—being at once clear, concise, and decisive. He bequeaths the estates, together with the mansion, plate, jewellery, furniture, &c., and property in land, valued at about £3000 per annum, and a sum of £400,000 in the Funds, to his widow, for her own absolute use. He leaves to his two sisters, both of whom are advanced in years, £200,000 each. To all his servants £50 a year for life, and a further sum of £500 to such as had been long in his service. To every labourer on the estate he has left £5, independently of other minor legacies. About two months before his death he distributed the large sum of £85,420 amongst some of his personal friends; adopting the plan of gifts in order to evade the legacy-duty, to the payment of which he had very great repugnance. His charitable performances were in accordance with his vast wealth. Some few years back he built, and liberally endowed a college, or almshouse, for the reception of reduced merchants of advanced age. He also erected a church, with a parsonage and school-house, in the hamlet of Stanstead, making ample provision for their permanent maintenance. Mr. Dixon was twice married, but leaves no issue by either marriage. His widow is sister to Admiral

STANSTEAD COLLEGE, ROWLAND'S CASTLE, HANTS.

Walcot (late of Bath), the member for Christchurch, and first cousin to Sir Edmund Lyons, the Commander in Chief in the Black Sea.

Stanstead College, of which we engrave a View, is situated at Rowland's Castle, Hants. It is built in the Old English domestic style, and its gables and chimneys ("windpipes of hospitality"), are characteristic of the benevolent object of its worthy founder. The front of the building bears a tablet with this inscription:—"Thankful for having means." CHARLES DIXON, Esq., of Stanstead, late a merchant of London, erected and endowed this building for the benefit of his less successful brethren." Each inmate receives £40 per annum, and £1 per month towards his dinner. There are kept two female servants, and one male servant. The rooms are furnished in the most substantial manner. There are also allowed the sums of £30 per annum for coals, £20 per annum for medical attendance, and £20 per annum for the services of a clergyman.

## MARKET SCENE IN THE BAHAMAS

*(From a Correspondent.)*

THE kind and gentle spirit of the aborigines of these beautiful islands still seems to linger here; for the present inhabitants exercise an unostentatious but warm-hearted hospitality. There is an air of vitality, as well as cheerfulness, about the clean, neat, quiet little town of Nassau, with its well-chosen library and literary institute. After the miseries of a long sea voyage, with what delight does the eye rest upon the green tints of New Providence: Nassau, and its long lake-like harbour, dotted with swift-sailing schooners, presents, indeed, a very pretty aspect. In the distance is seen the tall, slender spire of a church, like that of an English village, rising from a rounded clump of trees, until the pointed steeple is lost in the blue of heaven; but the beautiful cocoanut-palms, waving their plumed heads in the gentle breeze, and the brilliant skies, bring back the consciousness of another clime than that of dear old England.

Here, the population present a lively scene. Gay groups of chattering negresses, in their many-coloured turban-tied kerchiefs, with abundance of bandanna, solicit the attention of passers-by: "Hi massa!—my sweet massa!—buy beautiful banana!" Here and there lounges along some pale lemon-coloured Creole, with broad Panama hat and never-ceasing cigar, some would say tainting the balmy breath of the cool fresh morning; then come grinning gigantic negroes; whilst on all sides lie neglected heaps of conch-shells.

Along the sea side street surely it seems to snow—cotton lying about in white flakes, large yards piled full of it—huge, plethoric, bursting bales: these are cargoes of cotton wrecked upon the coast. Heaps of huge sponges are strewn about sometimes used as manure; for they grow plentifully in these seas.

Here is a quaint group of characters. One of the evilest-looking of genii, big and and black enough to have tumbled out of an Arabian Night, after lighting Aladdin's lamp. Beside him stands a tall, graceful girl, like a bronze statue of the Queen of Sheba—a plenteous lipped daughter of Ethiop, with great eyes, calm and placid as the Sphinx: ancient, time-honoured type of a beauty that has yielded to the later forms of ideal Greece, with its curt, curled-like lip; delicate, but firmly rounded oval chin; glorious front; and eyes so deeply set beneath they could not squint, nay, nor look furtively aside without turning the whole lordly head.

But what is this to the athletic African, as he sits sullenly, machete in hand, haggling with that fat old lady about the price of a bundle of grass he has brought from the interior?—the ferocity of his face strangely reminding one of the sons of the Gadites, described in the "Book of Chronicles" "as men fit for the battle, whose faces were like the faces of lions" Though perhaps the physiognomy of my friend resembles more closely the British lion as he appears on a door-knocker. The family likeness is also perceptible in that black-satin boy beside him (with an aldermanic exaggeration of stomach), almost unencumbered by any clothing. More market girls, bearing burdens on their heads: slow and stately in their every motion, they look as if they could not possibly be surprised into any angularity or sharpness of action—queenly! Yet (as a pleasant writer on the Tropics remarks)—strange to say, from bearing the burden of the slave!—who shall say labour is undignified?

At the date of our Correspondent's letter, September 12, Nassau had just been the scene of great festivity, to celebrate the marriage of Captain Lynge, R.E., to the niece of the Governor of the Bahamas.

THE MARKET IN NASSAU, NEW PROVIDENCE.

## EARTHQUAKE IN JAPAN.

THE following account of this calamity is from notes taken by a Russian officer descriptive of the effects felt at Simoda, when the Russian frigate *Diana* was wrecked and lost:—

On the 23rd of December, 1854, the men on board the Russian frigate *Diana*, being desirous of shifting their berth, sent a boat to lay out a small anchor on the bow, and at 9.30 another anchor was laid out on the quarter. At 9.45 she was observed to shake very much for about a minute. At first they imagined her to be aground; but, on sounding, eight fathoms water were found round her. The day was beautifully fine and clear, the sky without a cloud, and the water perfectly calm—nothing more was thought of the matter, and the duties of the ship were proceeded with. At ten a.m. a large wave was noticed rolling into the bay, and the water on the beach very rapidly rising immersed the village of Simoda; it appeared to those on board the frigate as if the village was sinking. A large Japanese junk was driven on shore with violence; but the frigate held to her anchors. The cutter and Captain's gig, which had been undergoing repairs on shore, were seen drifting out to sea, and a boat was sent to pick them up, but about five minutes afterwards the water (now very muddy) was observed rushing out of the bay. The guns were now secured, lower-deck ports closed, and hatches battened down; the boats recalled, and a large boat (pinnace or barge, probably) was obliged to throw everything overboard, and make the best of her way to the frigate. The boats had barely time to fetch the ship when a second wave rolled into the bay; this carried on shore all the boats that were afloat; and on its receding all the houses that had formed the village of Simoda were washed into the bay, covering the water with ruins of houses and wrecks of junks.

The frigate now dragged her anchor, and a short while afterwards a large junk came with great violence against her starboard bow, carrying away flying jib-boom, jib boom, mariningale and swinging boom, and injuring the bow. Three men from the junk managed to scramble on board the frigate, but the other five refused to go, and in two minutes all went down alongside—the ship at the same time swinging most violently. She continued this motion for about half an hour, and during this time must have made from sixty to seventy revolutions dragging her anchors all the time the islands.

The ship was now at the mercy of the waves. All command of her was lost; and at one time she fell on her beam-ends, so that it was impossible to stand on deck; but from the gyration she made no shock was felt. This lasted for five minutes, when the water rose, and she slipped off, tearing away a rudder, half of sternpost, false keel, and a piece of keel eighty-one feet long, besides two planks; and before she righted she described the same circle several times. One of the midship guns broke adrift, and jumped across the two guns on the opposite side, killing one man and injuring four others. At twelve o'clock the current was less violent, and shores were got out and placed against the ship's side. At 12 30 the water again rushed into the bay with the same impetuosity, swinging the ship to and fro as before. This continued until 2.30, during which time she was on her beam-ends five times, but not so much as before; the shores were carried away. The water rose and fell very rapidly; in five minutes it would decrease from 22 feet to 3 feet, and at one time it was so low that all the anchors were visible above water. At three everything was still, and the ship in 22 feet water, making 22 inches every hour, until finally she went down. Around nothing could be seen but wrecks of junks and fragments of houses: from the roof of one of the latter an old woman was taken, quite insensible.

SCENE OF THE RECENT EARTHQUAKE IN JAPAN.—SINKING OF "THE DIANA."

## NATIONAL SPORTS.

THE advent of a new year finds the dark Danebury horse, Wentworth, with the lead in the Derby betting, which is anything but spirited; and, looking dimly through the vista of the future, we may safely predict a Two Thousand Guinea race of no ordinary interest, and perhaps a dashing Ascot Cup match between those noted opponents, Fandango and Rifleman. Twice has the latter proved himself the better of the two at a mile, and a mile and three-quarters; but an additional three-quarters of a mile, and a hilly course, in favour of the Richmond horse, who is, in turf parlance, "never done with till he is past the post." Mr. Mare's name figures very largely in Messrs. Weatherby's forfeit list; but his horses were not of a stamp to be affected by future exclusion from races. The only offer upon which Neville Gordon will be able to put the Indian Warrior and Mirage coupled—both of them as unlikely winners as we can well conceive. The entry for this race, and speculation on the coming weights, are beginning to supersede the and "Fell" poisoning case at Tattersalls; and we hear that Dr. Palmer has been induced, by the timely threats of the Stafford gaol authorities, to take proper nourishment at last. His stud of thirteen brood mares, racers, and yearlings, has been seized under an execution by a Birmingham attorney, and will be sold at Tattersall's on Monday next. Neville Gordon, when she injured herself and Marlow so severely by bolting over the ropes, in consequence of a spur getting jammed into her side, when she was about to win the Oaks in a canter. She is a very fine-barrelled mare by Sweetmeat, and the *beau ideal* of a stayer; and hence, if perfectly recovered, she ought to fetch at least 800 guineas.

Blood foals will soon be dotting the stud farms in every direction, and The Flea, who was selected from the Hampton Court paddocks, and presented to the Khan by her Majesty, has already dropped to her Orlando foal, will be forwarded to Turin, it is to be hoped with a Pyrrhus the First foal, before the end of the spring. Acrobat has retired from the turf; Chanticleer has returned to his old haunts at Rawcliffe paddocks; and West Australian's subscription, like the Flying Dutchman's, are declared full. If these latter two fall at the stud, it will not be for lack of the choicest mates. This reminds us that the *Sporting Magazine* has opened the new year with a series of articles entitled "The Post and the Paddock," and also contains a pungent and a manly protest from the Northern jockey, S. Simeon Templeman, one of the few remaining professionals who went to scale with old Frank Buckle. His career in the saddle has now extended over a third of a century, and those who have watched his undeviating integrity and honesty must have not unfrequently felt indignant at the strange treatment he has met with during the past season from one of his regular masters, and a trainer, at whose hands he deserved better things. He is represented here in the blue and white stripes of the late Mr. Meiklam, for whom he rode some of his best races. From the French turf calculations we observe that Gladiator still preserves his superiority among the winning sires, and that M. Aumont is the premier among winning owners, with 167,500 francs.

The solitary steeplechase fixture for next week is at Gainsborough on Thursday. Where a hunt and a handicap race will be run. Coursing meetings are alike few, and the only couple of any importance that we know of at this date are Hainton and South Lancashire (Open) on Wednesday and Thursday. A novel stake of 50 gs. each for eight puppies of 1854, is proposed to be run at Newmarket, on Feb. 6th; the lucky winner of which will place a fine cheque to his master's credit than any of his gentle kind have done of late even on the plains of Altcar or Stonehenge. Local papers are as full of reports of strange birds in their respective varieties as they are wont to be, in due season, of monster turnips and plethoric gooseberries. The Chester Roodee for instance, that spot so teeming with turf recollections, is said to have been lately one living mass of sea-gulls. A sittern has been shot; while a red-legged buzzard has been viewed by the passengers in a railway train. A wild duck has also been dropped at eighty-seven yards by the aid of three pellets of No 3 shot; and twelve crossbills or sea-parrots have been brought down by one barrel in the neighbourhood of Seaford. To defeat the arrangements of such birds to come to as yet with Lord Chesterfield about hunting the Donnington country; but as Lord Forrester hunts five days a week, and Mr. Richard Sutton three, and the Cottesmore are within reach as well, the Meltonians have very little to complain of. The pleasures of Quorn-hall have completely departed with the close of the Sutton dynasty, and the whole of the estate has been sold for £14,000 to a Loughborough manufacturer, who intends to reside there. Its career has been an eventful one since the days of Meynell, and it was a glorious era for the chase. Few a time has Mr. Richard Sutton would have consented to spend £10 000 a year over hunting a country; and it is to be hoped that this liberality will spur the hunting men, who are sadly remiss in these matters, into keeping up a sub-cription pack, under Mr. Richard Sutton, which will be thoroughly worthy of this "Vale of Cashmere."

MR. OSBALDESTON.—We are requested to by a correspondent who ought to be well informed on the matter to state "that the information we received respecting Mr. Osbaldeston's 'quarrel on the turf' in December. We must further explain, in correction of our correspondent, that the word "tricks" was not used by us, nor, as far as we can discover, any word or phrase conveying that idea.

AMONGST the game shot in the covers of the Earl of Stamford, at Enville, on the 19th ult., was a very remarkable and handsome bird, between the black-game and the pheasant, more resembling the former than the latter, and weighing nearly 3 lb. A very fine specimen of the sitter (*Tetrao Tetrix*) was shot on the same day. A singular instance of the Carolina duck and widgeon breeding together has occurred in the pleasure-grounds at Enville-hall (the only one known), the young being hatched (a male and female of the Carolina or tree-duck). The produce is, fortunately, two females and two males, the latter now coming into brilliant plumage.

THE WINE TRADE.—We borrow from the circular of Messrs. John Reay and Sons, of Mark-lane, the following interesting particulars with respect to the wine trade:—"In Portugal the continuance of the vine disease, combined with the heavy rains during the gathering of the grapes, has caused the wines of 1855, generally, to be of a very inferior quality, and in quantity not equal to one-fourth of an average vintage. Old wines are exceedingly scarce, and consequently dear; but we are of opinion that even at present prices, with a restricted consumption, they will be remunerative to the bottler, and be a safe investment for his capital The appearance of the oidium in Spain, and an unfavourable vintage, have considerably decreased the stocks in Xerez and caused a further advance in the prices, especially of the pale or finer sorts of sherries: this is likely to be fully maintained We can report more favourably of the claret districts, the quality of this year's vintage generally being good, though in quantity far below an average. The quantity of champagne produced last year was extremely small, and the best growths have already been sold at high prices; this, combined with the very small stock of first-class wine now on hand, must fully sustain existing rates."

GRAND POULTRY SHOW AT COLCHESTER.—The promise of a hand some piece of plate, value £21, in addition to the usual money prizes, brough together a large and valuable collection of first-rate birds in all classes at this show; and the committee and honorable secretary, Mr. Watson, have to congratulate on the success of their labours, and the satisfaction so generally expressed with their arrangements. The Twenty-guinea Cup, which was open to all England, was offered to the best general collection of poultry, and fell to the lot of H. D Davies, Esq., of Spring Grove House, Hounslow. We have before had the pleasure to announce this gentleman's success, and drawings of some of his birds have been given in previous numbers. Mr. Fenton was the most successful candidate, and obtained a cup, value £5 5s. In this, as in many similar things, the good sense of our countrymen has extended a useful result from that which had for a commencement a mere poultry mania, which it was supposed would subside, like the ling and other manias. Committees are now formed, in connection with agricultural societies and otherwise, in all parts of the country, for the improvement of domestic poultry; and equally rapid strides are being made in the improvement of all kinds of food for the table, as formerly surprised every one in regard to our cattle and farming stock generally. Dorkings, which formerly weighed from 4 lb. to 7 lb., now commonly, in the best yards, weigh from 7 lb. to 10 lb.; duck, which formerly were five birds at 3 lb. and 4 lb., may now be seen weighing from 7 lb. to 8 lb. each; and geese, which would have satisfied us at 10 lb. or 12 lb., now frequently reach 15 lb. and 20 lb.—from 9 lb. and 25 lb.; and all this by increase of frame and solid flesh, without any great additional expense in feeding. It is to be hoped that the useful properties of our domestic fowls will continue to be kept in view, especially as such valuable premiums are held out to the successful competitors.

A DISAPPOINTED AMAZON.—The Allied cause has just been deprived of the services of a fair young Amazon, who longed to do battle against the Muscovs. The daughter of the Oppoff-Marshall of Sarkey, a fine young old, managed to get clear of her father's house, and to arrive, per railway, at Kehl in man's attire and smoking a cigar. Here she was arrested in her further progress, and conveyed ignominously back to the seat of parental authority.

Lieutenant-Colonel Lord Adolphus Vane Tempest left town, on Friday last, to rejoin his regiment, the Scots Fusilier Guards, in the Crimea.

We understand the contemplated rejoicings at Brocklesby, in celebration of Lord Worsley attaining his majority on the 9th instant, have been abandoned, in consequence of the continued indifferent health of the noble Earl.

A NEWSPAPER WAR IN LIVERPOOL.—The *Liverpool Mercury*, one of the oldest-established newspapers in the country, and which is now published tri-weekly, announces a reduction in price from threehalfpence to a penny. It is understood that this reduction in price is intended to wage war with the *Daily Post*, the only penny paper now remaining in Liverpool; and, from all that can be gathered, the competition will be fierce, if not lasting. It is said that the conductors of the *Mercury* do not pretend to deny that the present reduction will entail upon them a severe loss so long as the competition continues, but that their object is to compel the *Daily Post* to advance its price to what they deem to be the proper standard; and that, in order to enforce compliance, they are prepared to sacrifice an enormous sum of money in the struggle; whilst the conductors of the *Post* express full confidence in the success of the penny system, and are, so far, unwilling to advance.—*Letter from Liverpool in the Globe.*

REFORMATORY SCHOOL FOR NORTHUMBERLAND, DURHAM, AND NEWCASTLE-ON-TYNE.—A committee, consisting of Karl Grey, Mr. J. H. Hinde, Mr. R. Carr, and Mr. J. H. R. Atkinson, appointed at the meeting of Justices of the Peace for Northumberland, at the October Quarter Sessions, recommend that an efficient reformatory school for the two counties and Newcastle should be established as soon as possible, and that a suitable building should be provided for the purpose in some situation removed from a large town, and that the Justices might make a contribution towards it from the fund at the disposal of the Court, arising from Justices' wages, which amounts to £155 18s. 10d. The committee further suggest "that the Court might with propriety express their opinion to her Majesty's Government that provision ought to be made by law for establishing and maintaining such institutions, and might also petition Parliament to pass an Act for that purpose."

CAPTURE OF A WILD CAT.—On Friday week a man caught, in a wood on Kirkeman Hill, near Stirling, a fine live specimen of that nearly extinct class of the savage creatures of Scotland—a wild cat. It had been driven by hunger and the inclemency of the weather from its native recesses, where a baited trap, in the shape of a blush-grey colour, stands high, and measures three feet in length from the nose to the tip of the tail.—*Scotsman.*

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

THE Revenue Returns being considered unfavourable, and as it is evident that the Chancellor of the Exchequer will have to borrow more money, we have had a very dull market for all national securities, and a fall of nearly 1 per cent has taken place in the price of Consols Numerous heavy sales of Stock have been made by the joint-stock companies, evidently for the purpose of meeting the dividend payments; and, as our instalment of 10 per cent upon the new Turkish Loan has fallen due, the supply of money in the discount market has become very limited. The applications for commercial paper continue to be presented at the Bank, and the rates have continued fully up to those of last week. In reference to speculative sales of stock, we may observe that they have been unusually heavy, and our impression is that a great deal more than the usually depressing influence upon the Unfunded Debt, which has been at 10s and 12s. discount.

Since we last wrote, about £600,000 in gold has arrived from Australia and the United States; but we learn that the whole of it has been purchased for the Bank of France. These continuous sales, added to the heavy shipments to India, are productive of serious inconvenience to our merchants and others; but from information received from Paris, and which states that the drain of bullion will continues large, we are apprehensive that heavy supplies have yet to follow

A portion of the new Russian Loan of £8,000,000 has been subscribed for at Berlin, Amsterdam, and Hamburg; but the committee of the Paris Bourse have wisely determined not to allow the scrip to be quoted. It is asserted, on good authority, that a portion of the gold recently forwarded from this country was on account of the Loan in question.

The transactions in the English market on Monday were limited, and prices had a drooping tendency. The Three per Cents Reduced were done at 88¾ to 88½; Consols for Account, 88¾ to 88¾ ⅜; and the New Three per Cents, 88¾ to 88¾ ⅝. Bank Stock was 206. Long Annuities, 1885, realised 3 3-16. India Bonds, 4s dis.; Exchequer Bills, 5s. dis.; Exchequer Bonds, 97¾. On Tuesday very few purchases of stock were effected, as follows:—Three per Cents Reduced, 88¾ to 88; Consols for Account, 88¾ to 87¾; New Three per Cents, 88¾ to 88; India Bonds, 5s. dis.; Exchequer Bills, 6s. to 10s. and 12s. dis. Increased heaviness was apparent on Wednesday, and prices were again drooping. The Reduced Threes were 87¾ ⅜; Consols for Account, 87¾ to 87; New Three per Cents, 88¼; India Bonds, 5s. dis.; Exchequer Bills, 7s. to 10s. dis.; Exchequer Bonds, 97. On Thursday great heaviness prevailed in the English Stock-market, and the quotations were again lower. Three per Cents Reduced, 87¾ down to 87 ⅝ ex div.; the New Three per Cents, 87½ to 88; and the Reduced, 87½ to 87⅝. Bank Stock was steady, at 205½ Exchequer Bills were firmer, at 5s. to 6s. discount. The Bank Directors made no change in the rates of discount.

In glancing at the Consols-market for the past year, we find that the Three per Cents opened on the 1st of January at 91¾, that the highest price was 93¾, and the lowest 87¾. The new Three per Cents, 88¾; India Bonds, par; but in the former year it was 7¾ per cent. The depression in Railway Shares has been much greater. London and Brighton were at one time 108; Eastern Counties, 54; Great Northern, 89; Midland, 108; Bank of England, 215; Bank of Ireland, 214; South-Western, 88; and Northern of France, 85. The figures given in our present report show that railway property has seriously fallen. The highest price in the market was reached in 1854 was 27s. prem., and the lowest quotation 12s. discount, notwithstanding that an advance took place in the interest.

From a return just issued, it appears that the shipments of bullion and specie to France, via Folkestone, in 1855, were 2,477,923 ounces of gold, and 1,772,866 ounces of silver, valued at £10,360,000. These supplies are exclusive of those forwarded by private hands, which were very little short of £4,000,000 sterling

The fore gn house has been wholly devoid of animation, and sales have consequently been limited. Brazilian Five per Cents, 85¾ ex div.; Buenos Ayres and 90½; Ditto Small, 90½; Ditto Four-and-a-Half per Cents, 90¾ ex div; Danish Three per Cents, 88; Mexican Three per Cents, 19¾; Portuguese Four per Cents, 43 and 42¾; Russian Five per Cents, 97¾ and 98; Ditto Four per Cents, 88¾ to 89; Ditto Small, 83½; Ditto, New Scrip, 3¾ discount; Dutch Two-and-a-Half per Cents, 63¾ ex div.; Dutch Four per Cents, 94¾; Spanish, 4¾; Russian Five per Cents, 87¾ and 88¼ ex div.; Sardinian Five per Cents, 82¾ and 82; Belgian Four-and-a-Half per Cents, 95¾.

The last return of the Bank of England exhibits a total note circulation of £19,280,978; an amount of securities held of £20,055,320; a stock of bullion under £11,000,000; and a reserve of £7,076,855.

Most Joint-Stock Bank Shares have been steady as to price; but the transactions in them have not been very limited. Australian have realised 49; Bank of London, 58¾; English, Scottish, and Australian Chartered, 16⅝; London Joint-Stock, 8¾; Oriental, 38; Provincial of Ireland, 5¾ ex div.; Union of Australia, 74; the Scrips, 30¾.

Miscellaneous securities have been dull and drooping. Australian Agricultural, 28; Canada Company's Six per Cents, 109¾ ex div.; Ditto Government Six per Cents, 107½; Crystal Palaces, 5¾; Ditto Second Series, 2¾; Ditto Limited, 2¾; Peninsular and Oriental Steam, 63½; Scottish Australian Investment, 1⅝; Ditto New, ¾; South Australian Land, 3¾ ex div.; Van Diemen's Land, 15. Asiatic and Australian Shares have realised 145; Derby, 54; Loughborough, 550; Regent's, 14½; Stafford and Worcester, 420; Stourbridge, 290. Berlin Waterworks have sold at 7; Kent, 7¾; Southwark and Vauxhall, 89½; Ditto New, 3¾ ex div.

Compared with Consols, the fall in the value of Railway Shares has been trifling; but the business done in them has been trifling. The "calls" for this month, payable on Monday next, amount to £1,822,822 in January, 1855. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Amalgamated, Nottingham, and Boston, 39; Caledonian, 53¾; Eastern Counties, 5⅞; Edinburgh, Perth, and Dundee, 21; Great Northern, 87½; Ditto, A Stock, 73¾; Great Western, 52, Lancashire and Yorkshire, 75¾; London and Blackwall, 6⅛; London and Brighton, 99¾; London and North-Western, 96½; Ditto, Half-Shares, 48½; Midland, 76; Ditto, Birmingham and Derby, 38; North British, 29½; North-Eastern, Berwick, 67½; Ditto, Extension, 13; Ditto, G N E Purchase, 10½; Ditto, Leeds, 22½; Ditto, York, 67½; Shropshire Union, 42¾; South-Eastern, 66¾; Vale of Neath, 19; Waterford and Kilkenny, 4.

LINES LEASED AT FIXED RENTALS.—London, Tilbury, and Southend, 11¾ ex div.; Bradford and Midland, 150.

PREFERENCE SHARES.—Great Western Four-and-a-Half per Cent, 85½; Ditto, Braunghum, 93; North-Eastern (York) 92.

FOREIGN AND COLONIAL.—Rotterdam, 7¾; Eastern of France, 3¼; East Indian Extension, 15⅜; Great Central of France, 10¾; Great Luxembourg Shares, 5⅜; Ditto, Obligations, 3; Great Western of Canada Shares, 24¾; Ditto, New, 8¾; Northern of France, 35; Royal Swedish, 24.

Mining Shares have been dull. On Thursday, Brazilian Imperial were 2; Ditto Cocaes and Cuiaba, 2½; Cobre Copper, 67; Fortuna, 1; Quartz Rock, 1; South Australian, ¾; United Mexicans have realised 4 to 4¼.

*Friday Evening.*

The Consol-market is very flat to-day, and prices show a disposition to give way. The Three per Cents, ex div., are 87¾ ⅜ to 87¾ ⅝, 87 to 87¼; the Reduced, 87¼ ⅜ to 87⅜; and the New Three per Cents, 87¾ ⅜ to 87¾ ⅝. Very few Bank and Railway Shares are dull. The shipments of bullion to India and China are very heavy.

## THE MARKETS.

CORN EXCHANGE (Friday). The present week's arrival of English wheat has been again very moderate; and the samples fresh up to-day were trifling. Although the show of samples was small, the demand was in a sluggish state, as Monday's decline in the quotations. Foreign wheat—the show of which was by no means extensive—was dull and almost nominal in price. We had a dull sale for barley and malt, as well as floating cargoes of grain, at late rates. Oats met a slow sale, but no change took place in the value. Beans, peas, and flour moved off heavily. The two former articles were easier in purchase.

*Arrivals this Week.*—English, wheat, 9630 quarters; barley, 3400; malt, 410; oats, 120; flour, 2260. Irish, oats, 4370. Foreign: wheat, 3460; barley, 6700; oats, 8460; flour, 300 sacks, 1790 barrels

*English.* Wheat Essex and Kent, red, 60s. to 68s; ditto, white, 63s. to 72s.; Norfolk and Suffolk, red, 60s to 67s.; rye, [illegible]; grinding barley, 34s. to 35s.; distilling ditto 36s to 37s.; [illegible] Lincoln and Norfolk malt, 74s. to 80s.; Ware and Chevalier, 78s. to 80s.; Chevalier, 80s. to 82s.; [illegible] Kingston and Ware, 78s. to 80s.; [illegible] ditto, 78s. to 80s.; [illegible] white, 24s. to 28s.; tick beans, 30s. to 34s.; grey peas, 34s. to 36s.; white, 40s to 44s.; boilers, 47s. to 51s. per quarter. Town households, 2s. 10d. to 3s. 2d.; Stockton and Yorkshire, 2s. 8d. to 3s. 2d. per 4lb. loaf.

*Irish.* [illegible] per cwt.

*Foreign.* Wheat, 72s. 8d.; barley, 32s. 4d.; oats, 26s. 11d.; rye, 54s. 11d.; beans, 49s.; peas, 47s. 6d.

*Prices of the Week's Averages.*—Wheat, 68s. 7d.; barley, 41s. 1d.; oats, 27s. 11d.; rye, 54s. 4d.; beans, 51s. 5d.; peas, 50s. 3d.

*English Corn Sold last Week.*—Wheat, 98,964; barley, 13,333; oats, 16,353; rye, 2; beans, 3038; peas, 1725 quarters

TEA.—The amount of business doing in our market is very moderate. Prices, however, are steady.

*Sugar.*—Fine parcels of sugar have sold slowly, on former terms; but other kinds have fallen from ½ to ¾s per cwt., with a large supply.

*Coffee.*—We have to report a good consumptive demand for all kinds, at fully last week's prices. Good ordinary parcels have sold at 66s to 68s. per cwt.

*Rice.*—Owing to the heaviness in the corn trade our market is very inactive, and the quotations are in favour of buyers.

*Provisions.*—The Irish butter market is very inactive, and late rates are barely supported. English qualities are held at full prices; but the business doing in them is limited. Fine and middling Friesland are offering on lower terms. The bacon trade is heavy, and inferior qualities are cheaper. In other kinds of provisions very little is doing.

*Tallow.*—The demand for tallow for home consumption has declined, and is barely previous rates. P.Y.C., on the spot, 67s. 6d. to 68s. per cwt. The supply of town tallow is by no means excessive.

*Oils.*—Linseed oil has sold freely, at 42s. 6d. to 43s. 9d. and 43s. per cwt. on the spot. All other oils dull.—Cocoa-nut, 44s. to 3s. 1d.; Palm, 42s. to 42s. 6d.; Carron, 42s. 6d. to 43s.; Seal, 42s. to 43s.; Sperm, 84s. to 86s.; Pale Seal, 44s. to 45s.; Turpentine continues dull. Rough is quoted at 19s 6d. to 21s.; American spirit at 34s.; and English ditto, 32s. 6d per cwt.

*Spirits.*—Most kinds of rum are a slow sale. In prices, however, very little change has taken place. Fine Leewards, 1s. 2d. to 1s. 3d.; East India, 1s. 2d. to 1s. 3d.; per gallon. Brandy is easily, but not dearer. Cognac, best brands of 1851, 5s. 6d. to 5s. 8d.; 1850 ditto, 5s. 2d. to 5s. 4d.; 1848 ditto, 4s. 10d. to 5s. per gallon. Geneva, 3s. to 3s. 10d.; malt spirit, 11s. 2d.; gin, 7 o.p.u.r., 16s. 6d.; and 22 ditto, 16s. per gallon

*Hops and Drugs.*—Mandder bay, 54 4s. to 72s; choice ditto, 84 10s. to £7; and straw, £4 4s. to £10s. per cwt.

*Potatoes.* The supplies are moderate, and in but middling condition. About average sales have taken place at from 60s. to 110s per ton

*Hops.* [illegible]—There is a fair business doing in fine new hops, at full prices. All other kinds support last week's currency. This week's imports are 42 bales from Hamburg. Sussex pockets, 42s. to 48s.; East ponders, £3 3s. to £6 0s.; Weald of Kents, £3 0s. to £4 15s.; Soconds, £2 4s. to £3 3s.; per cwt.

Cloves.—Arnold Moor, 17s. 6d.; Heaton, 19s.; Bradley's, 21s. Heaton, 2nd sel.; Lawlson, 21s.; Skewerth, 2s. 6d.; Heaton, 2nd sel. Bradley, 21s.; South Kelsey, 20s. per bushel.

*Metropolitan Cattle Market (Friday).*—The supply of beasts on sale in to day's market was very large, and the demand for the same was by no means active, at Monday's currency. We were but scantily supplied with sheep, in which only a limited business was transacted. In prices no change took place. The best Downs realised 5s. per 8lb. There was only a slow sale for calves—the show of which was very moderate—at barely late rates. Pigs moved off slowly, on former terms.

*Per 8lb. to sink the offal.*—Coarse and inferior beasts, 3s. 6d. to 3s 8d.; second quality ditto, 3s. 10d to 4s. 2d.; prime large oxen, 4s. 4d. to 4s. 8d.; prime Scots, &c., 4s. 10d. to 5s. 0d.; coarse and inferior sheep, 3s. 4d. to 3s. 6d.; second quality ditto, 3s. 8d. to 4s. 2d.; prime ewes and woolled sheep, 4s. 4d. to 4s 6d.; prime Southdowns, 4s. 8s. to 5s 0d.; large coarse calves, 3s. 10d. to 4s. 0d.; prime small ditto, 5s. 2d. to 5s. 6d.; large hogs, 3s. 10s. to 4s. 1d.; small porkers, 4s. 6d. to 4s. 8d. Suckling calves, 18s. to 24s.; and quarter old store pigs, 17s. to 28s each. Total supply: beasts, 2610; sheep, 11,; calves, 120; pigs, 200. Foreign beasts, 180; sheep, 300; calves, 30

*Newgate and Leadenhall* (Friday).—Only a moderate business was transacted, as follows.—

Per 8lbs by the carcase: Inferior beef, 3s. 8d. to 4s. 4d.; middling ditto, 3s. 6d. to 3s. 8d.; prime large ditto, 3s. 10d. to 4s. 2d.; ditto small ditto, 4s. 4d. to 4s 6d.; large pork, 3s. 10s to 4s. 4d.; inferior mutton, 3s. 2d to 3s. 6d., middling ditto, 3s. 8d. to 4s. 0d., prime ditto, 4s. 2d. to 4s. 6d., veal, 4s. 4d. to 5s. 4d.; small pork, 4s. 6d to 5s. 4d.

ROBERT HERBERT.

## THE LONDON GAZETTE.

TUESDAY, JANUARY 1, 1856.

BANKRUPTCY ANNULLED

F MARSH, late of Bishopsgate-street, wool-broker and banker

BANKRUPTS.

W ELGAR, Hayford and Ragbrook, Northamptonshire, ironstone-master. R. H. BLACKER, Ludgate-hill, City, importer of Foreign wines.—L. LAZARUS, Chancery-lane and Coborn New-road, New-cut, late Whitechapel.—W. WIGGINS, Hawley Mills, near Dartford, and St. Paul's Churchyard, paper-manufacturer.—J. HARRISON, City, commissionagent.—W. SHEPHERD, Bishopsgate-street Without, and Hackney-road.—W. BUTLER, Handsworth, Staffordshire, chemist and druggist.—J. NOKES, Birmingham, glass-cutter.—G. TATLOW, Derby, silk-manufacturer.—S. BARKER, York, innkeeper.—J. FIRTH, Manchester, victualler and coffeehouse-keeper.

SCOTCH SEQUESTRATIONS.

R. COPLAND and F. W. BRICKMANN, Dundee, ship-brokers.—P. STOBO, Glasgow, smith and ironmonger M MILLER, Glasgow, coppersmith.

## FRIDAY, JANUARY 4.

BANKRUPTS.

H. CRICKMAR, East Donyland, Essex, shipowner.—A. FOULTER, Weston-super-Mare, Somersetshire, common brewer.—E. FORD, Sheffield, Yorkshire, coach-proprietor.—H. WELLS, Hampton upon-Hull, baker and flour-dealer.—G. GAINTER and R. LEVING, Camden-town, wharfingers and builders.—T. DARBY, Harrogate, Yorkshire, hotel-keeper.—H. Lee and T. WHITEHEAD, Manchester, warehousemen.—W. HOLLAND, City, late of Brompton and Aylesford, strand, and formerly of Broadway, general merchant.—W. TOWELL, Rodingcrokes-row, Rotherhithe, and Exeter Mi, Surrey, boot-maker.—W. MOORE, Bradford, Wiltshire, blue and mulley dyer.—M. R. L. MASON, Manchester-buildings, London, merchant and commission agent. T. SHERWIN, Long-acre, Leicestershire, carrier, leather cutter, and boot and shoe maker.—D. J. VAUGHAN, Pangbourn, Pontrokeshire, maltster H. STIRKE, Manchester, money servicer.—J. GRAHAM, Lichfield, banker.

### BIRTHS.

On the 31st ult., at Wrotham-park, the Viscountess Enfield, of a daughter.

On the same day, at the 28th ult., at Hendon, the wife of Mr. Hendon, Hyde-park, the wife of Colonel Bowring, of a son.

On the 1st inst., at Stanley-house, Brighton, Mrs Arthur Hodgson, of a daughter

On the 2nd inst., at the Rectory, North Stoneham, Southampton, the wife of the Rev. F. F. Bosdon, of a daughter.

### MARRIAGES.

On the 19th ult., by the Rev Dr. Jones, W Emil Heinemann, to Miss Emily M Dabney, daughter of E J. Dabney, Esq., Lansdowne-place, Hackney.—L. LAZARUS, Chancery-lane and Coborn New-road, New-cut, late Whitechapel.—W. WIGGINS, Hawley Mills, near Dartford, and St. Paul's Churchyard, paper-manufacturer.—J. HARRISON, City, commissionagent.—W. SHEPHERD, Bishopsgate-street Without, and Hackney-road.—W. BUTLER, Handsworth, Staffordshire, chemist and druggist. J. NOKES, Birmingham, glass-cutter G. TATLOW, Derby, silk-manufacturer S. BARKER, York, innkeeper. J. FIRTH, Manchester, victualler and coffeehouse-keeper.

SCOTCH SEQUESTRATIONS.

R. COPLAND and F. W. BRICKMANN, Dundee, ship-brokers.—P. STOBO, Glasgow, smith and ironmonger M MILLER, Glasgow, coppersmith.

### BIRTHS.

On the 31st ult., at Wrotham-park, the Viscountess Enfield, of a daughter.

On the same day, at the 28th ult., at Hendon, the wife of Mr. Hendon, Hyde-park, the wife of Colonel Bowring, of a son.

### MARRIAGES.

On the 19th ult., by the Rev Dr. Jones, W Emil Heinemann, to Miss Emily M Dabney, daughter of E J. Dabney, Esq., Lansdowne-place, Hackney.—L. LAZARUS, Chancery-lane and Coborn New-road, New-cut, late Whitechapel.—W. WIGGINS, Hawley Mills, near Dartford, and St. Paul's Churchyard, paper-manufacturer.—J. HARRISON, City, commissionagent.—W. SHEPHERD, Bishopsgate-street Without, and Hackney-road.—W. BUTLER, Handsworth, Staffordshire, chemist and druggist. J. NOKES, Birmingham, glass-cutter G. TATLOW, Derby, silk-manufacturer S. BARKER, York, innkeeper. J. FIRTH, Manchester, victualler and coffeehouse-keeper.

### DEATHS.

At Whitehaven, on the 29th ult., whilst on his way to Douglas Isle of Man, Archibald Joseph youngest son of the late Archibald Reed, Esq., of Newcastl.-upon-Tyne, deeply lamented.

On the 25th ult., at Bath, in his 82nd year, the Rev. A. Wheeler, B D., Vicar of Old Sodbury in the county of Gloucester.

On the 29th ult., Capt. E. N. T. R. O'Conor, aged 33. of the 61st Regiment Bengal Army, and son of the late Rear-Admiral O'Conor, R.N., K.C.H.

On the 28th ult., in her forty-second year, Christiana, wife of Mr. Joseph Collingwood, and eldest daughter of Ralph Rawstron, Esq., of Bridge-mills near Rochdale, Lancashire.

## THE WILLCOX AND ANDERSON TESTIMONIALS.

THE presentation of these superb testimonials originated at a special general meeting of the Peninsular and Oriental Steam Navigation Company, held March 1, 1855, when was read a report with the following passage .

Your committee have taken as their instruction the request embodied in the resolution passed at the last annual meeting, namely —

"That they should consider and suggest some mode by which the proprietary may evince their sense of the important services of Mr. Willcox and Mr. Anderson, and of their liberal and disinterested conduct in voluntarily relinquishing, for the benefit of the company, emoluments to which they are legally entitled under the Deed of Settlement."

And, having considered the question in all its bearings, are of opinion that the feelings of the proprietors will be best expressed by the presentation of testimonials of a valuable and lasting character; and they, therefore, beg to recommend that Services of Plate, suitably inscribed, and of the value of £1500 each, be presented to Mr. Willcox and Mr. Anderson.

The chairman (Mr. Dent), in moving the adoption of the report, referred to the services of Mr. Willcox and Mr. Anderson, and their relinquishment of large emoluments, which, by the report of Sept. 30, amounted to £18,154 7s. 3d.

The recommendation of the committee has been carried into effect with great care and judgement, and the presentation of the plate took place last month.

We have engraved one of the centre ornaments of the services, which are exactly similar. This ornament is four feet in height, and has branches for candles and candle-shades in front and rear. On one angles of the base are the camel, the elephant, and the lion. The principal group represents Enterprise, indicating on a chart the routes of the company's steamers, and the Genius of Steam exhibiting to Neptune (who is seated on a rock washed by the sea) the steam cylinder and the screw as the great agents in its work The date-palm, banana, and fan-palm rise from the base; and the crowning figure represents Commerce, with the emblems of Peace and Plenty resting upon the globe.

The inscriptions on the principal tablets are as follows: -

Presentation of a service of plate of the value of £.000, unanimously voted by the Proprietors of the Peninsular and Oriental Steam Navigation Company, to RIGHT HONBLE WILLCOX, Esq., M.P. [to ARTHUR ANDERSON, Esq.] one of the original Directors of the Company, in testimony of their sense of his valuable and unremitting services, as one of its Managing Directors during a period of fifteen years, and especially in order to perpetuate their recognition of his liberal and disinterested conduct in voluntarily relinquishing, for the benefit of the company, the whole [a considerable portion] of the large emoluments which were secured to him on its foundation. 1855.

The plate has been designed and manufactured by Messrs. Smith, Nicholson, and Co., Duke-street, Lincoln's-inn-fields; and in design and execution equals any large work of its class.

## AMUSEMENTS, &c.

THEATRE ROYAL, HAYMARKET.—The Farce of MY BUTTERFLY'S BALL and the GRASSHOPPER'S FEAST Every Evening preceded on Monday by the BEAUX' STRATAGEM Tuesday, the First Journeyman Night, to commence at Seven, with the LITTLE TREASURE; and the Re-engagement of Miss BLANCHE FANE; the Pantomime this evening will conclude at a Quarter past Ten. Wednesday, the BEAUX' STRATAGEM. Thursday, by desire, HER STOOPS TO CONQUER. Friday, Second Juvenile Night, the LITTLE TREASURE; and the Pantomime. Saturday, the BEAUX' STRATAGEM

THE PENINSULAR AND ORIENTAL NAVIGATION COMPANY'S NEW STEAM-SHIP "PERA."

## TRIAL OF THE SCREW STEAM-SHIP "PERA."

THIS fine screw steam-ship, which was built for the Peninsular and Oriental Company by Messrs. Mare, of Blackwall, from designs by Mr. James Ash, made an official trial of her speed over the measured mile in Stokes Bay on Saturday last. The *Pera* is now the largest vessel belonging to the Peninsular and Oriental Company, their leviathan steamer *Himalaya* having been purchased by Government for the transport service. Although of considerably less tonnage, the *Pera*, for accommodation and space, is almost in every respect equal to the *Himalaya*; and her fine lines, when compared with her breadth of beam, have caused her, or power in comparison with tonnage, to be, under steam, one of the fastest screw-vessels afloat.

The dimensions are:—Length for tonnage, 303 ft. 7 in.; ditto over all, 334 ft.; breadth, 42 feet 3 in.; depth of hold, 27 feet 2 in.; height between decks in the clear, 7 ft.; full tonnage, 2630. The engines, by Rennie and Co., are of 450-horse power, and are constructed upon the vertical trunk principle, with Lamb and Summers's patent flue boilers. The shaft has a multiplying wheel of two to one. The engines during the trial averaged 33 revolutions, or 66 entire turns of the screw, per minute. The wind was blowing strong from the South-south-west, and after the topgallant yards had been lowered the average of four runs showed a speed of 12½ knots, or equal to 14¼ geographical miles per hour. The result proved highly satisfactory to every one present, the impression being that an average of not more than twelve knots would be obtained.

There were on board Messrs. Anderson and Allen, Managing Directors; Admiral Thornton; Messrs. De Salis and Hadow, Directors; Captain Engledue, Superintendent of the Company at Southampton; Mr. Lamb, Superintendent Engineer; Messrs. Hughes and Lake, Government Surveyors; Messrs. Rennie, Summers, &c. In consequence of a domestic calamity in the family of Captain Soy, the appointed Commander, the charge of the vessel was intrusted to Captain Weeks, of the steam-ship *Tagus*. The internal fittings of the *Pera* combine every improvement which modern science has produced. Among the most recent may be mentioned the saloon dining-tables, which, although apparently solid single tables, may by an ingenious contrivance be divided, so that a double row may be instantly provided, thereby giving accommodation for a double number of persons. By this means (an invention of Mr. Taylor, of the Borough) 140 can comfortably dine. Upon deck are two powerful steam winches, which are used in the shipment and discharge of cargo, &c., and by which an immense amount of manual labour is saved. Upon the captain's bridge is placed a "helmsman's telegraph," entirely obviating the necessity of communicating *viva voce*, and which in working ships of great length is found to be an invaluable facility. The *Pera* is also fitted with Cunningham's patent reefing topsails, the advantages of which are now fully established, upwards of 700 vessels having them in use. Previously to her leaving London this vessel was pronounced to be the most perfect steam ship which had ever left the Thames, and confers great credit upon Mr. Robinson, under whose superintendence she has been fitted, and to whom has been intrusted the fitting of all recent vessels belonging to the company. As the power of the *Pera* is small when compared with the tonnage, the result of the first voyage is looked forward to with interest, and, should it prove favourable, of which most sanguine hopes are entertained, the new principle of less power and fine lines will be satisfactorily elucidated. It was the intention of the company to dispatch this vessel with the heavy portion of the India, China, and Mediterranean mails yesterday (Friday).

## SPLENDID PRESENT FOR THE KING OF SIAM.

AN Inkstand, probably the most brilliant and beautiful article of the kind ever made, has been manufactured by Mr. P. G. Dodd, jeweller, of Cornhill, intended as a present from her Majesty to the chief King of Siam. It is of silver, electro-gilt, and, although not of very great intrinsic value, deserves notice as a work of art. The figures, emblematical of science, and the ornamental portions generally are executed with great taste. The inscription on the inkstand states that it is presented by the Queen to the King of Siam, whose names are fully set forth: they are—Phra Bard Somdetch Phra Paramendr Maha Mongkut Phra Chom Klau Chau Yu Hua.

At a recent meeting of the Asiatic Society, the Secretary, on behalf of the Council, submitted to the meeting the name of the chief King of Siam, and that of his brother and subordinate Prince, for election as honorary members of this society. The claim of these Royal personages consisted in their protection of the interests of science and in their own personal attainments. The head King is a proficient in the Pali and Sanscrit languages; and has acquired a considerable acquaintance with Latin and English. The second King is stated by Sir J. Bowring to speak and write English with ease and correctness. Both are astronomers, able to take an observation and work an eclipse; and the second King is also a chemist and mechanician. Both have written letters to her Majesty the Queen, in English, which are creditable performances. The head King has entered into a treaty of amity and commerce with this country, which gives Englishmen a right to hold land and to be governed by their own laws in Siam, and grants other valuable privileges—thus opening up to our enterprise a country which has hardly been less shut to us than China itself. Their Majesties were unanimously elected.

SILVER-GILT INKSTAND FOR PRESENTATION BY HER MAJESTY TO THE KING OF SIAM.

CENTRE-PIECE OF THE WILLCOX AND ANDERSON SERVICES OF PLATE.—(SEE PAGE 14.)

OPENING OF THE VALPARAISO AND SANTIAGO RAILWAY.—TRAIN LEAVING THE VALPARAISO STATION.

## THE VALPARAISO AND SANTIAGO RAILWAY.

THE inauguration of the first eight miles of the Valparaiso and Santiago Railway took place on the 16th of September last, with every demonstration of enthusiasm and satisfaction. This portion of a very difficult and expensive line embraces three miles and a half along the coast, and presents a series of sea walls, breakwaters, and various other shore defences of enormous strength and solidity, the nature of the sea here at times demanding extreme precautions. The syenite rock in this neighbourhood is of the most obdurate character, and immense labour has been required to overcome the obstacles the rugged nature of the shore presented, and at one point a tunnel was rendered necessary, upon a sharp curve. The remainder of the distance through the valley of the Vina del Mar is of a less arduous nature, and the country is extremely beautiful. Beyond this the line yet unfinished will possess features which few English railways present in respect of gradients and other engineering difficulties.

The inauguration took place in the presence of about twenty thousand people, who were perched on every available spot where a view of the ceremony could be obtained. The Governor of Valparaiso, attended by a large military staff, together with all the foreign Consuls, attended; and a large number of troops kept the ground, and the artillery of the National Guard fired frequent salutes. The station had been prettily decorated with triumphal arches, the flags of the various Consuls; and at the extreme end of the terminus had been erected a painted Gothic screen, before which was placed an altar, magnificently furnished with all the usual appointments of the Roman Catholic service. At about eleven a.m. the Bishop of Valparaiso, attended by a large number of the clergy, presented himself before the altar; some prayers were repeated; an oration was delivered, setting forth the advantages of such undertakings; and then the locomotives were introduced, and the ceremony of the benediction took place, the Bishop spreading his hands out towards the engines, and sprinkling them with holy water. The weather was beautiful, and the ceremony was undoubtedly very splendid and impressive, and from its novelty afforded infinite gratification to the brilliant assemblage of ladies and gentlemen upon the platforms of the station, as well as the crowds collected outside.

Immediately after the ceremony had taken place the Governor of Valparaiso, the Bishop, the Directors of the Railway, and about 500 guests, started in a train along the line—the engine (La Empressa), which was gaily decorated with Chili flags, being driven by Mr. Lloyd, the chief engineer of the Railway. At various points throughout the distance traversed triumphal arches had been erected, many of which evinced considerable taste and judgment; one representing a group of palm-trees festooned with flowers and decorated with figures of "Peace" and "Liberty," was much admired. At the termination of the line already executed the Railway Directors had prepared a sumptuous dejeûner, which was spread beneath the shade of a grove of palm-trees beside a stream—here the whole of the visitors were regaled, several military bands performing during such time lively music.

At dusk the whole returned to Valparaiso highly pleased with their trip, and at the entire success of the first trial of this important line; and for the remainder of the week a succession of fêtes was given by the Directors at the Vina del Mar station. Altogether about 20,000 persons have taken the opportunity of travelling along the line.

On Thursday, the 27th, the Directors invited Mr. Lloyd, their engineer, to a dinner, at which were the Minister of War and most of the eminent merchants of Valparaiso.

The accompanying Views are from photographs taken by Mr. Martineau, one of the engineers of the line.

THE VALPARAISO AND SANTIAGO RAILWAY.—BRIDGE AT VALPARAISO.

## THE PRESIDENT OF CHILI.

IN presenting to our readers the Portrait of the Chief Magistrate of the Republic of Chili, it is our wish not only to introduce to their acquaintance an eminent statesman of the South American peninsula, but also to direct attention to a country whose growing importance, enlightened policy, and increasing relations with England entitle it to be better known than at present it is by the general mass of our countrymen. Chili, of all the independent States which sprung up in South America from the ruins of Spanish dominion, unquestionably occupies the foremost place. Under the animating influence of native rule and of a liberal Constitution, this young Republic has successfully consolidated its institutions; and, by its commercial transactions with England, France, the United States, and other emporiums in both hemispheres, has gradually extended the trade and developed the internal resources of the country. Contrasted with the sluggish pace at which some nations, even in the Old World, advance in the path of improvement, Chili exhibits a wise and spirited promptitude to profit by the numerous valuable discoveries and useful contrivances achieved by the enterprising genius of the present age.

It is now some time since the new system of locomotion, which by its celerity and cheapness incites to intercourse and makes close neighbours of distant communities, has been introduced into Chili. There also is known that beautiful invention, whose wonderful power imparts to our words the wings of lightning; and the astonished Chileno beholds the slender wire throbbing with the hopes and fears, the wants and sympathies of man. The financial ability and public integrity of the Chilian nation are now fully recognised. This is a fact which it requires no elaborate arguments or parade of figures to establish. A single and simple proof may suffice—the well-sustained rate of the Chilian "per cents;" and though the test may not seem very magnificent, it is, at all events, quite conclusive.

Chili, as before intimated, enjoys free institutions; and the Chilian "Bill of Rights" leaves nothing to be desired on the score of civil liberty yet it is much to be deplored that this charter of freedom is in one part disfigured by the stain of religious intolerance. It must be confessed, however, that Chili in this respect but follows in the wake of other countries in some of which juster ideas now, happily, flourish, though their growth has been slow and laborious: for it is a sad reflection that in every age and clime the last rights fully and frankly acknowledged have been almost invariably the rights of conscience. By the constitutional statute of Chili none but Roman Catholics can meet together for the public worship of God; but we find that practically this interdict is not enforced in all its rigour, for at the thriving port of Valparaiso, "where merchants most do congregate," the English residents regularly assemble for the celebration of Divine service, according to the Protestant faith, in a hall, where the officiating minister is an English clergyman, and the authorities wisely wink at the infraction of their own law. As there exists an intimate union between civil and religious liberty, we may safely predict that this favour will gradually become a right. The government of Chili is in form Republican, and in many respects, but not in all, resembles that of the United States of America. The Legislative authority is vested in a Senate and Chamber of

DON MANUEL MONTT, PRESIDENT OF CHILI.

Deputies, both elective. The constituency consists of all native and naturalised citizens of legal age, possessing a small property qualification, either of real estate or annual income. There are certain circumstances, moral as well as physical, creating an incapacity to vote; and among them is one worth specifying as an example of the importance attached by the Chilian Legislature to the diffusion of education. Every man unable to read and write is excluded from the franchise; and of this disqualification none can complain, since instruction is within the reach of all. The rich can obtain it at their own expense, and to the poor it is offered gratuitously by the State. Like Englishmen, the Chilians can boast that their country offers a generous asylum to those unfortunate refugees whom revolutions of Government not very rare events in South America—drive from their native home. The supreme executive authority of the State is exercised by the President, who is elected to the office quinquennially.

In the early and troubled years of the infant Republic, when intestine contentions rendered not infrequent an appeal to the arbitrement of arms, it is not surprising that those who wielded the victorious sword clutched the Presidency as their rightful prize. This military domination threatened to continue long after the evils which gave rise to it; and, until a few years ago, Chili had for its Presidents, with scarcely an interruption,* from the period of the Independence in 1818, a succession of fortunate Generals. The constant possession of supreme executive power by a particular set of men, accustomed to find in the soldiery a ready instrument for the execution of their behests, and one after another obtaining superiority in the State mainly by violence or intrigue, is calculated to raise in their minds visions of ambition, which at the first favourable opportunity may be realised in the utter extinction of the liberties of a people. This fate seemed at one time impending over the destinies of Chili; for so daring had the military party become that, when the young Republic, feeling its growing strength, wished to dispense with the dangerous care of its martial nurses, and, accordingly, in 1851, chose for President by an overwhelming majority a meritorious civilian in preference to a General, they treated with contumely the national decision; and, with the intent of establishing a military dictatorship, involved the country for a time in the horrors of a bloody convulsion.

Fortunately this revolutionary attempt was at last overcome, and Don Manuel Montt, the present Chief of the Executive in Chili, was firmly installed in his office, and now enjoys the distinction of being the first civil President of this rising state. About forty-five years ago Senor Montt was born, of humble parentage, in the small Chilian town of Petorca; and it is solely by eminent talents, the force of an energetic mind, and the influence of a popular and estimable character, that he has raised himself to his present high position. Early in life he evinced the spirit of an intelligent reformer, and being promoted from a subordinate appointment to the rectorship of the University of Santiago de Chili—his own *alma mater*—he at once materially improved the educational course at the chief seat of learning in his native country; and at the same time became conspicuous by his zealous advocacy of a system of popular education, in the maintenance and perfection of which Chili, to her honour be it known, expends a liberal proportion of her annual revenues. Having by such useful labours earned the approbation and confidence of his fellow-citizens, Don Manuel Montt was called from this more humble sphere of action to high offices of State; and, as the Minister of the Interior, he discharged important public functions with such great benefit to the nation, that at length his grateful countrymen conferred on him the highest honour in their power to bestow—the Presidency of the Republic. Senor Montt has fully justified the choice. By his administrative capacity he soon effaced the afflicting traits of civil strife; and Chili, tranquil and industrious, with an augmenting population, an extending commerce, and an overflowing exchequer, moves onward in it course of progressive prosperity.

* Upon one occasion an Admiral of the Chilian fleet was made President; but his reign ed long before his term of office expired.

## THE MORMONS.—LATEST NEWS.

By the last packet from the United States we received several numbers of the *Deseret News*, a weekly paper of the Great Salt Lake City, which circulates 4000 copies, and which is very like many other second-class American journals. It contains tolerably full accounts of our war, in which the Mormons—who have some of their people fighting in our army—take a great interest adverse to Russia. A very detailed life of Joe Smith, the founder of the sect, is in the course of publication in each successive number. The sermons of the different "Elders" of the Church are reported; elections, arrivals and departures of missionaries and immigrants, and other business are described; the season and the crops are adverted to; the deaths of distinguished members of the society noticed; and a variety of other matters are mentioned interesting alike to the "Saints" at home and abroad, and to persons everywhere who do not belong to the community. Numerous extracts are inserted from foreign journals, and numerous moral stories, some after the homely and instructive manner of Franklin, others borrowed from the kindly and affectionate schoolbooks of the Germans showing a strong desire in the people to encourage social virtues. The diatribes which continually appear in American and English journals against the disorders and vices of cities are aid hold of by the journalist to exalt the decencies and virtues of the people of Utah. Notes remind them when to sow wheat and when to graft peach-trees, and give them practical hints on many branches of agriculture and horticulture. Taking a much higher flight, Elder Orson Pratt lectures on planetary motion, the exact law of which he there announces as a discovery of his own—"the cube roots of the densities of the planets are as the square roots of their periods of rotation;" and gives numerous illustrations in algebraic terms and forms. He is also voluntarily to undertake the task of instructing the Saints, old and young, in all the mysteries of astronomy. Nor is this the only branch of high and abstract science cultivated in the Great City of the Salt Lake. A body of persons amongst ourselves known as the phonetics has undertaken to reform our orthography, and no student of the subject but is convinced that the system of English orthography, to use the mild language of the "Deseret Typographical Association," is very imperfect and inadequate to the end it is designed to serve." Accordingly the Mormons, carrying their ideas vigorously and boldly into action, for which they are distinguished, have invented the "Deseret Alphabet, which supplies a simple character to most of the simple sounds of the human voice, substantially correcting the absurdities of the English spelling, rendering more definite the pronunciation of words, and more easy the acquisition of other languages, and lessening to a very great extent for the rising generation the labour of learning to read;" they have cast a type for it, and are about to print and publish in it. All these proposed improvements are really wanted, are clear and precise, and apparently the Mormons are setting vigorously and reasonably to work to purify the English orthography, and promote the use of a pure language." There are many allusions in the journal to the organisation of this singular sect—to its schools, colleges, and industrial labour; but we have said enough of it to inform our readers of its characteristics, and to convince them that the Mormons cultivate some of the noblest sciences and some of the most abstract arts.

Two views at least may be taken of most subjects. There is nothing in earth or heaven which the young and the jubilant may not turn into fun, and from which the aged and the reflecting may not draw serious lessons—lessons, perhaps, of sadness and sorrow, which are the offspring of their own minds. On this occasion we are disposed to take the serious and earnest view of this Mormon colony, established in a country previously described as an "uninhabitable desert," which for centuries had been counted as a part of Mexico, but had been made no use of, "in which the rains of heaven cannot be relied on to any great extent for the cultivation of the soil." "The earth is destitute of trees, and in great part also of any vegetation whatever." The whole progress of the State of Utah, therefore, is due, as an American statistical writer observes, to the "intelligence and forces of the people." We can but recognise, therefore, in the Mormons, whatever may be their religious tenets, or their moral observances, the existence of those commonly called heroic virtues, which enable man to subdue the rude earth, overcome matter, and convert a desert into a blooming garden. It was in 1847 that Brigham Young, when the great Temple of Nauvoo, on which 1,000,000 dols. had been expended, was burned by the people of Illinois; and the Mormons, driven forth into the wilderness, started with a company of 143 pioneers to find a new and safe home for the persecuted Saints. On the 24th of July, after following a trapper's trail for 400 miles, and performing a journey in all of 650 miles by a new road, conducted as the journal says, by "the hand of the Almighty," for no person knew of the valley, Mr. Young and his companions reached the present site of the city. In the autumn 700 waggons with the families of the wanderers arrived and found the ground covered with a species of dry grass and myriads of black crickets on which the Indians fed. Spring brought another thousand waggons, but the scanty crops prepared by the first-comers were destroyed by the crickets, which came down in great multitudes from the mountains. Allies, however, appeared sent, say the Mormons, by the Almighty in the shape of large flocks of gulls which devoured the mammoth crickets, and vomiting them up almost as fast as they swallowed them went on with their destroying them. Struggling against all these difficulties the people made themselves a home in the desert. They organised themselves as a church—Brigham Young was the President, Heber C. Kemball and Willard Richards his counsellors (the latter is since dead); there were twelve apostles, and John Smith (since dead), the cousin, we believe, of Joe, was ordained Patriarch over the Church. Pass over two years to 1850, and, according to the Census, Utah contained in that year 11,380 persons, of whom 2355 were born in the States. They had 30,516 acres of land in occupation, of which 16,358 acres were improved; great quantities of farm implements, live animals, and a crop of wheat of 107,702 bushels. In 1855, according to the *Deseret News*, the settlements in the territory—forming, since 1850, a regular portion of the Great Federal Union—extend from north to south, wherever water can be had, 380 miles. There are 50,000 inhabitants, about fifty saw-mills, and great abundance of good wheat, corn, and vegetables, the product of industry irrigating the naturally barren soil. The tabernacle in Deseret is 126 by sixty-four feet, and is arched without a column; in the city are twenty-four good school-houses, and all through the territory similar school-houses have been built. The Church has 95 missionaries in Europe, and an equal number in other countries; and has branches in Denmark, Sweden, Switzerland, the islands of the Pacific, and Africa. From the commencement of the society till the present moment, every little act of the founder, his associates, and followers, supplies a proof how completely enthusiasm can effect its objects, how masterful is mind over matter, and how little man can know *a priori* from what small seeds great trees are to grow. Nothing ever appeared more wild than the Mormon prophet's scheme—more hopeless, more absurd, and less likely to attain any success; but, in spite of all predictions, though such a result was never anticipated by himself, it has led to peopling the centre of America, to connecting the eastern coast with the west, and probably to the discoveries of gold in California, which are likely to change the whole course of trade, and give a complete new phase to society. In spite of our dislike to the whole of the Mormonite creed, and to one part more especially—which is justly reprobated throughout the civilised world, but which by them is boldly avowed, boldly carried into action, and is not accompanied by the hypocrisy which too often characterises the different systems in the cities of Europe—we must admit that these fanatics have overcome many difficulties, and achieved extraordinary success.

## HYMN TO THE NEW YEAR.

O TENDER Spirit-child! Half-robed in snow
Thou com'st, thy white wings ruffled in the wind.
How, mother-like, we wearied for thy voice!
Spanning the bridge of darkness with a bound,
Our souls leaped forth to meet thee on thy way:
Now, in the fulness of the perfect time,
Clasped in the Old Year's fatherhood of love,
Lie all our weeping days: and thou art here,
Heaven-born into the world without a cry!

Gracious, and pure! Fresh from the touch of God,
In all thine aspects beautiful art thou!
Whether the frosted stars or icy moon
Glance at thee sidelong; or the joyous sun,
Speeding to hail thee from the opening East,
Shine on thy young face looking to the dawn—
Lovely in all! To feel thee is a Prayer.
Life's in thy breath, and heaven in thy smile;
And sorrow dies around thee—like the night.

We clasp—we hold thee! Every grateful sense
And every faltering motion of the lip
Cries out to bless thee. Yet, a little while,
And thou shalt melt into the fading prime.
Thy place shall know thee never more; but, snapt,
Like some fine chord of music in the soul,
Thy thread of life shall drop. Yet mourn not we,
For at the sacred pause of thy dear breath
The songs of angels drown the sobbing world;
And when thou'rt led to thine appointed rest
To meet the long-extinguished race of days,
From thy dead dust the living Christ upsprings.

Hark—hark the strain! Quick at thine onward tread
Rings out a solemn cadence of sweet sound,
Poured from each ancient belfry, full and deep,
Voiced round the like a breeze! 'Twould almost seem
Those rays thou wearest as a crown, were born
Of His great glory who but now did rise
From out a dead year's ashes: those same bells
Which heralded His coming, scarce had stilled
Their hallowed music, ere thine advent woke
Through every thrilling tongue a new accord!
So be it, gracious God: So touch our days
That all their goodly cycle shall rise, crowned,
Rich with thy glory; and, to these our souls,
With each lost year send thou the patient Christ!

E. L. HERVEY.

## KING FIFTY-SIX.

AN ODE FOR THE NEW YEAR.

O DREARY bells! Ding-dong! Ding-dong!
'Tis Fifty-Five whose doom they ring;
The lord of earth will die ere long,
And Fifty-Six will be the King.
Ding-dong! Ding-dong! the time is near
When he must die—this aged year.

Ding-dong! Ding-dong! We may not laugh
We cannot weep to see him go:
A leafless pine-tree for a staff,
He wanders o'er the waste of snow;
A weak old King who left undone
The noble deed his sires begun.

Ding-dong! Ding-dong! It is his knell,
The cold stars shine upon his track—
Yet stay, O King!—heed not the bell—
The little children call thee back!
O Fifty-Five! we fain would take
Kind leave of thee for their dear sake.

Ding-dong! Ding-dong! Let prayers be said
The poor old King is dying fast;
Ding dong! Ding-dong! The King is dead—
He's gone to join his sires at last.
O Fifty-Six! O Fifty-Six!
On thee our earnest eyes we fix.

Of all thy race, thou New-born Year!
I can remember twenty kings,
The first was he who brought me here;
His memory to my spirit clings.
I love him more than all the rest—
He laid me on my Mother's breast.

The after-years—the after-years!
They must have loved me one and all;
They gave me toys—they dried my tears—
They made me strong and stout and tall.
They filled my heart with thoughts of love—
They brought me playmates from above.

First at the door my brothers knocked—
Come in—come in—ye Angel-boys!
Around my father's knee they flocked,
They shared with me my griefs and joys.
I pray'd the Kings would spare them long,
And make them good, and brave, and strong.

And then my smiling sister came—
The pride and glory of my heart!
A Rose in nature and in name,
Whose loveliness shall not depart.
O generous year, that did'st entwine
Around my heart this flower divine.

Ding-dong! Ding-dong! The bells have ceased,
The festive winds blow loud and long;
The King is come to join our feast—
A jovial King that loves a song!
Hurrah! hurrah! The King is come!
Sound the trumpet—beat the drum!

O Fifty-six, thou glorious lord!
Accept our earnest fealty-vows:
We shout thy name across the board
We bind thy lofty Titan brows!
We jest and laugh, we dance and sing—
We drink to thee, thou new-born King!—C. E. M.

## A PSALM FOR NEW YEAR'S EVE.

A FRIEND stands at the door,
In either closed hand
Hiding rich gifts, three hundred and threescore,
Waiting to pass within each daily o'er the land,
Even as his seed the sower
Each drops he, treads it in, and passes by—
It cannot be made fruitful till it die.

O good New Year, we clasp
This shut, warm hand of thine;
And loose for ever, with one sighing gasp,
That which from ours thou claim'st—the dead fingers' twine
Ay, whether fierce its grasp
Has been, or tender; having been, we know
That it was blessed; let the Old Year go!

O New Year, teach us Faith:
The road of life is hard:
When our feet bleed, and scourging winds us scathe,
Point Thou to Our Lord's visage was more marred
Than any man's; who saith,
"Make straight paths for your feet: O Israel, hear;
This is the way—walk in it without fear."

Hang out some lamp-like Hope
Above this unknown way,
Kind Year, to give our spirits freer scope,
And our hands strength to work while it is day.
But if that way must slope
Tombward, O bring before our fading eyes
The light of God—the Hope which never dies.

Comfort our souls with Love
Love of all human kind;
Love here and there, that, like a sheltered dove,
Each weary heart its own safe nest may find;
And Love which looks above
Adoringly, contented to resign
All loves, if needs be, for the Love Divine.

Friend, come thou like a friend,
And whether bright thy face,
Or dim with clouds we cannot comprehend,
We'll hold out patient hands, each in his place,
And trust thee to the end;
Knowing thou lead'st us onward to those spheres
Where there are neither days, nor months, nor years.—D.

## PERFUMERY.*

IT was a *dictum* of the celebrated Beau Brummell that no man of fashion should use perfumes, but send his linen to be washed and dried on Hampstead Heath. Few subscribed to this arbitrary mandate; and it certainly opposed all precedent, both in ancient and modern times. The use of aromatics in the East may be dated from the remotest antiquity; and, even at the present day, to sprinkle guests with rose-water and perfume them with aloes-wood, at the close of every visit, is deemed a token of hospitality and friendship. Arabia is the country of perfumes; and in more ancient times it was the practice to keep them in shells which were thrown up large and beautiful on the shores of the Red Sea. Horace alludes to the same practice as prevalent at Rome when he flourished.—

Funde capacibus
Unguenta de conchis.

Perfumes were also thought to keep well in vessels made of alabaster. Pliny explains the shape of these vessels by comparing them to the pearls called *elenchi*, which are known to have been shaped like pears. In hot climates fragrant oils dispersed unpleasant odours which heat is apt to generate, and thus became essential to the enjoyment of social life. The poets of Greece and Rome were loud in the praise of perfumes. Thus Anacreon (Ode XV.) exclaims:—

Let my hair with unguents flow,
With rosy garlands crown my brow.

The magic skill of Medea consisted in her skill as a perfumer, and as an inventress of warm vapour-baths. Mr. Beloe, translating "Palæphatus," says of her that she first of all discovered a flower which could make the colour of the hair black or white: such, therefore, as wished to have black hair instead of white, by her means obtained their wish. That the professors of the medical art might not discover her secrets she used fomentations in her baths in secret. These made men more active, and improved their health; and as her apparatus consisted of a cauldron, wood, and fire, it was believed that her patients were in reality boiled. Pelias, an old and infirm man, using this operation, died in the process.

But these practices were not confined to Oriental nations: for Herodotus ("Melpomene," c. LXXV.) says—"The Scythian women bruise under a stone some wood of the cypress, cedar, and frankincense; upon this they pour a quantity of water till it becomes of a certain consistency, with which they anoint the body and the face. This at the time imparts an agreeable odour, and when removed on the following day gives the skin a soft and beautiful appearance." In the athletic exercises of the Olympic games, wrestlers and pancratists always anointed their limbs to render them more supple. In Greece the perfumes of Athens were most esteemed, as we learn from a curious passage preserved in Athenæus, from a fragment of the writings of Antiphanes, and the whole may amuse our readers. It runs thus, showing from what countries different degrees of excellence were obtained in his time:—"A cook from Elis; a cauldron from Argos; wine of Phlius; tapestry of Corinth; fish from Sicyon; cheese from Sicily; the perfumes of Athens; and the eels of Bœotia."

Mr. Piesse's book is curious, amusing, and instructive. He is a botanist and analytical chemist, and has been no careless reader of history. Perfumery, once a mystery to the millions, is now an open volume to all who profit by Mr. Piesse's researches and disclosures; and, no doubt, it will find a place on every toilet-table, for it deserves the patronage of the fair sex. The localities in which the perfuming branch of industry is cultivated are thus pointed out:—

In the south of France more than 80,000 persons are employed, directly or indirectly, in the cultivation of flowers, and in the extract of their odours for the use of perfumers. Italy cultivates flowers for the same purpose to an extent employing land as extensive as the whole of some English counties; tracts of flower-farms exist in the Balkan, in Turkey, more extensive than the whole of Yorkshire. Our own flower-farms at Mitcham, in Surrey, need not be mentioned in comparison, though important. These are the main sources of perfumes. There are other sources at Thibet, Tonquin, and in the West Indies.

We are next made acquainted with the commercial value of perfumes and flowers:—

British India and Europe consume annually, at the very lowest estimate, 150,000 gallons of perfumed spirits, under various titles, such as eau de Cologne, essence of lavender, esprit de rose, &c. The art of perfumery does not, however, confine itself to the production of scents for the handkerchief and baths, but extends to imparting odour to inodorous bodies, such as soap, oil, starch, and grease, which are consumed at the toilette of fashion. Some idea of the commercial importance of this art may be formed when we state that one of the large perfumers of Grasse and Paris employs annually 80,000 lb. of orange flowers; 50,000 lb. of cassia flowers; 54,000 lb. of rose-leaves; 32,000 lb. of jasmine blossoms; 32,000 lb. of violets; 20,000 lb. of tuberose; 16,000 lb. of lilies, besides rosemary, mint, lemon, citron, thyme, and other odorous plants in larger proportions. In fact, the quantity of odoriferous substances used in this way is beyond the conception of those even used to abstract statistics.

There are many perfumes of animal origin, as ambergris, civet, castor, and musk. The first of these substances is found in the stomachs of the most voracious fish, and in the intestines of the spermaceti whale. It is also found floating near the islands of Sumatra, Molucca, and Madagascar, and on the coasts of China, Japan, Brazil, and Coromandel. In 1691 a lump was found on the beach of the county of Sligo, in Ireland, which weighed fifty-two ounces. It is to be observed that the famous Robert Boyle considers ambergris to be a vegetable production. The perfume of ambergris is very sensitive, as the odour is retained in handkerchiefs after having been washed.

The civet cat is a native of the East, and the substance it secretes is principally brought to this country and to other European markets from Calicut and Bassorah. It requires to be diluted with a thousand times its volume of oil or spirit.

The musk deer lives in the mountainous districts which girdle round the north of India, and in Siberia, Thibet, and China, and in the Altai range near Lake Baikal. The male alone yields the substance of the perfume. Musk is imported into England from the cauldrons from fifty to one hundred ounces each. That which comes from Boutan, Tonquin, and Thibet, is most valued; that from Russia is deemed inferior in quality. Musk is one of the most remarkable of substances, for it has been kept in drawers for more than a century, throwing forth its odour, without losing any appreciable portion of its weight.

In Mr. Piesse's volume will be found ample particulars on all Smelling Salts, and on their modes of preparation; also on Essential Oils or Concrete, and Essences, Bouquets and Nosegays, and Compound Odours. In an interesting chapter on Soap we are told that the earliest record of the soap trade in England is contained in a pamphlet in the British Museum, printed in 1641. The excise-duty on soap, repealed in 1853, had been in force since the reign of Charles the First, and established a monopoly in the hands of a few rich capitalists. Not less than a ton could be made at one time, and the restrictions in the method of manufacture were so arbitrary, and at the same time so absurd, that improvement in the article was practically prohibited, as no one was allowed to deviate from the ancient process. We have then a learned dissertation on milks and emulsions, or consumes, as they are usually called in the perfumery trade. The invention of cold cream is attributed to Galen, the celebrated physician of Pergamos, called in pharmacy, Ceratum Galeni, but the modern formula for its preparation differs essentially from the original method. Hair-dies and depilatories are next brought under consideration, and the practices of the Moorish Arab, Egyptian, and Greek ladies are described. Among the moderns the Armenians residing in Constantinople are the most skilful in preparing a black dye for the hair, and their charges for teaching the art are very high. In Mr. Piesse's varied volume dentifrices are not overlooked. We have endeavoured to give a full and faithful account of its contents, and, as every process is explained, any person can obtain and mix up the ingredients. In respect to those perfumes which are wholly or chiefly extracted from flowers, if ladies living in rural districts will amuse themselves with studying botany, they may soon be skilled in the art and mystery to which this work is dedicated.

* "The Art of Perfumery, or the Methods of Obtaining the Odours of Plants." By G. W. Septimus Piesse. London: Longman and Co.

## THE WAR IN THE CRIMEA.

*(From our Artist and Special Correspondent.)*

CAMP, SEBASTOPOL, Dec. 15, 1855.

OUR Camp was startled a few days ago out of the most somnolent state by several remarkable facts, asserted with such astounding assurance, and from such good authority, that every one believed them. Some of them were disagreeable, others pleasant. In the first place, Kars, closely blockaded by the Russians after the failure of Mouravieff's assault, had capitulated, the garrison retiring with all the honours of war; in the second, Russia, though the medium of Prussia, had proposed terms of peace; and in the next, Marshal Pelissier had been recalled to Paris to assist the councils of the Emperor with his advice as to the prospects of the future campaign, and the effect those prospects might have upon the terms likely to be offered by Russia. But the crowning pinnacle of this edifice of fable was the statement that Marshal Pelissier had left the Crimea in a vessel placed at his disposal, for the purpose of proceeding at once to Marseilles. The arguments for and against the probability of peace, derived from these fertile sources, were extremely interesting and amusing. It was supposed that Russia had taken the capitulation of Kars as an event counterbalancing the capture of Sebastopol, and that proceeding from this basis she would offer terms which England and France could not accept. Marshal Pelissier could not but enlighten the Emperor of the French as to the precarious position of the Russians in the Crimea; and the public mind was fluttering between hopes of peace and fears lest Russia should escape the beating we expect to give her in spring.

The first blow struck at this edifice of "shaves" was the announcement that, whatever might have befallen Kars, the General-in-Chief or his part, knew nothing of its capitulation. This was a sore annoyance to the great political argumentators. Then it appeared that Marshal Pelissier, instead of being tossed on the billows of the Black Sea on his way to France, had comfortably enjoyed his breakfast at unusual at head-quarters. In the confusion caused by this stunning intelligence, the Russian proposals of peace vanished, leaving every one to ruminate over that old and ever-vexing question—the weather.

In truth, the season had exhibited for the last few weeks symptoms of unusual severity, and at the time when all the hopes of the Camp were concentrated on the subjects I have noticed, a cold north wind was blowing over the elevated plain of Sebastopol. Along the frozen roads parties of navvies were filling up large holes with metal. Working detachments from various regiments were passing up from Balaclava laden with materials for huts, or carrying warm clothing; whilst toiling up the ascents might be seen the dirty carts and men of the Land Transport Corps performing the usual duties assigned to them. There is no body of men, no number of animals, so much to be pitied at this moment as those of the Land Transport. Ministering as they do to the wants of the soldiers, carrying up provisions, clothes, and wood for them, they have had but little opportunity to look out for themselves, and so the animals lie for the most part picketed in the open air, wallowing in mud, where the men are to attend and look after them. This is a pity, for although the corps is not at present in the efficient state which is desirable, it is like most new experiments, capable of receiving considerable improvement; and the services which men and mules are likely to render in spring, if they are put in order, as I trust they will, are incalculable That efforts are now being made to improve their position I am aware; but, owing to the bad weather, which has prevented the arrival of numerous ships at Balaclava, these efforts have been almost vain. The wind and rain, which rendered the Black Sea so uncomfortable for ships, did not increase the pleasure of camp life. It was during the period when their presence was incessant, that the benefit of the new roads so energetically laid down and so ably executed in autumn was felt Although at the worst time these roads suffered from the general bad weather, and the rain wore holes into the newly-broken stone, the excellent drainage prepared in time, as well as the constant removal of mud, left it in a fair state for the continuance of traffic—so that now, when frost has sent in, there is scarcely a highway in the United Kingdom which can be called better than that from Balaclava to the Camp. As for the spots in which no roads were made, it is impossible to conceive deeper sloughs or more unsafe ground to move upon. If you can fancy the sea lashed into ungovernable fury, with a small bark endeavouring to make its way through it, now cresting the wave, then wallowing in its trough, heaving, straining, and hardly advancing, you may then form an idea of the position of water-carriers or fatigue men crossing the plains of mud and filth, leaping from heap to heap where a likelihood of bare ground appears, then stumbling into holes, and finally reaching home drenched, dreary, and uncomfortable. Let the scene be at night, and you might catch a glimpse of a light held by some solitary wanderer dancing about like a jack-o'-lantern, now disappearing behind a bank of mud, then struggling up, advancing slowly with such fantastic motions as to give the whole thing an appearance of an unreal and sprite-like kind.

In the midst of all this the men preserve their health admirably, although the huts in which they live are none of them water-tight, and the cold is to a certain extent felt there. In the mean while the Commander-in-Chief is actively engaged in preparations for the spring, and the tents have all been ordered into store to be repaired for future use. A regular school of musket drill has been opened, and the soldiers are rapidly learning the use of the rifle—targets having been erected everywhere and cartridges served out for practice.

*(To the Editor of the* ILLUSTRATED LONDON NEWS*)*

Gyllyngdum, near Falmouth, Dec. 15, 1855.

IN the letter which I sent you from the Crimea in September last, some remarks which I made expressive of regret that our medical officers and ambulance had not been "sent" to the field on the Tchernaya, have been so misconstrued as to cause annoyance to a very valuable body of men. I have already explained, in reply to Mr. Wright's letter in the *Times*, which I saw only at Gibraltar, that it was far from my intention to censure individually the officers of our medical department. I know them to be deserving of all possible praise for activity, humanity, and zeal; and I am personally indebted for very much kind attention on the part of several of those gentlemen.

To Mr. Wright's friendship and courtesy, also, I owe very much of the comfort I enjoyed during the time I spent in the Crimea; and he has added to the obligation I already felt by the gentlemanlike manner in which he has noticed my letter. Another individual (Mr. Monat), I have since seen, has misunderstood on my letter in a style very far different, and, for the rank he claims as "Staff-surgeon, first class," neither sensibly nor becomingly. Indeed, I am hardly justified in taking any notice of a writer, whose studentlike impudency and hospital impertinence are so little creditable to the taste and breeding of a gentleman, and far less to the true courage of a soldier But his testimony is too serviceable to be lost. I said that our medical officers, ambulance, &c., on the first day, were not "*sent*;" and Mr. Monat has very unwillingly confirmed this assertion. I said again, not that some might not be there, but that "neither could I find, nor had any one seen, a British surgeon on the field;" and he has justified me in the assertion also, by giving, like Mr. Wright, an excuse for there being so few that on so extensive a field, amidst 3000 wounded, nothing more likely than that such a paucity in numbers should escape one man's most anxious search for them. That search was made by me with feelings of the deepest commiseration for many sufferers, more particularly for one young Russian officer, whom I found in most pitiable agony; and as it was made some considerable time before the Russians reopened fire, I had not the excuse, with which your correspondent so valiantly taunts me, of being "so flustered as to have been unable to distinguish a British medical officer." Whatever might have been my own want of nerve "in such a scene of confusion," I do not apprehend that some twenty, at least, of British officers, naval and military, to whom I must have applied were also similarly "flustered" when they assured me they had been no more fortunate than myself. The fact is apparent that so few were the number who got down to the plain, or ventured to interfere, that they were not found by others as well as myself, seeking and inquiring for them in the considerable portion we traversed. All honour to those whose names have been mentioned, and all other medical men there; but I do not blame those who were not. I blame only the want of promptitude on the part of our authorities who should have instantly placed at the disposal of our allies as many of our medical officers as we could have very well spared after ten o'clock out morning, and the ambulance which our reserves, at least, were ble to remain idle.

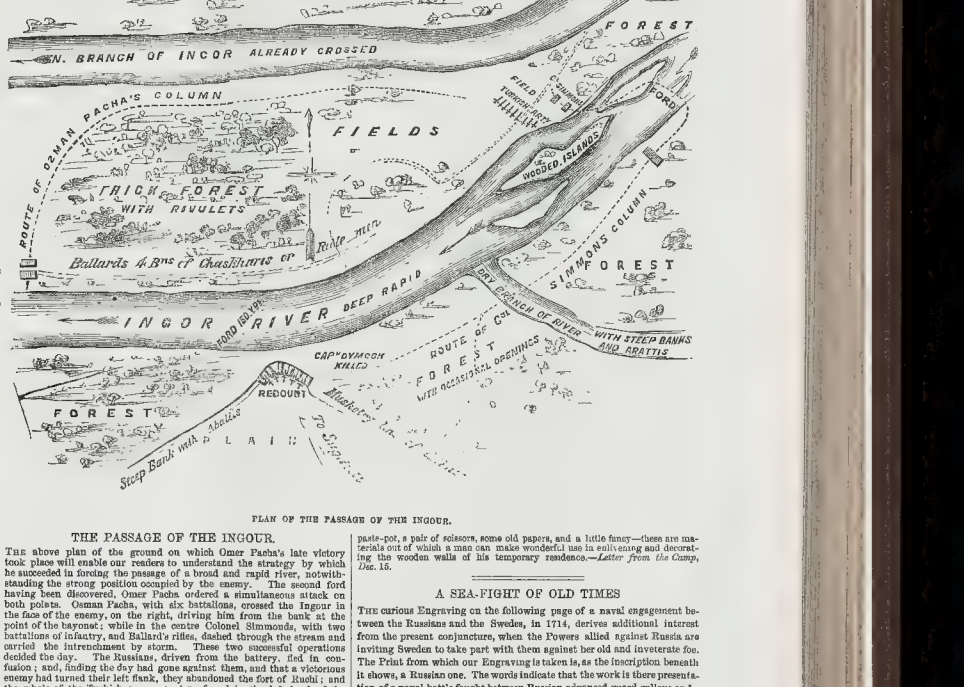
The statement of the most value, however, is—"That several civil surgeons from the General Hospital in the Camp proceeded to the field at an early hour the following morning, but were warned back by the French sentries." Now, Sir, does not this exhibit the irregular and haphazard manner in which we were acting? All our activity resolves itself into the honourable benevolence of a few volunteers. In the first place, to deal with this passage, my complaint has no reference to "the following morning;" and, consequently, the statement about the civil surgeons does not affect its truth one iota, but confirms its reasonableness. If these gentlemen had been "sent," they would not have been warned back by any sentries the moment they had stated their authority to the French officers; or, if they had been properly instructed, even how and where to proceed, they would have waited at the wooden bridge at the Sardinian end of the plain, or they would have proceeded over the base of the hill and got down to the Traktir-bridge, or to still farther points of communication by which, all day long, the wounded were brought in on stretchers, and deposited in groups until the mule litters or ambulance successively returned for the sufferers At one of these points, just under the position the artillery of the Imperial Guard had occupied, I remained with the assistant-surgeon who kindly accompanied me; and here beside the small white octagon building there was a number of wounded already collected, whom my friend assisted, and others were being brought in as fast as the fatigue parties could carry them. We met with every facility on the part of the French officers, and, with the sanction of a General who came up, the officer of the guard allowed us to remove some of the wounded on his stretchers, and convey them by bearers over the hill, a mile or more, to an hospital. All this would have been better done by authority, if medical officers, civil or military, had been "sent."

Your correspondent struggles to grow witty on my vanity for supposing that the "white horse" I rode attracted the Russian fire. I have yet to learn that the colour of a horse which is distinctive of age could be matter for vanity; but any man will understand how at a distance it might more quickly attract attention and offer a fairer mark to the gunners. I am not responsible for the colour of a horse which, being left for the public service was, without my choice, sent for my use. But is there anything so extraordinary in a man on horseback, whatever the hue of his animal, attracting the Russian fire, that he must be ridiculed for vanity who speaks of it? Why, your correspondent must know that the reason why the civil surgeons were "warned back," was because even one solitary mounted man was sure to be fired on the moment he was seen on the plain. I claim no honour, when I give only a natural reason for being disturbed, and "*those who were assisting me*," while relieving the wounded; and least of all did I wish it to be inferred that I "imagined it to be only intended for me and my white horse." I know very well, wherever a mounted man was seen, he was immediately fired on; and probably at that time other groups, like Mr. Monat, "shared the fire of the Russian heavy guns." But as I happened to be, just then, the only mounted person with the particular group on the spot referred to, I am not conscious of any inordinate vanity in supposing that so conspicuous a mark as my aged horse, probably tempted the Russian gunners in our direction, as any other "white horse," or any horse at all, may have offered a target in any other. Your correspondent knows that no horseman could, nor I believe can, pass down the quays of Sebastopol without being fired at by the northern forts.

He thinks, however, to fasten on me, in his own polished expressions, "that which is utterly, wicked, and mischievous," by denying that I could place "knapsacks" under the heads of the wounded—first, because the Russians had "no knapsacks with them," and, secondly, because "the operation" could not be performed without "dismounting." The word "*knapsack*" is either a misprint or an error of my pen for *haversack*; but still it is not correct to say there were no knapsacks, although the Russians did not generally bear them. I saw more than one; and I am not sure whether I should not have been literally correct in saying that I had "knapsacks" placed under their heads. Whether they were knapsacks, pouches, or haversacks, or anything else *substituting a pillow*, the truthfulness of my *meaning* is little affected by the hypercritical cavilling of a Staff-surgeon. I wish him joy, however, of his ingenuity in discovering the difficulty of the "operation" "without dismounting." Nevertheless, had he, with more candour and less irritation, referred to my words, he would have found that I said, "by *having* their knapsacks *placed* under their heads," and that I had elsewhere referred to "those who assisted me."

Warned by the melancholy failure of Mr. Monat, I will not conclude with a feeble attempt to be witty; but I cannot forbear seriously suggesting to him when next he writes for your paper, that it will be more creditable to his position as an officer and a Christian, to abstain from personalities and impertinencies; or if by some deplorable infirmity, he cannot restrain his language, let him remember it will be more consistent with the semi-military rank he enjoys, though probably not quite so safe for his person, to be less in red of impunity by the profession of the individual he insults.

WM. JNO. COOPE.



PLAN OF THE PASSAGE OF THE INGOUR.

## THE PASSAGE OF THE INGOUR.

THE above plan of the ground on which Omer Pacha's late victory took place will enable our readers to understand the strategy by which he succeeded in forcing the passage of a broad and rapid river, notwithstanding the strong position occupied by the enemy. The second ford having been discovered, Omer Pacha ordered a simultaneous attack on both points. Osman Pacha, with six battalions, crossed the Ingour in the face of the enemy, on the right, driving him from the bank at the point of the bayonet; while in the centre Colonel Simmonds, with two battalions of infantry, and Ballard's rifles, dashed through the stream and carried the intrenchment by storm. These two successful operations decided the day. The Russians, driven from the battery, fled in confusion; and, finding the day had gone against them, and that a victorious enemy had turned their left flank, they abandoned the fort of Ruchi; and the whole of the Turkish army was transferred to the left bank of the Ingour.

CHRISTMAS-TIDE IN THE CRIMEA.—The complaints against the new huts are numerous and well founded, and during the recent wet weather it was seriously proposed to remove the men out of the huts and put them into double tents. They never were intended, I presume, to keep out water without some felt or waterproof covering, and up to the present moment none has been provided, and not even the tar and pitch in one of the vessels at Balaclava can be landed. Still this will be a joyous Christmas, as far as it can be away from friends and home. Sailors' sweethearts ride out to Missionis, and gaze gloomily on the beautiful muslefoo which grows on all the wild pear and apple trees in these lovely valleys; but their contentment returns when they think of the fat goose who, tied by the leg, is waiting his doom by the kitchen tent or hatchway, or of the tender pig, who has been reared up from his childhood for the sole object of doing honour to the coming feast, and who is "just fit to be sulled" Already contracts are drawn between dealers in the trenches, or dreary outposts, on remote guards and pickets last year, and the luxuries which are forthcoming for the grand English festival. Men remember "that tough old Turkey, which cost 40s., and that turned the edge of the carver like plate glass," and laugh over the fate which seemed somehow to attend most efforts to be jolly last Christmas, and then turn and look round their huts, which are generally, it must be confessed, very like retail grocers' establishments, backwood stores, or cantsenneh's magazines; the shelves which are placed along the walls in layers, the cupboards made of packing-cases, between decanters in the trenches, or dreary outposts, on remote guards and pickets last year, and the luxuries which are forthcoming for the grand English festival. Men remember "that tough old Turkey, which cost 40s., and that turned the edge of the carver like plate glass," and laugh over the fate which seemed somehow to attend most efforts to be jolly last Christmas, and then turn and look round their huts, which are generally, it must be confessed, very like retail grocers' establishments, backwood stores, or cantsenneh's magazines; the shelves which are placed along the walls in layers, the cupboards made of packing-cases, between decanters in the trenches, or dreary bourg ware, cans, tins of soups and preserves, made dishes, vegetables, longnecked bottles of French manufacture, and the stumpier, sturdier work of the English glass-blower. There is a stove or some substitute for a fireplace in each hut, and it always enjoys the advantage of a famous draught from the door and walls. As to the latter, the embellishments upon them while away many an idle hour, and afford opportunities for the exercise of taste, good and bad, the monuments of which must perish with the spring. They consist chiefly of illustrations from the pictorial papers and; *Punch*, which are transposed ingeniously by the introduction of faces, figures, and bits out of different engravings, with the view of giving them a ludicrous or whimsical character, and the result is often very amusing. The walls are covered with them. A paste-pot, a pair of scissors, some old papers, and a little fancy—these are materials out of which a man can make wonderful use in enlivening and decorating the wooden walls of his temporary residence.—*Letter from the Camp, Dec. 15.*

## A SEA-FIGHT OF OLD TIMES

THE curious Engraving on the following page of a naval engagement between the Russians and the Swedes, in 1714, derives additional interest from the present conjuncture, when the Powers allied against Russia are inviting Sweden to take part with them against her old and inveterate foe. The Print from which our Engraving is taken is, as the inscription beneath it shows, a Russian one. The words indicate that the work is there presentation of a naval battle fought between Russian advanced guard galleys and a Swedish squadron, on the 27th July (O. S.), 1714. The elaborate character of the Engraving is remarkable, as showing the care with which, nearly 150 years ago, the Russians attended to practical detail; and it is worth while to observe the curious construction of the gun-boats, which resemble the Roman and Carthaginian galleys. We are indebted for the original to the kindness of Major Chambre (5th Royal Lancashire Militia, now at Aldershot), into whose hands it passed, with several similar works, from the possession of a person who was for some years in the service of the late Emperor Alexander. That officer, to whose tact and energy we may mention that his comrades at Aldershott owe no small portion of their comforts, remarks upon the character of the gun-boats and upon the gun being so well forward in the bows, and observes that the vessels seem capitally adapted to the narrow and shallow bays of the Baltic and their entrances, and that some of our naval constructors might take a hint from them.

There is one other point that must not be forgotten. This battle—fought during the struggles between Peter the Great and Charles the Twelfth took place near a spot which will be to all time a memorial of Russian treachery and barbarity. It was fought off Hango-Head—the place where the Russians murdered the bearers of an English flag of truce. The yacht Captain Hall, of the *Nemesis*, performed one of those acts of chivalry which will be equally memorable, namely, the landing, driving away the Cossacks, and solemnly laying down, with a religious service, a stone commemorating the murder, with an inscription designating it as one of foul treachery. The Russians doubtless returned and broke up the stone; but that small spite has been baffled by the printing-presses of Europe. Perhaps, ere the war ends, we may have to offer another engraving of a battle between Swedes and Russians, unless the northern fleet of the Czar should undergo similar "limitation" to that of the south. If that fight be fought, the union-jack and tricolor will diversify the picture.

NAVAL ENGAGEMENT BETWEEN THE SWEDES AND THE RUSSIANS, AT HANGO HEAD, 1714.—FROM A RUSSIAN PRINT OF THE TIME. (SEE PRECEDING PAGE.)

THE BOMBARDMENT OF SVEABORG.—OFFICERS ON THE ISLAND OF TONA MIOLA.—SKETCHED BY J. W. CARMICHAEL.

## THE BOMBARDMENT OF SVEABORG.

THIS pair of Illustrations was sketched by Mr. Carmichael during the progress of the bombardment, and they show the destructive attack in terrific reality.

The incident of the first Engraving is briefly as follows:—"On Sunday afternoon, August 12, H.M. steam-vessel *Lightning*, Lieutenant James Campbell, proceeded to the island of Tona Miola, with Admirals Dundas and Seymour, and several other officers, for the purpose of seeing, if possible, the damage done to the rear of the town of Sveaborg. The Admirals and officers landed on the island, and were almost immediately seen from the Russian batteries, who commenced firing on them, and also on the *Lightning*. Their fire was most accurate, at a range of near 4000 yards; but it did not prevent the Admirals from accomplishing their purpose, for they saw the work of destruction effected by our gun and mortar boats."

The second Illustration shows Captain Caldwell, H.M.S. *Duke of Wellington*, superintending the gun boats during the bombardment.

The extent of the damage inflicted upon Sveaborg by the bombardment may be estimated by the following article, which appeared in the *Helsingfors Tidningar*:—

The danger is past, at least for the present. Sveaborg has ceased to smoke, the roar of the guns no longer deafens the ear, as during the eventful days of the 9th and 10th of August. No "invincible armada" meets the sight, the horizon is once more clear; but Helsingfors is no longer itself. The feeling of security has not returned: life and excitement have vanished. Nothing more desolate can exist than the appearance of Helsingfors during the last few days. The incessant moving and transporting of valuables, furniture, and effects of all descriptions, is beyond belief; the streets are filled with them, and the main road to the interior is one line of carts, waggons, and fugitives. The scene baffles the power of language to portray. Helsingfors and its inhabitants used to be known for their tranquility and peaceable conditions; but now they labour under that most contagious fever, the pame of fear. And what do we fear? We hope our enemies have not lost all feelings of humanity and pity. They certainly have not, up to the present time, spared private property, especially vessels of every denomination. Still it ought to be borne in mind that here the question involves the safety of a whole town—a whole community a small one, perhaps, but centering in itself the little all of the inhabitants and the deepest interests of the Finland nation, a city that has a right to be respected, not only in the name of Humanity, but in that of Civilisation. It ought to be remembered that, as some deeds add imperishable laurels to a nation's and an individual's name, others leave a stain which for ever remains recorded in the future pages of history.

THE BOMBARDMENT OF SVEABORG.—SKETCHED BY J. W. CARMICHAEL.

# Memorabilia,

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*"A little chink may let in much light."*—OLD PROVERB.

### PLANS OF THE BATTLES OF MARSTON MOOR, NEWBURY, AND NASEBY.

BY SIR FREDERIC MADDEN.

In the "Memoirs of Prince Rupert and the Cavaliers," by Warburton, published in 1849 (a work more distinguished for brilliancy of writing than for a spirit of research or accuracy), he congratulates himself and his readers on being able to refer to a Plan of the Battle of Naseby, fought 14th June, 1645, "drawn up by Prince Rupert's orders, and found among his papers;" and he adds a copy (vol. iii., p. 105), on a reduced scale, of that portion of the plan representing the Royal forces. The original plan was sold with the collections of Rupert and Fairfax Papers at Messrs. Sotheby and Co.'s, in June, 1852 (lot 1443), and was executed by Sir Jerimah de Gomme, a Dutch engineer of eminence, who was in the service of Frederic Henry, Prince of Orange; and afterwards, having accompanied Prince Rupert to England, is said to have been knighted by Charles I., and subsequently became Chief Engineer, Quartermaster-General, and Surveyor of the Ordnance in the reign of Charles II. and James II. A military plan executed by so eminent an authority, who was contemporary with the event, must be admitted to be of considerable interest and value, more particularly since it differs considerably from the plan of Naseby fight engraved in Sprigge's "Anglia Rediviva," 1647, and reproduced (but smaller) in Rushworth's "Historical Collections" (vol. vi., p. 42, edit. 1722). But Warburton would have had still greater cause for congratulation had he known that in the British Museum existed, not only a larger and more careful coloured drawing of the same plan of the battle of Naseby, by Sir Bernard de Gomme, but also coloured military plans by the same hand of the battle of Marston Moor (2nd July, 1644), and the second fight at Newbury (27th October, 1644); all drawn of the same size (2 ft. 4 in. by 1 ft. 8 in.). These plans, with many others by De Gomme, were purchased for the British Museum at the sale of the library of Mr. Gwyn, of Ford Abbey, Dorsetshire, in October, 1846, and are believed to have belonged to Francis Gwyn, who was Under-Secretary of State from 1660 to 1682. They now form the Add. MSS. 16,370 and 16,371. Of the fight at Newbury Warburton merely says that it was "one of the worst-fought battles in the whole war;" and of Marston Moor —the result of which gave such a fatal blow to the cause of the Cavaliers—he is only able to refer to various conflicting authorities, and then (vol. ii., p. 455) ventures to subjoin an imperfect sketch "*as approximating to a correct plan of this perplexed battle.*" It may, therefore, not be unimportant to any future historian of the Civil Wars to give in detail the disposition of the Royal forces in this battle, as represented in the plan of Sir Bernard de Gomme (MS. Add. 16,370, fol. 64). It is entitled thus by the Dutch engineer, "Ordre of his Maj.tes Armeé of 11,000 foot and 8500 horse, with 16 pieces of ordinance, as the[y] where drawne unto severall bodyes at the Battle of Marston Moore, the 2 July, 1074; commanded[ed] by his Heighnesse Prince Rupert, in the releiving of the siedge of the city of Yorck, again[s]t the Sohots and the Parliaments Armee."

The King's forces, consisting of 17,500 horse and foot (which, be it remarked, is the exact amount stated by Warburton from conjecture alone), are drawn up at the bottom of a rising ground, the summit of which is occupied by the Parliamentary and Scottish army of 27,000 men; and along the whole of the Royalists' front is a hedge, lined with musketeers. The left wing consisted of 1100 horse (in eight divisions), supported by 500 musketeers, including the brigade of Sir Charles Lucas (five) and the regiment of Colonel Ayers (two); having, in a second line to the left, an additional force of 300 horse (in four divisions), under Colonel Carnaby, with a reserve of 800 horse (in six divisions), commanded by Sir Richard Dacres. The *first line* of the centre consisted of seven divisions of foot, namely, Col. Tillier's (two), Col. Ensley and Gibson (one), Col. Broughton (two), and Sir Thomas Tinley (two); flanked on the left by Col. Fretwill's regiment of horse (in three divisions), and, on the right, by Col. Trevor's regiment of equal force. In the *second line* were seven more divisions of foot, namely, Colonel Chisnall's, one not named, Col. Chester's (two), and three of Lord Newcastle's foot from York; whose remaining force (in four divisions) is placed in the *third line*, together with Sir William Blakiston's brigade of horse, in two. Behind these, in the centre, are stationed Sir Edward Widrington's brigade of 400 horse (in five divisions), and Prince Rupert's troop (of Life Guards!). The right wing consisted also of 1100 horse (in eight divisions), with 500 musketeers, including Sir William Vaughan's regiment (three), Col. Hurry's (two), and Lord Byron's (three); with an additional force in the second line, on the right, of 200 horse, under Col. Tucke, and a reserve of 800 horse, commanded by Lord Molineux, including the regiments of Col. Leveson (two), Col. Tilsley (two), and Lord Mohneux (two). On a line with this reserve, but more to the left, approaching the Newcastle Regiments, is stationed Rupert's regiment of horse (in five divisions). Besides these, in advance of the right wing, but bearing to the centre, are placed the foot regiments of Prince Rupert (in two divisions), and of Lord Byron (in one).

If this plan is to be depended on (and its authority seems undoubted), there would seem to be good grounds for believing (as stated by Ludlow and Rushworth) that Prince Rupert charged in the *right* wing; but still there is much that contradicts nearly every word of Warburton's description of the battle. Rupert's horse, instead of being in the front of the left wing, is here placed close to the right wing, and must have been engaged with Cromwell and Manchester's squadrons: whilst the Irish foot, under Tiller (who was taken prisoner), is not stationed as a reserve to the right wing, but with the left of the line of the centre. Rupert's famous troop of Life Guards also is quite in the rear of the centre, instead of leading the left wing, and it is difficult to conceive how the Marquis of Newcastle's "Lambe" could have been slaughtered in such an extent, unless Rupert's horse had given way. The victory obtained by the King's left wing must have been chiefly gained by the brigades of Sir Charles Lucas, Colonel Ayres, and Sir Richard Dacres. It is certainly difficult to reconcile all this with the accounts hitherto printed; but the plan, nevertheless, possesses unusual interest, and deserves more study than I have leisure to bestow on it. Before I conclude, I must add that a miniature portrait in oil of Sir Bernard de Gomme is prefixed to a collection of plans (executed probably for him) illustrating the campaign of the Prince of Orange between 1628 and 1645, preserved in George III's library, No. CII. 21.

### NOTES.

DELICATE OFFICIAL DUTY.—It appears from the letters now first published in Bohn's edition of Addison's Works (vol. vi.), that when George I quarrelled with the Prince of Wales (afterwards George II.), Addison, as well as the Earl of Sunderland and Temple Stanyan, was employed to forward a statement of the affair to the envoys at foreign Courts. The Prince had a son, and the King nominated the Duke of Newcastle as one of the child's godfathers at his baptism. The Prince intimated that he should send with some one to the Duke, "You rascal, I will fight you." This warlike threat the Prince afterwards endeavoured to explain away:—"I did not say I would *fight* you, but I said, you rascal I will *find* you: and I will find him; for he has often failed in his respect to me, particularly on this late occasion, by insisting on standing godfather to my son." The logic of the reply is unimitable. Old George, however, was not to be deceived. He ordered the Prince to keep his own apartments, and, after some unsatisfactory correspondence, banished him from St. James's. A more serious quarrel could scarcely take place between the Sovereign and the heir-apparent, but we do not find that Secretaries of State were employed to blazon them abroad.

SWIFT AND ADDISON.—The friendship between Swift and Addison is a pleasing and honourable feature in the literary history of the Anne and Georgian era. They differed widely in politics, and had different tastes and connections, yet each appreciated the worth and genius of the other, and their intimacy survived all the storms and jealousies of faction. "I have always honoured you for your good nature," writes Addison, "which is a very odd quality to celebrate in a man who has talents so much more shining in the eyes of the world." And "shall we never again talk together in *locum t*?" Delightful talk it must have been; for, though reserved and taciturn in mixed society, Addison's conversation with his intimate friends was peculiarly fascinating; and Swift's caustic brain was redolent of personal and witty fancies. Mr. Bohn's new edition of Addison's works, by its copious notes and illustrations, and the number of hitherto-unpublished letters it contains, has revived the fame of the great Essayist, and introduced us once more to that brilliant and accomplished circle of which Swift and Addison were at once the glory and delight.

FEMALE PETITIONERS.—Hume relates that in 1649 "the women applied by petition for the release of Colonel Lilburn, but were desired to mind their household affairs and leave the government of the State to the men." How much more piquant is the affair related by a contemporary, Clement Walker! "About this time some thousands of well-affected women of London, Westminster, Southwark, and the Hamlets stormed the House of Commons with two petitions in behalf of Jo. Lilburn and his company. They sompl[e]n'd of the Council of States' violent and illegal proceedings against them, in seizing them in the night by soldiers; of their arbitrary government, taxes, sequest, monopolies, &c.; and with uttering taking away all liberty of discourse, than which there can be no greater slavery. They were bid go home and wash their dishes. To which some replied, 'They had neither dishes nor meat left.'"

ADDISON'S CORRECTIONS.—Pope tells us that Addison was averse to making any corrections on his printed works. In Bohn's edition of Addison's Works there is, however, a copy of the original draught of the celebrated "Letter from Italy," which is preserved in the Bodleian Library, and is entirely in Addison's handwriting. From certain marks it appears to have been in the printer's hands, and printed in folio. This curious literary relic affords an instance of Addison's taste and care in composition. The original opening of the poem was entirely different from its present form, thirty lines having been struck out. The couplet imitated by Gray—

> How has kind Heaven adorn'd the happy land,
> And scatter'd blessings with a wasteful hand!

stood thus at first:—

> How is the happy land, above the rest,
> Adorned with pleasures, and with plenty blest!

All Addison's alterations are improvements, except in one instance. The concluding portion of the poem has two feeble lines—

> But I've already troubled you too long,
> Nor dare attempt a more adventurous song.

The original verse is better:—

> But spent already with a rhyme so long,
> I dare not 'tempt a more adventurous song!

The editor of Bohn's edition states that he is indebted to Dr. Bandinel, of Oxford, for this interesting document, which ought to accompany all future editions of Addison's works.

### QUERIES.

A SOUTH WALES CUSTOM.—About Swansea and in some other parts of South Wales, boys go about singing songs for a month or more before Christmas. Some of them take with them a "horse's head," as they call it, made in the shape of a horse's head, of paper or vasteboard, with about the neck of the horse is a white sheet to cover the person who carries the likeness of the head. When the songsters have sung one or two songs, they and the person with the horse's head march into the house and ask for something. The person with the head makes some jump like a horse during this time. Can you or your readers tell me what is the origin of the custom?—J. MOLINEUX.

IN the second edition of "Guesses at Truth," by Two Brothers, and at page 171, appears the following:—"Yet in Hamlet himself, that personification of human nature brooding over its own weaknesses and corruptions, that only philosopher, with one exception, whom poetry has been able to create. How different are all the reflexions!" Who is that other philosopher indicated in the passage?—J. T., Dublin.

CROWNE.—Will you kindly inform me the names of each of our Sovereigns for whom crowns have been specially made, as I am unable to ascertain them, and greatly desire a complete list?—L. B.

TAYLOR, THE WATER-POET.—In looking through the rare folio of Taylor's works, to which my attention was awakened by some extracts you gave from him lately, I met with the following in his "Wit and Mirth:"—"One asked a fellow what Westminster-hall was like? 'Marry,' quoth the other, 'tis like a butler's box at Christmas among gamesters, for whosoever loseth the box will be sure to be the winner.'" Perhaps some of your antiquarian readers will explain this?—A MODERN ANTIQUE.

THE GOOD COUNTESS OF MONMOUTH.—In repairing an old house at Watford, Hertfordshire, a diamond pane of glass was found, with this inscription:—"The Chamber of the Good Countess, Elizabeth of Monmouth, who died heare, 1640." Can any of your readers inform me who was this Countess of Monmouth, and give any particulars of her death, and where buried, &c.—CARPE DIEM.

A DEVONSHIRE CUSTOM.—Can any of your readers give the historical origin of the following custom? At Combmartin, on the north coast of Devon, it was customary, a few years ago, for a large party of the townspeople to proceed, one day in the summer, to a certain spot in a wood above the town, to search for the Earl of Tyrconnell. He, being discovered (in the form of one of the inhabitants who had purposely conveyed himself thither), was seated on a donkey, and brought in (drunken) triumph to the old market-house, where certain Bacchanalian ceremonies concluded the evening. The custom was abolished a few years ago, in consequence of the melancholy death of the then (assumed) Earl, who, having partaken too largely of the refreshment supplied him, rolled over some stone steps and lost his life.—Your obedient servant, H. S. P.

### ANSWERS TO QUERIES.

"LANDED GENTRY OF SOMERSET."—In reply to the inquiry of "F. R.," I incline to think there is no collected record of the landed gentry of Somerset in the seventeenth century in existence, except what may be found scattered in Burke's "Extinct Baronetcies," "Commoners," Hutchins's "Dorset," and at the Heralds' College. I have been informed by one of the heralds that a great number of pedigrees of western families were destroyed by the Great Fire of London, the loss of which can only be supplied from the papers in private hands. There has been lately established "The Genealogical and Historical Society of Great Britain, for the purpose of collecting from private sources and otherwise pedigrees and papers of families which hitherto have never appeared in print. A journal of its proceedings is expected to be published early in the ensuing year.—T. P. LANGDALE, Temple.

F. R., Totness, asks, amongst the Queries in your admirable ILLUSTRATED LONDON NEWS of December 22, where he can find a record of the Somersetshire families in the seventeenth century in Blome's "Britannia" of 1673 he will find the names of all the resident gentlemen in the different counties of England and Wales.—A FRIEND.

LAKE LENNOX.—In your paper of Dec. 15th David Walkenshaw mentions three facts, referring to Scotland; in reply to the second fact, the Lake Lennox refers to Lochlomond, formerly called the Lake of Lennox, from the family seat of the Lennoxes being at the mouth of Loshlomond. There is an old saying of three things to be seen in the loch:—1. A wave without wind. 2. A fish without a fin; and 3. A floating island. The first and third can be seen often, and the writer has sailed over to the floating island several times; it is composed of floating rushes or long grass, growing from the bottom of the loch, and a small saghog grows in the centre of it, but no person can land upon it as it has no foundation.—JOHN MILLER, Bookseller.

SIDE-SADDLES.—Some difference of opinion exists amongst antiquaries, as to what fair dame the honour is due of having been the first to introduce the use of side-saddles. Fosbrake, in his "Encyclopædia of Antiquities," says that "in the fourteenth century women rode both on the pillion and on side-saddles;" and, for this reason, he adds, that "the latter were not introduced by Anne, Queen of Richard II., as Rous pretends and Strutt denies, though probably her example entirely suppressed the indelicate mode." Stow agrees with Rous, and thereto says that they "were in use in 1388." From what Oliver says, in his "History of Beverley," Fosbrake's view would appear to come nearest the truth. Speaking of Joan, the wife of John de Wake, who lived in the time of Edward I., he says that she was the *first to ride sideways upon horseback*. This agrees with the words of "charta of the lady to the convent of Walton, to which a seal was appended, with the device of a female figure seated sideways on her horse, holding the bridle in her left hand." Old Zackary Gray, in his note on the lines in "Hudibras,"—

> To lay their native arms aside,
> Their modesty, and ride astride,

favours Stow, and refers for further information to Camden's "Surrey," edit. 1722, vol. i, col. 188, and Fuller's "History of the Holy War," b. ii, chap. 27. —R. W. ELLIOT.

Catherine de Médicis is said to have first used, if not invented side-saddles about the middle of the sixteenth century. (See Mrs. Markham). J. F. LLOYD.

THE "TALL PINTA."—H. J. R. very boldly asserts "that there was no vessel whatever named the *Pinta* in the Spanish Armada, and that Macaulay has simply used a poet's license in adopting such a name as suited his rhyme; that it *might* have been the Santa Maria." Macaulay has adopted the immortal name of the vessel from whose decks the discovery of America was made:—"A little after midnight the joyful sound of 'Land! land!' was heard from the *Pinta*, which kept always ahead of the other ships" (*Robertson*). Like a true poet he knows that there *must* have been also a *Pinta* in the Armada, and I fully believe him.—W. G.

THE SANCROFT MEDAL.—The Sancroft medals were struck to commemorate the acquittal of the Bishops in the reign of James II., and the following account of one of them answers the description sent by D. Bust of Archbishop Sancroft, 1688, on one side with inscription. Reverse: Busts of the six imprisoned Bishops round that of the Bishop of London, stars interspersed. An inscription round the edge. Compton, Bishop of London, also signed Archbishop Sancroft's petition against the Order of Council for reading the King's Declaration of Indulgence in the churches, and had arranged a list of Lords to become bail for the Bishops if the Court should require it. This very likely made him popular, and was perhaps the reason of his bust being placed in the centre of one of the medals. The Keeper of Antiquities in the British Museum has a series of eight of these medals. This information is taken from the "Life of Bishop Ken," by a Layman.—St. Leonards-on-Sea.

## CHESS.

### TO CORRESPONDENTS

KRAT.—You may probably obtain "Le Palamède" through the medium of Messrs. Williams and Norgate. The foreign booksellers; but the "Treatise on Whist," by Deschappelles, is reprinted in Bohn's "Book of Games." London, 1850.

F. WHITE.—Kemble's is the cut.

W. H. A. Tockey.—Yes.—1. Kt takes Q B P (ch). 2. Kt takes K P (ch.)

BRAVE.—A Pawn so advanced can be exchanged for a second Queen or for any other piece except a King, without regard to the pieces already on the board. 2. The fact of the K.R. having been stocked (not moved) does not prevent his Castling.

W. RAMSDEN.—The first is price 6s.; the other, 5s.

P. M.—Upper Tooting.—Nearly conceived, but much too easy.

A YOUNG CLERK.—There is a thriving Amateur Chess-club, the very thing that you require at the St. James' Literary Institution, Clifford-street, Bond street. The Club is open to readers about forty members, and any member of the Institution itself may belong to it on payment of merely a nominal subscription.

JANUS is thanked for his voluminous and interesting disquisition on ancient chess.

M. D., Burlington-street.—The present is the most advantageous period for joining the St. George's Chess-club as the annual subscription commences at the beginning of the year. Gentlemen desirous of becoming members should apply personally, or by letter, to the Secretary, at the Club-rooms, 53, St. James's-street. We have not room to publish a list of the existing Committee this week, but you can obtain it by applying as above.

S. J. R.—The new "French Chess Magazine" makes its appearance on the 15th of the month. You can subscribe through any of the foreign booksellers.

X. Y. Z.—When your opponent sacrifices a piece in the opening mentioned, your best course is to exchange Queens as soon as you conveniently can. This, of course, he will endeavour to prevent, and in trying to do so, he must afford you time to bring your forces into action. But should he contrive to obtain a little attack you need not be alarmed. Keep cool, carefully, and, ere long, he will end, as presuming attacks most commonly do, in the defeat of the aggressor.

SOLUTIONS OF PROBLEM NO. 617, by Anabel, H. S., W. G. T., A Lover of Chess, J. Knight, Tomkin, Bushby, Edmund T., Craigellachie, Chilcurg, Haris, are correct.

SOLUTIONS OF PROBLEM NO. 618, by J. Hudson, R. M., S. T., Hunter, Sisel, are correct.

SOLUTIONS OF ENIGMAS, by S. T. V. Civis, James Plush, Miles, F. K. S., Gregory, Omicron, A. Z., D., Craigellachie, M. D., Durham, Ernest, Pallo-Chess, M. P., Old Salt, Mungo Lee, F. Z., are correct. All others are wrong.

White playing first, compels Black to mate him.

## PARIS FASHIONS FOR THE NEW YEAR.

New-Year's-day brings with it many delights for the children, great and small, of France. In London the provision warehouses and poulterers of all kinds, and in France the venders of the thousand elegancies and luxuries of life, deck themselves out for the new year. In England it is a fête in which the entire family, from the baby to the grandfather, shares. In France it is the fête of the women and children. The men take no part in it beyond the pleasure they have of making presents. Thus, in France, the shops since last month, when I spoke to you of winter dresses, have been resplendent with the novelties of the year. We have seen a boy's frock of bronze Alsacienne, with silken embroidery of the same shade; the jaconet trousers reach to the knees; and beneath the gaiters are worn socks of maroon and blue cashmere. A little flat-brimmed hat, ornamented with a tuft of black feathers; and a plush mantle, with binding on the edges, completed this *costume de ville*. For the evening we have seen a dress of Chinese blue velvet, edged with ermine, with gimp, collar and cuffs; a velvet cap of the same shade, with a tuft of white feathers; and trousers, still richer, complete the costume.

For a little girl, *une robe de drogget* of violet ground, with a sprinkling of gold buttons; the corsage being ornamented at the edge of the basquine, and upon the sleeves, as well as on the brases, with a violet velvet band. The cloak (*la manteau visite*) is of black velvet, with lace of the same shade in three rows. For the evening a dress of pearl grey poplin; the skirt to a third of its height, ornamented with rose, *taffetas*, upon which are seven or eight undulating rows of small black velvet. The

corsage is ornamented, like the skirt, together with the short sleeves; the cambric chemisette, like the trousers, is ornamented with Valenciennes.

You can scarcely imagine the increase that has taken place in the export of French *modes* to the East since the war. It is singular, however, that French fashions are not at all popular there. The materials are taken in the piece, and out according to the fashions of the country. The lightest shades, as well as *damas brochés or et argent*, together with *gazes lainées*, are the most sought after. Valenciennes and Malines lace are much in request, and are the only materials for trimming, without rendering heavy, fine dresses of transparent silk. On our side the loans from Constantinople become more and more frequent. The *Causeuses d'intérieure* come from there, as well as the Fez embroidered in gold. The charming *bretelles*, of silk and gold, and tassels to match, denote that the alliance between these two extremities of Europe is becoming closer.

We have little to mention in the way of novelties for the ladies. Every one's attention is turned just now upon children, while they (the ladies) are waiting with too much impatience for their New-Year's presents to think much about their toilets.

### THE ILLUSTRATIONS.

1. Head-dress of Narcissus blue, with a garland around the top-knot, and in passing behind the comb to form two tufts, the ends of which fall over the shoulders. The other head-dress, seen from the front, with other flowers, is a similar arrangement, and indicates the way in which the tufts are arranged on each side of the cheeks.

2. *Velvet Hat (épingle)*, with embroidery of the same colour; simple roses upon the sides, with roses also of the same colour; for very few green leaves are worn mixed with them.

2 Mantle of black velvet, with lace (No. 6) upon the edge; below is the same lace, beneath which is another of double the width. The trimming is composed of a deep gimp, with large scallops. This latter is adopted in all the rich patterns, most in fashion during the late Exhibition.

*Gimp Collar (Point de Venise)*.—These rather large collars are not mounted, like the others, but are placed flat upon the dress, and closed in front by a richly-jewelled pin.

3. Chapeau of maroon velvet, trimmed with a tuft of flowers on each side; on the edge of the *passe* is white blonde; beneath it *en tulle illusion*, trimmed with white blonde, and flowers to match.

Dress of Pekin blue, with a single skirt, upon which are three bands of black velvet, and beneath a network of binding trimmed with *petits pois détachés*; the *corsage a brettelles* formed by the same trimming; sleeve with two *bouillons* formed by a *poignet* on a level with the elbow, and the extremity ornamented in the same way

## LORD BEAUCLERK'S ARCHIMEDEAN SUBSOIL PLOUGH.

THIS implement has been invented and patented by Lord Charles Beauclerk, and exhibited by Messrs. Ransome and Co., of Ipswich. It presents a new feature in the mode of tillage, and was first publicly tried at the Bath Agricultural meeting, of June, 1855, where it gained the prize, therefore its practical utility may be considered established. This invention has for its object the use of an axis with inclined or screw-formed cutting-blades thereon, and placed in such a manner that the axis, on being drawn on or under the surface of the land, shall receive a rotatory motion, by reason of the said blades cutting into the land. For this purpose each axis is formed by a cylinder of iron one inch diameter and eight inches long, having a steel point at one end with three knives or blades attached at an acute angle, thus forming a male screw of three threads. This axis or screw is supported by and turns on suitable bearings within an iron socket, so as to admit of its revolving freely when drawn in the direction of its own length through the land—such revolving of the axis being caused by the screw-formed blades being resisted by the land.

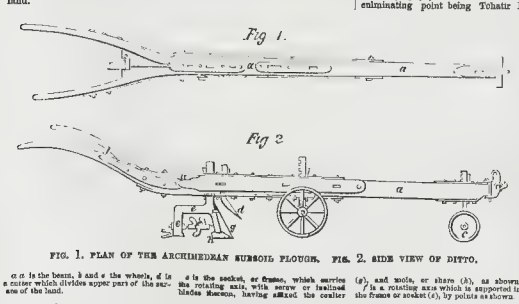

FIG. 1. PLAN OF THE ARCHIMEDEAN SUBSOIL PLOUGH. FIG. 2. SIDE VIEW OF DITTO.

*a a* is the beam, *b* and *c* the wheels, *d* is a center which divides upper part of the beam, *e* is the socket, or frame, which carries the rotating axis, with screw or inclined blades thereon, having fixed the coulter (*g*), and mole, or share (*h*), as shown. *f* is a rotating axis which is supported in the frame or socket (*e*), by points as shown

This implement, when at work, presents only cutting edges, therefore the resistance is small, and the effect produced is a female screw of three threads some six inches diameter cut into the land, plus the perpendicular and horizontal cuts made by the socket's passage through the land. Thus a vast amount of labour is economised, and the work of subsoiling is thoroughly carried out.

The simplicity of construction renders the cost of the screw or axis trifling, and they can be removed from the socket by any labourer and replaced by others of greater or less diameter.

The application of this system to other implements of husbandry may be various, and not confined to subsoil ploughs. Thus, for example, three of these axes may be placed on the same beam by means of parallel outriggers on each side, capable of being adjusted or removed at will, and in this form may be used for breaking up land, scarifying or cross ploughing, in the latter case it will be found most effectual. Thoroughly pulverising the soil with the additional advantage of not bringing the last year's surface uppermost, whilst time and labour are economised by the breadth compassed.

The operation of ploughing and subsoiling simultaneously has also been tried with success. This object is attained by affixing an Archimedean Subsoil plough in parallel beam, one foot in advance, and on the right hand of an ordinary plough. The first furrow being made, the subsoiler is lowered to the depth required, enters the said furrow, and as the team advances the plough throws the earth lightly over the furrow now subsoiled, which is left undisturbed.

## GEOLOGY OF THE CRIMEA.

*(To the Editor of the* ILLUSTRATED LONDON NEWS.)

HAVING observed in the Correspondence from the Crimea several inaccuracies with respect to its geological structure, more especially in a recently-published letter from the "Special Correspondent" of the *Times*, dated from the British Camp before Sebastopol, November 30th—where, in describing the formation of roads, he states that certain rocks were used in their construction, which do not exist in that country, and compares others of a comparatively recent date to rocks far lower in the series of strata—I deemed the subject of sufficient importance to offer this explanation, especially as the geology of the Crimea has been so well described by M. Du Bois de Montpérenx, by M. Hoot, in the work of Démidoff, and in the "Geology of Russia and the Ural Mountains," by Sir Roderick Murchison and M. de Verneuil.

The most ancient deposits of the Crimea are those belonging to the Jurassic group, forming the mountain chain which presents on the sea-coast steep cliffs of limestone based on schists, and much perforated by eruptive rocks, greenstones, porphyry, &c. This chain runs in a direction E.N.E. to W.S.W., its culminating point being Tchatir Dagh, or the Tent Mountain, 5135 feet elevation. In lithological character the Jura of the Crimea and the Caucasus represents, like that of Russia, the Terrain Oxfordien, or Middle Oolite of English geologists. It is to this series, no doubt, the limestones belong, alluded to by the correspondent of the *Times* as being used in the formation of the new road, by Mr. Doyne, round the base of Frenchman's-hill, which he speaks of as being formed of *hard carboniferous limestone* strata which would be considerably lower in the series, and do not occur at all in the Crimea or its immediate neighbourhood.

The "Nummulitic," or Lower Greensand, may be well observed in the Crimea at the foot of the chain towards the north, its horizontal beds resting unconformably upon the Jurassic limestone. Above this the Upper Cretaceous series occur, consisting of shales, upper greensand, chalk marl, and white chalk, as in the Caucasus.

Next in ascending order is the Nummulitic formation, now included in the Eocene, or Older Tertiary division (so named from its containing vast masses of lenticular bodies called nummulites, from their resemblance to coins), and much used as a building stone at Simpheropol and Sebastopol. Nearly all these rocks are of much harder and more crystalline character than their equivalents in Northern Europe.

Eruptive rocks frequently intervene, the effect of some of which upon the Jurassic limestone may be well seen near the Monastery of St. George.

The Older Caspian, or Steppe limestone, with sands, &c., occupies the northern and greater portion of the peninsula, including the Heracleotic Chersonese; and is the upper shelly limestone of Eupatoria, Sebastopol, &c. It also includes the chief limestones round Kertch, and the deposits of the cliffs of Kamiesch Bouroun, and Yenikale, also the limestones on the northern and western shores of the Black Sea. These limestones and sands, associated in parts with volcanic ashes, tufa, &c., are much softer than the rocks which constitute the chalk ridges; they occur in various conditions, and are more or less fossiliferous, being largely used as a building stone in the east of Europe. The oolitic character of some varieties has doubtless led to a mistake in the letter before alluded to, of comparing it with the Secondary Oolites of the neighbourhood of Sireuil in Gloucestershire.

The Newer Caspian occurs at the still more northern extremity of the Crimea, extending to Perekop, Kherson, and the shores of the Sea of Azoff.

The sides of the Bay of Sebastopol develop a succession of formations from the most recent of these Tertiaries, through the Steppe Limestone, Nummulitic limestone, and finally the Bay of Sebastopol having been excavated in the deposits of more ancient formations.

WILLIAM H. BAILY.

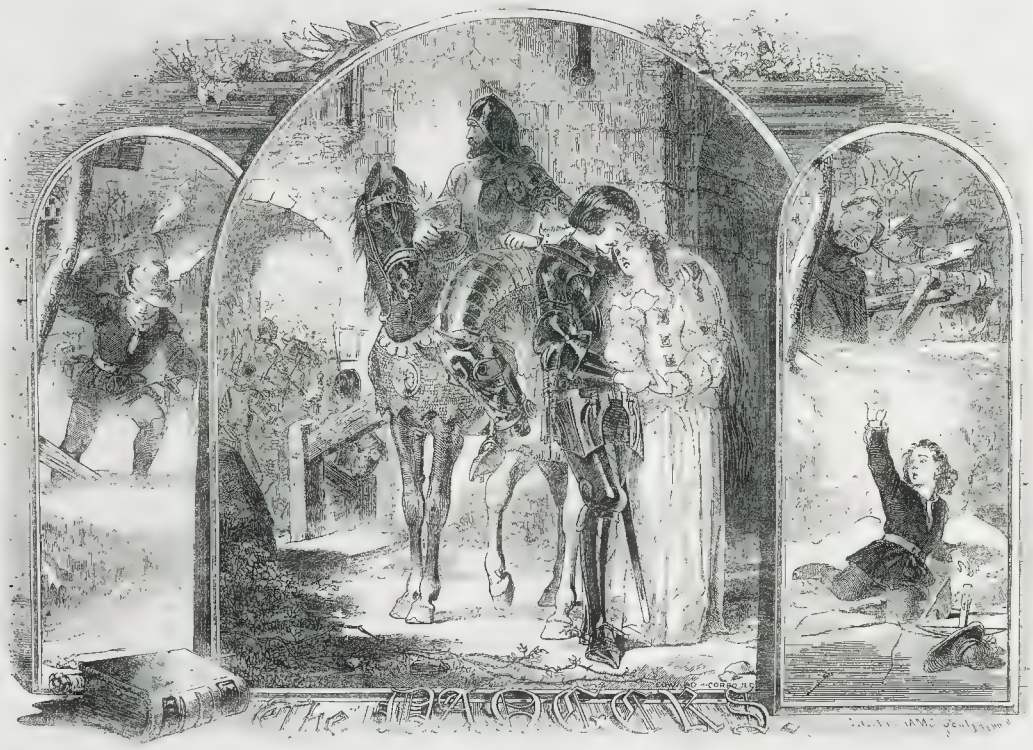
16a, Wilson-place East, Mornington-road, December 16, 1855

PARISIAN LUXURY.—As a slight indication to assist in forming a judgment upon habits and manners in French society in Paris, and of the height to which luxury of every kind has been gradually rising here since the last ten years, what should you think of a lady having, within the space of about twenty months, a bill at her draper's of 70,000 francs! upwards of £3000! Such is the fact, however. An action was brought, last week, by a draper against a lady in society here for the payment of her bill, which had been long owing. The defendant's counsel pleaded the necessity of reducing the items of the bill, which were, he said, exorbitant. The plaintiff's counsel, on the contrary, brought the bills of other persons to prove that there was nothing extraordinary in the charges set down in the one in question. The Court has not yet pronounced sentence one way or the other. One item was three pairs of embroidered sheets, at £120 each pair; dinner napkins, £20 and £30 the dozen; collars, £6 a piece; and a pair of manchettes, 700 francs (£28). These are proofs of that extravagance in dress on the part of the French *élégantes*, which people actually will not believe in England, but which are of really common occurrence. These manchettes of £28 counterpoised to another instance of wasteful extravagance which I have known to be committed by ladies with whom I have the honour of being personally acquainted, and who are in other respects perfectly irreproachable, namely, the wastefulness of putting on a new pair of boots every day, and wearing at least two if not three pairs of gloves a day.—*Paris Correspondent of the Manchester Guardian.*

THE NEW LAW FOR THE INSPECTION OF COAL-MINES IN GREAT BRITAIN.—The Act passed in the last Session of Parliament, "To amend the Law for the Inspection of Coal-mines in Great Britain," and "with a view to the safety of the persons employed in such mines," came into operation on Monday last, the 31st ult. The following general rules are required to be observed in each colliery:—1. An adequate ventilation of all collieries, to dilute and render harmless noxious gases, to such an extent as that the working places of the pits and levels of such collieries shall, under ordinary circumstances, be in a fit state for working. 2. Every shaft or pit which is out of use, or used only as an air-pit, shall be securely fenced. 3. Every working and pumping pit or shaft shall be properly fenced when not at work. 4. Every working and pumping pit or shaft where the natural strata, under ordinary circumstances, are not safe, shall be securely cased or lined. 5. Every working pit or shaft shall be provided with some proper means of signalling from the bottom of the shaft to the surface, and from the surface to the bottom of the shaft. 6. A proper indicator, to show the position of the load in the pit or shaft, and also an adequate break, shall be attached to every machine, worked by steam or water power, used for lowering or raising persons. 7. Every steam-boiler shall be provided with a proper steam-gauge, water-gauge, and safety valve. In addition to several general rules, special and appropriate rules are to be established and observed in each colliery. We understand that at most of the collieries in the north of England, in Staffordshire, and those in North and South Wales, prompt attention is being paid to the requirements of the Act, in providing steam-pressure gauges, water-guages, and safety-valves.

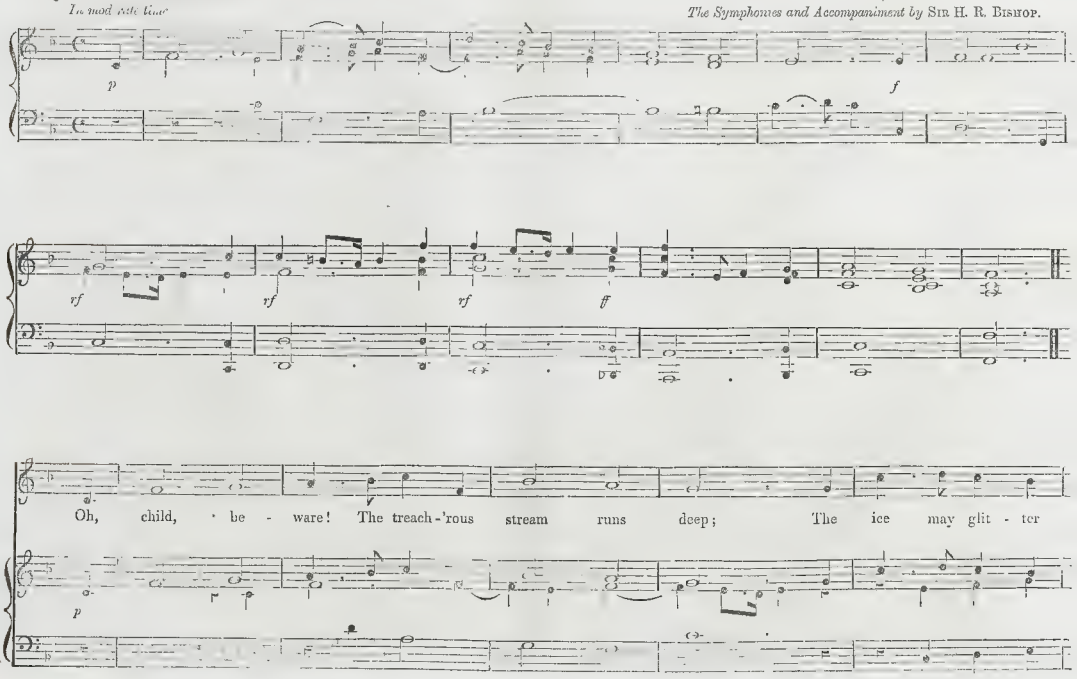
CHRISTMAS AT HOLYHEAD, NORTH WALES.—The Messrs. J. and C. Rigby, contractors for the great national undertaking the New Harbour of Refuge at Holyhead, evinced a very laudable feeling in rewarding the whole of the men employed on the above extensive works with a good substantial joint of beef for their Christmas dinner. For this purpose the necessary quantity of prize cattle was procured from the estates of Sir R. B. W. Bulkeley, Bart., M.P., and of Colonel Pratt, to the amount of upwards of 5000 lb. of prime meat. The cattle were exhibited in a roomy shed at the magnificent Town-hall, on Saturday last, when a very crowded assemblage thronged the building, which was brilliantly illuminated during the evening. On Monday, the 24th ult., the distribution took place in the Market-hall. A sirloin of beef was provided on the part of each, of which the Hon. Mr. Stanley, the Rev. Charles Williams, Rector of Holyhead, and many others of the leading gentry partook, and pronounced the same delicious. After which Mr Stanley in an eloquent address delineated the mutual good feeling subsisting between the respected contractors and their numerous workmen, dwelling forcibly on the well-conducted manner in which the men generally demeaned themselves, and the munificent gift made them on the part of the employers, Messrs. Rigby (nearly 1000 families with 1700 children being recipients thereof). Three hearty cheers having been given for the Messrs. Rigby, which were received with deafening applause, Mr. Rentheimer, as their representative, responded. In conclusion, Mr. Rentheimer proposed three cheers for Mr. Stanley's kindness in presenting, and also for his amiable and charitable lady, which was received with tremendous applause. Mr. Stanley hereupon addressed the meeting again, referring to the sympathy and interest shown the workmen by Mr. Rentheimer, the representative of the Messrs Rigby; and a similar address was delivered by the Rev. Charles Williams, the much-respected Rector of the parish, who dwelt at large on the great kindness and mutual good understanding subsisting between the firm and their workmen. Three cheers were then given for her Majesty, Prince Albert, and the Royal family. The distributions were continued, and kept four experienced butchers fully employed upwards of ten hours, in cutting up and sharing the prize meat amongst upwards of 1000 families.

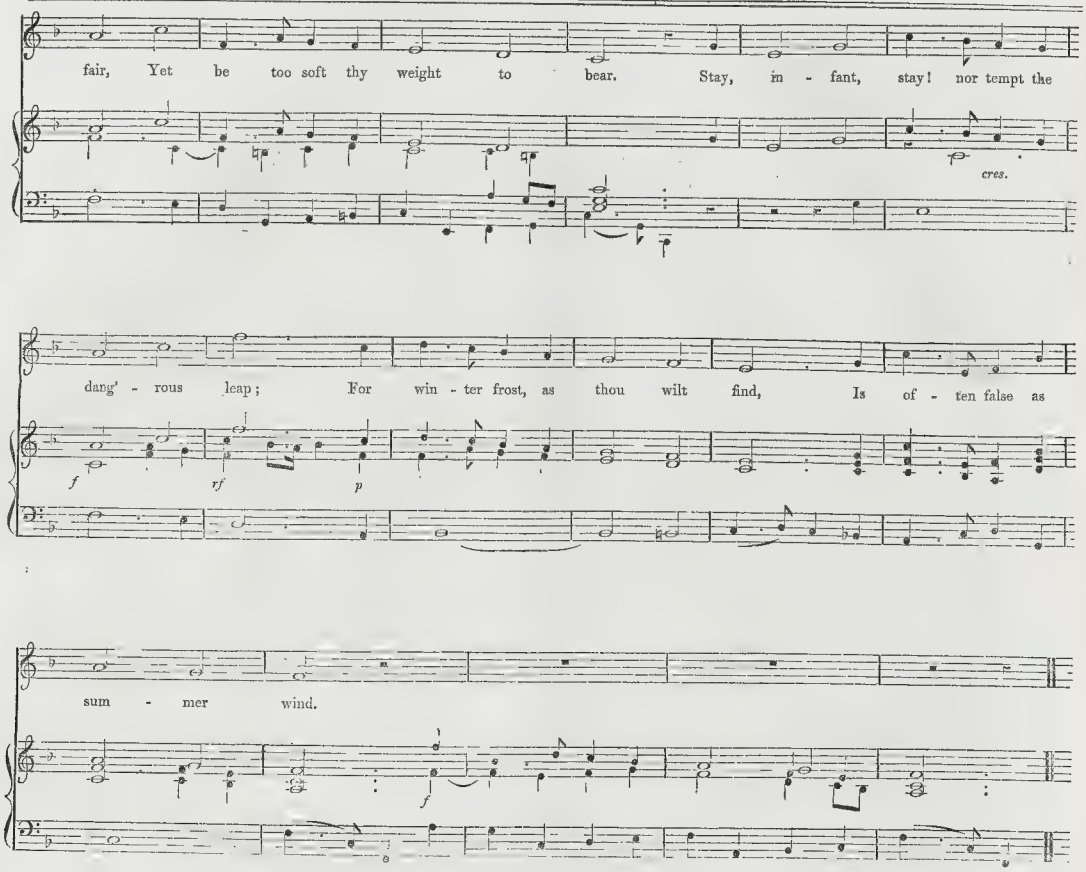
# ENGLISH SONGS AND MELODIES.



The Poetry by Charles Mackay.
*In mod rate time*

Air, "Castabella."
*The Symphonies and Accompaniment by* Sir H. R. Bishop.





fair, Yet be too soft thy weight to bear. Stay, in - fant, stay! nor tempt the
cres.
dang' - rous leap; For win - ter frost, as thou wilt find, Is of - ten false as
f
rf
p
sum - mer wind.
f

## THE DANGERS.

I.

Oh, child! beware!
The treacherous stream runs deep;
The ice may glitter fair,
Yet be too soft thy weight to bear.
Stay, infant, stay! nor tempt the dangerous leap;
For winter frost, as thou wilt find,
Is often false as summer wind

II.

Fond youth! beware!
The glory in thine eyes,
Or dream of love so fair,
May fade, and leave thee to despair.
Stay, young man, stay! be cautious and be wise;
For love and glory lure astray,
And scatter heart-aches on the way.

III.

Old age! beware!
Why should thy heart grow cold?
Earth has no sight less fair
Than starveling Avarice and Care.
Stay, old man, stay! nor hoard thine idle gold;—
For he who worships wealth alone
Shall have his heart for burial-stone.

---

"CASTABELLA."—The song entitled "Castabella going to sea," and beginning, "Hark, hark! methinks I hear the seamen call," is in the sixth volume of Watts's *Musical Miscellany*, 1731, and also in the fourth volume of *The British Musical Miscellany*, in which it is called "A Sea Song."—In both those works it is stated to be composed by Dr. Pepusch. This air has a remarkably original character; and the first part, or section, is somewhat curious, as consisting of *nine* bars, instead of the usual eight bars; though the ear would hardly distinguish any irregularity in the construction.—H. R. B.

## LITERATURE.

THE HISTORY OF ENGLAND, FROM THE ACCESSION OF JAMES II. By THOMAS BABINGTON MACAULAY. Vols. III. and IV. Longman and Co. (SECOND NOTICE.)

Having noticed in our former remarks the chief ground on which we felt bound to complain of Mr. Macaulay's great production—namely, its practical breach of an express engagement and of a spontaneous promise—we will now turn to the chief cause of its prodigious success as a publication This is the only course open to us; for, to follow so immensely diffuse a record in detail, would demand a series of articles nearly as voluminous in their final aggregate as the work itself. We must content ourselves with a less ambitious or less minute description, and keep to the salient characteristics.

The style of Mr. Macaulay is still, after all, his *cheval de bataille*. On that matchless charger he has ridden out of many a scrape. It is when an aphorism is reduced to an example that it first wins all the credit it may have deserved on its own account; and many among us have never understood the full meaning of Buffon's famous remark, "le style c'est l'homme," until they had witnessed the marvellous success of Mr Macaulay's "History." He is like one who has found a treasure, of which others learn the existence by the effects, and only in proportion as the course of his literary enterprises has necessitated the exchange of broad pieces. They have been his fortune, both literary and social; but what has the public gained?—Anything? We believe that the public has gained much by Mr. Macaulay's labours. Independently of the many bright intelligences which his genius has kindled into flame, he has this title to our gratitude—that he is one of those authors who have known how to make English prose enduringly classic. Here we make the chief, the great, acknowledgment which we honestly believe to be due to Mr. Macaulay. His story disappointed conscientious readers of English history; but his telling of the story more than half disarmed their displeasure. Since then he has mended in art; but we doubt whether he has improved in sincerity. He takes up the record of English events where "the most painstaking and erudite of English historians" (we believe we quote Lord Campbell in the sense, if not in the words) had left it off. Mr. Macaulay falsifies no real dates; misdescribes no actual occurrences; he omits little; but he heavily loads his narrative with portraits of men and women who have lived, done, and suffered; and the portraits are frequently virtual falsehoods themselves.

The art of the historian is here perfected; he is more moderate in the dangerous parts of his invective, more moderate in the untenable eulogies with which that invective is interspersed. There is a mellowness, an evenness, a forecast, a sequence, which were missed in the two opening volumes; he allows a proportion of what cannot be denied—he inserts the harsh features familiar to one generation in its awe, and to all succeeding generations in the traditions which must remain: he praises with a more subdued and temperate partiality, and he vituperates with a far more artful and considerate acrimony. The whole of the canvas, in short, is coloured and grouped in a manner more within the laws of probability and the limits of our national impressions and traditions. The common or prevalent estimate of character is not so shocked as it was in his first volumes; and prejudice itself, where prejudice happens to be the object of attack, is left without its rapier by a new trick of fence before it has been able to wield it.

William was, at first, more than a commonplace historical favourite with the writer: he was more than a hero; he was a demigod. The revolution of which he was the centre was the very birth of everything which Mr. Macaulay values in modern English politics. Without William that revolution might not have occurred at all, and would infallibly have assumed a different form, and taken a different direction. His party would not have existed. Mr. Macaulay could not have been what he is; the entire current of his career would have wanted the channel to run in; a thousand other careers more or less illustrious—some lost in the obscurity of unpublished usefulness, some rolling out before the sun would have found no track, no banks, as it were, to protect their course, and would have sunk again out of view as soon as they had arisen. And now, to a great extent this has been, on the contrary, the fate of the other party for more than five generations. They stand maimed and disfigured before the tribunal of posterity—bereft, doubtless, of many characters which should have graced their ranks—baulked of a destiny which was, but for that revolution, likely to have been one of the most famous class in English annals. Madame de Staël's remark about the internal dissensions of national politics has been often quoted, but it recurs forcibly in presence of this magnificent production. We certainly should never accept of a history of our Revolution as any even as a commentator upon our affairs, his authority among us is always short-lived. Hints of great value we may occasionally derive from such a source; but the views are too fragmentary, the "points of sight" is too capricious, as well as too remote, to allow the chance of any comprehensive or well co-ordinated survey of our insular struggles and social development. Even De Lolme has fallen into the portion of weeds and worn-out faces," in spite of the very flattering conclusions and the unity which seemed to pervade his whole work. Nevertheless, it remains true that foreigners do form a sort of "contemporaneous posterity;" their knowledge may be more limited, but so also are their vindictive resentments and their vehement prepossessions; and, in atonement for information less complete, they can plead an impartiality less disturbed, and indeed less tempted.

For a poem, a great national epic, we might well take "Æneas," on the one side, or "Ulysses" on the other; but those who fought over the body of Patroclus, those who gave wounds and received them, to carry off, or to save from profanation, the noble *exuviæ*, are not the fittest to record in sober narrative *the facts* of the long conflict.

Mr. Macaulay is himself one of the athletes. He is what he is because William was what he was. He regards the past history of the Whigs with a feeling much more akin to filial piety than to philosophic approval or even political admiration. Then, should a party in the record never state his case? We do not say so; we should lose many a great literary performance by enforcing such a rule. But we say that this is a stating of the case to almost as great an extent as it is history. Immediately the question occurs, Who will write a pendant to this work? That question may long wait for an answer. Not every day can a story of the last five generations, conceived and executed in a style worthy to compete with Mr. Macaulay's colossal fragment, be supplied to the opposite side. A greater master of English prose, or one more versed in the national antecedents, has seldom—perhaps has never—devoted his spendid endowments to the cause of a mere English party.

And what have we said here? His is the Dutch party in its origin. More must be conceded: his party was the Dutch party in its necessity, as well as in its origin. But although what we imported improved us; although it may have benefited us internally, and saved our greatness; yet what it worked upon was English. The old native element should not be altogether despised for the sake of this Batavian plating. The material beneath it had started from its fittings, and was dinted and battered in many a place; and the dull grains shine and glisten under the glamour of Mr. Macaulay's rubbing; but if ever two parties in the history of any nation were—one of them extraneous in its chief supp rts but national in its spirit, and the other racy of the soil but un- lish in many of its objects—it is the Whig and the Tory elements in the earlier half of the last hundred and sixty years of English annals

We cannot now go into a particular examination of the account which Mr Macaulay gives us of about nine years' events; the general remarks we have made were indispensable as a preface to what it might from time to time be incumbent to add, if we more particularly followed any portions of the writer's own course. We are speaking of a Titian who used the pen, not the brush; and the brush can never compete with the pen. No matter what interest may have passed away, provided a subject still retains its interest, it is as easy for the literary artist to draw his likeness as it would have been at the period when his subjects were in actual existence. Nottingham, Danby, Halifax, Shrewsbury, are diagrams ped in striking lineaments theirs?

But the very question suggests others. Is William a true portrait? Has the part he played in the general politics of Europe in no degree warped the judgment of the historian? We beheld him last June landing on the coast of Devon; we then saw him followed Monmouth's rebellion, and assisted at his despairing, unavailing supplications; we had watched the flight of James, when—strategically speaking—there was no real reason to fly, but much reason to remain. Now we witness the new King at the Boyne; we see him in his most pressing financial and police arrangements; and we are asked to call that the most satisfactory epoch of our history when England owed her political regeneration and her military renown to Holland. The date is one of the least splendid in our annals. And even Mr. Macaulay's magnificent language and glowing parallelisms fail to reconcile us altogether to the humiliating benefit.

(*To be continued.*)

MANUAL OF BRITISH RURAL SPORTS; comprising Shooting, Hunting, Coursing, Fishing, Hawking, Racing, Boating, Pedestrianism, and the various Rural Games and Amusements of Great Britain. With numerous Engravings. By STONEHENGE. G. Routledge and Co.

Every Englishman is more or less a sportsman. The passion develops itself in various ways. The little urchin, who, with a pin bent for a thread, a crooked rod and a worm, takes his stand at the margin of a stream, intent upon the capture of stickleback or minnow, is actuated by the first promptings of this universal instinct. In after years, when crossing the prairie in search of more dangerous excitement, his mind will recur to those earlier efforts, in which he engaged with even a livelier enthusiasm.

It is well for those. Pastime brings health and vigour, unaccompanied by regret. The child, the boy or the man, who seeks his recreation in the open air, on the free hill tops, or on the banks of streams, selects a wholesome discipline. In such scenes the mind and heart are purified, at the same time that the body is nerved for danger and endurance. It is this love of a free communion with nature, this irresistible desire to be constantly carrying into her mysteries, that has imparted to English manhood and to English courage their elasticity and their renown. The love of the chase, or of out door sports, is part of our birthright. One man has his horse and another his dog. Some pride themselves upon their skill in rowing, others in cricket; one hunts on a splendid steed, another follows the hounds on foot; this man shoots, and his friend fishes;—each has his own particular recreation. Go where you will—trace English society through all its varying grades—in all its classes you find a touch of the sportsman. Nor are our fair sex an exception in this respect. Not to mention those who can shoulder a gun and throw a fly, we could refer to many a female equestrian whose grace and dignity might cause a thrill of envy in hearts of sterner mould. Their presence gives animation to the meet—the pawing horse on her well bred hunter, and the farmer's smiling daughter on her pony, lend enchantment to the scene. It is only in England that such a general gathering can be witnessed, because it is only in our island that the love of sport is a national feeling.

The book before us is one that will be appreciated by all classes of the people. It contains information upon every kind of sport, and might justly be called the Englishman's Treasury, or the Manual of British Sports. It is a valuable compendium of out-door amusements, and will render unnecessary the many difficult and perplexing details to the commonest understanding. The author is already favourably known to the public by his popular work on the Greyhound. There are few portions of our island, or even of its dependences, in which the name of Stonehenge has not become a "household word."

The work before us embraces every topic that can possibly be of any interest to the British sportsman. It is divided into five parts. The first part refers to the pursuit of wild animals for sport, and is enriched with the simplest details on shooting, hunting, coursing, and angling. In connection with these subjects information is given respecting the preservation of game, the gun, the dog, the horse, the falcon, natural and artifical fly fishing, and the laws and expenses of fishing. The second part is devoted to racing. In this portion of the work the merits of men, horses, yachts, and boats are discussed. In the third part rural games and out-door amusements are described. The author grows eloquent upon cricket, minor games with ball, archery, quoits, skittles, curling, swimming, skating, riding, and driving. The fourth part contains investigations into the natural history of the principal animals used by man in rural sports. This is a subject that has not hitherto been treated with that attention which it deserves, and the labours of Mr. Stonehenge will be appreciated by those who possess valuable animals in whose health and preservation they are interested. The fifth part refers to diseases of the dog and horse, and displays our author in another character—that of a professor of the healing art. Every form of disease, and every kind of accident, are carefully investigated, and the remedies and modes of cure are admirable. In fact, the work is the English sportsman's true *Vade Mecum*, in which every subject is illustrated, and information of the most varied and accurate nature imparted.

We are glad to be able to notice one judicious omission. No mention whatever is made in these pages of pugilism, cock-fighting, bull and badger baiting. This is as it should be. The book can be admitted into any circle, for, in inculcating a love of sport, the author most carefully discourages cruelty. The volume is very well got up, and the accompanying illustrations are executed with care and precision. It is, in all respects, a book for the people.

SAUERWEIN'S ENGLISH AND TURKISH DICTIONARY.

Not more wonderful than one of the fairy changes in an Eastern story is the contrast presented in our Eastern camp in the Christmas of 1855 to the gloomy realities of the close of 1854. Snug huts and tents, good hospitals, warm clothing, an abundant Commissariat, horse-racing, and theatres replace those heartrending scenes of suffering the recital of which but twelve months ago so deeply moved the whole empire with grief and indignation. Among the lesser privations of our countrymen in the East, for which provision has not hitherto been made, is the want of some means of communicating with our Turkish allies. Fortunately, however, in spite of the Christmas playbills, is not an accomplishment in which the Briton excels—and the everlasting "*Bono Johnny!*" "*No bono Turco!*" have heretofore been the only means the great bulk of our people in the Crimea possessing with our Ottoman friends. To supply the want of an accessible Turkish dictionary is now very fairly supplied by this little volume, into which Herr Sauerwein has compressed a vocabulary of almost every useful—with occasionally a useless—word. If "Hiram" wants a road fowl and mushrooms, though he may not be able to get them, he can at least ask for them, with a better chance of being understood when he merely pronounces the words "*Tavuk ile mantar*," than his unhappy brother whom Albert Smith encountered at Amsterdam—crowing like a cock, and drawing a mushroom that was mistaken for an umbrella.

Nor need our countryman, armed with this little dictionary, despair of being able to enlighten the "sick man" upon the policy of Herr Sauerwein's countrymen. Thus, though a German, he does not discard from h Turkish volume such words as "dup icity," "coward," "tyrant," "slave," "sot," "bigot," and the like. Though, by some accident, we observe, Herr Sauerwein inserts the Turkish word for "Prussia," but not for "Austria." However, we cannot complain of any reasonable use, for the latter we are supplied with many synonyms. The book is really a very good one, well "got up," and will be a most valuable addition to any contribution of literature that may be sent out for the use or amusement of our army in the Crimea.

THE BIRTHDAY COUNCIL; OR, HOW TO BE USEFUL. By MRS. ALARIC A. WATTS. Edinburgh: Thomas C. Jack.

This unpretending little volume contains many specimens of good English composition, as well as an excellent story. The object of the book is, to use the author's words, "to describe in the form of a child's mind, and to trace an idea from its growth, originating in a casual observation to its result in active usefulness." The casual observation referred to is one made to the little heroine of the tale, Joanna Gascoigne, by her aunt. It is this:—"Few are too young and none too humble to benefit their fellow-creatures." Upon this simple text the author has constructed a really interesting and healthy narrative, such as cannot fail to benefit the youthful minds for whose especial perusal it is intended.

ROYAL PANOPTICON, LEICESTER-SQUARE.—The New-Year's novelties here are a series of dissolving views, illustrative of the histories of "Whittington and his Cat," and "Puss in Boots," which Mr. Leicester Buckingham accompanies with a lively narrative, replete with pun and patter. The lectures, which take place at intervals, are delivered by Mr. J. D. Malcolm, Mr. C. F. Partington, and Mr. G. F. Ansell, and deal with parlour magic, electricity, aerostation, and popular chemistry. Mr. Buckingham is the general exponent, he dashes from topic to topic, while the others, as we have mentioned, confine a "Ramble through Venice" and "Life in Pompeii." Next we have a concert under the direction of Mr. E. F. Clipp—the principal vocalists being Miss Jessie Dalton and Mr. Lawler Fielding, and the Orpheus Glee Union, whose delivery of German part-music is excellent.

RAILWAY FROM VIENNA TO CONSTANTINOPLE.—A letter from Pesth, in the *Augsburg Gazette*, says. "A company of rich landowners of Hungary proposes to prolong the railway from Vienna to Raab as far as Belgrade, in Servia, and the route which the company has chosen has been the subject to the authorities. An Anglo-French Company has undertaken, on the other hand, to construct a line from Constantinople to Belgrade, and has engaged for it 120 French workmen, who, with their families, are to take up their residence in Roumelia. This double line will place the capital of the Ottoman Empire in direct communication with Austria, Germany, and all Europe. The works are to be commenced simultaneously at the two extremities, Raab and Constantinople.

FRENCH CAMPS.—Engineer officers are now engaged in tracing out gigantic entrenched lines round St. Omer, for the immediate reception of a large army expected at 120,000 men. The new lines are to be erected adjoining those occupied by the Camp of this year. Another camp of 40,000 men is to be formed at Cherbourg.

## WIKES' CHURCH SPIRES AND TOWERS OF ENGLAND.

### STREET'S BRICK AND MARBLE ARCHITECTURE OF ITALY.

The singular rapidity with which so important a matter as that which involves our system of architecture has been checked, reversed, and, with a revived spirit again urged onward, has invested the circumstance with an interest so striking and noteworthy that it can have been ignored by few indeed. It seems but a short year or two since the architect's shield of faith was represented in the publications of Stuart, Nicholson, and other equally ancient advocates of classicism "as imported;" and yet the interval, brief though it has been, has not only worked a complete reformation of this art-creed, but has brought forth a literature especially pertaining to it—a literature which, while spreading a wider interest in the subject than it has hitherto known, has, at the hands of at least one of its contributors, attained to a prominent position among the worthiest efforts of the language.

Such has been the expansion of our knowledge in this branch of art that the accumulated prejudices which through three centuries has been held against it have been dispelled before our own observation. We have seen a Britton and a Pugin pioneering the way by which the Art of Christian England was to be restored to light, and again devoted to the religion under which it grew and flourished; and, moreover, we have witnessed such practical results of the movement as declare the speedy advent of an architectural system that will henceforward healthily and consistently identify itself with our age and country. Thus, while a death-knell tolls upon the garbled classicism which has so long been bolstered up amongst us, the art which at the hands of our ancestors had glorified Christianity, and embellished our island from village to village, at length regains its wonted position and natural votaries.

There are, as our readers will have noted, still occasional flickers of that paradoxical belief which at once rejects, as utterly incompatible with the spirit of our day, the art-principles of our fathers, and nevertheless discovers a kindred sympathy connecting the architectural requirements of our religion and habits with those under whose influence there reared the temples of mythological Greece. It has been urged that our nineteenth-century life and manners do not accord with clustered shafts and groined vaultings—that is, that harmonious relationship between a country and the art-pride which is as natural to it as is its wayside flower can—even where there has been no change of climate or religion—wholly cease to exist—a gratuitous dictum to which we do not subscribe. The disputants who thus argue against the revival of English architecture for an English people are not unfrequently men who feel the warmest admiration for the results of our ancient system, while they repudiate its revival for modern adaptation. Some of the contributors to our modern architectural literature—men who have no desire to see our architecture any longer made up of the infelicitous of classicism—have, nevertheless, now and then quarrelled with the pointed arch, and strenuously advocated the going back to the round one, with a view to developing it in channels as yet unthought of.

This going-back and fresh-development theory is pretty and amusing; but, as the process would be both unnatural and abstruesely retrograde, it is, we think, not likely to be attempted. Then, again, it has been asserted that our modern Gothic buildings lack that life and spirit which characterise the works of our mediæval progenitors—an outcry which has in no small degree been fostered by a moss-and-lichen worship that has added to the ancient buildings a peculiar romance never dreamt of by their architects. At the same time it must be admitted that the objection is far from being groundless; indeed it could have been scarcely otherwise since the close study of our ancient buildings not unnaturally vented itself in vain attempts at their exact reproduction, and, up to the present, has resulted in more of slavish mediævalism than of architectural life, such as alone can give us a true nineteenth-century Gothic—that will be truly allied in spirit that of our forefathers.

To the many valuable publications which have emanated from the students of our old examples have been recently added the two comely volumes by Mr. Wikes whose name stands at the head of this article. These are filled with large lithographed representations of most of our remarkable church towers and spires—to the elucidation of which, in respect to chronology and style, and the spire growth of middle-age architecture, the letterpress is principally devoted. Mr. Wikes is a ready hand, stepping eagerly we cannot say modestly—in the footsteps of John Ruskin, has given us in his book on the brick-and-marble architecture of Italy his impressions received during an architectural tour, prosecuted with almost Yankee rapidity, from Venice to Rome. These are the publications the plates form the most valuable part by design in Mr Wikes' case, by innocent miscalculation in that of Mr. Street. It is scarcely possible too highly to praise the result of Mr. Wikes' labours. He has given us at one view the most favourable examples of the great Gothic architecture—the tower and spire The drawings for the most part appear to have been made with great care and patience, and are, with few exceptions, trustworthy in respect to proportion and general portraiture.

In very many cases, perhaps, we should speak of the loose perspective which is occasionally observable in these drawings; nor should we do so had the handling been free and sketchy; but where the touch has been so exquisite, so delicately precise, it is not a little surprising to find a short coming in so simple a matter as that of line. As lithographs, nothing has yet been done that passes their many merits: while they are masterly and vigorous, the minutest detail has been clearly expressed. Of the letterpress little need be said. It is not ill done as far as it goes; but, as it amounts to little more than the simple jog-trot of pedigrees, style and dates—matters which we thought had been long since done to death the value of the work is scarcely enhanced by its introduction. Nevertheless the publication is highly meritorious and valuable, and the architect's library will in no small degree be enriched by such an acquisition.

In Mr. Street's book we find a worthy subject served up with a prodigal supply of literary twaddle of the purest water, together with a sprinkling of woodcuts, chromolithographs, and anastatic printings, which have been executed with the greatest taste and delicacy, and by which, as a book illustrator, Mr. Street has achieved a success which we readily acknowledge. This gentleman, it would appear, has been fired by the glowing pages of Ruskin into an idea that there might yet be some architectural pickings in Italy that had escaped the observation, or had not yet received the attention of, that powerful writer from this glorious fellow (the campanile); but much more was to be seen, so I dallied not long before I set forth on a journey of discovery (!), giving myself up to heat and ecclesiology." This fevered resignation does not appear to have taken a turn for the better during the sufferer's journeying onward to Venice, for, on his arrival there, he hastens to St. Mark's (of course), and contemplates its pavement in this mood:—

But of all the features of this very noble interior, that which, next to the gorgeous colour of the mosaics on the walls, most attracted me was the wild beauty of its pavement; for this undulating surface is accidental or unintentional, for, had it been the consequence only of a settlement of the ground, we should have seen some marks, too, in the walls, and some tokens of disruption in the pavement itself—none of which, however, could I detect.

We have before now, when "bussing it" down Oxford street, over the macadamized billows of that high road, found the present so exceedingly tantalising that we have felt more of ill temper than admiration for the parish paving-board who permitted such a state of things to exist. Certainly we never dreamt that there was the least intention of position

symbolism in the matter. Mr. Street would have been more contemplative and more just.

Although we cannot consider Mr. Street's bookmaking brilliantly successful, we know that, as an architect, he is consistent and faithful to one system, and that he would have as little sympathy as we have with the advocacy which was the other day uttered by one of his wayward brethren, who "felt bound to say, he believed that English architecture held its own against all rivals, although, he feared, we devoted our attention too much to the mediæval to the exclusion of the classical." A man may command admiration by his earnestness and consistency, if nothing else, in the pursuit of any art to which he may have directed his studies, so long as he is true to his belief. There can, however, be little genuine sincerity in the architect whose practice embraces principles the most conflicting and irreconcilable, and who, by such unclassical and unchristian advice have quoted, does his best to support the practice which has degraded the art, and made England a kind of architectural bazaar. What such a system has done for the art since the time when exotic styles were first the fashion amongst us to the present can be ascertained in a walk from our St. Paul's to our Panopticon. Since the period when Wren dallied with the art he despised to nearly our own day, architecture has been in so anomalous a position with us as to have become subject to the caprice of a patron or the whim of a professor; and even now there are architects who, for the consideration of their percentage, are not unwilling, by the help of Palladio, Vitruvius, or Sansovino, to ring the changes upon the five orders, and to them reproduce the "Moresque," "Mediæval," "Pompeian," "Assyrian," or, in fact, any style which their fancies or clients may by chance have led them. We have seen William of Wykeham embraced in Palace-yard, while his fickle partisan has, as freely, hob-a-nobbed with Palladio in the Green-park. And yet this free-and-easy coquetry with the art-creeds of other nations and religions has not been, by any means, unaccompanied with a belief that such a course of art was an important and reputable one. While the country became an arena in which system antagonised system, the promoters of the hopeless fray have quietly reaped Academic honours, and found in them neither a burden nor a reproach. However, this practice of boxing the compass of architecture has well nigh died out. We shall, perhaps, now and then see an architect attempt to "star it" with an Indian or Chinese system, which he may consider is by adoption peculiarly his own. But architects in the majority are getting far more earnest than they have been heretofore; and, in respect to the revival of Gothicism, many are now finding that there is more of the spirit, if not letter, of the style in the free and natural use of the materials, ideas, and inventions of the day, than can possibly be obtained by laborious adherence to every particular of our old examples. Amongst those whose reputations are not pinned upon former adaptations from Athens or Pæstum, there is being fostered a true artfeeling, and that nationality of style which has ever been the indispensable condition—the vital principle—in the growth of architectural character throughout the world—a purpose, without which no architect can become truly great.

## ANCIENT PIPES AND ANCIENT SMOKERS.

*(See Illustrations, page 29.)*

SOME account of so wide-spread a practice as tobacco-smoking—for it may be said to prevail over the whole earth—cannot fail to be interesting. Availing ourselves of an elaborate work, recently published by a German author, we shall give a brief outline of the facts connected with its introduction into Europe, immediately after the discovery of the New World, with which great event in the world's history it is connected in a remarkable manner. When Christopher Columbus landed, on the 12th of October, 1492, on the island of Guanahani, one of the western Caicos or Bahama Islands, to which he gave the name of San Salvador, he and his crew beheld, to their intense astonishment, a number of the natives peaceably collected on the shore puffing clouds of smoke from their mouths and nostrils. On closer inspection it was found that portions of some kind of dried herb were wrapped up in the leaves of the maize-plant, and formed into cylindrical rolls, one end of which was placed in the mouth, and, the other being kindled, the smoke was drawn up and puffed forth. They were, in point of fact, what we should call cigarettes; but the name given to them by the natives was tobaco, which is clearly the origin of the name we give to the plant, and not, as has been asserted, the island Tobago, one of the southern Antilles, which was not discovered till 1496. Still less is the word derivable from Tabasco, a Mexican province, which was not visited until the year 1518. The narratives composed by the early travellers and sojourners in the newly discovered regions of the Western World, a number of which have been recently brought to light, contain frequent allusions to the tobacco-plant and to the practice of smoking prevalent among the natives. The first European description of the tobacco-plant was given by the hermit-friar Romano Pane, whom Columbus left behind after his second voyage to convert the Indians to Christianity. He calls it a *herbe* (*Cohiba*), and says it was called *cohobba*, and *gioia*. He describes, moreover, a fork-shaped tube which the Indians introduced into their nostrils while they held the other over tobacco leaves spread upon burning coals. They called this tube tobaco. The leaves, in a green state, of the colesha-plant, he adds, were used exclusively used as a vulnerarium by the Indians. The prevalence of the custom of smoking among the inhabitants of the West Indies islands at the period of their discovery is attested by the accounts of all the early navigators and explorers; and the excellence of the tobacco grown in some of them, particularly Cuba and Trinidad, is the subject of remark. When the Antilles came into the possession of the French in the middle of the seventeenth century, tobacco was extensively cultivated in them, and of the tobacco-plant:—1. The large green tobacco, or petum, with leaves two feet in length and one broad. 2. Tongue tobacco, with tongue-shaped leaves. 3. Amazon tobacco, brought from the borders of the Amazon river, the leaves of which are very long and rounded at the end. 4. Varinas tobacco (*Tabac de Verine, Petum Musqué*), brought from the province of Varinas and the banks of the Assura. The West Indies, particularly the island of Cuba, to the present day afford the best tobacco, that possessing the finest aroma. According to Humboldt, the regions which produce the best quality lie westward of the city of Havannah, in the Vuelta de Abajo.

At the time of the conquest of Mexico by Cortes, in 1519, tobacco-smoking was an established custom among the natives; and Francisco Lopez de Gomara, who was chaplain to Cortez, relates that they used either the leaves rolled up into a cylinder, or pipes made from reeds and beautifully ornamented. These pipes and the whole practice of smoking are minutely described in a curious manuscript recently brought to light, composed by the celebrated Franciscan Bernardino Sahagan, who went over to Mexico as a preacher in 1529. The same kind of pipes are still in use in Mexico, though no longer for smoking tobacco, but for the purpose of perfuming the altars in churches with incense on feast days. The *zuma*, according to the account of Bernal Diaz, was accustomed to take his pipe after dinner: it was brought in on the removal of the cloth by beautiful maidens, and handed to him after he had washed his mouth with scented water. Long before the discovery of America by Columbus, the Spaniards, the Aztecks, and probably the Toltecks also, made use of tobacco pipes made of baked clay. A great number of such pipes have been dug up from the earth in the vicinity of the city of Mexico, and almost all are blackened from frequent use. A drawing of one of these is given on the preceding page; it represents a human figure. The nether lip is slit, and the ears, which are stretched downwards, are bored. It is probably intended for an Indian of the tribe of Totoconos. These clay pipes greatly resemble those so plentifully discovered in excavations on the shores of Lake Erie, on the banks of the Ohio and Wabash, and in the valley of the Mississippi. The Aztecs were acquainted with the use of tobacco in the form of snuff, and appear also to have chewed the leaves when mixed up with a certain quantity of chalk.

At the time of the discovery and conquest of Central American smoking was practised by the natives in Chiapa, Honduras, Guatemala, and Nicaragua—the caciques, no less than the common people, being passionately addicted to it. Hernandez de Oviedo, in the account of his voyage to Panama and Nicaragua, in 1526, states that tobacco was carefully cultivated there, and the leaves prepared into rolls six inches long, and the thickness of a finger, which were called in the language of the country ympaquete. The English navigator Wafer, who crossed the Isthmus of Darien with a company of buccaneers in 1651, and lived some time among the Indians, relates that boys puffed the smoke from long rolls of tobacco, two to three feet in length into the nostrils of the Indians as they lay stretched upon a bank, and holding their hands on each side of their noses to retain the precious incense.

In short, throughout the whole of Mexico and Central America the native tribes at the time of the first appearance of the Europeans among them appear to have practised snuffing. The Spaniards soon took to it, and at the present day the habit prevails among the whole population of those regions, male and female, of Spanish or mixed origin. The old Mexican smoking pipe, however, has long given place to the modern puro—the simple leaf rolled up—and cigarros or papelitos, made of tobacco wrapped up in thin paper. Large manufactories of these were soon established, and rapidly became an important branch of industry. Father Joseph Acta, who visited Mexico towards the middle of the last century, states that he saw 10,000 girls and 5000 boys engaged in preparing little rolls of tobacco of about a finger's length. From all the accounts of modern travellers in Mexico and the provinces of Central America we learn how universally the habit is indulged in by all classes, men and women. At all hours, and in all places, among goes on—in the office, the drawing-room, at the dinner-table, and even at balls and theatres. On the subject of ladies smoking, Stephens, in his "Incidents of Travel in Central America," says:—

I am sorry to say that, generally, the ladies of Central America, not excepting Guatemala, smoke—married ladies, puros; all tobacco; and unmarried, cigars, or tobacco wrapped in paper or straw. Every gentleman carried in his pocket a silver case, with a long string of cotton, steel, and flint, and one of the offices of gallantry is to strike a light; by doing it well, he may kindle a flame in a lady's heart; at all events, to do it bunglingly would be ill bred. I will not express my sentiments on smoking as a custom for the sex. I have recollections of beauteous lips profaned. Nevertheless, even in this I have seen a lady show her prettiness and refinement, barely touching the straw with her lips, as it were kissing it gently and taking it away. When a gentleman asks a lady for a light, she always removes the cigar from her lips.

The Spanish Government did not fail to take advantage of the great consumption of tobacco as a source of revenue. In 1764 a monopoly in the trade in tobacco was established under the name of *Estanco Rec. de Tobaco*; a license was received for its cultivation, and the produce was delivered to the Government at a fixed price. For the better supervision of the plantations, the growth of tobacco was restricted within certain boundaries. In the time of Humboldt's visit it was confined to the Valley of Aragua and Cumanacoa; and the only sort cultivated was that with broad upright leaves (*Nicotiana Tabacum*). The tobacco monopoly brought large sums of money to the Spanish Government. In bad years the net produce amounted to a million pesos; and in good to two and a half and more. In the great cigar-manufactory of Guinea 2,000,000 packets of paper cigars of thirty each were made yearly, and 60,000 packets of puros of seven each, producing yearly 16,000 pesos.

As regards South America, except in Brazil and in the province of Guyana, none of the natives following its various regions appear to have been acquainted with the use of tobacco until it was introduced by the Spaniards. In Guyana, however, at the time of Sir Walter Raleigh's voyage to the Orinoco in search of the El Dorado, tobacco appears to have been cultivated, and the custom of smoking generally prevalent among the natives, who were called Caribbees. The first accounts of tobacco in Brazil occur in the narrative of a Carmelite monk, André Thevet, who accompanied the expedition of Nicolas Durant de Villegagnon to form a settlement on the river Ganabra, in 1555.

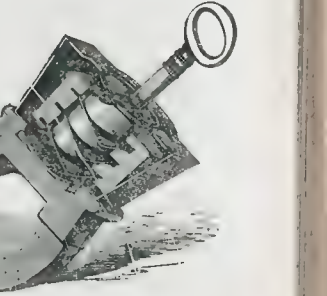
In North America the practice of smoking tobacco in pipes existed among all the tribes of native Indians at the time when they were first brought in contact with Europeans; and there is every reason to believe that it originated among the ancient nations of which the Wild Indians, as they are called, are the scattered remnants. At any rate, the practice was extremely ancient among them, as is testified by the abundance of pipes found in the old graves and tumuli in the regions bordering the Canadian seas, and in those watered by the Ohio, Scioto, Wabash, Miami, and Mississippi, as well as in the States of Tennessee, Alabama, and Florida. The great antiquity of some of these tumuli in which pipes were found is attested by the fact of colossal trees having grown upon them, which, from the number of rings exhibited by the trunk, must be several centuries old. These old pipes are made, some of baked clay, and some of different kinds of stone, talc, serpentine, greenstone, steatite, and a particular species of stone known as red-pipe stone, which is still used by the Indians of the prairies, of the Upper Mississippi, and of the Sioux country. They are for the most part manufactured with great skill, and exhibit considerable taste and artistic feeling. Every variety of shape is to be seen among them—human heads, wild cats, seals, otters, bears, falcons, owls frogs, &c.; and all are delineated with so much fidelity to nature that they may be recognised at once. A very remarkable circumstance about those representing human heads is, that the type approximates very closely to the Mongolian, which goes some way to bear out the opinion of those ethnologists who suppose America to have been peopled by migrations from the eastern part of Asia. The narratives of all the first discoverers and explorers of North America contain some mention of the tobacco-smoking of the natives, and show the practice to have been universal among all the numerous tribes inhabiting that vast continent. Thomas Hariot, who was Sir Walter Raleigh's instructor in mathematics, and joined the expedition fitted out in 1584 by Sir Walter, with Queen Elizabeth's consent, and which resulted in the discovery of Virginia, gives in the account of his voyage published by him a very full description of the practice. He states that the natives used tobacco as a gift of the Great Spirit for their especial enjoyment, and that it was the most acceptable sacrifice that could be made to the Great Spirit and the Lord of Life. They even believed smoking to form one of the pleasures of the Great Spirit and of all good spirits.

One of the most curious and remarkable points connected with the religious and spiritual side of tobacco-smoking, as regarded by the natives, was the ceremonial connected with the calumet or pipe of peace, which first came to the knowledge of Europeans in 1645, when Montmagny, a knight of Malta, and Governor of Canada, concluded a commercial treaty with the native tribes of the Algonquins, Montagnes, Hurons, and Cherokees. In the midst of the assembly the Indians had planted a richly-ornamented tobacco-pipe, round which the chiefs seated themselves on the mats. After the conclusion of the treaty they smoked this pipe, handing it round among themselves, and to the Governor, in ratification of the treaty, and as a token of their friendly disposition. This custom appears, from the accounts of all early travellers, to have been as universal among the Indian tribes of North America as the habit of smoking itself. It is particularly clearly described in detail by Hennepin, a Franciscan monk, who with De la Salle, travelled across the Canadian lakes and up the Illinois to the Mississippi; then, following the course of the Mississippi, reached the Gulf of Mexico, in the name of France took possession of the land which borders it, and called it Louisiana. The Jesuit father, Charlevoix, who passed vast tracts of the Indian country in the early part of the last century, also gives many interesting facts on the subject. They both agree in ascribing a religious character to the calumet, and connecting it with the worship of the sun. Marquete, another early traveller and missionary, finds some analogy between the calumet and the caduceus of Mercury, which was also a symbol of peace and friendly embassies, and was borne by priests and soothsayers, who were called fire-bearers, from bringing with them an altar with the sacred fire. The pipe of peace and the ceremonies connected with it still continue in use among the wild tribes of North America. Its mouth piece is five feet long, of light wood, and profusely ornamented with ribbons, tresses of woman's hair, strings of coral beads and feathers, particularly those of the war-eagle. The women of the tribe feel themselves particularly bound to make the calumet as handsome and showy as possible, and each tribe adorns its pipe of peace in its own way, so that an Indian can tell at a glance to which tribe any calumet belongs. The bowl of the pipe is usually made of the red pipe stone, a peculiar stone brought from one particular spot, called the Coteau of the Prairies, in the Sioux country. There are a variety of legends connected with the mountain from which the red pipe-stone is obtained; one of these is, that once upon a time the Great Spirit called all the tribes together round this mountain, and, standing on its summit, took a piece of the red-stone, formed a pipe from it, and began to smoke, blowing huge clouds over the assembled multitude. The Great Spirit then spoke, saying—"This stone is red, it is your flesh, and belongs to you all. Out of it make no more tomahawks, warhatchets, nor scalping-knives. Use it only to make the pipe of peace with, and smoke therefrom when you would propitiate me and do my will." At the last puff of his pipe the Great Spirit melted into a cloud which long hovered over the assembled tribes.

Spain was the first country in Europe into which tobacco-smoking was introduced by the crews of vessels returning from the New World. The tobacco-plant itself, however, was known at an earlier period than the practice of smoking—the seeds having been brought over by Gonzalo Hernandez de Oviedo. Its medical virtues as a vulnerary were much vaunted by Nicolo Monardes, professor of medicine at the University of Seville, and others; and Jean Nicot, French Ambassador at Lisbon in 1560, introduced it into France, having previously performed many wonderful cures of sores and wounds with it. The time it grows its scientific name of nicotia. Once the custom of smoking was introduced it rapidly spread throughout Spain and Portugal, and is at the present day universal among all classes, from the noble to the peasant. The introduction of tobacco into England is variously attributed to Sir Thomas Hariot on his return from Florida in 1585; to Sir Walter Raleigh, after his expedition to the Orinoco; and to Sir Francis Drake, who, in 1586, brought back some of the companions of Ralph Lane, who had attempted to form a settlement in Virginia, and in their intercourse with the Indians had adopted the habit of smoking. After first creating wonder and exciting curiosity it gradually found imitators, as everything new and strange and calculated to afford attention is sure to do. Sir Walter Raleigh, who was passionately addicted to it, seems to have contributed most by his eminent example to give a vogue to the practice. The old story of his servant believing him to be on fire need not be repeated here. So inveterate was the habit with the gallant old sailor, that even on the morning of his execution he is said to have smoked his pipe with the same apparent enjoyment as ever. In London the practice of smoking soon made rapid strides, and smokers assembled in large parties at the beer-shops and taverns. The trade in tobacco, which was brought from Cuba and Trinidad, and other Spanish settlements, soon acquired considerable importance; the shops in which tobacco was sold were soon distinguished by the figure of a negro with a roll of tobacco at his side. Towards the end of the seventeenth century tobacco-smokers were to be found in every corner of the land, and among all classes. The custom was first brought upon the stage by Ben Jonson, in "Every Man in His Humour, in which captain Bobadil appears smoking a pipe in company with others addicted to the same practice, and who are contemptuously styled in the stage direction "a rout of stinkards. *Bobadil* is made to break out into the following high Spanish panegyric of the weed:—"Sir, believe me on my relation for what I tell you the world shall not reprove. I have been in the Indies, where this herb grows, and where neither myself nor a dozen gentlemen more of my knowledge have received the taste of any other nutriment in the world for the space of nine-and-twenty weeks but the fume of this simple only. Therefore, it cannot be, but it is most divine, especially your Trinidado. Your Nicotian is good, too. I do cound it, and will affirm it before any prince in Europe, to be the most sovereign and most precious weed that ever the earth rendered to the use of man." Satires, pamphlets, and sermons were launched against the new-fangled habit on all sides. James I. regarded the practice of smoking with abhorrence, and composed a violent diatribe against it, which he entitled "Misocapnus seu de abusu Tabaci Imus Regius." In 1605, when James I. visited the University of Oxford, it was thought nothing more acceptable could be hit upon to please the King than a public disputation on tobacco-smoking. During the reign of Charles II. the use of tobacco spread widely: people smoked, snuffed, and chewed it. Under this reign the cultivation of tobacco was prohibited in England, but permitted in Ireland, and a duty was laid on its importation in 1684. In 1789 the tax was increased and put under the excise. The trade in tobacco has gone on steadily increasing up to the present day. The importation in 1850 was 49,551,984 lb., of which 1,909,306 lb. was manufactured.

## RUSSIAN PADLOCK.

THE annexed drawing is taken from a padlock of Russian manufacture, which formed a part of the booty obtained at Balaclava, and is now in the possession of Mr. Chubb. It will be noticed that the shackle, or bow, instead of being hinged at one end, as in English padlocks, is withdrawn entirely after unlocking. When replaced, it is secured in its position by a



series of metal curtains, each fitted on a separate barrel, which, on being opened by the proper key, look into the grooves shown in the shackle. The keyhole is at the bottom of the lock. A Russian name (partly obliterated), supposed to be that of the maker, is stamped on the shackle. Although the lock has evidently been much worn, the workmanship is of very superior character.

An ingenious yet simple description of padlock is in ordinary use among the Chinese. Unlike the Russian lock, which has no springs, the shackle of this is secured by a number of latch springs, attached to one end, which on closing the lock are propelled through certain apertures in a metal plate, and spring out immediately behind it. The key is required only to open it, which it does on being inserted and pressed onwards so as to compress the springs and allow them again to pass through the corresponding apertures in the plate.

The Egyptian lock is the most ancient description of lock of which there is any record. For more than forty centuries it has been used in Egypt, and that which we engrave is one of the usual kind sold in Cairo. To the outside of the door is fixed a wooden staple, in the upper part of which are several loose pins. These pins drop into corresponding holes in the bolt, so as to fasten the door when the bolt is pushed home. The key is a piece of wood, at one end of which are fixed pegs corresponding to those in the lock. It is inserted through a slot, when the pegs in the key lift up the loose pins in the lock to their respective heights, and thus allow the bolt to move backward or forward. Although thus simple in its construction, it is more secure than many common English locks. It is well adapted for out-houses, field-gates and similar purposes; and both lock and key being made almost entirely of wood, they might easily be constructed by any person able to handle a few carpenter's tools. The combinations of the locks and keys may be varied to any extent.

The Chinese have in use a lock of similar principle, but far more cumbrous in construction.

The locks from which these drawings are taken form a portion of the collection made by Mr. Chubb, of St. Paul's Churchyard, who will show them to any of the curious in such matters.

## "THE BRAVOS." BY MEISSONIER.

THE Engraving, "The Bravos," is after a picture by Meissonier, a very popular artist in France, who paints small fancy subjects. This picture tells its own tale—two assassins watching at a door for the exit of their intended victim. It has not been engraved in France, and is at present for sale, if at all. The same artist had three pictures in the late Paris Exposition: a landscape; a young man reading at his breakfast; and a third small canvas suggested by a line from a poem by Charles Reynaud—

In the shade of the forest a young poet sings.

Such is the dexterity, fanciful style of this very pleasing artist, and the success with which he prosecutes it almost excites regret that he does not aspire a little higher and attempt something more important and upon a larger scale.

## "ART AND LIBERTY." BY GALLAIT.

THE Engraving entitled "Art and Liberty," is from a picture, of life-size, by one of the best living Belgium artists, M. Gallait, who contributed to the London Paris Exposition two of the finest pictures it contained—"Tasso" and "The Last Moments of Count Egmont." The print has been published at Paris, where it is a great favourite with artists, in most of those lodgings or studios it is to be seen. This preference is probably to be attributed in many instances to a certain sympathy with the tastes of the bold good-looking fellow, over whom the cares of life evidently pass lightly, so long as he has fresh air, freedom, and his fiddle. Beside him are his music, his inkstand, and a pendent bunch of grapes, hinting that, for most of his class, he is no enemy to the bottle. Indeed, there is nothing of the teetotaller in his look, very little of it indeed in his form, well-cut, but full and rather sensual lips. On the wall, in the shadow of the vine's tendrils, he has carved the name of his lady love. He has a battered hat and a cloak somewhat tattered, but what cares he for that? He is free to come and go, his heart is light, his fingers are skilful, and all are ready to welcome the minstrel. The picture is altogether an extremely progressing one; and, in an æsthetical point of view, it has great merit. The execution, by its boldness and freedom, harmonises admirably with the subject, whose qualities are the same; and the lights are excellently distributed.

THE GREAT TOBACCO WAREHOUSE, AT THE LONDON DOCKS.

PIPE-HEADS, FROM ANCIENT GRAVES, IN NORTH AMERICA.

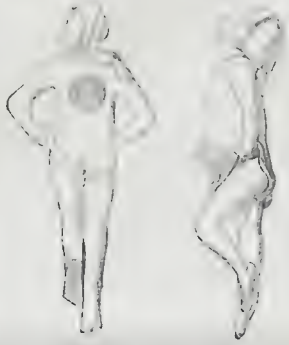
TOMAHAWK-PIPE.

ORNAMENTED PIPE.

## TOBACCO WAREHOUSES AT THE LONDON DOCKS

The Tobacco Warehouses at the London Docks of the interior of one of which we this week give a representation present certainly one of the great curiosities of the commercial world. The vast premises in which the tobacco brought into the port of London is stored previous to being entered for home consumption or re-exportation occupy an extent of some acres at the eastern extremity of the London Docks. There are, indeed two warehouses, a smaller one being situated on the other side of the bridge which crosses the entrance to the docks from the river. It is the larger one which is represented in our engraving. On first entering the building and glancing down the avenue stretching to an immense distance, before one lodged on each side with huge casks much resembling the immense tuns at the docks of glucose, interspersed with large wooden packages of a square shape, one would receive a magical impression of wonder and astonishment at the idea that all these are filled with the costly product known as the tobacco plant, and that in respect of time more or less short the greater part of the contents of these immovable and lofty casks will, in the solid human large and light limbs, and after passing through various of white vapour, and make themselves [illegible]. As the [illegible] one the main gateway, and glances to the right and left over immense spaces piled with casks below, the impression grows stronger and stronger as the wonder deepens to know the [illegible] of smoking, sniffing and chewing to be [illegible] solid and weighty matter as are here presented to the eye should be consumed. Here and there in this wil-

a huge pair of scales which require the assistance of a [illegible] pulley wheel fixed to the beams above to hoist them free of the ground. Around these scales a number of workmen are busily employed unhooping the casks, and when the head has been removed, together with [illegible] inner hoops, the huge cask is artificially tilted by the combined efforts of three or four pairs of stalwart men on one board of the scale, and being thereupon [illegible] like rolling-pin, its contents are left standing in a solid column of closely pressed tobacco leaves. The custom-house officer in whose presence this operation is performed directs one of his men to insert a sharp-pointed instrument into the mass and, by using it as a lever, to detach thick layers at various intervals, and thus to ascertain that the whole block consists of tobacco-leaves and nothing else. Its weight is then taken and duly noted with the brand and ship-marks which are on the casks. This is with a view to the [illegible] of duty for the revenue, and the registration of each package and its contents by the warehouse clerks. To the right of the principal warehouse is a separate compartment reached through the Cigar Floor, in which the cases of tobacco manufactured [illegible] cigars, cheroots and what is called negro head and [illegible] tobacco are stored and submitted to the same process of weighing and registration. This department is [illegible] together more elegant and refined in its appearance, as befits the reception of the aristocratic Havana and Manilla cigar. It is the upper house as it were of the commonwealth of weeds. It is floored with deal planking instead of the rough stone pavement of the other warehouses to keep it dry and temperate, and the supply of gas is abundant. Two large apartments into which the cigar floor is divided are filled partly with rows of mahogany chests, tubed one upon another,



are derived, partly with little squat tub-like casks, containing the dark pitch-like matter called negro-head or cavendish tobacco. Some of the casks lie open as they are undergoing inspection, and the layers of cigars, neatly and carefully packed up in bundles, are revealed. In this department one is no longer impressed with the sense of quantity; rather the reverse; the comparatively large display of cigars, imported in a manufactured state, persuades one of the extreme caution with which the assertions of the cigar-shop keeper are to be received, who, in his anxiety to enlist your custom, too frequently condescends to unworthy misrepresentations. Were all the cigars which we are so glibly assured to be foreign-made really so, the cigar floor would have to be enlarged to nearly equal dimensions with its less-refined neighbour.

A remarkable feature of a visit to the Tobacco Warehouses of the London Docks is the inspection of the kiln, in which all the waste and damaged tobacco is reduced to ashes—commonly known as the Queen's Tobacco-pipe. To obtain a sight of this we proceeded to the further extremity of the warehouses, then to the right, and found ourselves before a small folding door, on which are emblazoned, in rough style of heraldic limning, a crown and other insignia of royalty. This is the royal pipe-case, decorated with its appropriate cipher. Opening the case, we stood in the presence of the pipe itself, in the shape of a huge funnel-shaped brick shaft, stretching high up in the air—the Queen, indeed, smokes many yards of clay; the bowl of the pipe, closed by an iron lid bearing the royal cipher to that on the door, stands glowing and roaring before us. The pipe-case is very dark; and through the gloom we distinguished a dusky individual, who shortly made himself known as the attendant slave on the royal pipe—the Queen's hooka-burdar. His appearance is that of an abject penitent, for he is clothed in sackcloth and covered with ashes. Day and night he feeds the voracious bowl, and rakes out the ashes as they accumulate in the receptacle below. Like the virgins of the Temple of Vesta, he tends a fire which is never quenched, for the Sovereign is the most inveterate smoker of the realm. The royal slave observes the constitutional maxim—as the Monarch never dies, so the Monarch's pipe is never put out. This is almost literally true, for we were solemnly assured by the above-mentioned individual that, during a period of eleven years, until "last Saturday five weeks," the bowl of the Queen's pipe had never cooled. Royalty does not, however, fill its pipe with the fragrant weed alone. Sometimes—as heard it is astonishment, and write in sorrow—John Barleycorn, to add to his other sufferings recorded by the poet, is condemned to the flames. Some few days before, we forget how many quarters of barley seized by the officers of the revenue were handed over to our friend in the sackcloth and ashes to be thrown into the fiery furnace. Well might he, after so foul a deed, wear the badge of repentance. It is strange, when we are told of scarcity in the land, threatened with famine prices, to hear of food thus wilfully destroyed. Routine and State craft have probably a ready explanation—logical, profound—which may not always meet with a ready acquiescence, doubtless; but it is to us reasoning with an empty stomach. With this sad fact as a subject of grave rumination, the visitor departs from the Tobacco Warehouses of the London Docks, chewing the cud or food of meditation. There is one more detail connected with the so-called Queen's pipe, which must in fairness be added, as it acts in some degree compensatingly to that last recorded. If the fruits of the land are thus ruthlessly destroyed on the one hand, the producing power of the soil is augmented on the other; for the ashes of the Royal tobacco-pipe are sold to agriculturists as a manure, and it is said to be a very rich and effective one.

According to the last returns from the Board of Trade, the quantities of tobacco imported from the 6th of January to the 10th of September last were as follows:—Unmanufactured tobacco, 6,218,340 lbs; unstemmed, 10,637,863 lbs; manufactured and snuff, 1,969,235 lbs.: total, 18,825,438 lbs. The quantities entered for home consumption during the same period were—Stemmed, 11,654,484 lbs.; unstemmed, 10,523,886 lbs.; and manufactured, 164,815 lbs.: total, 22,373,186 lbs.

*(For an Account of "Ancient Pipes and Smokers" see page 37.)*

HOSPITAL for WOMEN, Soho-square,—The Committee earnestly appeal for Funds in consequence of the pressure arising from the high price of provisions. An unusual number of distressing cases are waiting for admission.
THE MAN SANGER, Secretary.

BANKERS: Messrs. Barclay and Co., 54, Lombard-street; Messrs. Ransom and Co., 1, Pall-Mall

ROYAL ASYLUM of ST. ANN'S SOCIETY for CHILDREN of those once in prosperity, Orphans or not. The next ELECTION will take place on Thursday, 1856. Three Candidates should be nominated immediately. Donations and Subscriptions gratefully received by H. P. LEEKS, Secretary

THE LONDON JOINT-STOCK BANK.

Accounts of parties are kept agreeably to the custom of London bankers.
Sums of money received on deposit from the customers of the Bank and the generality of the public at such rates of interest and for such time as may be agreed upon, reference being had to the state of the money market.
The Agency of Joint-Stock and other Country and Foreign Banks undertaken on such terms as may be arranged.
Investments, and sales of all descriptions of British and Foreign Securities, bullion, spe le. &c., effected: dividends received, and every other description of banking business transacted on liberal terms.
Letters of Credit granted on the Continent and on the chief commercial towns of the world

SPRING GROVE STATION, on the Windsor Line, Eight Miles from Hyde-park Corner. Trains every hour to and from Waterloo Terminus. Substantial VILLA RESIDENCES are erected, and elegantly finished, on any approved plan, on the Spring Grove Estate, which is delightfully situate, on a dry soil of gravel, between Osterley-park and Richmond. These houses have good gardens attached to them, and additional land may be obtained if wanted. Particulars for rent on lease, or purchase, may be had from the Manager, at the Station Office, near the Station; or, in Town, at 17, Warwick-street, Regent-street.

ROUSSILLON, 30s. per dozen (from the Pyrénées Orientales) The importations of this wine for three years past are as follows viz.:—for 1853, 500 pipes; 1853, 1000 pipes; 1854, 8000 pipes. The great value of this wine, as also of its cheapness, as shown by the above figures, is the strongest possible proof of the high estimation in which it has ever been held by the public, and the numerous testimonials daily received of approval by the subscribers are the best evidence of its excellence and adaptation as a first-class wine (For particulars see ILLUSTRATED LONDON NEWS of 16th February.) Hhds. or Pipes, the Gallon, or Bottled, Carriage Paid to any Railway Station in England. Terms, Cash. Remittances to be made (post-free) on application. Just published "Wine Lands," to be had of all Booksellers. Post-free, 2 stamps. More-court, Wick-street, Cheltenham.

MARINE ENGINES for SALE.—Messrs. JOHN BOURNE and CO., Engineers, Glasgow, have now ready THREE DIRECT-ACTING SCREW-ENGINES of Sixty Horse-power each, of the same construction as that which they have just put into the Screw-steamer "Anof" For further particulars apply to Messrs. Bourne and Co., Engineers, Glasgow.

## NEW BOOKS, &c

THE BEST BOOK TO GIVE A BOY.
THE BOY'S OWN MAGAZINE, First Volume, complete in itself, is just published, price Half-a-crown. Sent free by post for the same in postage-stamps.
London: S. O. BEETON, 18, Bouverie-street.

Crown 8vo, price 1s; post-free, 1s. 2d.
THE WAR ALMANACK for 1856. A Naval and Military Year-Book, with 12 Engravings
London: H. G. CLARKE and Co., 252, Strand.

Should be in every Home, price 3s. 6d., strongly bound,
THE PRACTICAL HOUSEWIFE, the best book for Matron, Maid, or Mistress.
KENT and CO.; and all Booksellers.

THE PETIT COURRIER des DAMES; or, Journal of French Fashion at 10s. per Quarter; or prepaid, 10s.—J. and S. B. FULLER and CO, 34 and 35, Rathbone-place.

THE JOURNAL DES DEMOISELLES for 1856. J. and S. B. FULLER and CO. continue to receive Subscribers' Names for the "Journal des Demoiselles" for 1856, at 14s. the year, or prepaid, per post, 16s.—34 and 35, Rathbone-place.

Illustrated Gift Book, price 5s. 6d., richly gilt,
TREASURES in NEEDLEWORK. By Mrs. WARREN and Mrs PULLAN.
"The best ideal of a present to young ladies."—Stamford Mercury.
"Rulled for fingers that pity either for love, pleasure, or daily bread."—Art-Journal.
KENT and CO., and all Booksellers.

Just published, price 6d.; post-free, 7d.
HOW to DRESS with TASTE: a most desirable Companion for both Ladies and Gentlemen.
Also,
HOW to WOO; WHEN, and to WHOM.
HOW to BEHAVE; or the Etiquette: a complete Guide to Polite Society for Ladies and Gentlemen. Price 6d.; post-free, 7d.
Messrs. T. CO OPER and Co., 36, Kirby-street, Hatton-garden.

BY THE AUTHOR OF LORENZO BENONI.
Now ready, crown 8vo, cloth extra, price 7s. 6d.,
DOCTOR ANTONIO: A Tale.
"A simple tale, with no striking, stirring events; but as attractive in its natural simplicity as that ever fresh story of the Vicar of Wakefield."—Atlas.
"In point of style there are few writers of the present day who surpass this author."—Literary Gazette.
Edinburgh: THOMAS CONSTABLE and Co. London: Hamilton, Adams, and Co

This day is published, in post-8vo, price 6s. 6d.,
THE PHILOSOPHY of the FALL, and ITS REMEDY By the Rev. R. C. TOPIAM, M.A., Curate of Ilchester, Somerset
"As a help to the maintenance of sound exegetical principles the work is of considerable value."—John Bull.
"We commend it as a thoughtful and reverent treatise on the Fall and the Atonement."—The Guardian
"This book displays an earnest purpose, as well as the comprehensive grasp of a rightly-directed mind."—Bell's Messenger
London. THOMAS BOSWORTH, 215, Regent-street.

Second Edition, Improved and Enlarged,
BOOKS LENT not BOOKS LOST. By a VICTIM. Alphabetically Arranged in Columns for Titles of Books, to whom Lent, when Lent, and when Returned, with Correspondent Address. Price 1s. 6d., or by Post, 18 Stamps. Metallic paper, with pencil, cloth, 1s. 9d.; morocco, 4s. Post-free
Uniform with the above, and can be had bound together,
INDEX of LITERARY EXTRACTS—an Indis pensabll Book to every thoughtful Reader. Alphabetically arranged. Metallic paper, with pencil, cloth, 2s. and 4s.; morocco, 5s. and 6s. Post free

Twelfth Edition.

RENDLE'S PRICE CURRENT FOR 1856
RENDLE'S PRICE CURRENT and GARDEN DIRECTORY for 1856, is just published by MESSRS. SIMPKIN and MARSHALL, and can be obtained through any bookseller in the United Kingdom, or from the Proprietors, WILLIAM E. Rendle and Co., Seed Merchants, Plymouth, price Sixpence, or free to purchasers of Seeds.
The present Edition is printed the same size as the "Florist," and will contain 128 pages, and will be found even more complete than the former editions.
It contains a valuable Descriptive List of Kitchen-Garden Seeds, with prices affixed to every article; and in addition to these descriptions there are short and concise cultural remarks for every kind of Vegetable, pointing out the best varieties for Early, Medium, and General Crops.
The List of Flower Seeds has been much improved, and contains descriptions of all the leading sorts, with directions for sowing seeds, and other useful practical remarks; and in this department Mr Errington has written expressly for the work an origina article on ANNUAL and OTHER FLOWER SEEDS, which will be read with much interest.
The Calendar of Operations for the whole of the year has also been revised, and will be found even more useful than the one in the last edition.
The Almanack is now a prominent feature of the "Price Current," and a page is devoted to every month.
Full Cultural Hints are given of the quantities and descriptions of seed most in the "Collections of Seeds."
The following Original Articles have also been contributed
HORTICULTURE By Mr. John Edwards, the Secretary to the National Floricultural, Botanic, and Horticultural Society, and Editor of "National Garden Assistant."
VEGETABLE FORCING By Mr. Robert Errington, Gardener to Sir P. Egerton, Gulton-park, Tarporley
RENDLE'S FARM AND FIELD SEEDING By Mr. John Dobson, late Gardener to Mr. Edward Beck, Isleworth
GRAPE DISEASES and MILDEW By Mr. James Cahill, of Camberwell
On NATURAL and ARTIFICIAL MANURES. By Mr J. B. Lawes, the celebrated Agricultural Chemist
On the PORTABLE and MINIATURE FRUIT GARDEN. By Mr. Niven, of the Botanic Garden, Glasnevin, near Dublin
On the CULTIVATION of the CUCUMBER. By Mr. Joseph Hamilton, Gardener to the "Hamiltonian System of Training"
LIST of a few of the best FRUIT-TREES Grown at WOOLATON, the seat of Lord Middleton. By Mr J. Smith
MIGNONETTE, CULTURE of. By Mr William Melville, Gardener to the Earl of Rosebery, Dalmeny-park
NEW and ECONOMICAL MODE of HEATING GREENHOUSES, ORCHARD HOUSES, &c. By Mr. Niven, Garden Farm, Drumcondra
ROTATION of CROPS. By Mr Robert Errington
SELECTION of KITCHEN-GARDEN SEEDS From the "Scottish Gardener and Magazine of Horticulture and Floriculture."
The GUANO SEASON. Introduction and Cultivation of
In addition to the above will be given short directions for the CULTIVATION of FLOWER SEEDS, with Modes of Testing their Growing Qualities Also a Descriptive List of all the newest and most useful for the present year
A Description of the CEDRUS DEODARA, with an Engraving kindly lent by the proprietors of the "Florist;" and a few remarks on the Lisscom Baltese, by Samuel Curtis, Esq., the proprietor of Curtis's Botanical Magazine
Copies of the above Edition can now be obtained through any bookseller in town or country, or from the Proprietors, price 6d. each, or free on application, per post, in terms of seeds
WILLIAM E RENDLE and CO.,
Seed Merchants, Plymouth.

CAUTION.—PATENT EVER-POINTED PENCILS.—S. MORDAN and CO. are daily receiving complaints of the unfair imitations of their truly useful invention. S. M. and Co. therefore beg to caution the public to see that the Patentees' name be stamped legibly on the case. A quantity of counterfeits were seized on the 21st inst., as they yield a ground profit to the vendor but will be found of no value in use
Perhaps the above caution is the more necessary when Cumberland Lead Pencils are purchased for refilling the Pencil-cases Unless these leads have been accurately gauged to the exact size of the pencil point, they will be found utterly useless
Each pencil is guaranteed, and protected by Warrant 4 8. MORDAN and Co Manufactory, 23, City-road, London.

FINE ARTS.—S. MORDAN and CO. beg to inform the public that they are enabled to supply a genuine rare Camel-hair Pencil, No. 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 63, 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 75, 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, 87, 88, 89, 90, 91, 92, 93, 94, 95, 96, 97, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 111, 112, 113, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 124, 125, 126, 127, 128, 129, 130, 131, 132, 133, 134, 135, 136, 137, 138, 139, 140, 141, 142, 143, 144, 145, 146, 147, 148, 149, 150, 151, 152, 153, 154, 155, 156, 157, 158, 159, 160, 161, 162, 163, 164, 165, 166, 167, 168, 169, 170, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 191, 192, 193, 194, 195, 196, 197, 198, 199, 200, PURE FRENCH COLZA OIL, 5s. 6d. per gallon.—Messrs LEMAIRE and CO., Manufacturers, Paris to the Queen of England. The London Soap and Candle Company, 76, New-road-street, South

PISTACHIO NU

# THE ILLUSTRATED LONDON NEWS

No. 779.—VOL. XXVIII.] SATURDAY, JANUARY 12, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## PEACE PUGNACITY.

THE "heralds" and apostles of peace keep up their customary clamour in favour of Russia, and against all who presume to differ from them in opinion, and especially against the press. They affect to believe that all human disputes can be settled by quiet arbitration;—that all the good qualities of humanity have been sufficiently developed to allow the Russian lion to lie placidly down by the side of the Turkish lamb, without the slightest prompting of the old carnivorous appetite; and that all the bad qualities have died out,—or would speedily expire, were it not for the instigation of devilishly-minded men, who wield the pen in London, and set potentates by the ears, who would otherwise be harmless as doves. They assert that, were it not for this unhappy influence, the sword might be immediately transformed into the ploughshare and the spear into the pruning-hook. They write and speak as if they believed that the late Emperor Nicholas was an amiable, peaceable, and well-disposed man, driven into war when he did not intend it, by wicked Lord Aberdeen, and by still more wicked leading articles in the London newspapers. They tell us that they have faith in all that is good, humane, and charitable. One thing—and one only—they cannot believe, which is, that the London press has, can, or ever will have, any higher motive or object than that of making money by pandering to the war spirit. It is solely in order to make newspapers sell, that editors preach up bloody war, and urge the destruction of Sebastopol, Cronstadt, and St. Petersburg. These men are the only fiends in a world otherwise quite angelic. Nicholas and Alexander and their Generals meant no evil, and committed none. All the wrong, all the bloodshed, all the misery, have been concocted in Printing-house-square, the Strand, and Fleet-street. It follows, however, if the newspapers are so very powerful and wicked, that the people of these islands must be very weak and foolish to be so misled by them. The good people in whom the Peace Society believes must be sought in Russia, and not in Great Britain. If newspapers have the influence attributed to them, the British people must share the condemnation which the oracles of peace pronounce against its instructors and leaders. If the one be bad, the other—if that be possible—must be still worse.

"The press of this country," says the "*Herald of Peace*," in its number of the 1st of January, "is doing its utmost to defeat all hopes of peace, by representing the conditions submitted to Russia in every form they can conceive to be most insulting and offensive to her pride, and most likely to ensure their peremptory rejection." But is Russia to be blamed by the men of peace for this peremptory rejection? By no means. On the contrary, Russia is to be praised for proper spirit. "For our part," says this mild teacher of the nations—this patriotic journal—which sympathises so cordially with the enemy of Great Britain, "if the *minimum* offered by the Western Powers be really a correct statement, we think its acceptance by Russia in the highest degree improbable. If the Black Sea can be made an exclusively commercial sea, from which all vessels of war can be shut out, *it will be exceedingly difficult to show why the Mediterranean should not be so also.*" Amiable suggestion intended, no, doubt, for the benefit of the Emperor Alexander and his wily diplomatists. If the Black Sea, why not the Mediterranean? Sauce for the goose is sauce for the gander; and we doubt not the Czar will thank his friends for the valuable hint, so full as it is of materials for dispute and controversy.

Foremost among the newspapers which the quarrelsome men of peace take it upon themselves to denounce, are the *Times* and the ILLUSTRATED LONDON NEWS. We must say, however, that we come in for a far larger share of their abuse than is bestowed upon our daily contemporary. Whether we are to take this as a compliment or not it is difficult to decide. It is not only Mr. Fry the recognised representative of the Peace Society, who thinks it necessary to abuse this Journal in lectures and in writings, but other members of that well-meaning body, who vent their spleen against us. We quote one of the most recent specimens:—

"Whence comes then," says a circular specially sent to us, "the

ARRIVAL OF THE FRENCH CRIMEAN TROOPS AT THE PLACE DE LA BASTILLE, PARIS.—(SEE PAGE 42.)

*hyæna* howl for more blood which we still too often hear? Is it possible there is an interest amongst us *adverse* to peace? Is it possible there can be *a man* so deaf to the claims of suffering humanity, as to cry for more slaughter, more desolation? Alas! that it should be so! but so it is! The interest of the *Press* is against the interest of the *People*. * * * The ILLUSTRATED LONDON NEWS probably fattens more on the war than any other paper, and proportionably reckless are its endeavours to prolong the war. What to its proprietor and editor are slaughtered hosts? What are desolate homes? What are broken hearts? As far as *they* are concerned, *'don't the war pay?'"*

We certainly admit that our circulation is large, and is increasing, and that we have supported the war; but we most emphatically contradict the assertion that one single article in this Journal has ever been written or published with any other than the most conscientious motive. The writer of the articles which so displease the Peace Society—but which we have reason to believe are approved of by the great bulk of our countrymen—never derived, nor expects to derive, one farthing of profit from the war—directly or indirectly. He writes from the dictates of his own reason and conscience, untrammelled by any trading considerations whatsoever, and would be ashamed of his right hand—if, for any bribe, or love of lucre, or worldly temptation, or reward in any form or shape—it could write a sentiment which his heart condemned or his conscientious and calm judgment disapproved. Can these amiable scandal-mongers imagine no honour but in Russia? Is it not as likely that a public writer in England should be pure-minded and incorruptible, as that the late Czar Nicholas should be unambitious? They believe in Imperial virtue, if it dwell in St. Petersburg, and wield the sword; but they treat as incredible the private virtue of one of their own countrymen if he live in London and wield nothing more cutting than the pen. It is scarcely necessary, on behalf of the proprietors and conductors of this Journal, to give the lie to the slanderous malevolence of these misjudging bigots who "cry peace, peace, where there is no peace," and bespatter with their abuse the right-minded men who represent the public opinion of this great and free nation. But this far, we may be permitted to state, that the war has *not* been a source of profit to this establishment; that, on the contrary, it has entailed very large expenses upon it; and that, though prosperous to a high degree, the ILLUSTRATED LONDON NEWS is prosperous, not on account of the war, but in spite of it. Two circumstances that are contemporaneous do not necessarily stand towards each other in the relation of cause and effect; or else we might say, the ILLUSTRATED LONDON NEWS has prospered while abused by the Peace Society—*ergo*, the Peace Society's abuse is the cause of its prosperity. Our condition, thanks to the support of the public, is one of growth and development. This Journal increased in circulation before the war, is increasing in circulation during the war, and we believe would continue to increase were peace proclaimed to-morrow.

The difference between ourselves and the public on the one hand, and the Peace Society on the other, we take to be simply this—that we all love peace but do not seek it by the same means. We, for our part, prize peace so dearly that we would coerce the wicked monarchs who break it; but the Peace Society—loving the shadow of its own dogma, and not the substance of peace, which all the world hungers and thirsts for—encourages by its wrong-headedness and sheepish stupidity the wily wolves of the human fold, and would deliver us without resistance to the tender mercies of any merciless and unscrupulous barbarian who was strong enough to subdue us.

We hope we have done with these quarrelsome people, and do not intend to take any further notice of them, or of any attacks which they may think fit to make upon us.

## *FOREIGN AND COLONIAL NEWS.*

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

BY a decision of the Empress, the large sum usually devoted to the purchase of New-Year's gifts to the Court has this season been set apart to be distributed to the poor, and to the wounded of the Eastern Army—an innovation which is likely to cause at least as much dissatisfaction on the one hand as gratification on the other. The position of her Imperial Majesty prevented her undertaking the fatigue of the reception of the *jour de l'an*, at which the absence of the Princes Jerome and Napoleon was much remarked. M. de Morny, President of the Corps Legislatif, pronounced on this occasion a short but most eloquent address. The reception was even more numerously and brilliantly attended than usual. On Monday, the 7th, took place the first fête of the season at the Tuileries: it is to be followed by three others, the next to be given on the 12th. Of these two are to be grand balls, the other (as well as the one of Monday) is of a more private character. It is said that later in the season it is probable the Court will adjourn to St. Cloud, and even that the last receptions of the winter will probably be held there.

The private fêtes, which, up to the present, have been extremely few, are about to commence with great activity; but, as usual, much more in the houses of foreigners than of the French society itself. Among the houses about to be opened for balls, soirées, private theatricals, concerts, &c., are the hotels of the Marquise de Boisy (late Comtesse G iuccioli), the Comtesse de Castellane, Mdmes. Bélissent, Bébagne, Ridgway, Riario, Sforza, Suchet, the Prince Stourdza, the Comte Pozzo di Borgo, &c. At the Hôtel Castellane the theatre is to be opened by a piece written specially for the occasion by a professional hand, but played by amateurs.

On the last day of the year took place the grand annual banquet of the Collége Henri IV., at which upwards of a hundred and twenty guests were assembled. The fête was this year presided over by M. Hausemann, Préfet of the Seine; supported by the late President, M. de Lesseps, M. Elie de Beaumont, M. Achille Juvenal, &c. At dessert, toasts were drunk to the memories of MM. Cashmir de Lavigne, the Maréchal St. Arnaud and M. Romieu, formerly scholars of the college.

It is decided that the uniform of the Cent-Gardes is to remain unaltered, and the additions to be made to this fine body are to be carried out as rapidly as possible.

The enormous enterprises of the establishment of the new Boulevards de Sebastopol and de l'Impératrice are about, ere long, to be commenced. The Boulevard de Sebastopol begins nearly opposite the fine old tower of St. Jaques-la-Boucherie, lately restored in the improvements in and about the new Rue de Rivoli, and extends to the Boulevard de Strasbourg. The Boulevard de l'Impératrice is to commence at the Tuileries; and, destroying the important streets of de Grammont and Ste. Anne, besides numerous more insignificant ones, opens on the present Boulevards. These pr ojects, magnificent as they are, will have the very serious, and at present almost alarming, consequence of entailing an enormous expense on the municipal budget, more especially as the jury appointed to judge the sums to be allotted to the expropriated proprietors shows itself extremely liberal to the latter, and completely upsets the calculations of the city. In one instance alone a proprietor claiming 300,000 francs was, by the jury, accorded the sum against the city, which offered 180,000. The embarrassment of the municipality is the greater that the Emperor insists on the execution of the two great thoroughfares being carried out together and at once.

It is said that certain remarks made on the occasion of the entrance of the troops, respecting the costume of the statue of Napoleon on the Column of the Place Vendôme, have led to an idea of substituting in its place an effigy of the late Emperor, attired in a somewhat more classical and artistic style.

Never was the story of the mountain and the mouse more completely realised than in the production of M. Véron's "Cinq cent mille livres de rentes." After the flourish of trumpets which announced the appearance of this gastronomic fiction appears a volume weak in construction, uninteresting in plot, flat, stale, and unprofitable in every part. What is to be said of a book whose sole result (as yet happily) on the public mind has been to induce a party of gourmands, headed by a Senator, to have carried into execution the bill of fare of a dinner described, in this "delectable treatise," wherein each member consumed a hundred francs' worth, not including wine? We are happy to see that in general the Parisian press has fallen with due severity on this claptrap production of an overheated vanity, and we trust the *Bourgeois de Paris* may be induced to profit by the lesson he has received.

The revived question of "Where is Cruvelli?" has been once more solved by the reappearance of the fantastic Diva in Paris. She is, it is said, at last married to the faithful and patient Baron who has for so long borne with such exemplary resignation the freaks and flights of the capricious damsel. We wish him much joy of his triumph; and we no less sincerely hope that her conjugal fidelity will induce the newly-made Baronne to let the public have a little respite from her absurdities. At the Grand Opera her place is most satisfactorily filled up by Mdme. Tedesco, who was *débutée* with Roger in the "Prophète."

A particular notice is required for the great theatrical event of the day, we may almost say of the age namely, the appearance of Alexandre Dumas' "Orestes," at the Porte St. Martin. In the execution of the work, which is in heroic verse, the author has closely followed Eschylus. The return of Agamemnon, the terrors and conspiracies of Clytemnestra and Egisthus, the prophecies of Cassandra, the murder of the King, the vengeance of Orestes (nearly the whole of whose career is displayed), the death of Clytemnestra, &c.—all are brought into the piece, and the usual immense resources for which this theatre is so remarkable in the way of scenic effect are called into play to give the work with becoming splendour. The success of so bold and novel an attempt as introducing a Greek tragedy before a Parisian public crammed with vaudeville, melodrama, modern comedy, and broad farce, appeared most doubtful; yet the result seems on the whole satisfactory. It yet, however, remains to be seen whether it is genuine taste or mere curiosity that at present fills the house. The different actors perform more than creditably. Mdme. Lucie Mavora (*Clytemnestra*) makes some very fine points; but perhaps the female part best performed is that of *Cassandra*, by Mdme. Laurent. The verse, as far as French verse can be brought to imitate the Greek, is deserving of much praise: if anything, it may be accused of being a little too polished and smoothed in the finishing.

The Gymnase has a pretty little piece, "Je Dine chez ma Mère," which introduces the celebrated actress, and yet more celebrated myer of *bonmots*, Sophie Arnoult, deserted on the day of family fêtes *par excellence*—New-Year's-day—by all her brilliant admirers, and contenting herself as she best may by dining *tête-a-tête* with the portrait of her mother.

Mdlle. Densin has, it appears, irrevocably decided on quitting the stage: a brilliant marriage is, we believe, the motive of this resolution.

The effect produced by the equestrian statue of François I., by Clésinger, in the Cour du Louvre, is so little approved of, that it is said it will be replaced by a Venus de Milo, on a malachite pedestal decorated with gold

### AMERICA.

The steam-ship *Baltic*, which left New York on the 26th ult., arrived at Liverpool on Tuesday. Congress had adjourned over Christmas-day without having succeeded in electing a Speaker. The last vote taken was—Banks, 101; Richardson, 72; Fuller, 31; Pennington, 4; Scattering, 7: Necessary to a choice, 109. The Washington correspondent of the *New York Tribune* states that the Message had been put in type under the President's eye in the Executive mansion, and says:—

Abuse of confidence on former occasions is assigned as the reason for this extraordinary precaution now. This step, however, is a new and a remarkable innovation upon all past precedent, and, if it proves nothing else, it establishes beyond all cavil that at least one person in the nation regards the Message as of sufficient importance to be watched as if it contained the revelations of another Joe Smith.

The Transit Company's steamer *Northern Light* had been seized by the United States' Government, when about to sail, on suspicion of containing a large number of recruits, &c., for Colonel Walker.

The authorities had been furnished with irrefutable evidence of a widespread movement being on foot to send men and arms to Nicaragua for the purpose of organising an army in that State to descend upon Cuba and St. Domingo, and wrest them from their present possessors. Colonel French, the Nicaraguan Minister, had presented his credentials at Washington, but Marcy refused to recognise them.

It is stated that Marcy's demand upon the British Government required, among other things, the recall of Mr. Crampton, or some other public act of equally signal satisfaction to the United States.

The Hudson's Bay Arctic expedition in search of Franklin had returned, after reaching the place where Franklin's crews were reported to have perished. Dr. Rae's report was fully confirmed. They met Esquimaux in that vicinity who had seen the whites, and gave much valuable information. On the island were discovered the remains of a boat, which had been partially destroyed by the natives for the sake of the wood and the metal fastenings, although there was sufficient left to identify it as having belonged to the Franklin expedition; one fragment of wood (now, as well as some other small relics, in the possession of the Hudson's Bay Company at Lachine) having the name *Terror* branded on it, while another piece has the name of Mr. Stanley (surgeon to the *Erebus*) cut upon it; this latter being part of a snow shoe, evidently of English manufacture, being made of oak, a species of wood no man accustomed to the snow-shoes would ever select for the purpose. No papers or books, and no human remains, were found. The Esquimaux were very friendly, and freely displayed all their treasures obtained from the boat, or found near it, and these consisted principally of the cooking utensils, used by them as tent-poles, the boat kettles, the empty preserved-meat cases, &c., but no papers; and the natives stated, with every evidence of sincerity, that none had ever been seen or found; everything portable was secured and brought back. It would be useless to recount them all; but we may mention bar-iron, rope with the Government mark on it, oars branded with the broad arrow, pieces of bunting (remains of a flag), a letter-holder, a step of a mast, &c., all clearly European, and all Government supplies.

The British ship *Resolute*, abandoned in the Arctic ice, had been brought into the port of New London, with armament stores, &c., on board.

ABOLITION OF THE ROBOT IN POLAND.—The Cracow paper *Czas* mentions that the Russian Government has ordered the abolition of the robot (villein service) in Poland, by commutation into a yearly money payment. For some years past the instances in which individual private proprietors have made this arrangement with their peasantry have been increasing, and the Government had also set a similar example on the Crown domains, so that as many as a fourth part of the whole peasant population had already entered upon their new condition. The commutation is now to take place all over the kingdom. The lists of the peasantry are being sent in, commissioners for superintending the business are appointed, and in three years the whole process is to be completed.

The Diet of Holstein has elected all its Deputies to the Grand Council of the whole kingdom from the German party opposed to the Danes.

## THE WAR IN THE CRIMEA.

*(From our Artist and Special Correspondent.)*

CAMP, SEBASTOPOL, Dec. 24, 1855.

YESTERDAY the French engineers successfully exploded the chambers of mines formed under one of the docks of Sebastopol. The explosion made but little noise, and was only marked by a large column of smoke, visible at the considerable distance to which spectators were forced to retire. The sides and bottom of the dock were completely broken up, the whole mass upheaving itself and forming a heap of ruins where the dock had been. The mines had been made below the stonework at the bottom of the structure, and completely destroyed it; but the ruin would have been more effectual had the chambers been carried lower, so as to effect the destruction, not only of the stonework, but of the piles on which it rested. Our engineers have been impeded mainly by the desire to effect the complete destruction of every part of the docks—the piles as well as piers and groundwork. Their shafts have been sunk much lower than the French, and have, in consequence, been subject to flooding. It is hoped that on Saturday, when the French intend to explode another of their mines, the English will also be ready, and then the destruction of Sebastopol docks will be complete.

CAMP, SECOND DIVISION, December 26.

For the second time since the invasion of the Crimea, Christmas has come and gone. How different the last was from its predecessor, the few who have weathered the vicissitudes of two campaigns can alone relate. It is sufficient almost to say that the enjoyments of 1855 have comprised the sufferings of 1854; for, if the former is marked by any peculiar feature, it is that comfort and substantial enjoyment are superabundant, and what there is of overflow in cheer must be taken as making up the deficiency of last year, during the merry time of Christmas. Unattended, uncared for, and weary, the soldiers on the 25th of December, 1854, held the trenches before Sebastopol, covered with mud, devoid of comforts, unhoused, ill-fed, and ill-clothed. Bad roads had caused short commons. Death, disease, and discontent, were the grim features of the day; the enemy was before us, and mismanagement behind. We have since driven away the first, and, in a great measure, dethroned the second; so that, although our last Christmas lacked much in outward show, its substance was real and tangible. In some favoured spot last year small parties may have gathered with the stern determination of being comfortable at all hazards. What is Christmas, however, without its turkey and roast beef? Of these neither was to be had. A goose may, here and there, have graced the board, in a bird resembling in aspect the gull can be supposed to pass for such. But Christmas dinners were a melancholy failure.

December 29, 1855.

The fall of Kars, which has been placed beyond question, has, it appears, singularly complicated the position of the Turks in Asia. Omer Pacha sent urgent messages by one of our ships for assistance against the threatening attacks of the Russian army released from the blockade of Kars. We now hear it rumoured that the Turkish Generalissimo has been completely surrounded and forced to lay down his arms. We all sincerely trust that this will turn out untrue.

A despatch from General Codrington, dated Dec. 27, gives some facts relating to the condition of the army in contradiction to the reported drunkenness of the troops. He affirms that the number of crimes of drunkenness, in September, October, and November, did not exceed one man per hundred in two days. Even were they to treble the numbers taken from official returns, he thinks the army in the Crimea would bear a comparison with many towns and villages in Great Britain. As regards the enemy, we learn that the Russians were firing with redoubled activity on the men employed in preparing the explosion of the docks at Sebastopol.

A despatch from Marshal Pelissier, dated Sebastopol, December 28th, states that a slight affair took place on the 27th with 100 Russians, who had taken up a position near General d'Autemarre's outposts. Eighteen of the enemy fell, and the rest were taken prisoners. The French did not lose a man.

### THE WAR IN ASIA.

The Russian army took up its position at Kars on the 3rd of December. The troops have been quartered in the town, and a small division of about 2000 men, consisting of Cossacks and irregular Kurds, has been left at Sobanly Dagh, where it occupies the fortifications erected in the month of June last by General Mouravieff. Yeni Kean, a village some fifty-four miles from Erzeroum, on the road to Kars, is likewise occupied by the Russians, who have collected there large stores of wheat, flour, and barley.

It appears that the Russian General is apprehensive of Selim Pacha coming to attack Kars, for he has concentrated all his forces at that spot, and has left at Alexandropol only a weak garrison, hardly strong enough to do the duties of the citadel.

The Turkish forces, under the orders of Selim Pacha, are still encamped in the mountains of Deveh Boynou. There is no fear of the enemy attempting now a *coup de main* against Erzeroum; the exhaustion of his troops and the state of the roads forbid it.

The *Invalide Russe* publishes a proclamation addressed by Prince Rebutoff to the *noblesse* of the Transcaucasian provinces, in which he tells them that the Allies have "risen against the Emperor, the only orthodox Czar in the world," as he styles him, because they are envious of his power, and jealous of the influence he has gained by demanding for the Christians living in Turkey relief from grievous wrongs. After calling upon them to show the enemy that they are the children of those noble Iberidians, Gourniens, and Mingrelians, who were never vanquished, the Prince concludes by the following solemn invocation:—

Salvation to you, in the name of the Lord, illustrious princes and noble gentlemen; raise above you the victorious sign of His cross, and, marching under its protection, drive the enemy from your territory

Letters from General Williams of December 1st announce his arrival at Batoum in good health.

Omer Pacha had re-entered Batoum, and the question of replacing him was discussed at Constantinople, but that measure was deemed impossible. In a council held on the 26th ult. the Divan decided that a new and numerous army should be sent into Asia in the spring.

At the departure of the courier from Constantinople seventy Turkish vessels were lying there laden with munitions of war, ready for transport to Soukoum Kaleh.

### RUSSIAN PREPARATIONS FOR THE NEXT CAMPAIGN.

The most energetic preparations for the spring are going forward in Russia. The Grand Council of War assembled at St Petersburg has been principally occupied with matters relating to the fortification of the strategic points of the empire.

The following letter from St. Petersburg, of December the 30th, shows that the Emperor Alexander has no great reliance on the result of the peace proposals:—

The momentous deliberations which have been carried on here for the purpose of settling the plan of the future campaign may be looked on now as closed. It is a presumption for which, however, I have very excellent grounds, that it is intended, in case another campaign should be opened there, to give up the Crimea entirely, and concentrate the entire power of resistance on other points; for it is as little overlooked here as probably in the rest of Europe that the plans of the Allies for next spring point to a removal of the theatre of war. We believe even that, quite *sub rosa*, the removal of the theatre of war is being already prepared for, and that a portion of the troops in the Crimea have already received orders to retire northwards upon the great central army, while, at the same time, another portion is destined to reinforce the troops in the Caucasus. According to all that I can hear, it seems also to be intended, with the greatest energy, and even in the course of this winter, to fortify, as far as it is possible, the entire north coast of the Bay of Finland, from Abo up to Wyborg; and behind these lines to concentrate the élite of the troops, viz.—three divisions of Guards and the 1st infantry corps, so as to be prepared for any attempts that might be made on this side with a probable view to an attack on the capital

Meanwhile the active manner in which Sweden is openly preparing for war is exciting great alarm among the German partisans of Russia.

Norway has been called on by the Swedish War Department to organise her forces. The Swedish journals are almost unanimous in their praises of the treaty with the Western Powers. Even the semi-official paper appeals to it as a reply to the reproach that Sweden is under the control of Russia.

### TURKISH WAR FINANCE.

The *Moniteur* of Tuesday last publishes an interesting statement of the financial condition of the Turkish empire. From this it appears that the Turkish Army amount to 103,066 men. The expenses of the war for 28 months (from May 27, 1853, to Sept. 27, 1855) amount to £7,400,000—a sum which includes one of £370,000, value of ammunition and war stores furnished to the Allies. The amount required by the War Department for next year is £4,345,000; and to meet the immediate wants an application is made to the Loan Commission for an instalment of £628,000.

### THE AUSTRIAN PROPOSITIONS FOR PEACE.

The first period allowed to the Cabinet of St. Petersburg for deliberation on the Austrian Propositions has been extended from the 5th, as first fixed, to the 8th of January. This arises from Count Esterhazy not having arrived at St. Petersburg as early as was intended. The second period is enlarged, in like proportion, from the 8th to the 12th. As on former occasions of a similar kind, Russia wishes to gain all the time possible.

The latest accounts from Berlin say that Austria has fully determined to reduce the Frankfort Diet to make some manifestation on the Eastern question. Count O'Donnell, the Emperor's Aide-de-Camp, is commissioned to visit various of the German Courts to feel the way for this object.

A private letter from Vienna states positively that the acceptance or rejection by Russia of the Austrian propositions depends a great deal, if not entirely, on Prussia. This coincides with the statement that the instructions of the Prussian Minister at St. Petersburg were to give the most conciliatory counsels to M. de Nesselrode; and it is moreover affirmed that the King of Prussia has addressed an autograph letter very lately to the Emperor Alexander to the same effect.

The *Indépendance Belge* gives the following as the text of the propositions submitted to Russia by Count Esterhazy :—

I. DANUBIAN PRINCIPALITIES

Complete abolition of the Russian protectorate. The Danubian Principalities shall receive an organisation conformable to their wishes, to their wants, to their interests; and this new organisation, respecting which the population itself will be consulted, shall be recognised by the contracting Powers and sanctioned by the Sultan as emanating from his sovereign initiative. No State shall be able, under any pretext whatever, under any form of protectorate, to interfere in the question of the internal administration of the Principalities; they shall adopt a definitive permanent system demanded by their geographical position, and no impediment can be made to their fortifying, in the interest of their safety, in such manner as they may deem advisable, their territory against foreign aggression.

In exchange for the strong places and territories occupied by the Allied armies, Russia consents to a rectification of her frontier with Turkey in Europe. It would commence in the vicinity of Chotym, follow the line of the mountains, which extend in a south-easterly direction, and terminate at Lake Sasik. The line (*trace*) shall be definitively regulated by the general treaty, and the conceded territory would return to the Principalities and to the suzerainty of the Porte.

II. DANUBE

The freedom of the Danube and of its mouths shall be efficaciously assured by European institutions, in which the contracting Powers shall be equally represented, except the particular positions of the lords of the soil on the banks (*des riverains*), which shall be regulated upon the principles established by the Act of the Congress of Vienna as regards the navigation of rivers. Each of the contracting Powers shall have the right to keep one or two small vessels stationed at the mouth of the river destined to assure the execution of the regulations relative to the freedom of the Danube.

III. NEUTRALISATION OF THE BLACK SEA

This sea shall be open to merchant vessels—closed to war navies (*navires militaires*). Consequently, no naval military arsenals shall be created or maintained there. The protection of the commercial and maritime interests of all nations shall be assured in the respective ports of the Black Sea by the establishment of institutions conformable to international law, and to the customs sanctioned in such matters. The two Powers which hold the coast engage themselves to maintain only the number of light vessels of a fixed force, necessary for their coast service. This convention, concluded separately between these two Powers, shall form part as an annex of the general treaty after receiving the approval of the contracting parties. This separate convention cannot be annulled or modified without the consent of the signatories of the general treaty. The closing of the Straits will admit the exception applicable to the stationary vessels mentioned in the preceding article.

IV.—CHRISTIAN SUBJECTS OF THE PORTE.

The immunities of the Rayah subjects of the Porte shall be religiously preserved, without infringement on the independence and dignity of the Sultan crown. An understanding is now taking place between Austria, France, Great Britain, and the Sublime Porte to assure to the Christian subjects of the Sultan their religious and political rights, Russia shall be invited, when peace is made, to associate herself thereto.

V

The belligerent Powers reserve to themselves the right which appertains to them of producing in an European interest special conditions over and above the four guarantees.

## THE LAST OF A REDAN HERO.

*(From a Crimean Correspondent.)*

WE left Balaclava late in December with a shipload of sick and wounded—some for Scutari, some for other hospitals on the coast, a few officers for Malta, and the rest for England. It was fine weather when we left Balaclava Bay, but at this season of the year the Euxine is seldom quiet for many hours together, and before we had got half way across, a storm was raging furiously. The wind blew uncertainly at every point of the compass, the black waves upheaving their vastness around us as if they would every moment engulf our ship with her cargo of human life, and the white surf swept our decks from bows to stern. I was standing on the quarter-deck speaking with the Captain, when a pale-faced boy with the badge of the 97th in his cap approached us, making with one hand a military salute whilst with the other he held on hard to save himself being washed overboard. "Captain," said he, "will you soon be in smooth water? There's a poor corporal of ours won't last long anyhow this way." The Captain shook his head. "My lad," said he, "the ship scarce makes any way in this head sea; there'll be no smooth water for the next twenty-four hour." "Then God's mercy be with him," said the boy, and he turned away. The Captain called after him—"Cheerly, my lad! isn't it all taut and dry below? and the doctor's with your mate; all the ship's comforts' are at his service: does he want anything?" "Faith, an' it's not long he'll want anything," was the reply: "he won't live below at all at all! He never could stand the sea by no means, even when he was the man he used to be: he says now, an' it's all his cry, 'give me the fine hair and I'll die contented!'" "The man says truth," said the Doctor, who came up at that moment; "we must have the poor fellow on deck. It's his only chance: he'll die below." "Then bring him on the quarter-deck," said the Captain; and in a few minutes, under our directions, the quarter-deck boats, a bed, as comfortable as possible under the circumstances, was provided. I assisted in his removal, and when he was lodged on his bed, with the winds shrieking around him and the salt sea foam splashing on his face, he revived for a time, and said he felt better, and hoped he should still weather the storm. I ascertained from his comrade that he had been one of the first to enter the Redan on the memorable 8th of September: that he was amongst the number who for a brief period occupied unmolested those enormous works, hoping momentarily that a rush of reinforcements would come to their aid—hoping, until thousands of Russians, yelling like demons, crowding in from the Malakoff and the barracks below, compelled the devoted few to retreat. In retreating towards the advanced trench over the terrible glacis he was wounded in several places. He had partially recovered from his wounds when the cholera seized him, and now on the quarter-deck of the [illegible] he was dying. His face and lips were pale as wax, his eyes sunken in their hollowed sockets, his features sharp and bedewed with the damps of death. A few sick men of the 97th, and several invalids belonging to other regiments, stood near him. "God bless you, my boys!" said he, "and the ould 97th! It's no use—I'll never, I'll never see *home!*" and at the last word his chin fell upon his breast. They thought he was gone, and covered his face; but he moved his head again, and attempted to raise his hand, now cold as ice. The lad before mentioned, a six months' recruit, grasped the fingers so feebly outstretched, and bent over him, the tears streaming down his cheeks and mingling with the spray of the sea which flew around the strange bed of death. "Mike!" said the corporal with convulsive energy, half raising himself, "Mike! I'm dying—the 97th ran back! Will any man say *I* didn't do *my* duty? God bless the Queen! and bless Ould Ireland, too!" He fell back, and never spoke again.

In a few hours we were off Scutari, and blew off steam whilst the ship's boat went ashore. One of the hatchways was lowered into the jolly boat, and on this rude bier rested a figure—the unmistakable outline of death—wrapped in a union jack. The sea was still running high. "Turn the hatchway round," cried the Captain, "or you'll have *him* overboard." The boy in the boat caught the something in the union-jack with one arm, and with the other turned the hatchway round. He lifted him tenderly. So light was his frame now (three months ago a Redan hero!) that the cabin-boy of fifteen years raised him and laid him down as if he had been a child. The boat put off towards the shore in a heavy surf, and it appeared every moment as if she would be swamped. I thought I had seen death in so many forms that nothing would ever touch me again, but the misery and grief of the young recruit, the faithful comrade, was a sight no mortal nerve could endure without the relief of tears. He stood leaning over the ship's ladder, his eager glance strained after the receding boat as she encountered each threatening wave, weeping all the time as if he were beside a household grave at home, hearing the dull earth fall upon the coffin.

W. C.

## SPLENDID METEOR.

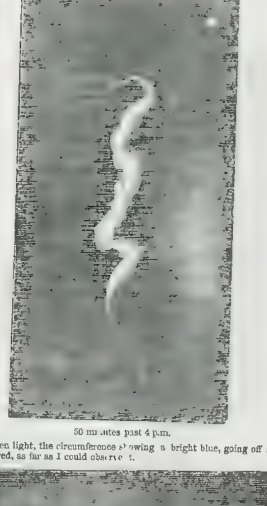
*(To the Editor of the* ILLUSTRATED LONDON NEWS*)*

Tunbridge Wells, Jan. 7, 1856.

THIS afternoon, about 47 minutes past four p.m., sitting opposite a window looking S.W., I was struck by the appearance of a most brilliant meteor descend-

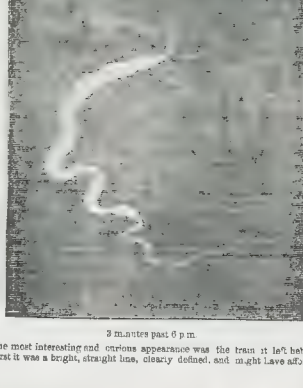
First Appearance—47 minutes past 4 p.m.

ing with considerable rapidity at a slight angle towards the south. It appeared slightly to the south of the planet Jupiter, which was shining brightly in a cloudless sky, and S.S.E. to myself. The appearance was that of an intense



50 minutes past 4 p.m.

oxy-hydrogen light, the circumference showing a bright blue, going off into a dull rusty red, as far as I could observe it.



3 minutes past 6 p.m.

The most interesting and curious appearance was the train it left behind. At first it was a bright, straight line, clearly defined, and might have afforded the poet a good image of the "flaming sword" of the Destroying Angel hanging over a doomed city. Its colour was quite white, and its character luminous, or apparently so—this might have been the intensity of the white colour deceiving the eye. Gradually the line began to assume a sinuated form, and became broad and cumulous, still standing out in bold and sharply-defined outline against the "azure vault." The cloud-like nature of this magnificent "train" now became distinctly visible, its entire length being distinguishable into heaps of white clouds. The upper point moved but little, while the lower point (from the first much attenuated) gradually disappeared, still not moving much from its first position. It will be seen, therefore, that the motion must have carried the centre portion, giving the whole a serpentine form. I have inclosed some sketches of its appearance at different times. It lasted just about a quarter an hour; and, in length, took about two-thirds of the distance between Jupiter and the horizon (apparently). Soon after six it vanished, and clouds came over. The greater motion of the middle portion may have been caused by the greater bulk there affording the wind more surface for acting.

The movement of the "train" will at once suggest the atmospheric nature of the phenomenon. I can hazard no opinion as to the distance it was from here, having no instruments to examine it with, except a small telescope.

J. T.

*** We have also to thank several other Correspondents for their accounts and sketches of this remarkable Meteor. Mr. W. Noble, of Forest Lodge, Uckfield, Sussex, compares its appearance to "an enormous comet," changing to that of the "golden rain" of a rocket; and next to an extraordinarily brilliant cloud.—"Its *angular* form in many parts strikingly suggesting its electrical origin. Examined through an excellent telescope of 1¾ inch aperture, it afforded the idea of a flocculent and somewhat arborescent mass—a sort of *fringing* being very apparent. As we regarded it, it very slowly changed its form, heading gradually into the form of the letter W. It remained visible for about fifteen minutes, gradually fading. It was due S.W., nearly under the great square of Pegasus (the stars, however, being invisible at the time from the strong twilight), and Jupiter was shining brilliantly to the W. by N. of it. The wind at the time was E. by N. Barometer 29·888 inches. Attached therr mometer 49°.—External thermometer perhaps a degree lower."

W. F., Brighton; T. W. W., Brighton; G. D., Stoermouth, Kent; J. Mickleburgh, Thanet House, Margate; C. M. Dobell, Cheltenham; J. L., Prince's-crescent, Margate; J. C., St. Leonard's-on-Sea; John Smith, Cowes; C. G., Wareham, Dorset; G. M. C., Wilmington, Sussex; Index, Midhurst, Sussex; W. C. B., Clifton next week.

H. G. B., Chudleigh, describes it as resembling a torn and blazing flag, terminating upwards in a slender ray-like shaft.

Mr. J. M. J. Broadwood, Buchan hill, near Crawley, Sussex, states the appearance to have been that of a large ball of fire, and its disappearance that of a luminous cloud.

## *NAVAL AND MILITARY INTELLIGENCE.*

PRESENT AND FUTURE STRENGTH OF THE BRITISH ARMY IN THE CRIMEA.—The total strength of the British land forces in the vicinity of Sebastopol, at the present moment, is as nearly as possible 53,000 men of all ranks and arms of the service. At Kertch there is a battalion numbering about 700, and on the Bosphorus thirteen regiments of cavalry, whose aggregate strength is rather over 4000, making a total, exclusive of 2400 in hospital at Scutari and Koulali, of, in round numbers, 58,000 purely English forces. Between this time and the first week in March nearly the whole of the troops now composing the reserve at Malta will probably be forwarded to the Crimea, their place being supplied by reinforcements from home, of which something like 4000 will embark in the course of the next week or two. About ten infantry regiments from home, Malta, and Gibraltar will, in all likelihood, be sent to the Black Sea, about the same time; thus adding more than 15,000 men to the English army now in the field, and bringing its numbers up to about 73,000 in all. The Turkish contingent, the head quarters of which is now at Kertch, may be considered as amounting to 20,000. Portions of the British Swiss and British German Legions are already at Scutari, one or two more regiments are on their way, and the total number of these corps in two months may be safely anticipated as 7000 men. The British Italian Legion appears likely to be most successful, but it is not probable that sufficient progress will have been made in its organisation to allow of its taking the field early in the campaign. Summing up the figures just stated, the whole of the British forces will probably be found to amount to 100,000 men, of whom 85,000 will be effective combatants. Some important arrangements as to the redistribution of the forces will be made on the arrival of Sir Colin Campbell, who now holds the local rank of General. All officers on leave must be present with their regiments on the 1st March, and within a very few days of that date the public may expect to see an army ready to take the field whenever it may be ordered which, in point of numbers, arrangement, and condition, we shall be justified in regarding with confidence and pride.—*Globe.*

ORDERS have been received at the several artillery stations in Ireland to send a certain number each of picked men forthwith to Woolwich, thence to proceed to the Crimea.

THE *Perseverance* naval steam-transport embarked at Portsmouth on Saturday detachments of the 19th, 33rd, 34st, 39th, 44th, and 46th Regiments, and 1st and 2nd battalions of the Rifle Brigade, with which she left on Monday for the Crimea.

ORDERS have been received at Portsmouth that on the arrival of the *Rodney*, 92, sailing-ship, at that port from the Mediterranean she is to be converted with all dispatch into a steam depôt-ship for the Baltic fleet. Her crew will be paid down and granted leave; her spars are to be reduced, with the exception of her lower masts and lower yards, which will remain the same; the rest of her spars will be those of a second-class frigate; the complement of her crew will be reduced from 850 to 650. The *London*, sister ship, is also to undergo a similar conversion, for the same service, on her arrival at Devonport.

HER Majesty's steam-sloop *Driver*, which arrived at Woolwich on Saturday morning last, and went down the river for the examination of her engines, previous (as it was supposed) to her being taken into basin for repairs, has been filled up with coal, and left Woolwich again at about eleven o'clock on Sunday for immediate service. In consequence of these sudden and unexpected orders a number of the factory workmen were set to work to repair the most defective part of her engines, and remained at work the whole of Saturday night and all day on Sunday until the vessel left.

THE authorities of the Horse Guards have forwarded an order to the Commandant of Chatham garrison to hold in readiness the men of the various depôts in the provisional battalion on the eve of embarkment who have gone through a course of instruction at the school of musketry at Hythe, and have qualified themselves for instructors in the use of the Enfield rifle to embark for the several presidencies in India, to enable the Commander of the Forces in that country to carry out the orders on this head. The following are the depôts from which instructors will be selected:—For the Bengal stations, the 10th, 32nd, 64th, and 86th Regiments—one from each depôt. For Bombay: the 64th, 78th, 83rd, 8th, and 90th Regiments—one man from the first three and two from the latter. For Madras: the 74th and 94th Regiments—four instructors from the former and one from the latter.

THEIR Serene Highnesses Prince Edward and Prince Gustavus of Saxe-Weimar, attended by Colonel Hamilton, Grenadier Guards, and two subaltern officers, paid a visit to Woolwich Arsenal on Tuesday morning, where they were officially received by Colonel Wilmot, Colonel Tulloh, Captain Boxer, and Captain Orr, representing the departmental government of the Arsenal. The visitors were conducted in the usual manner through the foundries, various workshops, and laboratories, and repeatedly expressed their gratification as they were shown the working of the huge and powerful machinery. Prince Edward had desired that the ordinary labour might not be disturbed, so that every department was in full work when they arrived. Before leaving the Arsenal the Princes expressed their conviction that this important establishment is unrivalled in Europe.

A CONTRACT has been entered into with Government by Messrs. Napier, of Glasgow, for the construction of the first of the great gun-batteries. It is intended to be of 3000 tons, and it is to be delivered on the Thames on the 15th of April next, under penalty of £1000 per diem.

SO great is the facility in reuniting the disjointed timbers composing the experimental mortar-raft at Woolwich, that in three hours after receiving the pontoon cylinders, which have been repaired and strengthened, the raft was again in service order. This is an important item in this newly-invented species of raft, showing the ready manner in which it may be transferred to any destination.

THERE are forty vessels in Portsmouth being equipped for active service. So many ships and fresh arrivals nearly every day give ample employment to every department in the port. The Gibraltar yard, Gosport, is full of stores in readiness for shipment. The *Flying Fish*, 6, arrived at Portsmouth on Monday, from Pembroke, to join the fleet fitting out.

ORDERS have been issued to hold in readiness for embarkation 800 disciplined men of the household infantry—viz., 300 for the 3rd battalion of the Grenadiers, 200 for the 1st battalion of the Coldstreams, and 300 for the 3rd battalion of the Scots Fusilier Guards. These draughts will proceed by the first opportunity to join the reserve at Malta, whence a similar number will be sent to join the service companies in the Crimea.

THE NEW VOLUME of the LONDON ILLUSTRATED NEWS, bound in cloth richly gilt, is now ready, price 18s. This volume contains a Series of Illustrations (many the size of one and two pages) of the War in the Crimea, and the Campaign in the Baltic, from Sketches by the Special Artists of the ILLUSTRATED LONDON NEWS. The Visits of the King of Sardinia to France and England, and all the leading events of the last six months, are also copiously illustrated in this volume.

# THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, JANUARY 12, 1856.*

"WHAT NEXT; AND NEXT?" Such is the title of the new pamphlet which Mr. Cobden has just launched upon the world, to enlighten the darkness of the English mind on the great question of the war. In the performance of a duty which, as journalists, devolves upon us, we have read the pamphlet through with that respectful attention due alike to Mr. Cobden's antecedents, to his undoubted honesty of purpose, and to the responsible position which he holds as a legislator. We think we have discovered the meaning that percolates through its half-hundred closely-printed pages. We think we know what Mr. Cobden is driving at; and, as all our readers are not likely to have the chance of making their way through the pamphlet as we have done, and possibly would not care to do so even if they had, we shall endeavour, in as brief a space as is consistent with lucidity, to epitomise the arguments which the author has employed, and point the conclusion to which he leads them. Mr. Cobden proclaims at the outset that he will studiously avoid all allusion to the original cause of the war; and expresses a hope that "the most strenuous supporters of the war and the most ardent advocates of peace will meet on common ground with him to discuss the probabilities of the future." It is to the probabilities of the future, therefore, that the pamphlet relates. Mr. Cobden does not go the length of his friend Bright, and deny the justice of the war. He does not assert that Russia is right or unambitious. On the contrary, he allows it to be inferred that in his opinion Russia is decidedly in the wrong, and ought never to have been guilty of the wicked cupidity which led it to overawe and invade the Ottoman empire. Mr. Cobden—while tacitly admitting all this—insists, for a variety of reasons, that we ought immediately to make peace. These reasons are, as clearly as we can gather them, as follows:—

First. The expedition to the Crimea was "a leap in the dark." In a two years' campaign "the Allies have lost in killed and wounded in actual combat nearly as many men as it cost Napoleon to gain possession of Moscow," and still Sebastopol "is not wholly in our power." Therefore we have undertaken a task beyond our strength to accomplish, and should immediately make peace.

Secondly. "Assuming the most favourable result—that, after a series of obstinate and bloody encounters, the Russians will be compelled to retreat, and leave the whole of the Crimea in the hands of the Allies, the Allies will be compelled either to abandon it or to retain it." If they abandon it, what is the use of taking it? If they retain it, an army will be required to occupy it. We cannot afford such an army. *Ergo*, make peace, and the sooner the better.

Thirdly, "If, in addition to the retention of the Crimea, the war is to be prosecuted in Bessarabia, or on the Dniepер and the Bug, another army will be required for those operations, to supply the place of that left in the Crimea, and to fill up the vacuum occasioned by our losses in the expulsion of the Russians." As we cannot afford army the first, it is clear that we cannot afford army the second. Therefore there is an additional reason for giving up the struggle!

Fourthly. "But there is another plan of warfare proposed. It has been said, as soon as you have cleared the Crimea of the enemy, withdraw your army, and convert the war into a naval blockade. But will the Russian armies, no longer menaced by the Allies, remain inactive? Russia is at war with Turkey. What, in that case, is to prevent her from pouring reinforcements—either by the pass of Dariel, or by her great highway the Wolga, and across the Caspian, which our ships cannot reach—into Georgia, and thus indemnifying herself (as Mr. Layard has predicted she will do) for the loss of the Crimea by fresh conquests in Asia Minor?"—As the best, if not the only, means of averting such a result, it is Mr. Cobden's opinion that the Allies should make peace!

Mr. Cobden is generous enough to admit that the Allies will achieve many successes, though he will not admit that any one or all of these successes will have the least effect in ending the struggle. "We may conclude," he says, "that the further operations indicated by the capture of Kinburn will be carried out; that after the conquest of the Crimea the Allied armies will proceed to attack and capture Nicolaieff; and, notwithstanding the difficulties of approach, and the obstacles which the genius of Todtleben may have created, Perekop will be invested; the forts of the Danube attacked; an army will be landed to occupy Odessa (I will not assume the infamy of a bombardment of that *entrepôt*). I will take for granted that all these operations are successful, and that every place within fifty miles of the Black Sea in Southern Russia is in the hands of the Allies; an army may then be dispatched to Tiflis to drive the Russians from Georgia and their Transcaucasian provinces. That all these objects may be accomplished with time and commensurate efforts—efforts of which the past are but a faint example—by two such nations as France and England, I have never denied; that repeated levies of men and money will be necessary for their accomplishment no one will dispute." Having assumed all these achievements to be effected in a succession of victorious campaigns, "having thus realised the wildest hopes of the most sanguine advocates of the war," Mr. Cobden comes to the object as well as to the title of his pamphlet, and triumphantly exclaims—WHAT NEXT? Even then, he says, Russia will not submit. His reasons for this belief are multifarious, but are divisible into the following, in continuation of the four already given:—

Fifthly. The Allies cannot seize the capital of the Czars, "with its seven miles of suburb and city, interspersed with gardens and trees, its green roofs of sheet iron gleaming to the sun, the hundreds of cupolas, flashing with gold, deep blue or green, spangled with stars, and surmounted with the Greek cross, from which hang gilt chains looped gracefully to the circumference of the cupola, and, crowning all, that picturesque cluster of palace, churches, and monuments, the Kremlin." For this reason and Mr. Cobden thinks it more than sufficient, especially as Moscow is so very beautiful—the Allies must yield, and leave Turkey to its fate.

Sixthly. "The Allies cannot sensibly impair the finances of the Russian Government by cutting off the sources of its revenue, for the territory bordering on the Black Sea comprises the poorest, the least populous, and the most uncivilised portion of European Russsia." Therefore let England call home her ships, disband her armies, break up her alliance with France; manufacture cotton goods; and leave the world to Russia—or any other Power that has the strength to govern or to oppress it.

Seventhly. And this, from Mr. Cobden, is the most extraordinary reason of all:—Russia is a strictly protectionist country, and can feed herself, and carry on a lucrative internal trade, even though the whole civilised world should declare itself against her. "For this reason—to use a common phrase—we should immediately "give in." The game is up:—it is of no use to fight against Fate; —Russia is too strong for us. Our place is to be humble and quiet; to mind our own business, and make Mr. Cobden Prime Minister, or President of the English Republic, until such time as Russia shall see fit to decree our annexation to her own Empire!

There are other reasons that seem to be equally cogent in Mr Cobden's mind—the whole of which may be summed up in one sentence:—The Allies cannot conquer, therefore they should yield. If Mr. Cobden were asked what course he should take if he were, with out reference to the past, responsible for the policy of the country, he states that he "would seek, above all things, to withdraw every British soldier from Russian territory," because our army may now be brought away without further loss or discredit, and that it may not always be so!

Alas for the reputation that once stood so high! Where would Great Britain be at this moment if her bygone statesmen had been such as Mr. Cobden? A province of a mightier neighbour; the appanage of a more splendid dominion; a nation of self-degraded slaves; her havens shipless; her marts grass-grown; Manchester silent, smokeless, and unpeopled; our very name a matter of history, "pointing the moral and adorning the tale" of greatness deservedly lost, of high position justly forfeited by the meanest cowardice, the most grovelling subserviency, and the most deplorable fatuity.

Mr. Cobden has done his duty. We hope the electors of the West Riding when they have the chance will not fail to do theirs.

## *THE COURT.*

The circle enjoying the hospitality of her Majesty at Windsor Castle has been this week increased by the arrival of his Royal Highness the Count of Flanders, second son of the King of the Belgians and cousin of the Queen. His Royal Highness landed at Dover from Ostend on Monday, and went direct to Windsor Castle.

The other company honoured with invitations during the week have been the Premier and Viscountess Palmerston, the Earl and Countess Granville, Viscount and Viscountess Hardinge, the Belgian Minister and Madame Van de Weyer, and Admiral Sir Edmund Lyons.

On Saturday last the Queen and Prince, with the Princess Alice, attended by the Marchioness of Ely, Lord Charles Fitzroy, and Colonel Seymour, went to London, and honoured the Photographic Exhibition with a visit. Her Majesty afterwards visited the Duchess of Gloucester, at Gloucester House, and returned to Windsor at twenty minutes past one o'clock. In the afternoon her Majesty was visited by the Prince of Salerno, the Prince and Princess Joinville, and the Duchess d'Aumale. The Prince of Wales and Prince Alfred came to town to attend Mr. Faraday's lecture at the Royal Institution.

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal, Prince Alfred, and the Duchess of Kent, the ladies and gentlemen of the Court, and the domestic household, attended Divine service in the private chapel of the Castle. The Hon. and Very Rev. the Dean of Windsor performed the service.

The Prince Consort has enjoyed the diversion of hunting, and the Count of Flanders has more than once been out shooting with his Royal Highness in the Great Park.

The Duchess of Kent has dined with her Majesty daily during the week, and the usual musical performances by the Queen's private band have invariably closed the evening.

Her Royal Highness the Duchess of Kent, attended byLady Fanny Howard and Sir George Couper, arrived in London on Wednesday morning, from her residence, Frogmore. Her Royal Highness returned by the Great Western Railway in the afternoon.

His Excellency the American Minister entertained a large party of the corps diplomatique at dinner, on Thursday evening, at his residence in Upper Harley-street. It is understood Mr. Buchanan is about to relinquish his post as Minister at this court.

Lord Adolphus Fitzclarence has been seriously ill with an attack of gout in the head. His Lordship is now, it is hoped, satisfactorily progressing towards convalescence.

Sir Thomas Moncrieffe has been dangerously ill during the last three weeks at Moncrieffe House. The hon. Baronet still continues in a precarious state.

APPROACHING MARRIAGES IN HIGH LIFE.—Viscount Somerton, eldest son of the Earl of Normanton, is about to form a matrimonial alliance with the Hon. Miss Barrington, eldest surviving daughter of Viscount and Viscountess Barrington. A matrimonial alliance is also about to take place between Captain Sayer, Royal Welsh Fusiliers, Deputy Assistant Adjutant-General at Head-quarters, and Miss Phipps, eldest daughter of Colonel the Hon. C. B. Phipps, C.B., and niece of the Marquis of Normanby. The Hon. Wyndham Quin, late of the Grenadier Guards, only brother of the Earl of Dunraven, is likewise about to form a matrimonial alliance with Caroline, third daughter of Admiral Sir George Tyler, M.P., of Cotteell, Glamorganshire.

## *METROPOLITAN NEWS.*

THE COAL TRADE OF LONDON. Statistics prepared by Mr. J. R. Scott show that the total importation of coals into the metropolis in 1855 was 4,177,853 tons; of which 3,016,858 tons were seaborne, the remaining 1,161,085 having been brought by railway. This total presents a decrease of 188,817 tons, as compared with the great importation of 1854; since, although the quantity by railway exhibits an improvement of 183,856 tons, there is a falling off of 282,693 in that by sea.—The latter circumstance being partly attributable to the removal of a number of screw-steamers from the trade for more profitable employment as transports under Government.

CANADIAN PRODUCTS AT THE CRYSTAL PALACE.—The directors of the Crystal Palace Company have entered into an engagement with the Canadian commissioners at the Paris Exhibition by which one of the best sites in the Palace has been given for the purpose of making an exhibition of the products and manufactures of Canada in every way worthy of the country. It is understood that the Canadian Parliament will vote a sum of about £5000 to carry this purpose into effect, as also an annual grant for keeping it in order, and supplying it with new objects of interest and attraction. No better means could possibly be adopted for disseminating information as to the products and resources of Canada amongst the people of this country. The Canadian collection in the Paris Exhibition has been the admiration of all who have seen it, and of none more than of the Emperor, whose interest served to confirm in the sound policy which has dictated the steps recently taken towards increasing the commercial intercourse between Canada and France.

BATHS AND WASHHOUSES.—At the grand wardmote held at Guildhall, on Monday, the Right Hon. the Lord Mayor in the chair, the following resolution was handed into the chairman of the inquest of St. Dunstan's-in-the West:—"We, your inquest, take this opportunity to state that, being fully sensible of the importance of public baths and washhouses, and of a general, public, and private point of view, and as likely, if established in the city of London, to conduce in an important degree to the comfort and well-being of our fellow-citizens, we desire to call the special attention of your worthy chief magistrate to the project now before the Corporation of London for the establishment of public baths and washhouses in the ward of Farringdon Without, in the hope that it may meet with your influential support." The Lord Mayor assured the inquest that the recommendation should receive the immediate and respectful attention of the court.

MR. ASPLEY PELLATT, M.P.—A meeting of the electors of Southwark was held at the Southwark Literary Institution, Borough-road, on Monday evening, for the purpose of hearing their honourable member explain his parliamentary conduct during the past Session. Mr. Aspley Pellatt congratulated the electors on the improved state of public affairs since he addressed them that time last year. He passed a high eulogium on the character of the late Sir William Molesworth, and approved of the election of Sir Charles Napier in his place. In reference to the war he said the Baltic and Black Seas should be thrown open to free-trade, and that the war ought to be continued until these terms were wrung from the reluctant Czar, even at any cost. A motion of confidence was carried after some discussion.

HEALTH OF LONDON.—The deaths of 1247 persons—namely, 630 males and 617 females were registered in London in the week that ended on Saturday last. Taking the first week in each of the last ten years (1846-55), it is found that the average number of deaths then registered was 1311, which, if raised in proportion to increase of population for comparison with the present return, becomes 1442. The public health, therefore, may be stated to be better than it usually is at the commencement of the year. In the first week of 1854, and also in that of 1855, the deaths rose above 1600. Last week the births of 853 boys and 809 girls—in all 1662 children—were registered in London. In the ten corresponding weeks of the years 1846-55 the average number was 1579.

MARGARET-STREET DISPENSARY FOR CONSUMPTION AND DISEASES OF THE CHEST.—The anniversary ball in aid of the funds of this excellent charity will take place at Willis's Rooms, on Thursday next, under distinguished patronage.

ROYAL HUMANE SOCIETY.—The annual meeting of the members of this society was held at their offices, Trafalgar-square, on Wednesday; Mr. Benjamin Bond Cabbell, M.P., in the chair. The report stated that during the past year 102 cases of persons, attended with risk to the lives of 188 persons, had been brought under the notice of the officers of the society, and that 25 of these had been cases of attempted suicide. Of the 188 persons thus immersed, 163 had been successfully treated: the other 18 having been past recovery. During the same period the society conferred, as rewards of gallantry to those who risked their own lives to save the lives of their fellow-creatures, 16 silver medals, 12 bronze ditto, 4 vellum and 18 parchment testimonials, and £138 in pecuniary recompense. It also stated that the society's boats are continually on the Serpentine, in which, during the last twelve years, 272,161 persons had bathed; being an increase of 80,000 bathers on the year, without one fatal accident having occurred, notwithstanding there had been as many as 39 casualties.

THE OMNIBUS ENTENTE CORDIALE. The first instalment of the London omnibus connection was passed over to the French Compagnie Générale on Monday last, and was duly worked by them through the day. This was the Holloway line, belonging to Mr. Wilson, and remarkable as the largest connection in the world. It consisted of 50 omnibuses, with 500 horses, employed about 180 men, all of whom are now in the service of the Anglo-French General Omnibus Company of London. The "time," or goodwill, considered to be of equal value with the vehicles, &c., were also made over as part of the bargain. A similar transfer was executed on Monday by Mr. Leonard Willing, the oldest omnibus proprietor in London, who, with the same intention, amalgamated the Stoke Newington and Kingsland and Dalston lines *inbloc*, comprising twenty-two omnibuses, 220 horses, and seventy *employés*. The French Company's intended system of "correspondence" (by which a person getting into an omnibus in any part of London may be conveyed, at one charge, to any point of destination by the mutual exchange of passengers) does not come into action until their new carriages are built and their purchases of the other London lines are completed. How far these have advanced can be judged, since a valuation is actually in progress of the following for which the bargain has already been struck)—viz., Newington and Hackney (the Wellingtons), 20 omnibuses, 170 horses, with 35 men; Brompton and Fulham, 40 omnibuses, 400 horses, with 140 men; Chelsea and Hoxton, &c. Chelsea and Bethnal-green, 37 omnibuses, 370 horses, and 120 men, Kent road and Hoxton, 12 omnibuses, 120 horses, with 40 men; Hackney and Clapton, 10 omnibuses, 100 horses, with 30 men; Woolwich, 4 four-horses mails, Barnet, 2 four-horse mails, with an establishment of 130 horses and 30 men; making a total now actually the property of the French Compagnie Générale of 168 vehicles, and 1680 horses, and giving occupation to 670 men. As might be supposed, the appearance of so wholesale a purchaser has somewhat changed the omnibus market, and it is probable that the Compagnie Générale may have to defer further arrangements until the excitement has partially subsided. The following well known names have already retired from omnibus proprietorship in favour of the French alliance:—Hartley, Chancellor, Willing, Mossmans, Wilson, Bennet, Woodford, Hunt, Forge, Proome, Martin, Home, Seale, Westropp, Fox, Rhodes, Johnson, Webb, Hawkey, Smith, Williams, Hinckley, Kerrison, and Breach. The offering of weavers into a continuous network the heterogeneous lines of the London omnibus traffic can be easily imagined.

## *CHURCH, UNIVERSITIES, &c.*

APPOINTMENTS. *Rectories:* The Rev. William Cooke to the Vicarage of Gazeley with the Rectory of Kentford annexed, near Newmarket; the Rev. R. J. Rice to Sutton Courtney, near Abingdon; the Rev. Henry Gough to Charlton-upon Otmoor, near Oxford; the Rev. Henry Tudway to Walton-cum-Weston in-Goodacre, near Bristol; the Rev. J. W. Compagnie Gwynne to Rolvenden, Kent. *Vicarages:* The Rev. J. D. Gray to Abbotsley, Huntingdonshire. *Incumbencies:* The Rev. William Jones to St. Thomas's Church, Penybonvawr, Pennant, Montgomeryshire; the Rev. J. C. Bates to King's Sterndale, Derbyshire.

RUSSIAN VIEW OF A BALTIC CAMPAIGN.—Russia possesses at this moment one army in Finland, another in the Baltic provinces, a third in Poland, and yet a fourth in St. Petersburg and its neighbourhood. Surely these are obstacles not to be surmounted in a hurry, nor can anyone dream of doing so. Cronstadt is not Kinburn. The success obtained by the floating batteries at the bombardment of that petty fortress, where they were employed for the first time, is not yet proved, for the simple reason that Kinburn, the construction and armament of which had undergone no change since the last century, possessed none of those engines that may be happily employed against these said batteries. There was not even a single Paixhan gun in that fort. It is different with Cronstadt; and, formidable as this fortress has always been, consisting numerously of several forts, it is more than probable that, since those floating batteries have been known at St. Petersburg they have discovered the means of counter-arming themselves there. The present war has proved that the arms of the engineers and artillery are not so badly wielded in Russia, and that under this head their inventive powers are not so poverty-stricken as previously supposed. Thus, when reasoning on the hypothesis most favourable to the Allies, the possible chances of a favourable issue to an approaching campaign in the Baltic—whether we consider it to be a gigantic enterprise, comprehending the invasion of Finland and the Baltic provinces, or whether we reduce it to its simplest expression, that is to say, to the mere bombardment of Cronstadt, it cannot by any possibility have for Russia those consequences to which the English journals are pleased to see her already reduced.—*Le Nord.*

## NOTES OF THE WEEK.

THE Russians have had the satisfaction of witnessing the deliberate destruction by the French of one of the magnificent docks of Sebastopol. A comparatively small quantity of gunpowder, judiciously applied by the skilful French engineers, has laid this fine work in ruins before the eyes of its late defenders, who attempted to avenge themselves by a vindictive fire, which was rendered harmless by the foresight of the French Commander. It is worse than idle to speak with any kind of regret of the demolition of these superb works. While Art is the servant of Civilisation let her receive a honour; but the moment that Art—whether employed as a vitiating and demoralising agent, or as the assistant of brute force and tyranny —opposes herself to the interests of humanity, let her work be trampled and shattered. The Sebastopol docks may be noble things; but the freedom of the Euxine Sea is a nobler. The Allies seem bent upon giving new significance to the demand which, *inter alia*, has been laid before the Court of St. Petersburg—namely, that Sebastopol shall be a ruin so far as fortification is concerned. The English engineers were not quite so forward as those of France, owing to the greater difficulty presented by the locality with which they had to deal; but it is probable that by this time the whole series of docks has been utterly destroyed. Certain incessant and undestrable interferences on the part of our War Minister are also assigned by writers from the Camp as the reason for our backwardness; but this allegation is one the truth of which at present there is no means of testing, any more than that of the assertion that General Codrington is disposed to object to take quite as many instructions from Lord Panmure as that nobleman is inclined to transmit.

The appointment of Mr. Bramwell as the new Judge (in consequence of the retirement of Baron Parke, who takes the title of Lord Wensleydale, not that of Lord Ampthill) has given universal satisfaction. This gentleman has taken little share in politics, and has comparatively little celebrity as a mere advocate; but as a learned and also a practical lawyer, and as a bold and earnest law reformer, he is most honours bly known in his profession, and to its heads in the House of Lords. The invaluable service rendered by Mr. Bramwell, and by the gentleman last elevated to the Bench, Mr Justice Wilies, in framing the Act by which common law procedure was placed upon a more rational basis, was understood to have constituted their final claim to the dignity each has now attained; and it is to the credit of Lord Palmerston's Government that such appointments should be based upon such considerations, and not upon those of partisanship. Had this last influence prevailed the new Judge would have been a very excellent lawyer, and a stanch supporter of Liberalism, to whom most persons supposed the vacant office would be given, and against whom nothing could be said, except that Mr. Bramwell's appointment is a better one for the public. A contemporary reminds the newly-made magistrate that there are some very important cases about to be heard, that murder is very rife, and that it is expected the Judges will deal out unhesitating justice. Those who know Mr. Justice Bramwell will be inclined to entertain no apprehensions lest "maudlin philanthropy" should in the slightest degree interfere with his enforcing the due execution of the laws in his sound, shrewd sense being one of his best-recognised qualifications for his office.

While the public is waiting to see what kind of reply the Eastern Counties Railway Committee will make to Mr. Waddington's cleverly-put plea for his own management, the public had better keep off the Eastern Counties Railway itself; for there appears to exist there even a worse rottenness than that of administration. An official intimation has gone forth from the Mayor of the most important place the railway connects with London, stating that an investigation of the condition of the line itself has been made—not, of course, by the railway authorities, but by those who think rather of lives than of dividends—and the appalling result is that the Government Surveyor reports such a state of unsoundness, such a mass of decayed piles, and so many doubtful bridges, that the Mayor most properly notifies to his fellow-citizens that they had better not travel on a road where there is such imminent peril of a frightful catastrophe. Common sense would say that such a caution ought to be followed up by the instant closing of the line; but its owners will not do this; and it appears that the Government cannot, according to law, although it could interdict the opening. License once given is given for ever, is a legal conventionality, in obedience to which the public is to be allowed to expose itself to the danger of a wholesale massacre. In a rational state of society a representation by a number of engineers confirmatory of such a statement of danger as has been made in the case of the Eastern Counties would lead an indemnity to the Home Secretary for closing any railway line or other communication in the kingdom; but it is better that we should be killed lawfully, and then that our relations should bring actions for the loss of our lives, than that a paternal Government should save us without warrant.

There seems to be some prospect of a reform in the most popular system of metropolitan conveyance. The cabmen have been greatly improved under Mr. Fitzroy's Act; and although the public is foolish enough to allow one of his provisions—that which makes the giving a ticket imperative—to fall into desuetude, so that a cabman is inclined to feel indignant when asked for what he ought to offer unasked, the general verdict of riders in these vehicles is not unsatisfactory. The omnibus system is now to be improved. An Anglo-French company is endeavouring to get the omnibus traffic into its hands, with a view to the making the carriages better, having a uniform charge, and introducing that arrangement, so useful in Paris, by which a traveller is transferred, for one payment, from vehicle to vehicle, so as to ensure his reaching his point, be it where it may, with speed and certainty. A great number of the owners of omnibuses have sold them to the French company, which has commenced working, but it is necessary that the system should be complete, and, of course, much opposition is offered to it by certain parties who hope to extort larger prizes. The public, however, is with the new company, and, if it be necessary to apply to Parliament for compulsory consolidation, the boon would be so great that no private hostility would be successful. Our London omnibus, with some creditable exceptions, is a wretched, dirty, ricketty box, as uncomfortable as possible, with bad rattling windows that let in draughts but do not ventilate; the pace is arbitrary, either an irritating crawl or a dangerous race; the fares vary at the whim of the owners; and the servants are rough, insolent fellows, with one thought only, that of filling the vehicle so as to secure their own profit. The omnibus, however, might be rendered a pleasant mode of conveyance, and we wish all success to the new undertaking. While in its infancy it is not improbable that the ruffianism of many who expect to be injured by it may be exerted to render it unpopular. We should be glad to know that employment was given by the new company to every decent and civil man who has hitherto gained his bread by the omnibus; but there is a great mass of "roughs" to get rid of, and we trust that if they "show fight" the magistrates will unhesitatingly call in the "crank" as umpire.

The Rugeley poison case continues to excite the most widely-spread interest. There can be no moral doubt that murder, for the sake of gain, has been the hideous habit of the accused man. His wife's body is found to contain quantities of antimony; which, from certain signs, is known to have been administered up to the last moment, though none was prescribed by her medical attendants, and she was slain by the exhaustion produced by continuous vomiting. Other new and important evidence is also in the hands of the prosecution, and, despite the promised forensic exhibition for which Mr. Serjeant Wilkins is said to be engaged, it is not probable that the course of human justice will be turned aside, as the general feeling now seems to be that it was on the last poison trial.

A sort of dispute, in which her Majesty's so-called "servants," the Drury Lane actors, are on one side, and the arrangers of the Windsor Palace theatricals are on the other, has afforded some conversation. It appears that, for reasons which those acquainted with theatrical politics perfectly understand, her Majesty has not been recommended to patronise the present management of Drury-lane Theatre. A discussion as to the entire consistency of this course, taking into consideration all that is patent in connection with stage matters, might lead into rather a large discussion. Suffice it to say that, according to certain surface doctrines, the refusal of patronage to the management in question might be conventionally defended. But it is wished to produce some dramas at Windsor, for which the aid of Mr. Charles Mathews and other artists now engaged at Drury Lane is required. Mr. Kean, who directs the Palace performances, applies to these actors, and their manager refuses them permission to perform before the Queen. The refusal displayed both want of tact and want of courtesy; but we are really unable to affix to it any greater amount of blame; and, if we have any regret upon the point, it is that some exceedingly clever artists lose the opportunity of acquiring such honour and profit as might accrue to them from a performance in the Rubens Room at Windsor.

E. J. LOWE.

## COUNTRY NEWS.

A MUNIFICENT CHRISTMAS-BOX.—Mr. J. P. Heywood, of the firm of A Heywood, Sons, and Co., extensive bankers, Liverpool, has given the handsome sum of 1000 guineas, to be divided among the clerks and *employés* of the establishment, as a timely aid to them, as clerks with fixed salaries, during the pressure caused by the war.

THE IRON TRADE IN SOUTH WALES.—No fewer than four new blast-furnaces are about to be erected at Pontypridd, in Glamorganshire, by Mr. Francis Crawshay. The foundations have been commenced, and these, with the construction of an incline plane and tramroads, will afford employment to numbers during the winter. A decided improvement has taken placed in the Welsh trade. An advance has been made in the price of common bars at the works in the principality, and there is a considerable demand for them in the northern markets. The collieries are exceedingly busy.

"COMMON THINGS V. BOOK LEARNING.—A statement was made at the last meeting of the Leicester Board of Guardians to the effect that "out of 90 girls and young women in the workhouse school there was not one who could iron a shirt or get up linen properly, and the matron had said that were it not for her private means she would be under the necessity of putting this work out of the house to be done." A further statement was made that persons who had taken girls out of the house as domestic servants had returned them, saying they rather required waiting upon themselves than to serve others.

A LEAP IN THE DARK.—On Sunday last a female who was in charge of police-officers made her escape out of a carriage on the North Kent line, while the train was proceeding at the rate of twenty miles an hour through the tunnel, which is two miles and a half in length. When they were in total darkness she contrived to open the door, and thus let herself out without being felt: she was not missed till the train arrived in the light. Every one concluded that she was killed, and the station-master immediately proceeded into the tunnel with an engine to find the body; but, to his surprise, on the engine coming to the opening of the tunnel, midway between Higham and Strood, he found her endeavouring to make her escape by climbing up the cliff, which is upwards of sixty feet high, and almost perpendicular. She was recaptured.

"IN THEIR DEATHS DIVIDED."—The Bishop of Exeter has just been involved in a dispute with the burial board of Torrington. The board have divided the new burial-ground into two sections: one being intended for the members of the Church and the other for religionists of other denominations. Between the two parts runs a gravelled pathway, seven feet wide, leaving a broad distinction between the two sections, every way suitable to the wishes of the Churchmen of the place. The Bishop refuses to sanction the site until the Church division "be well and sufficiently fenced from all other grounds, whether for the burial of Dissenters or otherwise." To this demand the board demurred, and a resolution was carried to the effect that no other fence than that of the wide grave-walk be put up. The question, therefore, rests between the contending parties, and it remains to be seen which will come off victorious.

SHOCKING ACCIDENT AT WINDSOR.—On Saturday last a singular accident occurred at the White Hart Inn, Park-street, Windsor-hill, who had long been in service in the house, was going down stairs with a basin in her hands, she made a false step and slipped down three, the basin broke, and the young woman fell upon a piece, which cut the jugular vein, and she died on the spot.

THE CASE OF MRS. WOOLER.—The auditors of the county of Durham, in presenting the accounts the other day, mentioned that the late prosecution in the great Durdon poisoning case had cost the county no less than £612.

THE BANK FAILURE IN LICHFIELD.—About three o'clock on Monday afternoon a panic was created in Lichfield by the appearance of a written paper on the closed door of the banking establishment long known as "Palmer and Greene's Bank. The writing was as follows:—"Lichfield Bank.—It is with deep concern I find myself compelled to close the door of this establishment. The circumstances which occasion this step are not at present remote, and will be fully explained without delay. Richard Greene." From the extensive credit enjoyed by this bank the firm had almost a monopoly of the business of this neighbourhood, and the consequences of their stoppage are most distressing. The Lichfield Union, the Savings Bank, the Excise, the Dean and Chapter, the Corporation, the Street Rate, the Dispensary, the Militia, the Conduit Lands Trust, the Yeomanry, the Half-pay Officers, the Turnpike Trusts, many charities (but not the municipal charities), and other public accounts, are all locked up. Lichfield has never before received such a shock, and many persons who had funds in the bank will be seriously inconvenienced. On Tuesday Mr. Greene attended at the Bankruptcy Court, Birmingham, and filed a petition in bankruptcy. On Wednesday he attended, accompanied by Mr. Knight, solicitor, and surrendered. The cause of the stoppage is, it appears, a debt of £50,000 or £60,000 due to the bank by the late Mr. Palmer, the senior partner. The amount of his liability is £220,000; the assets amount to from £150,000 to £160,000 available from mining property, which is good, money, general securities, &c.; the Peel and Brownhill Colliery is of course, included. The bank was established so far back as 1765.—*Staffordshire Advertiser.*

TESTIMONIAL.—A few evenings since Mr. James Eaton, professor of singing, was presented by the members of the drawing classes of the Mechanics' Institution, Manchester, with a handsomely-bound copy of the works of the poet Longfellow, in acknowledgment of Mr. Eaton's valuable services at several annual soirées of the above classes.

SALE OF THE BOROUGH COMPTER.—On Wednesday the Borough Compter, which is situate in Tooley-street, was sold by auction by Messrs Pullen and Son, the auctioneers. The materials of the building, which is very extensive, and which occupied a large area, consisted of the usual appurtenances of a prison—viz., massive iron gates, strong doors, spiked guards, fences and railings, fittings of cells, dormitories, baths, &c. The property also comprised about 500,000 bricks, 2500 feet of York paving, 100 bedsteads, stone staircases, several tons of lead, &c. A great number of persons took the opportunity of visiting the interior of the prison, and an active competition took place for the various lots.

## *EPITOME OF NEWS—FOREIGN AND DOMESTIC.*

General Bosquet, summoned to Paris by telegraph, left Pau on the 3rd for that capital. It is supposed that he will assist at the grand Council of War convoked by the Emperor. On Sunday last he dined at the Tuileries.

Mr. Sausse, Assistant-Barrister for the county of Wexford, has been appointed a Puisne Judge of Bombay, with a salary of £6000 a year.

The learned Professor Frederick Hermann, of Göttingen, died at that place on the 31st ult. Hermann is the third professor of eminence at the same University who has been called hence within the last six weeks.

The chairmanship of Wexford, to which Sir Colman O'Loghlen has been appointed, is worth £900 a year.

Dr. Lushington stated in the Admiralty Court, on Tuesday, that forty years ago he was counsel in a cause relating to the very ship which brought William III. to this country.

The *Journal de St. Petersbourg* announces the death of the Privy Councillor Lebensky, of the Russian Foreign-office. To the pen of this gentleman the most able of Count Nesselrode's notes have been ascribed.

Mr. Martin and Mr. Bodkin are both canvassing at Rochester, and the contest appears likely to be a close one. Mr. Bodkin expresses his desire to support the Government in their effective prosecution of the war.

The Royal Swedish Academy of Rural Economy at Stockholm has just elected M. Michel Chevalier, of Paris, and Mr. James Hudson, secretary of the London Agricultural Society, as corresponding members.

The funeral of M. David (d'Angers), the celebrated sculptor and Republican, took place on Tuesday, at the Cemetery of Père la Chaise. The cortège left the residence of the deceased, Rue d'Assis, at eleven o'clock. There was no mass celebrated, M. David having died a Protestant.

Mr. Bramwell has been appointed a Baron of the Exchequer, in the place of Sir James Parke.

There is no truth in the statement that Mr. Denison, M.P. for the West Riding, intends to retire at the end of the Parliament into private life.

Notwithstanding all reports to the contrary, Mdlle. Cruvelli has really become the Baroness Vigier. Her marriage was solemnised on Saturday at the Mayoralty of the first arrondissement, and afterwards in a Catholic and a Protestant Church, the lady being a Protestant.

The statement that Sir Brook Bridges, Bart., is likely to be brought forward at the next general election by the University of Oxford, in the room of Mr. Gladstone, is contradicted.

A medal has been struck at the Paris Mint in commemoration of the celebrated loan of 750,000,000 fr. France is represented as receiving the tribute of Agriculture, Commerce, and the Arts, over which soars the Genius of War.

One of the seats for Tamworth is rendered vacant by Captain Townshend's accession to the peerage; and a requisition has been signed by the most reticent of electors, requesting the late member's eldest son (now Lord Raynham) to allow himself to be put in nomination.

According to a statement published by the Prussian *Moniteur*, the Census taken last month shows the present population of Prussia to be 17,175,361 souls.

At a sale of land the property of John Barrow, Esq., at Wedmore, last week, eighteen acres of grazing land in one piece were sold at the enormous sum of £2460, or about £135 per acre.

The 2nd of January was appointed for the opening of the Conferences on the Sound Dues, but they have been postponed *sine die*.

The Duke of Cambridge, with the other military and naval officers composing the English person of the Council of War, left town at an early hour on Wednesday morning for Paris.

The Paris correspondent of the *Indépendance* mentions a rumour that the Emperor Napoleon will command in person one of the armies to act against Russia in the ensuing spring.

Le Comte Philippe de Flandre, accompanied by Capitaine de Burnail (Aide-de-Camp to the Prince) and a numerous suite, arrived at Dover on Monday morning, at one o'clock, and started in the evening for Windsor.

The Duke d'Aumale arrived at Turin on the 1st instant, intending to leave that capital for Switzerland, after paying a visit to King Victor Emmanuel.

The bedchamber in the Palace of the Elysée occupied by Queen Hortense, and in which Louis Napoleon was born, is being made ready to receive the Empress.

The Duke de Calabre, Prince Royal of the Two Sicilies, born on January 16, 1836, has just been betrothed to the Princess Caroline Thérèse Hélène, born on April 4, 1834, daughter of Duke Maximilian of Bavaria, and sister of the reigning Empress of Austria.

Colonel Manteuffel had recently an audience of the Emperor of Austria, to deliver an autograph letter from his Majesty the King of Prussia.

Baron James Rothschild has left Paris for Madrid, to support the pretensions of the Prost Company against M. Pereire, for the establishment of a Credit Mobilier Society there.

A Royal proclamation just published decrees that the King of Denmark's marriage with the Countess Danner shall ever remain morganatic, and be so inscribed in the State calendar.

The French Emperor and Empress, after walking for about an hour on Sunday last on the river terrace of the Tuileries, went down into the garden among all the promenaders, and proceeded towards the large basin. On reaching that spot the Emperor mounted his horse and the Empress got into an open vehicle, and they proceeded without escort across the Place de la Concorde and up the grand avenue of the Champs Elysées.

Lord Stanley, M.P., has arrived at Hughenden Manor, on a visit to the Right Hon. B. Disraeli, M.P.

The civil list of the Sultan, for the maintenance of the Imperial establishment, which was formerly 6,500,000 piasters per month, has been raised lately to 10,000,000, principally in consequence of the high prices of provisions.

The Archduke John of Austria left Vienna on the 2nd inst. for Gratz, in Styria.

The title to be taken by Baron Parke will be that of Lord Wensleydale, of Wensleydale, in the county of York.

The Archbishop of Milan has issued a circular establishing, in virtue of the new concordat, an ecclesiastical censorship over all books printed within, or introduced into, his diocese.

Rear-Admiral Sir Michael Seymour, K.C.B., late second in command of the Baltic fleet, has completely lost the sight of the eye which was injured by the explosion of an infernal machine in the Gulf of Finland last summer.

General Mouravieff is to take the command in the Crimea, where it is expected the prestige of his success will be more useful to Russia than in Asia.

Gold has been found in several parts of the Danubian Principalities.

Abraham Baker, convicted of the murder of his fellow-servant, Naomi Kingswell (at Southampton, on the 14th October last), was hanged on Tuesday by Winchester.

The telegraph wire from the Monastery of St. George to Varna is not likely to be again ready for work till the end of February or commencement of March. The breakage has been found to be about twenty-five miles this side of Varna.

The *Spectateur* of Dijon states that the Jesuits have purchased for 98,000f. a large building in that town, with the courts and gardens adjoining, known by the name of the Petits-Cîteaux.

A large number of small brass Roman coins were found a short time since at Nunburnholm, in the East Riding of the county of York. They have passed into the hands of Lord Muncaster, who proposes to cede them to Lord Londesborough, the lord of the manor.

Messrs. Walter and Schlesinger, of Vienna, have obtained a patent in Vienna for a system of working the railway train at full speed may be brought to a standstill without danger to the engine, waggons, or human life.

The Customs revenue for the port of Glasgow, for the year 1855, amounts to £700,476 17s. 5d., being an increase over the preceding year of £31,920 8s. 1d.

Mr. Ignatius Meyer has caused several trials of goldwashing to be made in different parts of the Danube, and it is reported that they have been attended with the best success.

A contract has been entered into by the Government for the supply of £20,000 worth of granite from the Guanislake quarries for the service of the Breakwater at Plymouth.

During the last few months large excavations of ironstone have been make in Middlesbrough.

The total amount received by the French Minister of War for the Crimean Fund is 23,845. 38c.

The Queen and the Catalonian deputies against the re-establishment of the tariffs was presented to the Cortes on the 4th inst., and a stormy debate was expected to be raised by the Democrats on this important question.

The position of the miners and pitmen on strike at Manchester remains, generally speaking, unaltered.

THE FRENCH IMPERIAL GUARD.—HORSE ARTILLERY.—(SEE PAGE 42.)

## THE RECEPTION OF THE CRIMEAN TROOPS IN PARIS.

THE 29th of December will not soon be forgotten in Paris. All the streets were alive at daybreak, either with troops or National Guards marching to their stations, or with the population bent upon procuring a good place. Many persons who never go to the national anniversary fêtes, who did not see Queen Victoria, and who, in short, make an ostentatious profession of staying at home, did violence to their usages, and set out that morning at an early hour to see the entry into Paris of the heroes, who had, by the risk of their lives for more than a year past in the Crimea, sustained and enhanced the reputation of the French army. It was impossible to walk along the Boulevards, vast as they are. Thousands who proposed to themselves to go to the Bastille were compelled, after useless efforts, to take up a position and wait to see the procession pass.

Before eleven o'clock the troops of the garrison and the National Guard took their place along the whole extent of the Boulevards, to form a line from the Place de la Bastille to the Place Vendôme: the National Guard taking the right side. The troops arrived from the Crimea were massed on the quays of the canal leading into the Seine, at the entrances of the Rues St. Antoine, de Lion, and de Charenton, and spreading out on the Place de la Bastille in front of the Boulevard Beaumarchais—regiments of the Line being nearest the column. The pupils of the Ecole Polytechnique and that of St. Cyr occupied the two sides of the Place de la Bastille nearest the Boulevard. A triumphal arch was erected at the entrance to the Boulevard Beaumarchais, from the design of M. Ballard, the city architect, and inscribed "To the Glory of the Army." In the middle of the frieze, which represented various attributes of war, was an escutcheon bearing the word "Sébastopol" in letters of gold. On the pillars were eagles, with wings displayed, and having on one pillar, each under an eagle, the words "Bomarsund," "Eupatoria," "Kertch," "Kinburn," "Sveaborg," "Balaclava," "Oltenitza," and "Kamtschatka;" and, on the other pillar, "Alma," "Inkerman," "Traktir," "Koughil," "Malakoff," "Silistria" and one or two other scrolls. This monumental gate occupied the whole breadth of the Boulevard, and was more than four yards in thickness under the arch. A second triumphal arch was erected near the Porte St. Martin Theatre. The fronts of the houses were all admirably decorated, and large standards and wreaths of tricolored flags were displayed along the entire route. At half-past eleven Marshal Magnan arrived on the ground with his Staff to assume the command, and employed himself until the arrival of the Emperor in seeing that the position of the troops was exactly as it should be.

The Emperor left the Tuileries at a quarter past eleven—the cortége being preceded by the regiment of Guides, a picket of the Cent Gardes and orderly officers. The Emperor and Prince Napoleon, in full dress, surrounded by a brilliant Staff of generals, officers of the household, and foreign officers—English, Piedmontese, and Turks. Behind all were a squadron of the Cent Gardes and the Cuirassier Regiment of the Guard. The route followed was the Rue de Rivoli, the Place Vendôme, the Rue de la Paix, and the line of the Boulevards, the air ringing with acclamations as the Emperor appeared. Soon afterwards the Empress arrived at the Ministry of Justice, to be present at the défilé. A vast gallery had been erected along the front of the hotel, covered with red velvet, and completed with draperies of the same material. There the Empress took her seat, accompanied by Prince Jerome and the Princess Mathilde. The ladies of the Allied Ambassadors had received the honour of an invitation from the Empress to take their seats near her. On reaching the Place de la Bastille, the Emperor was received by the army with an enthusiasm difficult to be described. His Majesty contemplated them for an instant with an earnest gaze, and then, urging his horse to the central point from the mass of troops diverged, in a fanlike form, uncovered, and harangued his soldiers in the following words, delivered with that Imperial clearness and strength of voice which seem to belong to the ruler of the French:

Soldiers,—I come to meet you, as the Roman senate of old came to the gates of Rome to meet their victorious legions. I come to tell you that you have deserved well of your country

My emotion is great; for with the happiness of again beholding you are mingled painful regrets for those who are no more, and a profound chagrin not to have been able myself to lead you into action.

Soldiers of the Guard and soldiers of the Line, you are welcome. You both represent that Army of the East whose courage and perseverance have newly illustrated our eagles, and recovered for France the place that is her due.

The country, attentive to all that has been accomplished in the East, welcomes you, with so much the more pride, that it measures your efforts by the obstinate resistance of the enemy.

I have recalled you, though the war is not ended, because it is just to replace by turns those regiments that have suffered most. Each will thus go to take its share of glory; and the land that maintains six hundred thousand soldiers is interested that there should be now in France a numerous and wartried army ready to turn where necessary regards.

Carefully, then, preserve the habits of war; strengthen yourselves in the experience you have gained; hold yourselves ready to answer, if need be, to my appeal. But to-day forget the toils of a soldier's life; thank God for having spared you; and march proudly amid your brethren in arms and your fellow-citizens, whose acclamations await you.

The Emperor then took his station in the Place Vendôme, near the gallery in which the Empress was seated, and the troops defiled. General Canrobert having been honoured by the Emperor with the command of this operation. The 6th, 10th, and 14th Regiments of the Line came first; then the Chasseurs à-pied, Zouaves, Voltigeurs, and Grenadiers and Artillery of the Guard. The cheers of the populace, which were tremendous throughout the whole affair, were redoubled as General Canrobert was seen advancing at the head of those war-stained veterans. The veiled uniforms, but still more the haggard and worn appearance of the men's swarthy faces, told a tale of suffering and endurance which drew tears from many of the spectators; and the intensity and earnestness of the cheering exceeded anything ever before heard in Paris. The flag of one of the regiments (the 50th) was torn to ribbons; the white maculated with the blood stains, which changed its colour to a doubtful red; and the eagle which surmounts the shaft showed, by one of its wings shot off, the fierceness of the struggle it had been engaged in. Behind the bands of each regiment marched the wounded, for whom the exertion was not too great; and the shouting, clapping of hands, and waving of handkerchiefs which greeted them, brought a smile of proud satisfaction on their poor wan faces which it was impossible to see unmoved. Several of the officers who had distinguished themselves were also recognised, and cheered to the echo. After the troops of the Line came the Voltigeurs of the Imperial Guard. Their reception was cold, compared with that awarded their comrades of the Line, although their gallantry is a fact beyond doubt. This may be easily explained by the well-fed and comfortable look of the men, who, from their stay in the Crimea having been rather limited, have not gone through the wear and tear of the campaign like their less-favoured brethren in arms, and therefore had not the same claim on the sympathy of the public. The Chasseurs-à-pied, whose flag was riddled with balls, and the farfamed Zouaves followed. The latter were received by the population with extraordinary enthusiasm. These sporting troops, for the most part Parisians, were recognised individually by hundreds, and they often ran out of the ranks to embrace their friends. As they passed along to the air of "La Casquette du Père Bugeaud," their jaunty, devil me-care bearing electrified the spectators, and renewed the bursts of cheering which the Line had first called forth. The tumultuous applause and *vivats*, and clapping of innumerable hands, which, in the open space, sounded like distant musketry, continued until they disappeared in the windings of the Boulevards. The march was brought up by the Artillery, Grenadiers, and Gendarmerie de la Garde, whose reception was also of the warmest description; but the "Hons" of the day were unquestionably the Line, the Zouaves, and the Chasseurs-à-pied.

Without taking the noble reception given to the troops as a positive manifestation in favour of the war, certain it is that, had it been as unpopular as some writers in England and France take a pleasure in describing it, no such enthusiastic greeting would have been the gallant fellows would have been displayed. The day was mild, but the absence of sunshine was calculated to deprive the scene of all the attraction of a military show, but this served to give a more serious and unmistakable character to the manifestation on the public mind. It was, indeed, impossible to see these thousands of brave men, with the marks of severe toil and fatigue on their bronzed features, their dingy uniforms, and tattered standards, without a recollection of the dangers they had gone through, and a profound sigh for those brave gallant comrades they had seen fall at their side. The cheering of the spectators as each glorious band passed on proceeded from the heart, and irrepressible tears flowed down many a manly cheek among the humblest of the populace at the sight of the little laurel branch borne by the war-worn soldier, and at the small wreaths of immortelles attached to the tattered colours signifying that its last gallant bearer was no more. These touching little incidents everywhere seemed to send a thrill of emotion through the crowd, and to mingle a feeling of deep and generous sympathy with the triumph of the day.

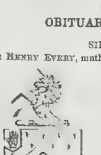
Our Paris Correspondent speaks in equally strong terms of the universal enthusiasm with which the Crimean veterans were received. Writing a few days after the ceremony, he says:—

"Paris has not yet recovered from the emotion caused by the entrance of the army on Saturday. Rarely have the annals of a nation had to record a sight or a ceremony so touching as that of the 29th December, 1855. From early morning, the route by which the troops were to make their entrance into the capital was lined with crowds of eager and anxious spectators, not of the class that usually attend sights and fêtes—not persons moved by mere idle curiosity and desire for excitement—but a crowd, earnest, serious, full of emotion, and deep and often painful interest. As the hour when the arrival of a portion of the remains of the great army that, but a few months since, went forth in health, strength, vigour, and confidence, was expected, an almost breathless excitement appeared. At last they came, and a burst of intense emotion, cries, acclamations, tears, and earnest welcomes, spoke the feelings of the impassioned crowd, as the broken ranks—for the places of those who had fallen were left vacant—marched past. Not a house, hardly a window, the whole length of the Boulevards, the Place Vendôme, &c., but showed some sign of rejoicing. Flags, lampions, trophies, appeared from ground floor to attic; the theatres and public buildings were covered with transparencies, allegories, mottoes, &c., &c. Lamplons by millions were exposed for sale at all sorts of shops, and, for the most part, bought up before night. So real and genuine a demonstration of public interest and feeling we never before witnessed, and never can the solemnity of the 29th December be forgotten by those who took part in it even as simple spectators.

## OBITUARY OF EMINENT PERSONS.

### SIR HENRY EVERY, BART.

SIR HENRY EVERY, ninth Baronet, of Eggiston Hall, county Derby, was the eldest son of Sir Edward Every, the fifth Baronet, by his wife, Mary, daughter of Edward Morley, Esq., of Horsley, Derbyshire, and widow of William Elliott, Esq., and likewise of Joseph Bird, Esq. He was born the 4th June, 1777, and succeeded, as ninth Baronet, on the demise of his father, the 29th December, 1783. He married, the 22nd December, 1798, Penelope, youngest daughter of Sir John Parker Mosley, Bart., by whom (who died in 1812) he had issue four sons and a daughter. Sir Henry Every—who lived the life of an English country gentleman, and who was much and deservedly beloved and respected—died on the 23rd ult., at his seat, Eggiston Hall, Barton-on-Trent, Derbyshire. He is succeeded by his grandson, now the tenth Baronet, the eldest son of Sir Henry's eldest son, Henry Every, Esq., of Beaumont Lodge, by his second wife, Caroline, younger daughter of Henry Jeffery, fourth Viscount Ashbrook. Henry Every, Esq., of Beaument, died the 27th Feb., 1853. The ancient family of Every, Baronets, is a branch of the noble house of Yvery, of Norman extraction: it enjoyed, in the reign of Queen Elizabeth, large possessions in Staffordshire.



### PRINCE DE SCHINAS

THE Grand Postelnik, Prince de Schinas, related to the ancient reigning families of the Danube Principalities, and Seigneur of Moldavia, died at Spa, on the 16th ult., aged eighty-two years. The nobleman combined with great intelligence and learning a natural kindheartedness that made him much beloved. He lived latterly at Spa, and he there gained the respect and affection of the visitors and residents. The stranger inhabitants of Spa, especially the English, looked on the Prince as an old and familiar friend, and his remembrance will remain long traditional among them.

The Prince's funeral was conducted at Spa with great pomp. A large concourse of the inhabitants of all classes followed the remains to their last home. The town of Spa was represented by the Burgomaster, who was the chief pallbearer.

### THE MARQUIS OF ALESBURY

CHARLES BRUDENELL BRUCE, first Marquis and Earl of Ailesbury; Earl Bruce, of Whorlton, co. York; Viscount Savernake, of Savernake Forest, co. Wilts; and Baron Bruce, of Tottenham, co. Middlesex, in the Peerage of the United Kingdom, was the youngest son of Thomas, first Earl of Ailesbury, by his first marriage with Seaman, daughter of H. Hoare, Esq., and widow of Charles Viscount Dungarvan, son of John, fifth Earl of Cork and Orrery. Charles, first Marquis of Ailesbury, was born on the 14th February, 1773. Previously to his accession to the Peerage, on the death of his father, the Earl of Ailesbury, in April, 1814, he represented Marlborough in the House of Commons during several Parliaments, and was throughout his public life a zealous Conservative of the old school. He was twice married first, on the 10th April, 1793, to the Hon. Henrietta Maria Hill, eldest daughter of Noel, first Lord Berwick (who died on the 2nd of January, 1831), by whom he deceased had issue two daughters, married to Thomas Francis Wentworth, Esq., George, Earl Bruce, and Lord Ernest Bruce, M.P., Vice-Chamberlain of her Majesty's Household; and, secondly, on the 28th of August, 1830, to Maria, youngest daughter of the Hon. Charles Tollemache, by whom he has only son, Lord Charles Bruce, in the Life Guards. The deceased was the Ranger of Savernake Forest, and, with the exception of the Earl of Aberdeen, the senior Knight of the Order of the Thistle, having been knighted in 1818. He was, within two years after he had obtained that distinction, created a Marquis (1821). IV. The Earl Cardigan, who was heir presumptive to the Earldom of Cardigan, died on the 4th inst., and is succeeded by his eldest son, George William Frederick, Earl Bruce, Lieutenant-Colonel Commandant of the Royal Wiltshire Yeomanry Cavalry, born 30th November, 1804, who was, in 1839, summoned to the House of Lords by the title of Baron Bruce, of Tottenham.

### SIR WILLIAM WYNN.

MAJOR SIR WILLIAM WYNN, of Hendreyweallan, Merionethshire, who died on the 23rd ult., aged eighty-five, entered the Army in 1794; he was, in 1810, appointed Captain of Sandown Fort, Isle of Wight, and in the same year was knighted. He married Miss Long, daughter of Colonel Long, of Tubney Lodge, Berks, which lady died in 1850. Sir William was a magistrate and Deputy-Lieutenant of Merionethshire.

WILLS.—The will of the late Alderman Lawrence was sworn under £60,000 personalty: Sir Andrew Vincent Corbett, Bart., £9000; Dame Caroline Eliza Campbell, of Dover, £2000; George Probyn, Esq., of Bryanstonesquare, £30,000; William Pigott Leo Buckle, Esq., of Cleveland, £10,000, Henry Percy, R.N., bender, Yeovil, £6,000.

THE WILL OF THE LATE THOMAS CUBITT, Esq., is one of the longest on record, and extends to 386 chancery folios, covering 30 skins of parchment. The personal estate exceeds one million (termed in law of upper value), and is charged with the highest interest on the scale of probate duty, the stamp being £15,000. The widow has an immediate bequest of £20,000, and an annuity of £8000.

NEW ORDER IN CHANCERY.—The following new order in Chancery has been issued:—"Every decree, order, report, certificate, petition, and document made, presented, or used in any cause in this court, is to be distinguished by having written on the first page of such decree, order, report, certificate, petition, and document, the year of the reign, the letter and number by which the cause is distinguished in the cause-books kept by the clerks of records and writs. The clerks of records and writs are, in addition to the entries heretofore made by them in their respective cause-books, to enter therein respectively the date of every decree, order, report, and certificate which shall be made in each cause. The entry of every such decree and order is also to contain a reference to the date and folio of the registrar's book in which such decree or order shall have been entered."

THE MASSACRE AT SINOPE.—If a man, who saw that fleet floating in its barbarian triumph over those waters loaded with corpses, and cried out in the spirit of outraged humanity, "Thus fleet is doomed!" it shall never wave a flag again; it shall not even have the honour of a brave defence; it shall perish by a fate unknown before—passively, ignominiously, in the face of the enemy's cannon—it shall perish, its crews shall perish; the whole Euxine fleet of Russia shall perish without a struggle, without a shot being fired, and perish by Russian hands; and the whole destruction shall come within the year;" what would have conceived him a fanatic, a man of inflamed imagination, an utterer of presumptuous prophecy! And yet, the doom was fulfilled. We may idly attribute such things to chance—we may smilingly speak of the accidents of war. But in the waters of its own harbour lie the wrecks of that whole fleet; in the graves of that city lie its three admirals; in the trenches of that fortress lie its twelve generals; and, if to point the eye of Europe to the source of that high vindication of justice—the master of them all—the lord of the empire—the great incendiary of the war—in the midst of his dreams of conquest, was hurried to the tomb. If the scene of this transaction had been in Israel of old, who could have doubted the hand of Providence?—*Sermon on the First Year, by the Rev. Dr. Croly.*

THE MAZZINI ORGAN.—The editor of the *Italia e Popolo* of Genoa, the organ of the Mazzinian party, has been cited to appear before the Court of Appeal to answer the charge of having, in a recent article, endeavoured to excuse the crime of Giovanni Pianori, who some months ago attempted to assassinate the Emperor of the French.

## THE PHOTOGRAPHIC SOCIETY'S EXHIBITION.

THE Third Annual Exhibition of the Photographic Society was opened to public view on the 7th inst. The private view, on the 5th, was honoured by the presence of her Majesty, H.R.H. Prince Albert, and the Princess Alice. The collection, numbering some 600 specimens, fully represents the capabilities of the art in its various and increasing applications, and displays a marked advance upon the Exhibition of last year. The progress of the art is most conspicuous in the better artistic treatment of subjects, due, probably, to the greater facility and certainty of manipulation gradually attained to. In the infancy of the art mechanical difficulties to be overcome in obtaining a tolerably perfect picture were so great, that the photographer could give but little consideration to the æsthetics of his art. With the result, however harsh or uncouth in treatment, he was satisfied, although the composition might be bad in every respect, and the point of view ill selected. But, since artists have coupled themselves with this powerful auxiliary to pictorial art, they have brought their peculiar technical knowledge to bear upon the subjects represented, and the artist is called upon to examine and pronounce upon photographs as he would upon a gallery of water-colour drawings. Those who regard photography only as a mechanical art should compare views of the same landscape or building taken by different photographers, and they will soon recognise that the individuality of the operator is as much a part of a photograph as the picture is of the individuality of the painter. What a delicate perception of the beautiful in nature is displayed in the landscapes of Knight, Cundall, Shadbolt, Holden, Llewelyn, Delamotte, H. Taylor, and others, whose pencilled productions possess merits as much as if they were members of the Water-Colour Societies! Each has his favourite tone of colour, which of itself is frequently sufficient to proclaim the artist at a first glance. One revels in sepia, another in bistre, another in Indian-ink. No less indicative of the artist is the choice of subject. One haunts the tangled copse; others the shady glen, the mill-stream, the loch, moor, the rural lane, the quaint cottage or mouldering ruin; another, more soaring in his imagination, mounts the castle-tower to depict the panorama beneath his feet. In the architectural subjects this individuality of treatment is still more striking and remarkable. Some at first sight there would appear to be much less scope for it: but how widely different are the architectural views by Bedford, Newton, Bolton, Frost, Holden, Dolmore, and Bullock! and is not this difference the artist's individuality? Therefore, since the manipulation of the art, however delicate it may be, is no longer an impediment to the highest perfection of which photography is capable, we may fairly pronounce upon the works submitted to examination according to the canons of art.

The artistic element in photography is most prominently in the composition groups of Mr. Lake Price and Mr. O. G. Rejlander. Mr. Price's productions are the most ambitious yet presented to our notice. He has entered upon the task of raising photography to the rank of high art with great boldness, tact, and taste; and, if the results are not altogether unexceptionable, they are the nearest approach to excellence in this direction we have seen. The "Scene in the Tower" (No. 139) is an ambitious attempt at the composition of an historical picture, which, judged as a picture, is, to our minds, too crowded with figures, who, wanting in earnestness, distract the observer's attention from the sleeping children, upon which it ought to be centered. Besides, the couch upon which they are lying is scarcely adequate to the occasion. Each portion of the picture, taken separately, is good in its kind, but our objections apply to the composition in its *ensemble*. As a photograph it is remarkable, and the attempt praiseworthy. There are many other productions which place Mr. Price in the first rank of photographic artists—particularly "Portrait from the Life" (No. 136), and "The Page" (No. 147). We wish we could say as much of "The Breakfast table" (No. 48). As in all the domestic groups in the Exhibition, the artists are so ingeniously exhibiting themselves that the pictures become caricatures, if not satires upon family egotism. Most amusing examples of this weakness will be found under Nos. 180, 300, and 324.

In the productions of Mr. Rejlander we find much artistic excellence, combined with a vein of humour that is quite refreshing. His grouping is generally excellent: the figures tell their story plainly, and they appear to be very much in earnest—always excepting, however, the "family groups." No. 4, a frame containing three subjects, is especially worthy of attention. Specimens are Nos. 120 and 124. The frame No. 208 contains two subjects—"Jane and Joe on Sunday," which would make a good illustration to the song of "Sally in our Alley." Here the artist's vein of humour is strikingly displayed; and, transferred to canvas, this subject would make a painter's fortune. His portraits (No. 270 and No. 299) are also very excellent.

Very interesting to the psychologist are the "Portraits of Insane Persons" (No. 247) taken by Dr. Diamond. A collection of these would be most instructive and valuable to the physiognomist as well as to the artist. They remind us forcibly of Kaulbach's celebrated picture of the "Madhouse." Another interesting photograph by Dr. Diamond is "A Tray of Admiral Smyth's Roman Coins" (No. 434) the first application of the art in that direction we have seen.

Among the landscape views we place in the first rank the productions of Llewelyn, Cundall, Knight, Howlett, H. White, and Gething. The subjects chosen by Mr. Llewelyn are always the most poetical presented by Nature, and he seems to know the most favoured spots. How charming are "A View of the River at Pendlegare," No. 468; "Waterfall," No 507; and the "Birch-bark Canoe, No. 518." This latter transports the mind of the spectator to an American forest glade, so suggestive are the stems and the hut introduced into the English landscape.

Mr. Cundall's views of "Jersey Rocks" (No. 1) are picturesque, and at the same time illustrative of science, for they form capital data for the geologist, who could pronounce upon the strata as confidently as if he had walked over them. But No. 135, "Sprouginton Lock," is a gem of the first water. Its brilliancy is dazzling: it is truly a poetical picture.

Mr. Knight's views are numerous and striking. He is fortunate in the selection of romantic scenery, such as affords an opportunity for displaying aerial perspective in great perfection. In frame No. 506 is a view of "Upper Lake, Penllergare," which exhibits this feature in the most picturesque manner imaginable: the islands in the lake, separated by a veil of mist, remind us of some of Turner's happiest studies.

Mr. Howlett's views display a true feeling for that striking peculiarity in our landscape scenery expressed by the word "rural," in which wild nature and quaint art combine to form that charm which characterise English landscapes. No. 121, "Shed at the Beehive," and No. 482, "Barn at the Beehive," are beautiful studies: Nos. 309 and 466, in the "Valley of the Mole," with No. 418, "Box hill," exhibit the characteristics alluded to.

There are many fine landscape studies by various photographers claiming our attention; but we can only point out, as most deserving notice, the production of Mr. F. Scott Archer, Mr. J. Cadley Fleming, the Rev. H. H. Holden, Mr. Shadbolt, W. J. Cox, Sir W. J. Newton, Buchanan Smith, G. B. Gething, and H. White; in each of whose works the individuality of the artist is most apparent. Most of these pictures would, as studies, form inestimable treasures to the artist's portfolio; for the artist can now bring the faithful relics of nature home to his fireside, and study at his leisure,—and such studies as must effectually extinguish the egotism of the so-called pre-Raphaelites.

*(To be Continued.)*

SCARCITY OF GOLD AND SILVER IN RUSSIA.—Great activity in the mint, and great wear and tear of coin, are the two facts most prominent in advices from St. Petersburg. A letter from that capital, dated the 26th ult., published in the Berlin *National Gazette*, says:—"Notwithstanding the enormous issues of paper money, repeated loans, and patriotic gifts of an inconsiderable amount, money—i.e. gold and silver—has become exceedingly scarce. It is affirmed that even in the Baltic provinces, where trade is more active than in other districts, nothing but paper money is to be seen from Gatchina to Kowno. The Minister of Finance has repeatedly sought to remedy this state of things, but all his endeavours are foiled by the practice which the Russians have of hoarding their specie. His last, therefore, he brought himself of the vote of the Council of State, on the 7th February, 1849, for the issue of copper coinage to the amount of 3,000,000 roubles. A new vote to the same effect, under date November 30, 1855, has been sanctioned by the Emperor. A second issue of copper coinage to the extent of 3,000,000 of roubles will therefore take place at the rate of thirty-two silver roubles to the pood.

MEXICO AND ROME.—For some days past a report, which is believed to be well founded, has been current, namely, that the President of Mexico has expressed to the Mexican Congress his desire to ally, and has ordered the Minister who has been residing there to cease his functions. The archives of the office are being already sealed up. The President is also expelling the Jesuits from Mexico, and has authorised full freedom in religious worship.—*Letter from Rome, Dec. 31.*

LADY ELLENBOROUGH.—I have this day received communications from Constantinople which say that the unfortunate Lady Ellenborough, whose romantic adventures are too familiar to the public, was lately assassinated in Arabia, by (says my informant) "Le harceme d'un Cheik Arabe." I am only able to add that the deed is supposed to have been committed at the suggestion of some women who were jealous of her Ladyship.—*Letter from Paris.*

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

CHARLES MACKAY'S new poem—"The Lump of Gold"—makes its appearance to-day. We shall not detail the plot. As the book will soon be in the hands of all readers and lovers of poetry, it will speak for itself, and win its own public. We shall only say of it this week, that it is neither of the spasmodic, nor of the unintelligible school, but clear and wholesome as daylight

The announcement in the columns of a contemporary, that "Mr. Layard has another work on Assyrian Antiquities in the press," has produced a world of consternation in publishing circles. "A King's or poet's birth doth rak an age." Layard and Macaulays are not of mushroom make. Mr. Murray, the friend and publisher of Mr. Layard, has been pestered, we are told, with the congratulations of his friends on the certainty of adding another coal five thousand to his account. His fellow-publishers in the Row have written from Hampshire and Hertfordshire to say how delighted they are "at the good news." Mr. Murray himself has written (so we are assured) to ask if the promised book is about to appear in the Row—for in Albemarle-street nothing whatever is known about it. The Row replies, that, it Mr. Murray is not the publisher, Mr. Layard must have been to Mr. Routledge, for nothing is known about it in the Row. Mr. Routledge is equally in the dark. The fact is that the whole story is "fudge." Mr. Layard is not about to publish a volume on Assyrian antiquities. Our friend is not even "in the press." He has been employing his idle hours of late with frescoes only. He is full of fresco-painting—but is not, we may confidently state, about to publish (this season) anything whatever on the subject.

Lord Mahon—we beg his Lordship's pardon, Earl Stanhope—has corrected three of his addresses recently delivered at Manchester, Leeds, Birmingham, and is about to give them to the public in the shape of a shilling pamphlet. We have seen an early copy of the work in the hands of a friend. The Manchester and Leeds addresses are well known. That delivered at Birmingham in November last was more properly reported, and in the shape in which we now see it has received, we observe, some of his Lordship's finishing touches. It is in every respect by very far the best of the three. Lord Stanhope, always a sensible thinker, has no fear whatever about him. He speaks boldly out on all occasions; and never more boldly than he has done on a subject now of real consequence in art. His Lordship has been recently in Rome. He loves sculpture—he understands art—but he cannot altogether "a-down" with Mr. Gibson, our great English sculptor. Lord Stanhope saw, when in Rome, the statue of her Majesty by Mr. Gibson. He was horror-stricken at seeing anything like colour upon Parian or Carrara marble. In the statue of the Queen a little colour was visible, introduced with masterly skill, but still, Lord Stanhope thinks, in very indifferent taste. "I hope," says his Lordship, "that this new fashion may not permanently invade the sculptor's studio, and that colour in figures may be left to the doll-shops." We are sorry to differ from his Lordship and from Mr. Bally, the sculptor, whose taste has too long had an undue influence in directing public opinion on this point.

The portrait of Mr. Lockhart, painted by Mr. Pickersgill (it is one of Mr. Pickersgill's very best portraits), has just been engraved by Mr. Doo-in his most careful manner.

All who remember Mr. Lockhart in the prime of his London life (not his Edinburgh life) will be delighted with this engraving. We prefer it infinitely, in common with his oldest friends, to the clever representation of him made by Mr. Grant, when the hand of death was on him. The proud Spanish look and the winning smile of the man have been happily caught by both painter and engraver.

The following verses are attributed to Rogers:—

TO AN INFANT SLEEPING IN A POET'S ARMS.

Oh wake thee, Clerah! sleep not there,
Where passion's throes the soul de-
form;
So rests the seraph of the air
Upon the cloud that veils the storm.

A serpent that will shortly wake,
And o'er each flow'r of bliss be
twined;
From hope her dream of rapture take,
And blight the Eden of the mind

Oh! wake thee, dearest! for the hour
Of that proud heart is fraught with
care,
Those arms that fold thee to deceive,
For there's a slumbering serpent
there;

Then, wake thee, boy! for even now
The poison drinks with subtle art;
Prepared with many a traitor vow,
To break thy doting mother's heart.

The poet in whose arms the infant was asleep was, it is said, Lord Byron; the mother was—so runs rumour—Lady Caroline Lamb. We transcribe the verses to denounce them as spurious. Mr. Rogers could never have written—

*For there's* a slumbering serpent *there.*

His ear was too delicate.

The old sun-dial in Kensington Gardens, attributed to Grinling Gibbons, was stolen (actually stolen) some twelve months ago. A sun-dial stolen *Ekes fugaces!* Some ruffians (roughs, as they are now called) tore it from its place in front of the palace, threw the stone column on which it stood into the Round Pond, and carried the dial itself—no one has told where. Sir Benjamin Hall (the Chief Commissioner of Works) is about to give us another dial. Thank you, Sir Benjamin!

Actors are praising "Ben Webster's letter" respecting Alleyne's College at Dulwich. In remodelling the College, surely something should have been done for actors. Out of that snug origin al £800, now enlarged by another cipher (the College has now £8000 a year), common sense demands that poor players should have at least a little.

The Prince of Wales "took the chair" the other day on a public occasion. The Prince has been attending Faraday's lectures. Prince Albert, it so happened, was unable to attend—the chair was vacant—it must be filled. The boy-Prince took the chair, and, to the surprise of many, behaved like other boys, with great modesty, and, of course, good sense.

The Kaffir Journals of Sir George Cathcart, who fell before Sebastopol, are in the press. and Mr. Danby Seymour, M.P., is about once more to face the critics

ENGLISH AND FRENCH TRADE WITH RUSSIA.—In the last general "Statement of Trade and Navigation" published by the Board of Trade the real value of the produce of the United Kingdom exported to the northern and southern ports of Russia is estimated for the year 1849 at £1,586,000, and for 1853 at £1,227,000; the intervening years being marked by a gradual decline. Similarly the tonnage of vessels cleared from this country to Russia fell (Table xvii) from 407,000 tons in 1849, to 378,000 tons in 1852; while the corresponding decline in the imports of this country from Russia is attested by the figures 480,000 as the tonnage of vessels entered here in 1849, and of 410,000 as that of the entrances of 1852. Again, in "M'Culloch's Commercial Dictionary," article "Russia," the real value of the exported produce of the United Kingdom to Russia is quoted as regularly declining from £2,123,000, in 1844, to £1,586,000, in 1849; thus attesting a gradual reduction of twenty-five per cent in the five preceding years, as well as a corresponding decrease in the imported produce of Russia. And thus the export trade of England to that country fell by nearly one-half within the space of ten years of peace. These general facts are not less true of the relations of France with Russia than those of England. The *Mouvement Commercial* for 1854—the last publication of the French Government, corresponding to the blue-books of the Board of Trade—quotes the real value of the export and import trade of France in the year 1854 at 3,497,000,000f., or £137,880,000 (*Table au général*), while it computes the imports of the produce of Russia into France, for 1853, at 67,000,000f.; and the exports of the produce of France into Russia at only 16,000,000f (*Tableau de Détail*). France, therefore, lost less than one-fortieth of her trade by the outbreak of the war with that Power. Her commerce, meanwhile, in 1854, is shown, by the same tables, to have exceeded by 4,000,000f. that of 1853.

Lieutenant-Colonel Teesdale, who distinguished himself so much at Kars, on the 29th of September, and subsequently took so active a part in the negotiations with General Mouravieff at the time of the surrender, is the only surviving son of Colonel Teesdale, Royal Artillery.

Wednesday last was the fiftieth anniversary of the public burial of Lord Viscount Nelson—that memorable event having taken place on Thursday, the 9th of January, 1806.

## *MUSIC.*

THE announcement of "The Creation" by the SACRED HARMONIC SOCIETY on Friday, the 4th instant, drew a vast assemblage to Exeter-hall. This grand and beautiful oratorio was never, probably, more magnificently performed. Madame Clara Novello sang the soprano part with an effect scarcely to be surpassed, even by Jenny Lind. The music is eminently fitted to display our fair country woman's qualities—the power and beauty of her voice, the brilliancy of her execution, and the artistic finish of her style. Her two great airs, "With verdure clad" and "On mighty wings," were received with acclamations. Mr. Sims Reeves, who had not been heard in London for a considerable time, was most warmly received, and sang with great power and energy. He was especially successful in the air, "In native worth and honour clad," descriptive of the primeval state of man, the most exquisite morceau in the whole oratorio. He sang it charmingly, and was loudly encored, though we should have been more completely satisfied had he abstained from several liberties with the composer's text. Mr. Thomas, in the bass songs, supported his rising reputation. The choruses were perfectly sung, and were unspeakably grand and beautiful.

AMONG the numerous Provincial Concerts, those at Manchester hold a principal place. At one of them a new sacred work of magnitude by an English composer has just been produced with success—the "One Hundred and Third Psalm," a cantata, for solo voices and chorus, with full orchestra, by Mr. Thorne Harris, an eminent professor of that town. The solo parts were sung by Miss Milner, Miss Newbound, Herr Reichardt, and M. Gullmette. The performance was highly successful.

THE AMATEUR MUSICAL SOCIETY are about to give a concert in aid of the funds of "The Cambridge Asylum for the Widows of the Non-commissioned Officers and Soldiers of the British Army." It is to take place about the end of this month, and will be honoured with the patronage of the Queen, Prince Albert, and the Royal Family, and is expected to be a highly attractive performance.

THE Concerts of the PHILHARMONIC SOCIETY this season are not to commence till after Easter. They are to be six in number (instead of eight as formerly), and will take place between the 14th of April and the 23rd of June. The appointment to the conductorship of so eminent and accomplished a musician as Mr. Sterndale Bennett cannot fail to give general satisfaction.

ST. GEORGE'S HALL, BRADFORD.—The second musical festival, conducted by Mr. COSTA, will take place at the close of the summer. Mr. Charles Ollivier, the secretary and manager of the hall, has been presented with a gold watch and appendages, and a purse of 110 sovereigns, as a token of esteem and acknowledgment of his services. The testimonial was handed to Mr. Ollivier, at a numerous meeting at the hall, by Mr. Alderman Smith, the Chairman of the St. George's Hall Company, and other directors.

BEAUMONT INSTITUTION.—On Monday evening last the second of a series of vocal and instrumental concerts took place at this assemblyroom, Mr. Frank Mori conducting at the pianoforte. The vocalists were Madame Clara Novello, Miss Louisa Vinning (her first appearance), Mdlle. Corelli, Mr. Sims Reeves, Mr. Farquharson, and Mr. Cooper. Of the singing of Madame Clara Novello and Mr. Sims Reeves it is scarcely necessary to speak. They were both in excellent voice, and were received with that cordiality and enthusiasm which they deserve. The execution of "With verdure clad," in particular, by our great soprano, was loudly encored. Mr. Sims Reeves sang Bishop's beautiful aria, "The Pilgrim of Love," in his best style; and, for an encore, he replied in the once popular song of "When other lips," by Balfe. But the great event of the night was the debut of Miss Louisa Vinning, a pupil of Mr. Frank Mori. Though very young, she is an old friend as well as an old favourite of the public—being, in fact, no other than the "Infant Sappho," who created so much sensation in London about fifteen years ago. Miss Vinning was evidently born to be a singer. It is said of her that she could sing long before she could speak. Her parents, anxious to make a display of her talents, had her instructed and brought before the public. The fashion of the metrevel was fixed to hear the baby-singer; and the press published her praises throughout the land. The task, however, of amusing an audience night after night no trifling matter even for an adult—was deemed too much for so young a child, and she was withdrawn from public life. Her natural musical world lost its "Infant Sappho," but not for ever. On Monday evening she reappeared under her actual name, and by her prepossessing personal appearance created a feeling in her favour, which her performances confirmed and strengthened. The fair débutante possesses a fine soprano voice, as well as a great amount of musical expression. She was loudly applauded, and encored in all her songs; and, at the termination of "I love the lilies," by Mr. Frank Mori, she received a graceful tribute from the audience in a shower of bouquets. We augur for Miss Vinning a brilliant future. Among the other performers, Mdlle. Corelli, a fine mezzo-soprano, and Mr. Farquharson, deserve especial mention. The room, which holds upwards of 1500 people, was completely filled

## *THE THEATRES, &c.*

PRINCESS'.—Mr. Charles Kean appeared on Wednesday in his favourite character of *Hamlet*. It is in this part that Mr. Kean is distinguished from his contemporaries by the evident genius, as discriminated from talent, in which his performance abounds. His *Hamlet* is certainly the most brilliantly effective on the modern boards, and with every fresh production of it improves in its finish and general completeness. While it is light and elegant in its outline, it is impressive and various in its details; and altogether leads on the mind of the spectator with an augmenting interest to the conclusion of the tragedy. The manner in which Mr. Kean was received by a numerous audience was merited by the excellence of his performance. The applause was such as testified to the supremacy which he has acquired in his delineation of the melancholy Prince, whose dramatic attributes are among the highest in the Shakspearean world of character

HAYMARKET.—Mr. Buckstone has introduced another of our old sterling comedies, in an abridged form, to the modern boards—"The Beaux' Stratagem" of Farquhar, which was performed on Saturday. These comedies can be now seldom acted, the "manners" of which they were representative having long ceased to interest. But she allowed at the same time a sort of ideality about them which preserved them from being merely literal versions of the follies of the time; and, as Charles Lamb said long ago, they live in a world of fancy and wit, which was as little the real world of their day as it is of ours. This ideal spiding, notwithstanding obvious drawbacks, makes these pieces indeed perennial; and thus it is that we occasionally meet with them when it serves the purpose of a management to relieve the general tenour of a theatre with a legitimate revival. Mr. Buckstone has been remarkably fortunate in his attempts in this way—of which "The Busy body may serve as an example. The *Scrub* of the present comedy gives him rich opportunities of developing that peculiar humour on which his popularity as an actor depends. Nor were the other parts ill filled. Mr. Howe, as *Archer*, and Mr. Farren, as *Aimwell*, were by no means inefficient; and Mr. Chippendale, as *Sullen*, was excellent. A new actress, Miss Bella Copeland, attempted the part of *Cherry*. At present she is not sufficiently practised to play it in perfect style; but she showed an amount of playfulness and cleverness that offers fair ground of promise. Altogether the old comedy made its way with the audience, and, on the fall of the curtain, commanded very great applause.

ADELPHI.—"Urgent Private Affairs," a new piece by Mr. Stirling Coyne, produced on Monday, bears a title that explains its political allusion. The scene is, however, not the Crimea, but the metropolis of England; and the incidents are connected with the movements of the militia that may be required by the exigencies of the present contest. Mr. Coyne has shown great skill in the grouping of a series of incidents, all arising during a single night out of circumstances attending militia duties, and which lead to endless misunderstandings and mistelations. Bustle and fun are the elements of situation and effect, requiring the experience of the well-practised playwright to combine and evolve with the requisite adroitness and clearness. All the points are ingeniously contrived, well brought out, and cleverly dovetailed. Mr. Wright was admirable in his "fooling," and the whole of the characters were capitally supported. We have seldom seen a new play so completely successful.

The *Detroit Tribune*, of the 3rd ult., states that at St. Paul the Mississippi River was being crossed by waggons on the ice, and there was good sleighing for about 160 miles, or to Dacotah, some 50 miles north of Dubuque. At Dubuque the ice was running, and the river was about closed

Mr. Peter Benson Maxwell, of the English common-law bar, has been appointed to the vacant Recordership of Penang. The salary is, we believe, £2000 a year, with a chance of ultimate promotion to the bench of the Superior Courts in India.

## *NATIONAL SPORTS.*

WE are once more entering on a great race cycle—the first leading event of which is the entry for the eight spring handicaps at Newmarket, Epsom (2), Doncaster, York, Chester, and Northampton. The number of horses entered in all of them is slightly below the general average, but the Chester Cup stands nearly at its old mark, with 184, being one hundred more than the Great Northern Handicap, which ought to have proved a more worthy rival, considering the admirable handicapping of Mr. Johnson, and the very superior courses over which it is run. It has been suggested in the great organ of the racing men that in future handicaps the top-weight should be "the raising-point," or that at least the latter should be made out, instead of the conventional 8st. 7lb.; but handicappers are such confirmed red-tapists, that we can hope for no such justice to Job Marson, Rogers, Templeman, Alfred Day, and the other heavy-weight cracks, who are now so unwarrantably deprived of their honest earnings. Forty acceptances appear in the Burwell Stakes, and the top-scopping weight is Sultan, 9st. 7lb. The number of entrants, late the property of Dr. Palmer, for sale at Tattersall's next Monday, is now stated to be thirteen racers and yearlings, and four brood mares—two of which are supposed to be in foal to Teddington. Serjeant Wilkins is engaged for Palmer's defence. We hear that the late Mr. Cooke often complained to a friend that he felt ill after he had been at Palmer's house, and thought it must be "something in the soup." Palmer owed £100 at the time of his committal to the gentleman to whom this was told by Cooke, and hence nothing could induce the latter to accept a pressing invitation to dine and sleep all night at Rugeley, after he had heard it. It is now confidently asserted that Palmer was heavily in Lord George Bentinck's debt, and had been seen in his company a few hours before his death, and thus fresh currency is given to the painful report which was at the time rife in the locality of Welbeck, when the noble Lord was found dead in his father's "Blood Meadow." A notice has been posted at Tattersall's requesting all those who paid anything to Mr. Cooke at Wolverhampton to send a written statement, if possible, of the numbers of the notes, &c., so as to furnish a clue as to the amount that might have been on his person when he died. His executor and a police-inspector attended at Tattersall's to make inquiries on Monday. Only £10 has been accounted for, whereas he is thought to have gone to Rugeley with at least £1000.

Maid of Lyme has, as usual, been first and foremost among the broodmares, and produced the first of the Newminsters in the shape of a fine colt, on Jan. 2nd. We trust this son of Touchstone and Beeswing will be lucky, as the "old mare's" blood is very scarce, seeing that the French have got Nunnykirk, and so many of her other foals died.

Prime Minister, for whom 5000 guineas was refused as a two-year-old, has left the turf; Sister to Kettledrum is christened Minic; Bumby has leave to take in horses: and Cliffe, the father of the celebrated light-weight, has, after a long and faithful service with Wadlow, commenced training on his own account

The only steeplechase meeting for next week is at Chertsey on Tuesday, where two steeplechases and a hurdle race will be run. Oliver, Darling, Archer, &c., and the rest of the cross-country knights of the saddle, have very poor pickings left them now. The Liverpool steeplechase entries, however, number fifty-one, and the Warwick ones forty-eight.

Coursers are hardly taking sufficient advantage of the unusually open weather, and the meetings are not so numerous as we could have expected. March (O.) is fixed for Tuesday and Wednesday; North and East Cowton for Wednesday; and Alcon, Pound and Longnor, and Caledonian Club (Edinburgh) for Thursday and Friday. The ground is fearfully deep and wet, and hence very few hares escape, while the hunting steeds are suffering greatly from the same cause.

Earl Stanhope has, as usual, at the head of the *battues*; and in four days, he said (before the end of last year), he and his friends shot 1116 pheasants and 2 hares, independently of other game. We are glad to hear that it is not improbable that he will leave the Albrighton and take the Quorn country—an arrangement which was hinted at very soon after the Richard Sutton's death. The expense of hunting the Quorn country may be judged by the fact that about £2000 a year is paid for the rent and keeping up of covers covers alone, whose rent per acre is often thrice as much as that of the adjoining land.

In closing our weekly notes on the leading incidents of the past year, we can hardly omit the splendid testimonial from racing and fox-hunting men, as well as farmers, which was presented in December to Mr. Lucas, of Lutterworth. Mr. Lucas holds the same position among the professors of veterinary science that Meynell did amongst foxhunters, "Orford" amongst coursers, and Sir Charles Bunbury on the turf. Lord John Scott took the chair at the dinner to him at Rugby, and presented him, in the name of 300 subscribers, with a portrait of himself on his favourite mare, a service of plate and about 350 guineas to boot. The subscription did not go below the £1 subscription, or indeed this amount might have been easily raised, as a testimony to the reputation he has acquired by practice, which has now extended over nearly forty years. Belzoni, the premier hunter sire of England, was the property of Mr. Lucas for fully half that time, and was succeeded, when he died about four seasons since, by Meteor.

MASONRY—THE MARK DEGREE. It will be seen from our report of the proceedings of the Grand Chapter of Scotland that it has been resolved to issue warrants for the holding of Mark Lodges in those countries where the degree is not acknowledged. By this means all disputes as to the legality or illegality of Mark Lodges may be easily and amicably settled, and those Brethren who (either being Mark Masons or desiring to be so) have conscientiously abstained from joining Mark Masons' Lodges in England be brought in union with each other, should the Grand Lodge of England not acknowledge the Order as a portion of Ancient Masonry. As, however, the question is now under the consideration of a Joint Committee of the Board of General Purposes and the Grand Chapter of England, we would advise that no steps should be taken to form Mark Lodges until after the delivery of their report, which we believe may be expected at the Grand Lodge Communication in March.—*From the Freemasons' Magazine and Masonic Mirror*, a well-conducted miscellany of information for Freemasons as well as for general readers.

A DISTRESSING shipwreck has been reported by the agent at Calcutta. An English ship, with 300 emigrants (coolies), from Singapore, struck on the south end of the Agnada Reef, on the 24th of last October, and, with the exception of eleven, all met with a watery grave.

The *Savoy Gazette* announces the discovery of an extensive mine of fossil coal at Vimines, near Chambery

Jonathan Heywood, sentenced, at the last South Lancashire assizes, to be hanged for the murder of Mrs. Jones, of Rochdale, in August last, was executed at the front of Kirkdale gaol, on Saturday last.

## VIEW OF HAMILTON, IN CANADA WEST.

THE city of Hamilton, the principal scene of Sir Allan Macnab's public life, is situated on the south side of Burlington Bay, at the head of Lake Ontario

The View given on the next page, taken from the mountain in the rear of the city, has been engraved from one of Mr. Whitehold's "Original Views of North American Cities," published at Hamilton; and affords a delightful prospect of the opposite shore in the distance, the bay, and one of Canada's inland seas, Lake Ontario. On a clear day Toronto, forty miles distant, can be seen from this point.

Hamilton is the chief town of the county of Wentworth, and returns one member to the provincial Parliament. It is situated in the centre of one of the most fertile districts of Canada West, and, consequently, the emporium of a large export trade in wheat and flour, which is yearly increasing.

It is interesting to notice that the site on which this rising city now stands was little more than twenty years ago under cultivation. Its population now exceeds 20,000, and is increasing at the rate of 3000 a year. Its taxable property amounts to twenty millions of dollars.

The forests of Western Canada, which were almost impenetrable within the memory of men now living, have been cleared by the industry of the settler. The war-whoop of the Indian has given place to the shriek of the locomotive Cities, towns, and villages have rapidly sprung up, and of these none have shown greater signs of onward progress and advancement than the city of Hamilton, whose motto "I advance," is singularly appropriate.

The completeon of the Great Western Railway has added greatly to the prosperity of Hamilton, and it now possesses all the elements of a great city—which, from its many advantages, it is destined to become.

The great heart of the rich and extensive country to the west and north obtain their supplies of merchandise from this city, consequently the wholesale trade of Hamilton is very large. In 1854 the duties collected at the port of Hamilton amounted to one seventh of the duties collected in the whole province, and one-third of all collected at ports in Western Canada.

The head offices and extensive workshops of the Great Western Railway are located here. The railway to the sister city, Toronto, is now in operation.

As there is abundance of stone in the vicinity, the principal buildings in the city are of that material, and present a solid and substantial appearance.

## TESTIMONIAL TO THE HON. SIR ALLAN NAPIER MACNAB.

THIS eminent statesman is the son of a general officer, in the British Army, who, having served his Majesty for many years, went to Canada with his Colonel, the late General Simcoe, the first Governor of Upper Canada. Sir Allan's father greatly distinguished himself, and was repeatedly wounded—having on one occasion had both his legs broken.

During the late war, when the Americans took York (now Toronto), Sir Allan, then a boy between thirteen and fourteen years of age attending the school of Dr. Strachan, now Bishop of Upper Canada, volunteered, with many others, and marched into the woods above the garrison with the Grenadier Company of the King's Regiment, who were nearly all destroyed by the enemy. The army subsequently retreated to Kingston; where, through the influence of the late General Sir R. H. Sheaffe, young Macnab was placed on board Sir James Yeo's ship, on Lake Ontario, as a midshipman, in which capacity he acted under Sir George Provost at the attack on Sacketts Harbour.

He soon, however, left the Navy, and resumed his position in the Army, joining the 100th Regiment, then in advance on the Niagara frontier. He was at the storming of Fort Niagara and taking of Buffalo and Black Rock, which placed the Niagara frontier in possession of the British; for which services he was honoured with an Ensigncy in the 49th: with this regiment, about the commencement of the Lower Canadian campaign, he marched to Plattsburgh, where he commanded the advanced guard at the bridge over the Saranac on the morning of the attack. He continued to serve with his regiment until the reduction of the Army in 1816; when he returned to Toronto (then York), and commenced the study of the law, with the then Attorney-General.

In 1824, shortly after being called to the Bar, Macnab established himself in Hamilton, then a village of only two hundred inhabitants, where he secured to himself a very lucrative practice, and was the first barrister who was honoured with a silk gown as Queen's Counsel for Upper Canada. In 1828 he had a difficulty with the House of Assembly, by whose order he was committed to custody, but was soon after set at liberty.

In 1830 he was elected to represent the county of Wentworth, in which he resided, in the Provincial Legislature; since which time he has continued in Parliament. He was for several years Speaker of the House of Assembly of the then province of Upper Canada; and is now Prime Minister and leader in the House of Assembly. During the insurrection in Canada in 1837-1838, and when Speaker of the Assembly, Sir Allan commanded the militia force in Upper Canada; and, after the dispersion of the rebels at Gallows hill, he put down the rebellion in the London district. At one day's notice he marched with 1600 men to the Niagara frontier, where he remained for the greater part of the winter to repel the threatened attack of escaped rebels and American sympathisers and brigands. By his prompt action in cutting out and destroying the piratical steamer *Caroline*, he put an end to the rebellion and attempted invasion of that part of the province. For these services, so generally known and acknowledged, Sir Allan was knighted.

Sir Allan was always a warm advocate those public improvements which have tended so powerfully to develop the resources and increase the population of Canada.

In 1834 he procured an Act incorporating the London and Gore Railway Company; which was amended by a subsequent Act introduced by him in March 1837, and the name of the Company was changed to that of the Great Western, now known in this country as the Great Western of Canada. Owing to the rebellion which broke out at the commencement of the following winter, and the consequent long period of blight which fell upon the province, this and all projects for improving its condition remained in abeyance. When better times returned, Sir Allan renewed his exertions on behalf of this and the Grand Trunk line, and was mainly instrumental in procuring for both enterprises the aid of the Provincial Government; which formed the chief element in the success which has attended the construction of these works, now so well known and appreciated. Sir Allan Macnab's mind was also early directed to the importance to the trade of Canada of rendering the St. Lawrence navigable for lake-going craft of large burden; he also aided materially in carrying on those magnificent canals constructed to avoid the rapids of that mighty river—unsurpassed by any similar works in the world. He likewise supported with all his influence the enlargement of the Welland Canal, which connects the two great lakes, Erie and Ontario, to a capacity to admit of vessels carrying 500 tons, passing from any of the great western lakes through to tide water, and thence to any part of the world.

As early as the year 1835 he turned his attention to the desirability of increasing the facilities of communication between the western lakes and Lake Ontario and the St. Lawrence by means of a railway connection. In that year he procured an Act to incorporate a Company for the purpose, called the Hamilton and Port Dover Railway Company. This line was delayed in its completion from the causes before assigned; but the charter has been recently revived by Sir Allan, and the route is now regarded as likely to become one of the most important channels for the vast and yearly increasing trade of Western America.

In person Sir Allan possesses a commanding and noble aspect, and has ever been remarkable for energy of character, and determination of purpose. In manner and address he is affable; and amidst the turmoil of political strife always commanded the personal esteem and social respect of all parties.

The accompanying Portrait has been engraved, from a photograph by Milne.

The great public service rendered by Sir Allan to his native country, together with his untiring efforts in promoting the interests of Hamilton (now a city of 25,000), lately induced his constituents and friends in other parts of the province to join in presenting him with a handsome Service of Plate as a testimonial of their esteem, and an acknowledgement of his long and faithful services.

The presentation took place at the Hall of the Mechanics' Institute in Hamilton on the 29th October last. The noble apartment, which was tastefully decorated for the occasion, presented a most brilliant appearance. In all parts of the room the flags of the Allies were blended together in graceful festoons.

On a high stand upon the dais at the end of the room was displayed the costly plate; behind it was placed a large mirror, tastefully decorated with bouquets, and surrounded by union-jacks. Fronting this, and running parallel with the dais, was the chief table, at which George W. Burton, Esq., presided: on his right sat the guest of the evening. Three tables extended the whole length of the room. The demonstration passed off with great éclat, and was attended not only by the leading men of Hamilton, but by others from a distance.

The superb Service of Plate was purchased from Messrs. Lambert and Rawlings, Coventry-street, London. It consists of 22 pieces, with a splendid Candelabrum as a centre-piece, bearing the following inscription:—

Presented to One of the Honorable Sir ALLAN NAPIER MACNAB, Prime Minister of Canada, who has represented the City of Hamilton and County of Wentworth, in the Parliament of Canada, for twenty-five years, by the Citizens of Hamilton, of all political parties, as an acknowledgment of his valuable services and untiring efforts in promoting the material interests of that City and of the Province generally; but more especially for the important aid he has rendered in the Construction of the Great Western Railway, which has conferred the most important and lasting benefits—moral, fiscal, and political, upon Hamilton and upon Canada. 1855

The above inscription is also on one side of the large Cup; on the other side of which is "Success to the Great Western Railway of Canada." Around the base of the Candelabrum are the figures of Justice, Peace, and Truth. Peace holds in her right hand a palm-leaf, on which is inscribed "G. W. R." (Great Western Railway). Each article bears the Macnab crest, with the motto "Timor omnis abesto."

THE HON. SIR ALLAN MACNAB, PRIME MINISTER OF CANADA.—(FROM A PHOTOGRAPH.)

HAMILTON, CANADA WEST, FROM THE MOUNTAIN.—(SEE PRECEDING PAGE.)

BEAR-HUNTING IN SWEDEN.—(SEE NEXT PAGE.)

## SWEDISH BEAR HUNTERS SETTING OUT.

THE winter season in Sweden is the time for "looking up" the Bears. The quarters where this sport is indulged in lie some hundreds of miles up the country north of Stockholm; and latterly the game has become rather shy, owing to the frequent attacks made upon them. The districts of Norrland, Jemtland, Lappmarken, and the eastern slopes of the Dovrefield mountains, afford, we believe, the best hunting ground. Amid the vast pine forests, which cling with their tenacious roots to the precipitous cleffs of these hills, the bears find a safe refuge. The houses are very thinly scattered; the nearest hunter of any consequence to one neighbourhood of the shaggy-coated quadrupeds is disagreeable, especially in a small number. Under these circumstances a small corps is organised by the inhabitants, who collect together, from house to house in the hamlet, all those who are willing to share the fatigues of the chase.

The hunting gear generally consists of a rifle, knife, and a pole of moderate length, which latter is useful in two ways: first, to steer and push along with when wearing the tremendous snow-shoes; and, secondly, as a push to screw off a wounded bear from getting within "hugging" distance. A sledge or two accompany the hunters as far as practicable, to carry provisions and stores of any kind that might be required; and, after the parting glass "for luck" at each cottage, they start off.

Arrived at the ground, the work is conducted in the same way as in Spain and other parts of Europe. It is generally decided by the hunter; but sometimes the bear shows fight to the last, and can only be dispatched at close quarters with the knife. Dogs are of little account, except to indicate the retreat of the game, for which purpose they are taken.

## THE RUGELEY POISONING CASES.

IF one-half of the dark surmises regarding the crimes alleged against William Palmer should prove to be well founded, the Rugeley poisoning cases will form one of the most appalling records in the annals of crime. The inquiries instituted at Stafford and Rugeley have brought to light several new circumstances of a mysterious character; and it is now ascertained, upon the evidence of two or three persons, that Palmer was seen in the company of the late Lord George Bentinck on the day of his death. It is also said that he had had betting transactions with the noble lord, and owed him a considerable sum of money at the time of his death. This information has tended to heighten the excitement already prevailing in Stafford, Nottingham, and Lichfield, where the accused is well known. Additional inquiries have been set on foot to trace Palmer's movements on the day on which Lord George Bentinck's body was found in the field, and it is stated that there are witnesses in Nottingham in a position to say they seen Palmer and Lord George Bentinck together for some time before the death of the latter. He is also said to have entertained designs of a similar character with regard to four or five gentlemen with whom he had money transactions, and who are now residing in London, Manchester, Newcastle, Cambridge, and Nottingham. His *modus operandi* was to invite his intended victims to pass him a friendly visit, for two or three days, at a time when he knew they would have a considerable sum of money about them; and, had they accepted the invitation, there can be very little doubt that the fatal results would have been.

Suspicion was entertained by some of the insurance-offices that the death of Mr. Walter Palmer had not been strictly natural. Simpson, a shrewd and intelligent detective, was employed to make inquiries; and the result of his investigation was the opinion that that gentleman had died from poison, and that his brother, to whom the assurance policy had been assigned, was the person who had administered it. His sole object, however, was to protect the insurance-offices against an illegal demand, and for that end he obtained an interview with Mr. Palmer, at Rugeley, where he charged him with having made away with the late Mr. Walter Palmer, and also with having murdered Mr. Parsons Cook. Palmer at once replied, "Simpson, you are a rascal!" and, striking the detective a violent blow, he knocked him down. Simpson, however, was not to be intimidated by such a display of violence, and, rising to his feet, he said, "Palmer, you are a murderer, and I will have you hanged!" Palmer replied that he would see him a thousand times damned first, and, striking Simpson another violent blow, he knocked him down a second time

## AMUSEMENTS, &c.

THEATRE ROYAL, HAYMARKET.—At the request of many families in Town and Country, the BURGLIONS has to announce a JUVENILE WEEK, commencing MONDAY NEXT, Jan. 14, and ending on SATURDAY EVENING, Jan. 19. # CHRISTMAS PANTOMIMES.

CAFE, AT KARASU-BAZAR.—SKETCHED BY WILLIBALD RICHTER.

## ROOM OF A MIRZA IN THE VALLEY OF BAIDAR.
## A CAFE IN KARASU-BAZAR.

THESE two Engravings, from sketches by Willibald Richter, give a pleasant glimpse into the simple everyday life of the Tartar inhabitants of the Crimea. The quiet, thoughtful personages here represented in their happiest mood, dreaming life away, like German patriots, under a cloud of their own smoke, present a striking contrast to the Russian invaders of the Crimea. The savage manners of the latter more resemble those of the Mongolian hordes, ancestors of the Tartars of the present day, who, under the grandson of Jenghis Khan, subdued this part of the world in the early part of the thirteenth century. Homor de Hell, in his description of the Crimea, calls attention in the following passage to the change which has taken place in the manners of the inhabitants :-

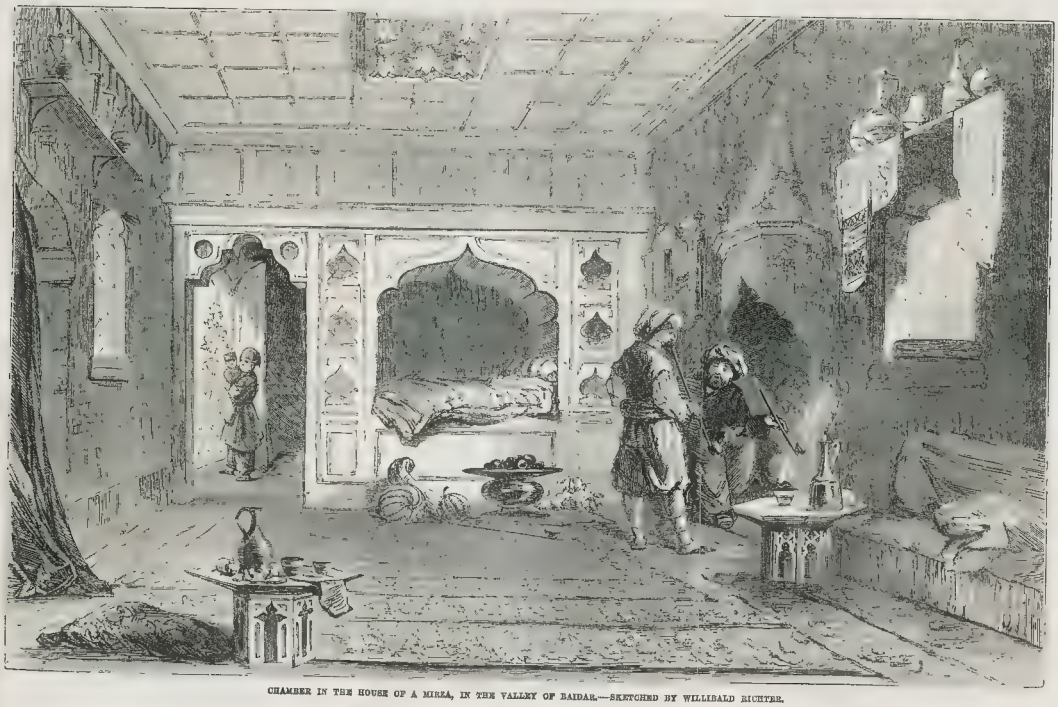
In seeing the Tartars of the present day, who would recognise in these simple men with modest virtues the descendants of those haughty Mongols who once subjugated a part of Western Europe? To the active life of camps, to the long marches, wild manners, and the ambitious humour that then possessed them, an apathetic indolence has succeeded, a philosophic resignation that seems to seek an oblivion of the past in the tillage of their plains, and the culture of those vineyards and fine orchards whose fruits serve to adorn the most sumptuous tables of Moscow and St. Petersburg.

There is a great difference between the Tartars of the coast and the mountaineers: the former, through their contact with the Russians, have become greedy, cheating, and deceitful: the latter, on the contrary, have preserved in the heart of their mountains the patriarchal manners that distinguish the nations of Asia. The stranger finds among them a touching hospitality, simple and unaffected virtues that deeply affect him. The best room, the most succulent viands, everything the Tartar has to offer is laid before his guest with an eagerness that stifles even the idea of refusing them; and, indeed, it would be a mortal insult if you should wish to remunerate his benevolent reception by aught save an expressive grasp of the hand

The Tartar women, without being beautiful, have something timid and graceful that lends to them an inexpressible charm. Covered in public with a long white veil, the two ends of which fall back on the shoulders, they are remarkable for the total absence of vulgarity. We only saw at Bagtcherai such as belonged to the poor classes of society. The wives of the mirzas (nobles) and the beys (princes) live completely an indoor life, and never show themselves abroad.

RUSSIAN CROSS TAKEN FROM A HOUSE IN THE REAR OF THE REDAN

THIS interesting specimen of ecclesiastical art is in the possession of Captain Green, of the steam-ship *Bahiana*. It was taken from a house in the rear of the Redan, and was carried by a priest (as our informant states) at the head of a relief party, to that work and the Malakoff. The Cross is about seven feet six inches high: it is carved and decorated with no mean skill, although it has evidence of frequent and long use. It was carried apparently much as our own ensigns are, bearing marks of the hands and the leather strap with which the bottom was secured.



CHAMBER IN THE HOUSE OF A MIRZA, IN THE VALLEY OF BAIDAR.—SKETCHED BY WILLIBALD RICHTER.

## THE LIME-TREE FORESTS OF RUSSIA AND THEIR PRODUCE.

On the outbreak of hostilities between England and Russia, the interruption of the friendly relations which the two nations had so long maintained with each other naturally gave rise to apprehension. We were led to expect diminished supplies and augmented prices in relation to many articles for which we had long mainly depended on the imports conveyed to us through our Baltic trade. Among the articles of general utility with which that trade has hitherto largely furnished us are oil, tallow, hemp, &c; and the increased price of these articles was very reasonably regarded as not the least of the grievances entailed by the war. There is, however, one branch of our commerce with Russia respecting which little or nothing has been said, though it is by no means unimportant as regards either its extent or its utility,—we allude to the importation of Russia mats.

Prior to the present war it was no unfrequent occurrence to see the Russian ports—especially Archangel, St. Petersburg, and Riga—thronged with vessels preparing to sail for England, and laden with cargoes of Russia mats. These mats are made of the bast of the linden or lime tree.* The bark, by maceration, is separated into thin layers, or ribbons, which, in Russia and other parts of the north of Europe are known by the name of bast or bass. In England, Russia mats are chiefly used for the purpose of packing, and they are in great demand among our gardeners, who use them for covering baskets and packages of fruit, plants, &c. On every market-day vast numbers of Russia mats are brought from the country in the carts which convey the supplies of fruit, vegetables, and flowers to Covent-garden. In Russia, however, these mats are much more extensively used. Flour, meal, and all descriptions of dry provisions are transported from one part of the empire to another in bags made of mats stitched together. The boxes used for packing merchandise are protected against the rain by layers of mats. The carts of the peasants are lined and covered with them.

But these mats are not the only articles made in Russia from the bark of the lime-tree. The peasantry employ the bast in the production of various objects of utility; indeed in the Russian peasant the lime-tree is what the birch-tree is to the peasant of Sweden. The thick bark is used for making boxes and trunks, and even for roofing huts and cottages. Sieves for winnowing corn are also made of the tough fibres of the outer bark of the lime-tree. This fibrous substance is also much used for making ropes and cordage. The boats which carry produce on the various rivers and canals in the interior of the country, are scarcely ever provided with any other cables or ropes save those made from bast.† Some even have sails made of the same substance; and in many parts of Russia the poorer class of people use bast, instead of leather, for making boots and shoes.

It is difficult to conceive the magnitude of the forests capable of supplying the enormous number of trees annually felled in Russia for the sake of the bast. The manufacture of mats has been kept up for centuries with undiminished activity, and the mats are not now scarcer or dearer than they were at a very remote period. Another fact, no less singular, is, that in spite of the extensive export trade in Russia mats, the numbers exported are insignificant in comparison with those used in the interior of the country. None but persons who have travelled in Russia, who have seen the habitations of the peasantry, the bazaars of the small towns, and the boats on the rivers, can form any idea of the various uses to which the linden bark is applied by the lower classes of the Russian population.

In a district of Russia comprising the governments of Viatka, Kostroma, Kasan, and Nijny-Novgorod, the people are actively employed in the manufacture of various articles for which the bark of the lime-tree furnishes the material. The same branch of industry is carried on in several other parts of the empire, but on so limited a scale that the articles produced scarcely suffice the local consumption. The governments above named chiefly furnish mats for foreign exportation, and also supply the northern and southern parts of the empire. In those governments there are whole villages whose inhabitants derive their sole means of existence from the lime-tree forests.

During the months of May and June, at which season the bark is most easily detached from the trunk of the lime-tree, the villages in the parts of Russia above mentioned, are in a great measure deserted. Men, women, and indeed whole families, then repair to the forests, where they spend several weeks at a considerable distance from their homes; and nothing short of the arbitrary authority exercised by the nobles over their serfs, could force the poor creatures thus to bury themselves in the depths of forests which seem almost inaccessible. The time of the vegetation renders the bast sufficiating at that season of the year. moreover, the labourers are tormented by swarms of insects, and they frequently have to wade through stagnant water before they can reach the trunk of a tree. The success of these toilsome expeditions to the forests is often very precarious, and it frequently happens that the labour of the villagers is but poorly recompensed In years during which the weather is dry and cool it is found almost impossible to detach the bark from the trunk. Rain and warmth tend very considerably to facilitate the operation; and after a winter of more than ordinary severity, even a favourable summer will fail to counteract the effects of the previous cold.

Before cutting down the lime-tree, in order to prevent it drying too speedily, the bark is ringed at the distance of several feet from the roots of the tree. This trench is of sufficient depth to receive the tree when it is felled; and if the trunk be 1½ archines, or more in circumference, the bark at the lower extremity, being stronger than the rest, is set aside to be used for roofing. Care is taken to preserve in its full thickness the *liber* that is, the lining which lies between the outer bark and the wood, without separating one from the other the different pellicles of which it is composed. The outer bark having been cut away, the liber, or inner bark, is next removed; and it is stretched over a moderate fire, to prevent it curling into the tubular form it is naturally inclined to resume.

Some of these pieces of bark measure from 1½ to 3 archines in length, and from 1½ to 2 in breadth To render them perfectly flat, that they may answer the purpose of roofing, they are kept pressed under heavy weights. The usual price of a hundred pieces of bark thus prepared is from 32 to 40 roubles. The bark taken from the upper part of the trunk, and from the branches, is tied up in bundles and packed in large rectangular straps or frequently in a pund dug for the purpose. These bundles of bark are left in the water till the setting in of the frost—that is to say, until the beginning of September or October; and it is remarked that the bark, which is macerated in running water, is whiter and finer than by its superior whiteness from that which has been submitted to the action of stagnant water. When, at the approach of winter, the bundles of bark are withdrawn from the water, they are placed on sledges, and conveyed to the villages. Here the separation of the layers are heated to a moderate degree of temperature, and the bark is suspended from the roofs and along the walls, or spread out on the floor. The action of the heat causes the water it has imbibed in the process of maceration to evaporate, and the bast of which the inner envelope of the tree is composed, are then easily separated one from another, and each is divided into a certain number of thin and pliant ribbons or strips, called bast.

A Russian lime-tree of the best quality, the trunk of which measures about 6 archines in height, may furnish 30 pounds‡ of bast. In including even the youngest trees, it may be fairly estimated that the average quantity of bast produced by every foot of lime-tree, in the government of Kostroma, amounts to 2 pounds 17½ pounds.

The machine used for weaving the ribbons or strips of bast into mats is extremely simple in its construction. It is merely a square frame, on which the ribbons forming the woof are stretched over a weaver's stay, and the web is passed through by means of a large shuttle.

The mats are made of various sizes and of different degrees of strength, according to the purposes for which they may be destined. Some are so light that a hundred of them will scarcely weigh eight pounds; whilst the same number of thick mats made of ribbons of twisted bast, such as those manufactured by the Tcheremisses of the environs of Viatka, and the inhabitants of the government of Kasan, will not weigh less than twenty pouds. These mats, which are dear by reason of their solidity, are sold at the Fair of Nijny-Novgorod, at the price of 90 roubles per hundred. The mats, which are made into sacks for containing corn, flour, &c, are woven from very soft bast, and are of a closer texture than the mats of ordinary quality. A hundred of these mats, weighing about 18 pounds, are sold at from 30 to 40 roubles.

Such are, as nearly as possible, the quantities and the value of the mats annually produced in those parts of the Russian empire, in which the branch of industry is most actively developed. The manufacture of bast is nearly equally carried on in the government of Viatka.

According to authentic estimates the following figures show the number of mats annually produced in Viatka, and in the other Governments of Russia in which that branch of industry forms the chief employment of the people:—

| | | Mats. |
|---|---|---|
| In the Government of Viatka | ... ... ... | 6,000,000 |
| ,, Kostroma | ... ... ... | 4,000,000 |
| ,, Casan | ... ... ... | 1,000,000 |
| ,, Nijny-Novgorod, at least | ... ... | 1,000,000 |
| ,, Vologda, Samboff, Simbirsk, and Penza | | 2,000,000 |
| Total | ... ... ... | 14,000,000 |

Of these, about three millions and a half are exported to foreign countries, and the rest are consumed in Russia. These mats represent a value of about two millions of silver roubles; to which may be added another million of roubles, as the proximate value of the roding, cordage, shoes, and other articles made of bast; so that the annual produce of the lime-tree forests in the parts of Russia above named amounts to about three millions of silver roubles.

The number of lime-trees felled in those parts for the sake of the bast obtained from them cannot be less than 700,000. This seems an enormous number; but if the Government prohibited or restricted the manufacture of mats, the trees would be left to rot in the forests, for the adjacent countries are but thinly inhabited. The administration of the Imperial forests therefore adopts every measure calculated to ensure the preservation of the lime-tree forests; but last, at some future period, they should be found insufficient to supply the demands of an augmented population, endeavours are made to limit the variety of objects made of lime-tree bast. The meshes of these nets, when stretched out, are each about three-quarters of an ell wide. The height or length of the net is equal to the stature of a man. These nets, supported on poles, are set up in a line of 100 fathoms in extent. The lower edge of the net is close to the ground. The bear is driven into the net by people hunting him on all sides."

## CHARADES.
### BY T. K. HERVEY.

I.

HIS heart was sad, and his foot was sore,
When a stranger knocked at a cottager's door;
With travel faint, as the night fell down,
He had missed his way to the nearest town,—
And he prayed for water to quench his thirst,
And he showed his purse as he asked for my FIRST.

The cotter was moved by the stranger's tale,
He spread the board, and he poured the ale:
"The river," he said, "flows darkly down
Betwixt your path and the lighted town,
And far from hence its stream is great
By the bridge on the road that you have lost:
Gold may not buy, till your weary feet
Have traversed the river and reached the street,
The thing you ask:—but the wandering moon
Will be out in the sky, with her lantern, soon,
Then, cross o'er the meadow, and look to the right,
And you'll find my SECOND by her light."

My Second shone like a silver floor
When the tenor passed from the cotter's door:
He saw the town on its distant ridge,
Yet he sighed no more for the far-off bridge:
And his wish of the night soon gained its goal,
For he found my FIRST when he reached my WHOLE.

II.

WE galloped along through the gusty night,
My gallant grey steed and I,
When the moon was tossed like a boat of light
In the scud of the autumn sky.
Now breasting its billows—now float-ing free—
Now lost in the vapour shroud—
Now sailing up on her golden keel
To ride on the wave of cloud.
And wherever the vapour broke, at times,
I could see, through the rift, afar,
As it shone of the sky were at anchor there,
Each riding by a star.
We traversed the cover—we reached the plain,—
And then on my steed and me
Fell down the drops of the soft sweet rain,
Like spray from that upper sea.
And I heard the talk of the tiny rills,
That never talk by day,—
And scents that the flower-cups hide from the sun,
Were out by the moon, at play.
In the happy hush of the pleasant hour,
The leaves had a low sweet hymn;
And the gale of the distant waterfalls
Might be heard through the forest dim.
—My spirit arose to join the song,
As a lark it sits up to sing,—
And there broke from my lips, as we galloped along,

"My FIRST is a glorious thing!"

My heart was light, and my thoughts were bright
As I shook out my palfrey's reins,
And shouted sound to the waterfalls,
And laughed along the plains;
But the sea of cloud grew dark above,
And the moon was madly tost,
And the tempest thickened among the sky,
Till the golden bark was lost.
And I knew that a lower storm, erelong,
Would certainly come of that upper,
And I also knew, by symptoms strong,
It was past the hour of supper:—
So I spurred amain through dark and damp,
And the night was getting late
When the foal came down, as it heard our tramp,
And neighed at the paddock gate.

I threw the girths of the saddle loose,
And stalled my steed in its stable,
And at—od by the fire as a good grey goose
Was smoking on the table.—
"It isn't the first time, by many times told,
That, for my SECOND," I said,
"I might have gone weary, wet, and cold,
And supperless to bed."

I am one of the many who say, or swear,
That a Michaelmas goose is prince's fare,
And to slumbers long and slumbers light
There are few such roads as a ride by night
Then, why, that night, did it seem to me,
When my head had found its pillow,
That the mattress was a tossing sea,
And the bolster like a billow!
Why, when I slumbered safe and soon,
Did I myself dive after the moon,—
Or riding the clouds on a golden spar,
And giving chase to a flying star?
Why did the shutting sand put on
The forms of ships with sails,—
Or the plaster swim about like fish
With lustrous scales of silver?
Why did the hitherto all quiet walls
Preach like so many Bunyans,—
And breezes bring on their every wing
The scent of sage and onions?
Why did I speak with a hissing sound
When I answered the spirit calls,
And strive through all that weary night
To climb the waterfalls?
Why did I gallop always on,
Yet always come too late?—
And what on earth could make the foal
Sit on the paddock gate?
—Oh, a ride at evening has its use,
Is a pleasant thing beside,—
But when next I eat of the stubble goose,
I'll sup *before* I ride:
My own grey steed I lightly sit
At early ride or late,—
But when my WHOLE is the thing I mount
It carries a weary weight'

A NEW SUBMARINE WAR MACHINE.—A letter from St. Petersburg says:—"Mr. Mann, after being refused by the British Government, has obtained great encouragement from the Russians, who have been at the expense of erecting one of his machines, at a cost of about £15,000. It is said to be a clever invention, and to be spoken well of by the most intelligent engineers at St. Petersburg. It is to be propelled by two screws, and steered in any point under water, where it may remain for eight hours without requiring fresh air to be pumped. The Russians ostentatiously protest to congratulate themselves that it was not adopted by the British, as it might have been efficacious in enabling them to remove the booms and mines they have put under water to prevent the approach of ships of war."

TRIBUTE TO OUR FRENCH NAVY.—In order that the important services rendered in the Crimea by the navy shall not be forgotten in the homage paid to the Crimean army, a medal has just been struck by some French artists, the composition of which is ingenious and appropriate. The face represents Neptune standing on a rock, armed with his trident, and holding a crown in his right hand. The motto round the edge is "Honneur aux braves marins Français!" On the reverse is a winged genius, standing on a terrestrial globe, and holding crowns in her two hands. On one side of the medal are engraved the following names of places, which sum up the labours of the French navy: "Bomarsund—Sebastopol Sveaborg—Kinburn;" and on the reverse, by way of motto, "Mer Baltique—1854-1855—Mer Noire."

## THE CURRENCY QUESTION.

*(To the Editor of the* ILLUSTRATED LONDON NEWS.)

UMBERSLADE, WARWICKSHIRE, 27th DEC., 1855.

SOME short time ago we were at issue respecting the Limited Liabilities Bill, but from the late remarks in your paper upon the Monetary System, I believe that we shall agree upon the necessity of an alteration in the laws by which it is regulated.

It is now forty years since I first paid attention to the subject, and I then formed my opinion respecting it, which I have seen no reason to change. During that period the supporters of the present system have, at every crisis, stated that the question was settled for ever, but it comes before us again periodically, as it must ever do from the unsoundness of its nature.

I have never supported the principle of paper money which was not redeemable in specie, never having been able to perceive how the quantity necessary for the circulation could be regulated; and the only difference between the late Sir R. Peel and myself upon the subject was that I suggested with him as to the quantity of gold which should by law constitute a pound. Any one would believe from the arguments now used by the advocates for maintaining gold at £3 17s. 10½d. per ounce, that a one pound sterling is a natural and unalterable production; and many do not know that it was fixed by William the Conqueror at *one pound of silver*, which it continued till the reign of Edward I., since which there has been no pound except what the law fixed to be called a pound. It is said that it was the dishonesty and cupidity of following Kings that reduced the contents of the pound, until the reign of Queen Elizabeth; but I believe it was caused more by the increasing quantity of silver in general circulation, which had no sufficient increase in the production of the mines until the discovery of America; and though Queen Elizabeth is quoted as a restorer of the pound, when she fixed it at four ounces of silver; she really did anything but restore its intrinsic value, if the reduced ounce of silver in her time be considered.

Few are aware of the pressure upon the industry in 1695, when the Government of that day called in all the clipped silver, and recoined it of full weight, thereby reducing the quantity about half; and still fewer are aware that the country was relieved from that pressure solely by the present Bank of England being then established, and issuing upwards of three millions of paper. From that time till 1780 the average amount of paper circulation was four millions; but about that period it was increased to eleven millions, and in 1793, to seventeen millions—which caused the panic of 1793, and the suspension of cash payments. At these extensions of paper circulation were depreciations of the pound of Queen Elizabeth, and before the end of the French war the depreciation of the pound was 30 per cent, as compared with property, produce, and labour. As gold and silver gradually advanced, not being required for coin under the effects of the Bank Restoration Act, did not advance in the same proportion. It is needless to travel over the last forty years' attempt to restore the legal pound to the four ounces of silver established by Queen Elizabeth, the six money panics during that period show that it cannot be reissued. To say that it has been done because notes have been payable on demand of £3 17s. 10½d per ounce of gold is a delusion; and the flagstaff of the *Times*, about taking a cab to the Bank and obtaining five sovereigns for a five-pound note, being a proof that the notes can be paid in gold at £3 17s. 10½d. on demand, is an insult to society. Let the *Times* show that the Bank can pay one-half of its paper in gold, before it writes such stuff. Equally absurd is it to publish that the price of gold is not fixed by the law, but that the Bank only gives a receipt by its notes for a certain weight of gold. The *Times* we. knows that the next minute the holder of the notes can obtain from the Bank coined gold at the rate of £3 17s. 10½d per ounce, which is a legal tender for every payment, and by which everything is priced. The *Times'* Correspondent, "Mercator," says, that when gold leaves the country, it may be recovered by a reduction in all prices, which makes the gold more valuable here. We don't want to be told this, it is what we have all been complaining of for many years. Prices are advanced upon us by the wants of society without our control, and then the fixed low price of gold forces them down again, causing great loss and great ruin. It would be more creditable if "Mercator" would write in his own name instead of being a sham—he would soon get answered.

The great difficulty upon this question is, that the difference between price and value is lost sight of. The price of gold is fixed by law, the value cannot be fixed. Had the price of gold not been fixed during the last five years, the large increase in the importation of gold must have reduced its price, but it has not altered in the least As, however, the value of gold will find its due relation to other property, produce, and labour, everything except gold has, during the last five years, advanced in value about fifty per cent. This was a natural result of our monetary system, and was foretold by me, before there was any sign of it, in a letter to the *Morning Herald*, in December, 1851.

What is to be done? Why, as I have always said, that the 1819 Bill was wrong; but, having done that wrong, would you do a greater by retracing your steps? We think the 1844 bill should be altered, but no more." In reply to this, I say that, if the 1819 Bill was right, the 1844 Bill is right also; that gold was a very good standard for money before the 1844 Bill was passed, and will be so again if it be repealed. I contend that the 1819 Bill has never been carried out, and never can be maintained, that the legal pound has not been restored to the four ounces of silver of Elizabeth, or the £3 17s. 10½d. gold standard by which were the assumed value—but such can never be the case till some forty millions of paper-money are withdrawn; that every attempt to restore the legal pound, and every approach towards it, has been productive of injury to the bank of society; and that our condition may be compared to a boat which has been made to build the arch by a temporary relaxation, which gives us prosperity by high and remunerating prices; but we leave out the keystone which should be altering the price of gold at which our bank-notes should be redeemed—for want of which, the moment the arch or the bridge is built it is beneath us. Many say now that, if we altered the price of gold, all other prices would immediately rise. This I deny altogether. All other prices have risen, and an alteration in the Bank price of gold is in conformity would only prevent other prices again falling to the relative prices of gold

The working of the system is quite natural, and easy to understand. Whenever any circumstance, as the increased supply of gold, enables society in this country to advance the prices of property, produce, and labour to such prices as will afford a profit, after paying the heavy burdens of the State, such prices speedily reduce the export trade and increase the import trade; the balance is gradually enlarged, and must be paid in gold, which payment by bank-notes cost of exchange to the amount of the balance, and soon reduces prices again to the Bank price of gold as far as is supportable. If the Bank price of gold was altered by law to the relative prices of property, produce, and labour required for the good of the country (and always raised with joy when they temporarily accord with) we should have a permanent high scale of prices in this country, because the high prices would be neutralised in the foreign markets by the altered rate of the exchanges It is all very fine publishing the exports to prove, or to prove to those, that the balance of trade is not against us; such accounts are a mere deception, and there is no real data for them. The simple fact of the gold leaving us proves the balance to be against us Again it is said that the war causes the good to go, for the exchanges are so direct that it is not the balance of trade. The exchanges are however, no evidence (see Adam Smith); for the exchanges between the other States of Europe, and, indeed, the whole world, may altogether neutralise them, and though the war will produce some effect, it is small compared with the great causes of the pressure, which were evidently coming before the war commenced The increased issue of notes last week is too ridiculous to be worth consideration; but no issue of notes can produce any permanent improvement so long as the price of gold continues fixed by the law at £3 17s. 10½d. per ounce. The effect of an increased issue would speedily be to cause a more rapid exportation of gold, a still greater monetary pressure must follow, and all prices would become low and unprofitable.

The Whig philosophers say that it is a misnomer to say that the price of gold is fixed by law—that the gold is only divided by law into certain weights. It might as well be said that if a man hanged another he did not kill him, he only hanged him. Let these men who ought to be, according to their title, lovers of Nature, but are only the adherents of conventionism, produce any man, in his senses, who will give more for gold than the Bank is bound to find it at by the law, or who will take less for gold than the Bank is bound to give for it by the law, and then I may pay some attention to their sophistries.

In conclusion, Mr Editor, I will merely say that we have been sacrificed too long to such fallacies, and if we don't emancipate ourselves from them we shall become the laughing-stock of the world, and, instead of successfully conducting a necessary, just, and honourable war, we shall, merely to satisfy a herd of meaners and money-grubbers, descend to the position of a third-rate Power in Europe. Yours, respectfully,

G. F. MUNTZ.

Since writing the above I have read an account of the Manchester strike which gives ample proof of the absurdity of our system. On the one hand, the workmen cannot exist in comfort upon the wages they are earning; on the other hand, the masters are profitless, because they cannot obtain sufficient prices for their goods to enable them to pay such *deficient* wages. Will any of the philosophers show how this state of things is to be remedied, under the present monetary system of this country, *permanently!*

AN INCIPIENT VOLCANO.—The *Journal de Genève* mentions a curious phenomenon which has just manifested itself near Roches, in the canton of Vaud, where large brave fissures have been observed in the soil, emitting a dense smoke. Engineers have been sent to the spot to inquire into the cause.

---

* *Tilia Europea.* This tree grows in Russia more abundantly than any other, with the exception of the birch.

† In some parts of England ropes are made of lime-tree bast. Ropes and cordage are so made in Lincolnshire, in the Forest of Dean, and in various parts of the borders of South Wales

‡ The Russian archin is equal to about three-quarters of an English yard.

§ The sazaseen is nearly equivalent to an English fathom.

‖ The pood is about thirty-six English pounds.

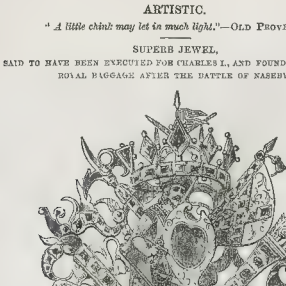
## Memorabilia,

### LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*"A little chink may let in much light."*—OLD PROVERB.

#### SUPERB JEWEL.

SAID TO HAVE BEEN EXECUTED FOR CHARLES I., AND FOUND AMONG THE ROYAL BAGGAGE AFTER THE BATTLE OF NASEBY.



This jewel, of which the above is a faithful and at the same time a spirited representation, is now in the museum of Sir John Soane, and is certainly a splendid and tasteful ornament. In the centre is the figure of the King in armour, beautiful y enamelled in fine gold. He is surrounded with military trophies, surmounted by a crown richly studded with diamonds and rubies. The military emblems are likewise profusely decked with diamonds and rubies, and the helmet rich with gems. At the left of the figure is the Red Cross banner in rubies; as also the Sarsenetic quiver, and Turkish shield and sabre. On his right side are swords, shields, drum, &c.; the whole bound together with branches of olive; while a lion decorated with a large ruby is couchant at his feet. The jewel was purchased by Sir John Soane many years back for a considerable sum, and is supposed to represent King Charles I. defending his rights. As remarked above, the tradition goes that it was discovered after the battle of Naseby among the baggage of the King.

#### ARCHBISHOP TENISON'S LIBRARY.

In the course of a pilgrimage to some of the less-known public libraries of the metropolis, we lately found ourselves in the old building known as the Tenison Library This institution, which is situated at the back of the National Gallery, was founded by Dr. Tenison—afterwards Archbishop of Canterbury—when Vicar of St. Martin's, in the year 1685. The original design of the founder was to supply the clergy and st.dious persons of Westminster with a place of retirement and study. "He told me," says Evelyn ("Diary," Feb. 15, 1684), "there were thirty or forty young men in orders in his parish, either governors to young gentlemen, or chaplains to noblemen, who, being reproved by him on occasion for frequenting taverns or coffee-houses, told him they would study or employ their time better if they had books. This put the pious Doctor on this design." On the 23rd Evelyn again writes, "Afterwards I went with Sir Christopher Wren to Dr. Tenison, who we made the drawing and estimate of the expense of the library to be begun the next spring near the Mewe"

Looking at the present forlorn and miserable appearance of the library, its volumes mouldy in dust and exposed to the vicissitudes of heat and damp, we are painfully reminded of the day when, under the auspices of these three illustrious men, the building was planned, and of the goodly show which Stowe tells us the books with their "gilt backs" made in his time.

By a series of misfortunes this institution, it appears, has been reduced, of late years, to the last stage of decay. Its slender endowment was almost entirely lost in the South Sea Bubble, and its resources failed altogether on the expiration of a lease, the remainder of which has been taken by the Commissioners of Woods and Forests for the improvement of Charing-cross. There are now no means of providing salaries for the officers or for any of the expenses incidental to the maintenance of a library, and the probable fate of an institution which ought to be interesting to all lovers of literature is to be regarded with apprehension and anxiety. The collection of books and MSS. is more valuable than we had thought. Amongst the 5000 volumes of the ordinary staple of what libraries were formed a century and a half ago, our attention was directed by the librarian, the Rev. P. Hale, to many choice specimens. The MSS. especially commanded our notice. They contain a beautiful Sarum Missal of the thirteenth century, and a magnificently-illuminated Psalter of a little earlier period. But the gems of the collection, to our mind, are the "Psychomachia of Prudentius," and the "Versarium of Fortunatus," both apparently of the tenth century, and either worth a special pilgrimage to this strangely-neglected shrine. Mr. Hale remarks in his "Plea for Archbishop Tenison's Library" (p. 6), "It seems to be a moral law that every institution, in spite of the care and munificence of its founder, should fall short of his aim, in order to give room for the vigilance and charity of his successor." We hope this suggestion may not in the present instance prove an unintentional sarcasm; but that all, at least, "within the precincts and liberties of Westminster," now that their attention is awakened to the subject, will exert themselves to design a new and more prosperous future for the Tenison Library.

### NOTES.

THE EPISTLES OF ST. IGNATIUS.—Since the period when Archbishop Usher and Bishop Pearson laboured to solve the difficulties which were experienced respecting the genuineness of the Ignatian Epistles, no new light had been thrown upon the subject until 1845. In that year the Rev. William Cureton, then Assistant-Keeper of the MSS. in the British Museum, and now Canon of Westminster, discovered among the MSS. obtained by Dr. Tattam from a monastery in the Lybian desert, a very ancient Syriac version of these Epistles. Mr. Cureton published at that time the results of his discovery in a small volume, the impression of which was speedily exhausted; and in 1849 he gave us a more extended work, entitled "Corpus Ignatianum," embodying all the ancient documents attainable having relation to the Epistles attributed to St. Ignatius, in Greek, Latin, and Syriac. This important work was received favourably or otherwise, more in accordance with the Church biases and prejudices of different parties than with the real merits of the case. Among those who at that time took an opposite view is that of Mr. Cureton was the learned Dr. Niedner, President of the Historico-Theological Society of Germany, who, as editor of the Journal issued by that Society, in 1851, published an article by Uhlhorn, impugning Mr. Cureton's positions. This was translated into English, and printed in the "Theological Critic" of 1852. In the "Journal of the Histerico-Theological Society for 1856," the opening number of which has just come to hand, we are gratified to find that Dr. Lipsius, after a lapse of five years, has taken up this question—a question interesting not only to the clergy of our own Church, but to Protestants of every denomination; and, in a long and learned treatise, completely corroborates all that Mr. Cureton had advanced; namely—*that of the Seven Greek Epistles commonly attributed to St. Ignatius three only are genuine; that those three have, for dogmatical purposes, been copiously interpolated; and that, for the same purposes, and by the same hand, the four others have been forged!* "*Magna est veritas, et prevalebit.*" We are anxious now to see whether the English reviewers will imitate the rare and exemplary candour of the noble-minded German.

A GOOD EXAMPLE.—Henry VII. prohibited itinerant pewterers and brazi ers, in order to prevent thieving: and, to keep the air of populous places pure, he prohibited butchers from killing animals within walled towns. —(See "Turner's History of England," p. 3837).—BERMS.

ABSURD INTERPRETATION.—In Southey's "Common-place Book," we find the following amusing incident:—"In the church of St. Hilary, at Poictiers, the friends of some departed citizen had inscribed on his tombstone 'Vermibus hic ponor,'—I am put here for the worms. The populace read this inscription in a ridiculously literal sense, and were in the habit of scraping the stone in order to make powders for cure worms. So general did the habit become, that it was necessary to erect an iron fence round the stone to protect it."—BERM.

TEST OF CONJUGAL AFFECTION AMONG THE NAZARITANS.—"They buy their wives of their fathers (as others their dwelling doe), but never see them untill they come to be married, nor see neither untill the marriage be solemnized betwixt them, for there is a partition in the place where they meet to be married, and the man and his friends stand on the one side, and the young woman and her friends on the other side, where they may hear but not see one another, until the Cassise bid the young man put his hand thrown an hole in the wall, and take his wife by the hand. And whilst they have hand in hand, the mother of the mayd cometh with some sharpe instrument, made for the purpose, and all to be pricketh the new married man's hand, and maketh it bleed. And if he letteth her hand goe, when he feeleth his hand smart, they hold it for a signe that he will not love her: but if he hold fast (notwithstanding the smart) and wring her hard by the hand until she cry, rather than he will once shrinke, then he is counted a loving man, and her friends are glad that they have bestowed her on him."—*From a black-letter pamphlet of* 1612, *entitled "The Travels of Foure Englishmen."*

### QUERIES.

In the University Library at Cambridge there is a volume entitled "Collectanea," by G. Whiteway. It is wholly in manuscript, and is in that style of handwriting which was so commonly used for epistolary correspondence in the seventeenth century. There is no explicit date to the volume, but, from internal evidence, it is clear that the author must have written between 1630 and 1635. Who Mr. Whiteway was I know not, nor do I know whether the contents of the volume are original or copied, but as I have never seen the following before, and as they appear both curious and clever, they may perhaps deserve a place in your "Memorabilia." As the Duke of Buckingham was assassinated on August 23, 1628, the first two epigrams, whether by G. Whiteway or not, must, according to their date, have been written *within a month* of his death. The last as clever jingle on the words "Rex, Grex, Crux, Dux." Perhaps some of your readers can give information about G.Whiteway and his writings. —QUONDAM.

ON GEORGE DUKE OF BUCKINGHAM, SEPT. 18, 1628.

I that my country did betray,
Undid my King that let me sway
His sceptre as I pleased, throw downe
The glory of Great Britaine's crowne;
The Courtiers' hate, the Country's hate,
The agent of the Spanish State;
The Papists' friend, the Gospell's foe:
The Church and Kingdome's overthrow.
Here may my odious carcass dwell,
Until my soul returns from Hell;
Where, with Judas, I inherit
Such portion as all Traitors merit.
If Heaven admit of Treason, Pride, and Lust,
Expect my spotted Soul among the Just.

ON THE SAME. THE SAME DATE.

Some say the Duke was virtuous, great, and good,
And Felton basely did to spill his blood.
If that be true, the Duke did by the same
In sending him so quickly to his place?
Pale Death seems pleasant to a good man's eye,
And only bad men are afraid to die.
Let he this kingdom to possess a better!
Why, Felton then hath made the Duke his debtor.
George IV. DVKE VVCKINgha MIts.

ON THE DUKE OF BUCKINGHAM.—JUNE 1, 1627.

Rex and Grex the same do sound,
But Dux doth Rex and Grex confound.
If Crux on Dux might have their fill,
Then Rex with Grex might works his will.
Three subsidies so fine would turne,
And Grex would laugh which now doth only mourne
Or Rex' thy Grex doth sore complaine,
That Dux beards Crux, and Crux not Dux againe.

GEORGIUS VILLEBIUS.

Regis. Volgi Illusor.

SAXON ANTIQUITIES.—Is there any Society in London which has for its object solely the investigation of Scandinavian or Saxon Antiquities?—H. D. M. S.

LESTRANGE, in his History of Charles I., speaking of his stammering, says, "There was never, or very rarely, known a fool that stammered." Is there any truth in this observation?—As a general rule, persons who are deficient in any one organ or function by no means excel in others, but display a universal imperfection of organisation!—BERMS

MADRIGAL AND GLEE.—Will you oblige some musical friends by explaining the distinction between a *glee* and a *madrigal*?—A. Y

[A madrigal is for a large body of voices. A glee should only have one voice to each part. A madriga. is rather a succession of harmonies than a melody. A glee should have a tune throughout.]

TAYLOR THE WATER-POET.—I observe in a late Number of the ILLUSTRATED LONDON NEWS some notices of Taylor the Water-poet. Can any of your numerous readers inform me where the works are to be obtained? The Watermen's Company have in their hall a portrait of him, and I am desirous to present his works to them.—CARLOE LUCIUS.

[Taylor's works have never been reprinted. The folio volume in our possession bears the date of 1630, and is somewhat scarce. It professes to give "all the works of John Taylor, the Water-poet—being sixty and three in number," &c.; but there is in the collection of Mr George Daniel, of Islington, a small tract, by Taylor, supposed to be unique, intituled "Taylor's Travels and Circular Perambulation through, and round by more than thirty of the twelve Signes of the Zodiac, of the famous Cities of London and Westminster. With the Honour and Worthiness of the Vine, the Vintage, the Wine, and the Vintoner; with an Alphabetical Description of all the Taverne Signes in the Cities, Suburbs, and Liverties aforesaid, and significant Epigrams upon the said several Signes. Written by John Taylor, London. Printed by A. M., 1636."]

### ANSWERS TO QUERIES.

FELTON, THE ASSASSIN OF THE DUKE OF BUCKINGHAM.—At the death of Mr. Upcott the Felton paper was missing, and what has become of it is not now known for a certainty. A very careful facsimile was published by Mr. Upcott in his privately-printed catalogue of autographs; and afterwards in Smith's "Facsimiles of Historical and Literary Curiosities." Another interesting relic of Felton is the knife with which he stabbed the unfortunate Duke. This is fortunately preserved at Newnham, Warwickshire, the seat of the ancient family of the Fieldings, Earls of Denbigh. Ireland, in his "Warwickshire Avon," gives a representation and description of the instrument. "This dagger," says the writer, "was brought from Portsmouth by the house of Sir Daniel Norton, within five miles of Portsmouth, where the Court then, in 1628, was held, and at which place the murder was committed. The person who brought it was one Firebrace, valet-de-chambre to the Duke, and who was ancestor of the late Sir Cordel Firebrace, Bart.' it was brought to the Lady Susanna Villiers, sister to the Duke, who was then married to Sir William Fielding, afterwards the first Earl of Denbigh, and ancestor to the present Earl. The length of the dagger is eight inches, the blades nearly four and a half; the breadth of it near the handle, which is of ivory, one inch and a half: the inner sides of the blades and handle are flat, and move on two small pivots, which give firmness to the gripe when the blades are opened." There are two different accounts as to the manner in which Felton became possessed of this knife. Wotton, in his "Short View of the Life and Death of the Duke of Buckingham" (4to, 1642), says:—"In a bye cutler's shop on Tower-hill he bought a tenpenny knife (so cheap was the instrument of this great attempt), and the sheath thereof he sewed to the lining of his pocket, that he might at any moment draw forth the blade alone with one hand, for he had maimed the other." The historians of Sheffield say:—"In 1626 Thomas Wild, cutler, living in the Crooked-billyard, High-street, made Lieutenant Felton the knife with which he stabbed the Duke of Buckingham. The knife was found in the Duke's body, and had a corporation mark upon it, which led to the discovery of the maker, who was immediately taken to the Earl of Arundel's house in London, when he acknowledged the mark was his, and that he had made Lieutenant Felton two such knives when he was recruiting at Sheffield, for which he charged him twopence. The Earl was well satisfied with the truth of Wild's testimony, and ordered him to be paid the expenses of his journey home."—EDWARD F. RIMBAULT.

BEES.—I beg to inform "H. L. C." that a still more curious superstition than the one he mentions prevails with us. When the head of a family dies who keep bees, after the friends return from the funeral one of the family goes into the garden and gives the bees a taste of everything taken at the funeral such as wine, cake, cheese, ale, and even tobacco; for it is believed that without this mummery the bees will all die. I should feel obliged for any information as to the origin of this silly procedure.—JOHN WETHERALL, High Connesliffe, Durham.

"INTONING" THE CHURCH SERVICE.—Your correspondent who inquires about the authority for "intoning" has fallen into a mistake as to the use of the term. There are two ways of performing Divine service. 1. It may be "said" on one note, which we now call "saying" chanting on many tones;" or, 2. It may be "sung," i.e. with inflections, as in cathedrals—to which mode the modern term "intoning" *properly* belongs. Marbeck's "Common Prayer, Noted" is, I imagine, the best evidence of the Church's intention in the matter, as it was published by authority immediately on the publication of the Prayer-Book itself.—PRESBYTER.

## CHESS.

### TO CORRESPONDENTS.

LEX.—THE REVISION OF THE CHESS RULES.—The statement in question must have arisen from a total misapprehension of the whole matter. The facts are simply these: At the meeting of the second day's sitting of the Northern and Midland Counties Chess Association, assembled at Manchester in 1853 Mr. Staunton undertook, in conjunction with Messrs. Jaenisch and Heydebrand der Lasa, to prepare a revised code of laws for Chess play. At the meeting of this Association at Leamington, last year, under the presidency of Lord Lyttleton, an epitome of the new rules proposed by Messrs. Jaenisch, Heydebrand, and Staunton was read; and, after some discussion upon controverted points, it was resolved that a committee be formed to confer with Mr. S. upon his and his colleagues' new rules, so as to open the best results of reading their code to the public. Two amendes had one meeting (at several, at match), and, after hearing an abstract of the revised laws which had been prepared by Mr. Staunton, they unanimously agreed that it was highly expedient that a new code of regulations accompanied by explanatory extracts from the first one of the kind to be issued. Mr. Staunton, Mr. Heydebrand, should be forthwith printed; and that the new rules should be finally submitted to the Association at the next meeting in 1856.

J. KNIGHT; C. S., Leith; BUSHEY.—Your Solutions of No. 617 are correct; but were not sent in time for notice in due course.

C. W., Sunbury; and others. The fault in Enigma No. 880, we find, was in misplacing the White King and Queen. Set up the new thus:—*White*: K at KKt 7th, Q at Q Kt 4th, B at K R 8th and Q B 3rd; Ps at K R 2nd, K B 3rd, and K Kt 5th. *Black*: K at K B 4th, B at K 8, and Q B 2nd, Kt at Q 8th and Q B 8th; Ps at K B 5th, K 6th, and Q Kt 3rd. White to play, and mate in four moves.

ONE WHO WISHES, &c.—Learn the moves of some friend, and, when thoroughly versed in them, procure the "Chess Players' Handbook," published by Bohn, or any other elementary treatise on the game

THE FETE OF NOTRE DAME DE

AE, AT SARAGOSSA.—(SEE NEXT PAGE.)

## THE FETE OF NOTRE DAME DEL PILAR.

THE city of Saragossa (written in Spanish, Zaragoza) is situated upon the banks of the Ebro. It is the general opinion that the foundation of the present city was contemporary with that of Sagunto,—a Phœnician colony, which preserved its mother-tongue and manners up to the time of the Roman invasion. By command of the Emperor Augustus it was re-built, enlarged, and fortified, and honoured with the name of Cæsar Augusta, whence the modern corruption—Saragossa.

Originally conquered by the Sueves, and afterwards by the Goths, Saragossa at length, in the year 712, yielded to the arms of Zarif, the conqueror of Seville and Murcia. Subsequently the city fell into the hands of the Caliphs of Africa, who entrusted it to governors chosen by themselves.

A certain Prefect of Abdelerhaman wishing to become independent of the Caliph, sent an envoy to Charlemagne, offering him the suzerainty of Saragossa on condition that he should remain Governor. The Emperor accepted the proposal, landed in Spain with a large army, and took possession of the city.

The different accounts of the conduct of Charlemagne with respect to Saragossa given by the historians of France and Spain render it somewhat difficult to ascertain the actual truth. The only point on which they all agree is that he left Saragossa to the dominion of the Arabs; and that, in returning to France, his army was defeated in the defiles of Roncesvaux by a body of Gascons.

The gates of the city were at length thrown open to Alphonse, surnamed the Warrior, who seemed destined to be crown, and pronounced Saragossa to be the capital of the kingdom of Aragon.

The union of Castille and Aragon, in the fifteenth century, by the marriage of Ferdinand and Isabella, eclipsed the splendour of Saragossa by reducing it to a provincial town. Nevertheless, the *fueros* or privileges annexed to the crown of Aragon kept it respectable. The *Justicias Mayores*, or first magistrates, exercised irresponsible authority, and became formidable opponents to the Houses of Austria. It is in this manner that Don Juan de Lanuza, Justicia Mayor of Aragon, at the end of the sixteenth century, resisted the pretensions of Philippe II. But that Sovereign, considering that there ought to be no bounds to his authority, sent disguised troops into Aragon, caused Don Juan to be arrested, and finally had him beheaded publicly in the principal square. The inhabitants, dismayed by this act of rigour, lost all power of resistance, and scarcely besmirred themselves for the preservation of their ancient privileges. Thus were destroyed the preponderance and consideration of the venerable city of Saragossa.

The conduct of the inhabitants of Saragossa in 1808 is well known. Not till half of their city was levelled to the ground, and half of their number buried beneath its ruins, did this noble population acknowledge themselves defeated. At length, however, on the 21st of January, 1809, the French entered the town in triumph, stumbling over piles of corpses and wading in pools of blood. Posterity will pay a just tribute to their valour and patriotism, and will remark with astonishment that the best legions of France, commanded by one of its best generals, were employed in attacking, during a whole night and a day, a town having scarcely any bulwarks but the breasts of its defenders, and were at length compelled to besiege, one after another, the private dwelling-houses of that noble people.

The environs of Saragossa are more fertile and picturesque than those of most of the cities in the interior of the Peninsula. The situation of the capital of Aragon is, in fact, magnificent; it stands in the midst of a luxuriant plain, watered by the winding river Ebro. In spite of the traditional aversion to trees in Spain numerous elms and poplars may be seen in the outskirts of the city, forming stately avenues, and inclosing gardens *aux mille fleurs*.

The city of Saragossa is of great extent, but its population is comparatively small, numbering about sixty thousand. It consists, for the most part, of narrow, unpaved, flinty streets. The Calle del Coso is the most elegant thoroughfare, and is the fashionable promenade of the town. The houses, though regular, are of mud rude. The balconies, in which the inhabitants spend almost all their time, are supported by whitewashed walls, and are covered with flower-pots and climbing plants.

The inhabitants of Saragossa are like Spaniards in general—sober, brave, and honest, though somewhat proud and reserved. The men are generally large, robust, well-built, and capable of enduring great fatigue. It is Aragon that supplied the celebrated infantry, which were surnamed the Invincible before the defeat of Rocroi. That which distinguishes them from the rest of their race is not ordinary valour and perseverance which nothing can subdue. Aragonese have been represented in pictures in the attitude of attempting to hammer nails with their heads, in order to symbolise the tenacity to which we refer, and which has become as proverbial in Spain as that of the Bretons was in France.

The image of Notre Dame del Pilar is as it were the palladium of the city of Saragossa. The inhabitants heard of old the solemn words resounding in the church: "Notre Dame del Pilar is among you;—it is she who requires your lives. Prepare yourselves for glorious death!" Drunk who requires your lives. Prepare yourselves for glorious death!" with enthusiasm, they saw death approach, and went to meet it, singing in a joyful voice to the sound of their guitars:

La Virgen del Pilar dice,
Io no quiero ser francesa
Mas quiero ser cristiana
De la tropa Aragonesa
[Notre Dame del Pilar says,
"I will not be a French lady;
But I will be the captain
Of the troops of Aragon.")

There are individuals in Saragossa who, after reading translations from the French free-thinkers, will declare that they do not believe in God, but who will not suffer the ... t word of unbelief or disrespect to be coupled with the name of Notre Dame del Pilar.

The church of Notre Dame del Pilar is a noble edifice, 500 feet in height, with three spacious naves, separated by pillars supporting seven arches, on each side. It may be said with propriety that all the arts have been united to decorate the interior of this beautiful building. Marbles rare and choice, gold and silver ornaments of unrivalled workmanship, combine to render it one of the most imposing spectacles in Saragossa. Statues, bas-reliefs, cornices, carvings, and paintings are to be seen on all sides. The Chapel, which is entirely constructed in marble and rare jasper-stone, is filled with imitations of legs and arms wrought in gold and silver—presented by the Virgin by the devout. Crutches and decrepit persons who believe themselves to have been cured by her. Numbers of lamps and wax candles burn all day long, and produce a magnificent illumination. The radiance which is cast around the statue of the Virgin renders it sometimes invisible. Like the sun, surrounded by its beams, the inspired figure of the Goddess—for Goddess she is in the eyes of the Spaniards—stands enveloped in glory. Upon her head is a golden crown, and round her arms and at her feet bracelets, necklaces, garlands of gold, diamonds, and rare precious stones—the offerings of her devotees—the whole valued at several millions of francs. The image itself is of wood, but it has entirely disappeared in the coating of jewels and gold with which it is laden.

It is in front of the altar which supports the pedestal that the annual gathering takes place. Deaf, dumb, lame, blind, rich, poor—persons from all parts of Spain—assemble to do honour and render thanks to the Virgin. The worshippers raise their arms and fold them in the shape of a cross, praying and chanting devoutly.

The procession is led by priests with long loose gowns bespangled with gold. After them come the military authorities; then the municipality, escorted by a legion of Alguazils, dressed in black doublets, with small steel swords; then priests, carrying wax candles, and chanting in Latin the praises of the Virgin; then the ecclesiastical dignitaries, dressed in mantles of embroidered silk; then prelates, bearing pavilions of silk beautifully ornamented and surmounted by a cross. Lastly comes the statue of the Virgin, supported on the traditional pillar and enveloped in clouds of incense. The procession terminates with the Grand Sacrament.

The accompanying Illustration of this imposing scence was drawn by the late M. Valentin, and derives additional interest from being the last work of that distinguished artist.

RARE BOOKS.—A sale of rare books has just been terminated at Paris, at which some very curious works changed hands. A manuscript of the fifteenth century, "Latin Hours," with a calendar in French, handsomely bound and adorned with illuminated figures, brought not less than 800f.; two other similar works of the same period were sold for 455f. and 340f.; the "Heure de l'Office de la Vierge, en Français, Loys XI., à l'ouneur de Sainct Michel," an octavo, richly bound, 580f.; the "Roman de la Rose," revised and corrected by Clément Marot (Paris, 1529) octavo, 280f.; the "Seinur d'Honneur" (Paris, 1619), on which are represented crescents, the attributes of Diana of Poitiers, 305f.; the "Loups Ravissants," in twelve chapters, published in 1535, 265f.; the "Recueil de plusieurs belles Chansons spirituelles," composed against the rebels of the King Charles IX., the only copy known, 315f.; the "Guerre des Masles contre les Femelles," in three dialogues, on the prerogatives and dignity of the two sexes (Paris, 1588), 131f.; and lastly, the "Siècle d'Ord" (Paris, 1521), a beautiful copy of a very rare book, written in verse, 200f.

## RAILWAY STATISTICS.

SOME years have elapsed since men of sagacity and foresight predicted the speedy advent of a railway heptarchy, and it is now proposed to amalgamate all the lines under a single directory. Rival companies, each desirous of monopoly, have so stimulated competition that, in spite of an annually-growing traffic, dividends have fallen to an unremunerating scale, while, to execute extension lines, a pernicious system of preference shares has been generally introduced. Cases of gross, and even corrupt, mismanagement have been proved; and, in some instances, truth has been concealed from shareholders by the payment of profits out of capital. When it is considered that the total amount of money authorised to be raised by railway companies, by shares and on loan, to the end of the year 1854, amounted to £308,105,736, of which £286,068,794 had been raised, and that the balance of £21,037,442 is nearly all absorbed at the present date, except where new projects have been abandoned, the gigantic magnitude of these undertakings must forcibly strike the most cursory observer. At the end of 1854 the total length of lines authorised by Parliament amounted to 13,983 miles; but of this 1177 miles were abandoned by subsequent Acts, or by warrant under the authority of the Commissioners of Railways, and, consequently, there remain 12,806 miles for which the Parliamentary powers which were obtained have not been repealed. Of these, 8054 miles were open at the end of 1854; and 4752, which have received the authority of Parliament, remained to be opened since that date. These figures exhibit the actual dimensions of this comparatively modern system of transit and locomotion.

The benefits arising to the whole community from the substitution of iron for earth roads are too palpable to require comment, for you may now travel for less per mile in a first-class carriage than you paid a postboy in the times that are past, and fly over forty miles where you crawled over eight. It might have been presumed that an enlightened Government would never have thrown any impediment in the way of such truly national undertakings, or permitted the projectors to be mulcted in enormous sums of money before they placed a brick or dug a turf; yet it appears from the Return to the Order of the House of Commons, moved for by Mr. Hadfield (Paper 460), and printed 6th August, 1855, that the preliminary expenses paid by 160 companies amounted to £14,086,110 14s. 5½d.; while 43 companies have not given in any return.

The details of railway statistics are very curious and interesting, and as the following figures are taken from the Parliamentary Report every dependence may be placed on their fidelity. Of the 8054 miles open for traffic at the close of last year, there were in England 6114 miles; in Scotland, 1043; in Ireland, 897. In England 5261 miles were constructed on the principle of the narrow guage, 647 on that of the broad gauge, and 206 on the mixed; in Scotland the narrow gauge alone exists; in Ireland, with the exception of eight miles, the Irish gauge is used.

In the three kingdoms there are 114 companies having single lines, extending over 1962 miles, but several of these may be expected to become double in due season.

In 1854 on the lines opened for traffic, 90,409 persons were employed, being an average of 11.59 individuals per mile; and there were 2410 persons.

The total number of passengers conveyed on railways, in 1854, amounted to 111,206,707, and the total receipts from all sources of traffic amounted to £20,215,724. The number of passengers conveyed per mile, was 14,160. This return to the three kingdom...

The passenger traffic on the English lines alone is put down at 92,346,145, or at the rate of 15,427 persons per mile; and the receipts from them yielded £7,896,402, or £1324 per mile. The proportion of each class is thus distributed:—first, 13.3 per cent; second, 36 per cent; third, 50.7 per cent.

In Scotland the passengers numbered in 1854, 11,949,388, or 11,725 persons per mile, and the receipts were £742 per mile. In Scotland, first class, 11.3 per cent; second, 15.9; third, 72.8; a very different scale of proportion from that which obtains in England.

In Ireland the number of passengers amounted to 6,911,170, the ratio per mile being 7703, and the receipts £478. Of these 3.6 per cent were first class; 16.8 per cent, second; and 46.8, third: a small number were not apportioned.

"As regard the returns of Great Britain and Ireland, of the 111,206,707 conveyed, it appears that 14,517,461 were first-class passengers, 37,120,655, second-class, and 58,732,048 third-class, there being 26,843 not apportioned into classes; and of the £9,174,945 received from passengers £2,738,458 was derived from first-class passengers, £3,264,545 from second-class, and £2,992,466 from third-class passengers; a sum of £178,478 not being apportioned into classes. Although the relative proportions of each class of traffic has not varied much, yet a slight increase may be observed in the proportionate receipts for third-class traffic, and a slight decrease in the proportionate receipts for second-class traffic."

The Goods traffic is an important item in railway receipts, not only as a source of income to the several companies, but as indicating, in this channel of transit, the progress or decline of internal trade. The whole amount received through this department in 1854 was £11,040,779. Comparing the years 1853 and 1854, the increase of the latter over the former was 16 per cent; the same results appear in Scotland, while the increase has been 20 per cent. In 1849 the revenue from the goods traffic was only £5,529,606; and it is gratifying to remark that while railway lines have increased in length since that date 40.6 per cent, the goods traffic has increased 99.67 per cent—the receipts per mile having been £2119 in 1849, and £2976 in 1854. Another point is worthy of note. In 1849 the passenger traffic yielded 53.17, and the goods traffic 46.83, in each £100 received, but these relative proportions were reversed in the year 1854, for the receipts from passengers declined to 43.34 per cent, while those from goods rose to 56.66 per cent.

The working expenses on railways average 45 per cent on the gross receipts, the proportion being in England 45 per cent, 43 per cent in Scotland, and 46 per cent in Ireland. This expenditure is subdivided under the following heads:—

| | | | |
|---|---|---|---|
| Maintenance of Way in England and Ireland | ... | ... | 14.5 per cent. |
| " Scotland | ... | ... | 15.9 " |
| " Ireland | ... | ... | 14.6 " |
| Cost of Locomotive Power in England and Wales, including expense of rolling stock | ... | ... | 39.7 " |
| " Scotland | ... | ... | 42.9 " |
| " Ireland | ... | ... | 44.5 " |
| Traffic charges in England and Wales | ... | ... | 2.81 " |
| " Scotland | ... | ... | 2.05 " |
| " Ireland | ... | ... | 2.4 " |
| Miscellaneous expenses in England, police, watchmen, &c. | ... | ... | 1.6 " |
| " Scotland | ... | ... | 1.6 " |
| " Ireland | ... | ... | 1.6 " |
| The rates and Government duty in England | ... | ... | 8.1 " |
| " Scotland | ... | ... | 4.7 " |
| " Ireland | ... | ... | 2.6 " |

(There is no passenger traffic in Ireland.)

| | | | |
|---|---|---|---|
| Expenditure per mile by trains run in England | ... | ... | 31.28d. |
| " Scotland | ... | ... | 28.42d. |
| " Ireland | ... | ... | 29.18d. |
| Receipts in England per mile | ... | ... | 66.83d. |
| " Scotland | ... | ... | 63.33d. |
| " Ireland | ... | ... | 61.19d. |

One of the most important points in these statistics in the rate of profit which results from railway enterprise as a whole; and here must be distinguished the dividends on the whole of the ordinary share capital from those on preference shares and loans. The former stand thus in the subjoined years:—

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 1849 | ... | ... | 1.88 | 1852 | ... | ... | 2.40 |
| 1850 | ... | ... | 1.85 | 1853 | ... | ... | 3.05 |
| 1851 | ... | ... | 2.44 | 1854 | ... | ... | 3.39 |

The preference shares yield an average dividend of five per cent. The money loaned has produced 4.27 per cent.

No accidents are more frightful to contemplate than those which happen on railways; but, when facts are calmly pondered over by the light of experience, the travelling public may dismiss their fears. Compared to the loss of life or injury to persons by the old system of coaching, safety on the iron road becomes almost absolute; and the loss of life in a single emigrant ship far exceeds all the destruction caused in a year on all the lines in the kingdom. In England alone, in 1854, the railways carried 92,346,149 passengers, and the total number killed was only 180 persons. Of these only nine met their death by causes beyond their own control. Thirteen passengers were killed or wounded by their own indiscretion. The remainder were servants of the companies, or of contractors, who perished or were injured either unavoidably or from their own imprudence, and trespassers killed or hurt while rashly crossing or walking on the rails. For every million of passengers conveyed, the percentage of those killed or injured in the three kingdoms, in 1854, amounts in England to .09 killed, and 3.69 injured; in Scotland, 0.16; injured, 3.51: in Ireland—killed, .14; injured, .57. These figures ought to disarm the timid traveller of undue fears; but, of course, they ought not to relax railway vigilance.

As to a very recent proposition to amalgamate all the existing companies, and thus put an end to the competition of rival lines, it is obvious that such a plan would place the public at the mercy of the directory, and perhaps create a power to be wielded at Parliamentary elections incompatible with our free Constitution. But a surely some remedy must be sought for the evils of a system which has absorbed so much capital as amounts to about one half of the National Debt. Much evil has been already inflicted of a permanent character, now irremediable, and original subscribers may never be placed on the same footing as those who came later into the enterprise and hold preference shares. On the other hand, much future evil may be avoided by more stringent regulations for enforcing personal instead of divided responsibility.

THE NEW GOVERNOR OF CRONSTADT.—The nomination of Prince Menschikoff to the Governorship of Cronstadt is understood in St. Petersburg to have been the direct consequence of the untiring efforts of the Grand Duke Constantine. On the very possible diversion to bring forward the old Russian party into an all-absorbing prominence: it is traced to him also that not only as in this instance the name of Menschikoff takes the place of Lutke, but those of Delia, Bersh, and Kleinmichel are set aside for Nevostilia, Putin, and Tschevkin. The only Commanders that have in the war received the Order of St. George, Second Class, besides Meravieff (an especial favourite with that party), are Rebindef and Nachimoff, and of all three it is understood that they were strongly recommended for it by the Grand Duke Constantine. The only exception to the all-engrossing old Russian influence in the nomination to Cronstadt is the choice of Lieutenant-General Baron Meyendorff, the brother of the late Minister in Berlin and Vienna, to be Master of the Horse and High Chamberlain of the Imperial Court. It is probable that, in the matter of Court officers, this zealous champion of the old Russian party, the Grand Duke Constantine, is willing to accord to the so-called German party some glimpses of Imperial favour, in recognition of their superior intelligence and observance of the manners of life, &c. The distinction conferred upon Prince Menschikoff in confiding the defence of Cronstadt to him, which is virtually putting into his keeping the keys of St. Petersburg, is a conclusive refutation of the many stories that were current at the time of his retirement of his having fallen into disgrace with his late master. The present Emperor has not only assigned to him the splendid hotel of the Staff of the Marine for a residence, but has kept him as much as possible near him and in his confidence, and has sent him on an important mission to Finland, with particular reference to Sweaborg.—*Letter from Berlin, Jan. 5.*

COUNT NESSELRODE'S CIRCULAR.—The Austrian public is so profoundly ignorant of what has been doing during the last few weeks in the Eastern question that it believes Count Nesselrode's Circular of the 22nd of December to be a reply to some project of peace that has recently emanated from the Allied Powers. It is well known, however, that the circular of the Russian Chancellor of State is merely a repetition of terms of peace some three weeks since proposed by Prince Gortschakoff to Count Buol. The Austrian Minister for Foreign Affairs declined to discuss the merits of the Russian proposition with Prince Gortschakoff, but he lost no time in communicating what had passed between himself and the Russian diplomatist to the representatives of the Western Powers. As for the conditions proposed by Russia, they were brought forward by Prince Gortschakoff in the 12th Conference, which was held in the city on the 21st of April, 1855. They were then positively rejected by Anti Pacha, Lord John Russell, and M. Drouyn de Lhuys. It is, therefore, but natural that they will not now be taken into consideration. It may be observed that the pertinacity displayed by Russia excites a mixed feeling of astonishment and indignation in the most influential diplomatic circles. People are impatient to learn what progress Count Esterhazy is making in St. Petersburg, but some days must elapse before any positive information can be given on the subject. Up to the present moment the very best informed persons in this city are in total ignorance of the intentions of the Russian Government; but it is believed Count Esterhazy will be able to give some little insight into them in the course of next week. The definitive reply of Russia is not, however, likely to be given until twenty-one days from the 27th of December, on which day the Austrian propositions were communicated to Count Nesselrode.—*Letter from Vienna, Jan. 3.*

FRENCH BOUNTIES OR RE-ENLISTMENT.—The *Moniteur* of the 4th inst. publishes a decree of the Minister of War, fixing the conditions of re-enlistment of such men as have been released from the service. Re-enlistment for seven years will entitle the party to the sum of 230f.: 720f. to be paid at the time of re-enlistment, 200f. either at the end of that time or during the period of service, and the remaining 130f. on his definitive liberation from the service. Re-enlistment for less than seven years will give a right to a sum of 230f. for every year's service, 100f. to be paid on the day of re-enlistment, 50f. either at the same period or during the time of service, and 100f. at the period of liberation. Voluntary engagements of those altogether liberated from the service within less than a year will be entitled to the same advantages as above specified. The Minister has addressed a circular to the military and civil authorities containing the above regulations, and ordering them to be posted up in the different barracks and in all the communes throughout the country.

ENCOUNTER WITH A WILD BOAR.—A private gamekeeper at Neale-la-Repeste (Marne) named Gauthier had a narrow escape a few days ago from being killed by a wild boar. The animal had been wounded on the previous day, and Gauthier was engaged in a thicket through which Gauthier went in search of it. The barking of his dog soon showed him the spot where the animal lay concealed, and he fired at it as it lay crouched among the brambles and wounded it in the thigh. Furious at the attack, the boar leaped on the man and knocked him down by a severe wound in the thigh with its tusk. The boar's attention was then directed to Gauthier's game-bag, which it began to tear open. The keeper gave himself a little time to recover his presence of mind, and turning suddenly round he seized the animal, which was but weak on its legs in consequence of the wound, and overturned it; and while he was holding it down, some person came to the aid dispatched it.

AUTUMN STORM IN THE BLACK SEA.—Accounts have been received from Constantinople of another fearful hurricane having visited the Black Sea on the 19th of last month; and it is reported that fifty or sixty ships foundered during the height of the storm, off the South Russian coast. Lloyd's agent at Galatz states that in twenty-three instances the vessels went down with all hands, as also fifty-two lighters, which were in tow. The Russian coast at the Danube mouths belong to them is supposed to have escaped. Most of the vessels were laden with corn. Three ships (one from England, called the *Caledonia*) were driven ashore near the harbour of Sebastopol, and were wrecked. Also one of the *Caledonia* perished in the same vessel. The *Talavera*, English transport ship, No. 98 (belonging to Mr. Duncan Dunbar, at Limehouse), is among other vessels reported to be lost on the east coast of Marmora; and her Majesty's ship *Gibraltar* had been dispatched from Constantinople to the spot to render assistance.

THE ENGLISH MISSION IN PERSIA.—The differences between the British mission in Persia and the Persian Government, which induced the British Minister to strike his flag, arose in the following manner:—The British mission, like two kinds of native employés, called Mirzas, one for all written communications and the reduction of notes and memoranda; the other for verbal transactions, messages, &c. Last year one of these latter died, and it became necessary to fill up his place. A man named Mirza Hashi was among the competitors. He is married to one of the numerous daughters of the late sons of Shah Fetch Ali, and his wife enjoys on that account a pension of 6000 piastres. This lady was rather strong-minded for a Persian woman, and had sown intrigues among the European part of the community, in consequence of which the couple had reason to fear the loss of their pension. Under these circumstances, the husband thought it advisable to become one of the Mirzas of the British mission, which position offered likewise considerably superior emolument to the irregularly paid 6000 piastres of his wife. He was appointed and presented to the Grand Vizier. This latter objected to have dealings with a man who had been employed in various services, even of a menial character in the palace, and who was, besides, from his unscrupulousness, a dangerous person to intrust with any communications between the Persian Government and the British mission. In consequence, however, of subsequent representations, the British mission did not insist further; after, the man tions, the British mission did not insist further; after, the man thought, protesting that their lives were endangered, took advantage of the night of asylum which all European missions in the East so conveniently afford, and took refuge in the palace of the Embassy. This thing was referred to England, and the Government sent out instructions to get an assurance from the Persian Government that the man should not be injured. The Persian Government was quite ready to give an assurance of this kind privately to the mission, and promised to leave the man quiet; but would not give any written declaration, as it was afraid that the man would use it for his own purposes, which was not at all improbable from his character. Then the English Minister, carrying out literally his instructions, struck his flag.—*Letter from Constantinople.*

*NEW BOOKS, &c.*

THE GARDENERS' EVERY-DAY BOOK.—Just published, Part I., price 1s. 6d.
G. CON, King-street, Covent-garden. Orders received by all Booksellers.

POEMS. By WALTER R. CASSELS.
London: SMITH, ELDER, and Co., 65 Cornhill.

Now ready, illustrated with Two Maps, at all the Booksellers' and Circulating Libraries,
INSIDE SEBASTOPOL.
CHAPMAN and HALL, Piccadilly.

This day.
THE BAND of HOPE REVIEW—The Five Yearly Parts of "The Band of Hope Review," containing upwards of 60 Engravings, in one volume, cloth, 1s.; gilt, 2s. 6d.
London: FARTRIDGE and Co., Paternoster-row.

This day.
THE BRITISH WORKMAN, and FRIEND of the SONS of TOIL. The Yearly Part for 1855 (Nos. 1 to XII.), with 152 Engravings by Cruikshank, Gilbert, Absolon, &c. 1s. 6d.
London: PARTRIDGE and Co., Paternoster-row.

This day, Two Volumes, post 8vo, with a Map, 18s.
LETTERS from the UNITED STATES, CUBA, and CANADA.
By the Hon. AMELIA M. MURRAY.
London: JOHN W. PARKER and SON, West Strand.

NOW READY, MR. DOD'S PEERAGE, &c.
New Edition for 1856, thoroughly revised and improved.
MR. DOD'S PEERAGE, BARONETAGE, KNIGHTAGE, &c., for 1856 (Sixteenth Year). Foolscap 8vo, handsomely bound in cloth, gilt.
WHITTAKER and Co., Ave-maria-lane, London; and all Booksellers.

Price 18s., cloth.
HAYDN'S DICTIONARY of DATES.
Seventh Edition, with Additions and Corrections, by B. VINCENT, Assistant Secretary and Keeper of the Library of the Royal Institution of Great Britain.
EDWARD MOXON, Dover-street.

Just published, price 2s. 6d., free by Post 3s.
THE FAMILY FRIEND.
"It is the very thing we want after the curtains are drawn and the candles are lit, after a long pleasant evening."—Bradford Observer.
London: WARD and LOCK, 158, Fleet-street.

Price Sixpence each,
MISS GUY'S CROCHET SHORTWAY.
EDGINGS, First, Second, Third, and Fourth Series. To be had all Berlin and Fancy Repositories. Either of these series sent postfree, on receipt of Seven Stamps, or the four for Twenty-five Stamps, by the Authoress, 36, Queen-street, Kensington.

ODELL'S SHORT-HAND.—Forty-fifth Edition, making 100,000 Copies sold, pronounced to be the easiest and best System of short-hand ever published. Price 8d., post-free.—ISAAC ODELL and SON, 5, Paternoster-row, London.

WORTH NOTICE. The DICTIONARY of 14,000 WORDS is now published, price 1s., with the names of 7,000 words omitted in other Dictionaries, containing the full meaning of the words, a correct spelling, and a letter about to write on that subject. BEELEY and Co., 54, Fleet-street.

One vol., fcap., price 3s. 6d.,
BLANCHE de BOURBON, with Miscellaneous POEMS. By W. H. JONES.
"We must make a reputation to the author."—W. S. Landor.
"We heartily recommend it to our readers, assured that the public, as a whole, is one of great merit, and far beyond the predictions of the present day."—Morning Chronicle.
"The story of Blanche is one of much interest, and it is narrated with a rich and illustrated with skill in Mr. Jones's poem."—Literary Gazette.
"In 'Blanche de Bourbon' Mr. Jones has evinced a poetic genius that will be found to stand the test of time, and to reflect upon himself an enviable reputation and a writer."—Brighton Examiner.
HOULSTON and SONS, Old Bond-street.

Demy 8vo, 344 pages, 8s. or 8s 6d with Hartley's Preface post-free,
SWEDENBORG'S HEAVEN and HELL; also, The Intermediate State, or World of Spirits.
Ewedenborg Society, 36, Bloomsbury-street, Oxford-street, London.

Post published, per 8vo, cloth, 2s. 6d.
DIGESTION and its DERANGEMENTS.
By T. K. CHAMBERS, M.D., Physician to St. Mary's Hospital, and Lecturer on Medicine at St. Mary's Medical School.
London: CHURCHILL, New Burlington-street.

In Four Series, to suit all Schools.
FOSTER'S PENCILLED COPY-BOOKS:—
Infants' Schools, fine post, 4to. 6d each.
For Boys' Schools (in Foolscap, 4to. 6d. each.
For the National Schools, 4to. 3d each.
For Private Schools, 4to. 4d each.
Published for J. Foster by C. H. LAW, 131, Fleet-street. W. AVARE, 5, Paternoster-row; and may be had of the National Society of Education, the British and Foreign School Society, and of all Book sellers, Stationers, and Newsmen. Full allowance to the Trade and to Schools.

BOOKKEEPING.
Just published, Sixth Edition, improved; to which is added, an Appendix on Partnership Settlements, Offices' Balance Sheets, Examination of Government Clerks, &c., 4to, price 8s. 6d., cloth;
DOUBLE ENTRY ELUCIDATED. By B. JACKSON, Accountant. This work contains a clear exposition of the principles and practice of Bookkeeping, and will be found alike useful to the teacher, the learner, and the man of business.
"Mr. Foster has produced a treatise which, for simplicity and accuracy, surpasses anything of the kind extant."—Bankers' Magazine.
London: Printed for John Souter; published by C. H. LAW, 131, Fleet-street; by Avare and Co., 5, Paternoster-row; and sold by all Booksellers.

Fourth Edition, just published, free by post, in 1s. stamps,
CONSUMPTION.—Important Discoveries relative to Consumption, its Cause, Nature, and a New and Successful Remedy. With Notices of Diseases mistaken for it. By JOHN GARDNER, M.D., member of the College of Chemistry, &c.
HEALE and Co., 15, John-street, Oxford-street; and all Booksellers.

HOMŒOPATHIC TREATMENT of INDIGESTION, Constipation, and Hæmorrhoids (Piles). By W. MORGAN, M.R.C.S. Containing simple Instructions for the Treatment of these common Disorders. Directions for Diet, Exercise, and Preparations of Iodine, which may be safely taken by persons suffering from any of these complaints. Free, bound, price 1s. 6d.
JAMES LEATH, 7, St. Paul's-churchyard, and 9, Vere-st., Oxford-st.

Twelfth Edition, 8vo, bound, price 18s. 6d.,
HOMŒOPATHIC DOMESTIC MEDICINE.
By J. LAURIE, M.D. Devoid of all technicality. No medicines are prescribed without the indications for its selection, and the time it is to be administered. A concise work, for families, students and practitioners. A Medicine Chest for this Work, price 50s.
AN EPITOME of the ABOVE. Price 5s. A Guide to those commencing this treatment in family practice.
In this work, price 9s. Carriage-free on receipt of post office order.
JAMES LEATH, 9, St. Paul's-churchyard, and 9, Vere-st., Oxford-st.

CHEAP BOOKS.—Excellent SECONDHAND BOOKS, in good condition, at very Low Prices. Catalogues sent free for One Stamp.—WILLIAM NIELD, 2, Davies-street, Berkeley-square.

BINDING the ILLUSTRATED LONDON NEWS.—Subscribers to the Illustrated London News (Old Monthly Series) can have their Volumes bound in the new and elegant manner, with Gilt Edges, at 2s. per Volume, by sending their copies carriage-free, with Post office Order payable to LEIGHTON, SON, and HODGE, 3, Shoe-lane, London. The only Binders authorised by the Proprietors.

MILITARY CONTINENTAL EDUCATION.—In a first-rate fortified town on the frontiers of France, in the house of an M.A. of Cambridge, where German and French are constantly spoken. Numbers limited. Address to D. 37, Johnstreet, Bedford-row.

APPROPRIATE CHRISTMAS PRESENTS.
15,000 BIBLES, PRAYER-BOOKS, and CHURCH SERVICES, in ornamental, plain, and antique bindings; common Bibles 3s. 6d.; family Bibles 10s. 6d.; velvet Church Services 10s. 6d.; bound with clips, clasp, and ornaments, 4s. 6d.; elegantly mounted 5s.; Prayer-books, rims and clasp 2s. 6d. Wholesale depôt for Hagster's Polyglot Bibles, at the publisher's prices. N.B. PARKINS and GOTTO, 23, Oxford-street.

BREWING.—PRACTICAL HINTS as to the Brewing, Fermentation, and Preparation of London Porter and Scotch East India Ale of Edinburgh Ales of Prime Quality, suited to the personal resources, method of Working, Capacity for Expenditure of Private Families or easy means. From Pale Pale Malt, with full directions for using Liquid Finings. Address, T. M. Post-office, Bridge-street, Blackfriars. By DAWSON and SONS, 74, Cannon-street, City, London.

*NEW MUSIC, &c.*

JULLIEN'S CADEAU for 1856. Price 5s., postage-free, containing a New Quadrille, Waltz, Polka and Galop; the whole of which have been performed with the greatest success at M. Jullien's Concerts this Season
JULLIEN and Co., 214, Regent-street.

GARDNER'S LAMPS are the BEST MODERATOR LAMPS for Study, Reading, Writing, Dressing, and Parlour use, at 23, 63, and 63, STRAND, CHARING-CROSS.
By Appointment to her Majesty.
Established 104 years.

MODERATEUR LAMPS.—EVANS, SON, and CO respectfully invite their Friends and the Public to an inspection of the extensive and beautiful STOCK of these unrivalled LAMPS, just received from Paris, embracing every improvement, in every variety of mounting. Also a large assortment of various elegant designs, suitable for the cottage or mansion. Show-rooms, 34, KING WILLIAM-STREET, London-bridge.

MODERATOR LAMPS.—Simplicity, strength, and great beauty of light. Also, smaller in size, for the Drawing-room, at 21, PRANCE and SON above every other Lamp in use. They are the cheapest in the trade. The Moderator Lamp is the best, and is the best light, and of the most elegant construction, and exclusively to this house—being makers of Art of High merit.—Address Prance and Son, 20, Poultry, City.

LAMPS à MODERATEUR, from 6s. to £16.—The demand for these lamps is now so great that WILLIAM S. BURTON has collected from all the manufactories in Paris and in London a variety that cannot be surpassed. As many have arrived from Paris were found to be inferior to his works, William S. Burton has sent expressly to Paris to select only from the best makers, and he can now guarantee each lamp he sells as perfect in all its parts.
Bronze lamps, full size ... from 6s. 0d to 20s. 0d

Pure Colza Oil, 5s. per gallon.
At Oxford-street, Nos. 1, 2, 3, and 4, Newman-street; and 4, 5, and 6, Perry's-place.

CANDLE LAMPS.—The high price of Oil, and the adulteration by the dealers of London, has directed public attention to CANDLE LAMPS. Messrs. FIELD and CO. have turned their attention upon an excellent candle lamp in facility of management, cleanliness, and general economy. They are the best lamps for giving any amount of light, and are suited to all purposes (the large glass globes are the best for reading, writing, or working), and the light is as perfect as possible, care should be taken to procure Lamps, Candles, and Chimney Glasses stamped "Palmer and Co.," as they cannot be answerable for the burning of their Candles when the Lamps are not used with their Chimneys. Lamps and Candles sold retail by all Lamp Dealers, and wholesale by Palmer and Co., Sutton-street, Clerkenwell.

LONDON AND WESTMINSTER BANK.—NOTICE is hereby given that the ANNUAL GENERAL MEETING of this Company will be held at the BANK in Lothbury, on WEDNESDAY, the 16th day of JANUARY, at One o'clock precisely, to declare a Dividend, and to elect three Directors in the room of Walter Helps, Esq., James Esdaile, Esq., and John Stewart, Esq., who retire by rotation, but, being eligible for re-election, offer themselves accordingly. THE BEST FOOD FOR CHILDREN, INVALIDS, AND OTHERS is ROBINSON'S PATENT BARLEY, for making superior BARLEY-WATER in fifteen minutes, has not only obtained the patronage of her Majesty and the Royal Family, but the highest testimonials of general use to every class of society. It is acknowledged to stand unrivalled as an eminently pure, nutritious, and light food for infants and children; much approved for making a delicious custard-pudding, and excellent for thickening broths or soups.
ROBINSON'S PATENT GROATS far more than ordinary Oatmeal, and are considered by many families superior to the finest farina of the oat and are highly recommended for making a pure and delicate GRUEL, which for a sick or infirm person is a most nutritious supper for the aged is a popular recipe. For invalids generally, as of general use in the sick-chamber, and, above all, as a food for the young, they are unrivalled. Sold in packets of 6d. and 1s., and Family Canisters, at 2s., 5s., and 10s. each.

THE "MAISON VERTE," SEBASTOPOL.—SKETCHED BY E. A. GOODALL.

## THE "MAISON VERTE," SEBASTOPOL.

THE subject of this Engraving was a favourite target for the long ranges. It was not hit quite so often as the sea who aimed at it desired, but it has been mauled quite enough in all conscience to satisfy any reasonable artillery man. It certainly was not the house one who had any regard for a whole skin would have selected for a lodging. Marks of shot are plentiful enough in and around it. One shot, which has left no mark that can be observed, has half turned round the topmost stone of the centre pinnacle of the south front; or, could it have been the wind of the shot only—an agent of mischief which forms an article of belief with old soldiers, and is gravely discussed in treatises on military surgery? This house was once devoted to the purposes of education. It was, in fact, a school for young ladies, and, no doubt, a highly-respectable "establishment," if one may judge from the extent of a range of green covered sheds within the railing and walls of the premises. Many a gallant fellow, who will never see Sebastopol again, will be glad to know what the Maison Verte looks like on nearer acquaintance. Here it is, then; and we hope that its portrait as it now is—or was, at least, on the 8th of November, 1855—will interest the reader as much as the inspection of the original did the artist.

## THE NORTH SIDE OF SEBASTOPOL.

THE position of the Russians on the north side of the harbour of Sebastopol, of which we give a Sketch this week, has remained without any alteration for the last few weeks. The rumour which was current a fortnight ago, regarding their intention to move northward seems to have been without foundation. According to the latest accounts the forts on the north side continue to fire, but the Allies do not deign to reply to them. The new French batteries are completed, and when the day arrives to bring their guns into play the forts on the north will, it is expected, be soon reduced to silence. A letter from Kamiesch, of the 5th instant, in the *Gazette du Midi*, says:—

I can announce to you a fact of considerable importance—the docks of Sebastopol are to be blown up on the 9th. These docks were amongst the most remarkable maritime constructions not only of Russia, but of the whole world. An idea of the expense they occasioned may be formed from the fact that their sides are formed of square blocks, of which each side measures about five feet. Miners have for some time been engaged in sinking shafts to the bottom of the lowest foundations; these shafts were recently finished; and preparations for the blowing up were then made. The destruction of these great works will be the signal for a war without mercy. "It seems to me," said a General, "that, in blowing up the docks, we shall blow up the headquarters of negotiations." Locomotives have begun to run on the Balaclava Railway, and excite the admiration of the Turks. The first brought into use has been named the "Alliance," in honour of the Allied Powers.

The report gains confirmation day by day, that, as far as regards the Crimea, the Allies will be content to fortify and hold the points already in their possession, and that the great bulk of the French, if not of the English army, will be removed elsewhere.

SEBASTOPOL. NORTH SIDE. SKETCHED BY J. A. CROWE.

# THE ILLUSTRATED LONDON NEWS

No. 780.—VOL. XXVIII.] SATURDAY, JANUARY 19, 1856. [WITH A SUPPLEMENT, FIVEPENCE.

## THE AUSTRIAN PROPOSITIONS.

THE substance of the Russian reply to the Austrian propositions for peace has been made public. The Czar notifies his willingness to declare the neutralisation of the Black Sea, and to renounce the protectorate over the Greek subjects of the Sultan; but objects to any "rectification" of his territory on the Pruth or at the mouths of the Danube. He also objects to forego the rebuilding of Bomarsund, or to consent to any limitation of his rights, aggressive or defensive, in the Baltic. But in agreeing to the neutralisation of the Euxine, and the consequent limitation of his naval power in that sea, the Czar, in January, 1856, consents to terms which, in April, 1855, he rejected as incompatible with his personal dignity and the honour of his country. So far there has been progress during the nine months. The sword has partially done its work. If Russia be still to any extent unreasonable, we know the process to employ to bring her ruler to a more peaceable frame of mind. The only argument that touches Russia is the *ultima ratio*. From his point of view the Czar is right in acceding no more to his enemies than they can compel him to yield. From their point of view the Allies will also be right, if they continue to employ the argument which has been to this extent convincing. Sharper sword-thrusts, better-directed efforts, and heavier blows;—such are obviously the only means to produce the stable and honourable peace, and the European security and independence, which are the sole objects of the war.

Europe, and the Allies more especially, have now to consider what effect these partial but insufficient concessions will have on the extent and character of the contest, and on the mutual relations of the several Powers engaged, or about to be engaged, in it. The failure of Russia to give her "pure and simple" adhesion to the Austrian project, places Austria in a new position towards Russia. While remaining on the defensive, the Czar states to Austria, in effect, "I yield what Great Britain and France demanded of me nine months ago. I will not yield what you have now, on your own responsibility, added to their demand. You ask it in your own interest—not in theirs; and I will rather do battle with you than submit to your dictation." What course will Austria pursue under the circumstances? It is difficult to believe that Francis Joseph will quietly accept the humiliation of the refusal, or that he will wriggle out of the dilemma by so unworthy a loophole of escape as that offered to him by the "pure and simple" rupture of diplomatic negotiation. The heavens would not crack if Prince Gortschakoff and all his legation bade their final adieus to the courtly and pleasant Count Buol and the bowery avenues of the Prater; neither would the post-Metternichian deluge burst forth on the unlocosing of the little plug, which is kept safe and water-tight, as long as the Esterhazys represent the majesty of Austria on the banks of the Neva. Everything might go on as peacefully as before—and some people are stubborn enough to believe, still more peacefully than before—if there were no such persons employed as Ambassadors, and if plain Consuls were alone left to transact the business of nations. But leaving that question as irrelevant at the present

HER IMPERIAL MAJESTY THE EMPRESS OF RUSSIA.
(SEE NEXT PAGE.)

CHRISTMAS-DAY IN THE CRIMEA.—DINNER OF CAPTAIN BROWN'S COMPANY, 57TH REGIMENT.—SKETCHED BY J. A. CROWE.—(SEE NEXT PAGE.)

time, the wisdom and the spirit of the Austrian Government, if it take no steps more decisive than the issue of Prince Gortschakoff's passport and the recall of Prince Esterhazy, will be questioned in every part of Europe. Whether such doubts, not unmingled with contempt, are of any consequence to the stability of the Austrian empire, as at present constituted, time will show. Yet it seems to us that no State, however great or powerful, can safely consent to any degradation which she has it in her power to avert by honesty and courage; and that considerations of interest, which may perhaps weigh more strongly than those of duty in the balances of Vienna, will link Austria yet more closely to the Western Allies, and widen still more sensibly the moral chasm which now separates her from Russia. She "has passed the Rubicon," and a few days will show whether she have done so merely to pass back again, or to march forward, and fight. The probabilities are that she has made up her mind to act honourably and decisively, and to declare war against the enemy of Europe. If so, *tant mieux pour l'Autriche!*

It is not possible that Great Britain and France will accede to terms which have not even the merit of satisfying their reluctant friend at Vienna; although some short-sighted politicians —and not a few wrong-headed if not wrong-hearted members of that party which prefers peace with dishonour and humiliation to war with honour and dignity—may consider that the counter-propositions of Russia are worthy of acceptance. The one set of reasoners would punish Austria for not having, at an earlier period, made common cause with us. To effect this they would make peace on the Black Sea question only—thus leaving Austria to bear the whole brunt of Russian vengeance. The other would, with Mr. Cobden, make peace on any terms whatsoever, and place the victors in the position of the vanquished—leaving to Russia all the honours as well as all the advantages of the strife. The universal heart of Great Britain and France repudiates both; the first, because the policy they recommend would be unwise as well as ungenerous;—the second, because the policy, if worthy of such a name, is the policy of dastards and of idiots—a policy that would invite and foment the warfare and the aggression which it loathes, and which would leave Europe to the tender mercies of those who have no mercy, and own no rule but that of the strong hand of ungovernable ambition.

The Emperor of Russia is in a critical position. Great Britain and France have proved—and, if peace be not made, will prove yet more emphatically—that they, unaided either by Austria or by Prussia, are quite able to enforce the justice which he refuses to yield. There is no holding back on their parts, no hesitation, no slackening of exertion, no bating of heart or hope; but, on the contrary, both people and rulers swell to the height of each greater occasion as it arises. In the midst of a struggle that seems to have well-nigh exhausted their opponent, they feel and act as if all they have done was but a preparation for a mightier conflict—a mere warming of their hands in the morning, for the great day's work that lies before them. Whether Austria joins them or not will make no difference to their determination, and but little difference to their tactics. France and England have the power of the screw. They have turned it so effectually as to abate the high pretensions of Russia, and to compel slow Austria to make one move in the right direction, and to render it difficult, if not impossible, for her to refuse to make another. They know how to wield the instrument. What is wanted is the screw upon Russia, Austria, and Prussia. Each requires a little more pressure, and if unhesitatingly and vigorously applied, it is probable that peace will be the result. Whether the happy consummation will be arrived at before or after a spring campaign will, under present circumstances, depend as much upon the squeezability of Prussia as upon that of Austria. Of this all Europe may be certain, that the time has come when Prussia must either declare herself our friend or our enemy. If she prove a friend the war will speedily close; if not, it will last a little longer; but the result will be the same, and Russia and all who back her will be compelled to yield to force what they have refused to yield to justice.

## ALLEGED ACCEPTANCE BY RUSSIA OF THE AUSTRIAN PROPOSITIONS.

THE preceding article was in type when the public was startled by a telegraphic announcement in a second edition of the *Times*, under date of Vienna, Wednesday, ten p.m., stating "that Russia had *unconditionally* accepted the propositions of the Allies," and that the news was "*authentic*." The Funds rose in consequence; but, as in well-informed quarters little credence was attached to the statement, and as the *Morning Post*, at a later hour, announced, on the authority of a telegraphic despatch from Sir Hamilton Seymour, that Russia merely accepted the Austrian proposals "as a basis for negotiation," the public securities again declined. In fact, the Russian answer amounts to little or nothing. All the world knows that the Czar in March last accepted in the same manner the famous "Four Points" as the basis of a pacification, without ever intending to make peace upon them, as the result but too surely proved. What faith can be put in Russia at the present time? What is there in the character of Russian diplomacy to induce the belief that she accepts the larger basis, with a sincerer object than she did the smaller one? Between an unconditional acceptance without parley, and the acceptance of a basis to parley about, there is a wide difference. Of course the Allies will not, and ought not to, raise any difficulties in the way of renewed negotiation; but while the diplomatists talk the war must proceed. We hope that peace will result, but we are certainly not sanguine.

THE QUEEN'S PRESENT TO MISS NIGHTINGALE.—The design,—suggested by the Prince Consort—of the jewel presented by her Majesty to Miss Nightingale, consists of a St. George's Cross in ruby-red enamel, on a white field, representing England. This is encircled by a black band, typifying the office of Charity, on which is inscribed a golden legend, "Blessed are the merciful." The Royal device is expressed by the letters "V. R." surmounted by a crown in diamonds, impressed upon the centre of the St. George's Cross, from which also rays of gold emanating upon the field of white enamel are supposed to represent the glory of England. Wide-spreading branches of palm, in bright green enamel, tipped with gold, form a framework for the shield, their stems at the bottom being banded with a ribbon of blue enamel (the colour of the ribbon for the Crimean medal), on which, in golden letters, is inscribed "Crimea." At the top of the shield, between the palm branches, and connecting the whole, three brilliant stars of diamonds illustrate the idea of the light of Heaven shed upon the labours of Mercy, Peace, and Charity, in connection with the glory of a nation. On the back of this Royal jewel is an inscription on a golden tablet, written by her Majesty, recording it to be a gift and testimonial in memory of services rendered to her brave army by Miss Nightingale. The jewel is about three inches in depth by two and a half in width.

## HER MAJESTY THE EMPRESS OF RUSSIA.

RUMOUR has been for some time past busy with the name of the young Empress of Russia as a personage who exercises no inconsiderable influence over the mind of her Imperial husband, and more especially as being steadily the advocate of peaceful measures. In Russia, as we all know, there are two great parties—the Muscovite and the German. They are as antagonistic in the principles of their policy as in their objects of ambition. In the Council-chamber, in the Army and Navy, in the Administrative departments, and even in the saloons of the Emperor, they maintain an eternal and internecine rivalry which only the predominant and despotic authority of the Crown can temper and control. Without going the length of saying that the Empress is at the head of one of these parties—for it would be contrary to her nature and character to take part against any of the subjects of her husband—she is, nevertheless, looked up to with veneration and hope by those with whom she sympathises in origin and language. If at the present moment she is desirous of peace, it would be too much to affirm that a consideration of the evils which a universal war would bring upon her Fatherland does not, even unconsciously to herself, influence her in endeavouring to give that tone to the policy of the country of her adoption. For her Majesty is thoroughly German in her character, although a cause of duty and the influence of associations have led her entirely to identify herself with the interests of her husband and of the nation over which he rules. The whole of her early life, and most of it since her marriage, was spent in the Hessian dominions—from which she can only be said to have been finally severed when called on to mount the throne of Russia.

Some twenty years ago the traveller in the mountainous regions in the neighbourhood of Darmstadt might have encountered and have stopped involuntarily to admire—perhaps on the wayside, perhaps in some peasant's cottage, perhaps ascending the mountain's side—one of the loveliest of God's creatures. The same traveller might also have encountered her in the streets of Darmstadt, running about that quiet little town, making her visits or her purchases, and attended, perhaps, by only a waiting-maid, like any other lady promenader. The lady was the Princess Mary of Oldenburg, the present Empress of Russia.

Some ridiculous stories used to be circulated as to the Princess, which we only notice here because their contradiction may warn the credulous, always too prone to extravagant fables with respect to Royal personages. In consequence of her extraordinary beauty, and the frank simplicity of her character, and the pleasure she took in escaping from the ceremonies of State and Court life, it was circulated that she had been treated with neglect and disdain by her relatives; that, in short, she was a kind of Cinderella, to whom her sisters—or, as according to some others, her cousins—were preferred. These were mere inventions. The Princess Mary has always been, and, notwithstanding her elevation to the Russian throne, still is, a favourite with the good people of Darmstadt, whose affection is amply justified by her extreme affability and beauty.

While thus she lived a life of happy freedom the event that was to decide her fate in life was approaching. About the year 1840 the present Emperor Alexander II., then the Cesarewitch, was sent by his father, the late Emperor Nicholas, on a tour through Europe in search of a wife. He visited several German Courts, where the brilliancy of the prize exposed him to all the seductions and temptations which usually assail a man who is known to have some claim to a union. In vain was he introduced to the various Princesses of the reigning houses. From all he passed unscathed till he reached Hesse Darmstadt; but there his fate was sealed. One of the peculiar characteristics of the Russian Court is its combination of extreme refinement and elegance with an almost patriarchal simplicity in domestic life. In the young Princess Mary—then about sixteen years of age—the Cesarewitch saw the ideal of a wife, and he became enamoured of her at once. Within a year they were married, the Princess changing her original names, Maximilienne Wilhelmine Augusta Sophia Maria, into the Marie Alexandrowna, by which she is known to the Russian people.

The Empress of Russia was born on the 8th of August, 1824. She was the daughter of LOUIS II., the late Grand Duke of Hesse, and was married to the present Emperor of Russia on the 16th April, 1841. Her Majesty has five children, three sons and two daughters. Her elder brother, the reigning Duke of Hesse, has recently used his utmost efforts to second his sister in her great aim—that of arriving at a restoration of peace. Although at war with the Russians, we have learned to respect their many great qualities; and it is a still more softening influence over the asperities engendered by strife to know that the illustrious lady who shares the Russian throne is herself an apostle of peace, civilisation, and progress.

## CHRISTMAS-DAY IN THE CRIMEA.

*(From our Artist and Special Correspondent.)*

CAMP, SECOND DIVISION, Dec. 26, 1855.

IT was "creditable to be jolly" under our circumstances; and those who were so, deserved it for their lightness of heart under a load of privations. Yesterday the mess-tables of the regimens more resembled those of England than the impoverished arrangements of a winter in the Crimea. Plum-puddings sent out from England had failed to arrive as a matter of course; but our military cooks had their own, of fresher and equally good materials. The chief losers were the sutlers, who were to be seen groaning over the retention of 2000 puddings at Constantinople, or a thousand and more stowed under planks and warm clothing at Balaclava. Whilst the officers in their various messes thus surrounded themselves with the good cheer of the season they were not unmindful, at the same time, of the welfare of their men, and a vast system of dinners by companies was organised throughout the Camp with the greatest success. Money subscribed by the soldiers amongst themselves was added to sums clubbed for them by their officers, and the most sumptuous repasts were spread out upon improvised tables, rigged in naval fashion and suspended by leathern thongs from the roofs of the huts. Happy were feets surrounded by all the pomp and circumstance of war, for the soldiers' muskets were slung over their heads, their cartouche-boxes near them, whilst their packs decorated the rafters. When the eatables had been discussed, grog and port followed, and toasts were given round amidst enthusiastic cheers. Absent friends were thought of without the expression of regret for their enjoyment of better fare than had graced the board that day, the feeling being rather—may they enjoy themselves as well as we do, and if they fight as we did may they have our reward! There the jovial songs so dear to soldiers reverberated through the wooden edifices, and were more remarkable for their execution than for musical qualities. There were hurrahs for the "Girls we left behind us;" murmured applause for the "Old house at home;" and choruses of a hundred voices for glees, which of all English music are perhaps the dearest and the best to real English hearts.

Whilst feasting without its outer show of holly-berries and mistletoe were the order of the day in our camps, the Russians spent their time in quick though useless discharges of their guns from the north side, finding no more appropriate objects to fire at than the holiday folks taking a turn in the sunshine and loitering amidst the ruins of Sebastopol. Nor was a contrast wanting between our camps and those of the French, where the day was marked by no change: the ill-fed soldiers calling round at their usual haunts in search of biscuit, or cadging for what else they could pick up. One soldier in particular struck me as I was sketching in the hut of Captain Brown, of the 57th, under the care of Colour-Sergeant Macgann. He walked up to the door of the hut, looked in, and, seeing the crowd devouring their plum-pudding, he slowly retreated, heaving a sigh which was visible as it escaped into the frosty air, and disappeared with a look which almost said, "Is this what the camp life in winter quarters near the enemy?" went on his weary rounds, asking at the doors of the huts, "*Johnny, as tu du biscuit?*"

THE POLISH LEGION.—General Zamoyski has just addressed to his countrymen and his old companions in arms, in the form of a report to Prince Czartoryski, a circular, in which he informs them that he is charged by the British Government, with the assent of France and Turkey, to organise a division composed of Poles, bearing the name of the "Polish Division of Cossacks of the Sultan," and destined to receive into its ranks Polish prisoners of war or others who may quit the Russian army. This division will, at first, be composed of a brigade of infantry of two regiments; of a battalion of foot chasseurs and of two regiments of cavalry. A first regiment of cavalry has already been formed, and is now at Varna, and the formation of the first regiment of infantry is far advanced at Scutari. General Zamoyski, having to appoint a considerable number of officers of all ranks, requests his old comrades of the Polish army to send in their applications, with documents proving their rank, to a commission which has been formed by Prince Czartoryski for examining them. These applications must be addressed to the agency of the Polish Division of the Cossacks, 3, Rue Breteonvilliers, Paris, before the 26th inst., as the appointments are to be made on the 1st Feb.

## FOREIGN AND COLONIAL NEWS.

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

IT appears that a variety of highly-important measures of State are in preparation in anticipation of the birth of an heir to the Imperial crown—measures relative to the continuation of the present dynasty of the greatest interest and significance. At the first ball at the Tuileries her Majesty appeared; but did not, as usual, make the round of the *salons*, nor enter into conversation with any of the guests, except Lady Cowley. Her Majesty retired at an early hour, appearing somewhat fatigued. The absence of the Princes Jérôme and Napoléon from the Tuileries, which formed the subject of general remark, is, it is whispered, owing to the dissatisfaction caused by certain difficulties made to the promotion of some of the officers about the persons of their Imperial Highnesses—officers especially recommended by them for advancement. An interview has taken place between the Prince Jérôme and the Marechal Vaillant on the subject, in which the sentiments of the former have been most decidedly expressed, the Prince feeling to a certain degree responsible for the welfare of the officers taken from under the authority of their own commanders to be on his staff.

A magnificent fête is to be given at the Ministre d'Etat in honour of the inauguration of the new Louvre. The ball at the Hôtel de Ville is deferred.

The new arrangement in England with respect to the postal transport of books and other printed productions is about to be also adopted here, and a project for further ameliorations on this subject is proposed to be brought forward at the next sitting of the Corps Législatif. But while on this point we would direct attention to a part of the regulation which, as it now stands with regard to the transport between England and France, entirely destroys the benefits of the arrangement to a certain and a sufficiently large class, under peculiar circumstances—we allude to authors during the process of correcting proofs. A word, a letter, a mere sign, written on the margin of the sheets, either by printer or author, takes away his privilege, and the packet becomes subject to the same regulation as a letter, and pays by weight—thus causing an unavoidable and frequently heavy expense, to those, moreover, whose profession exposes them to the constant recurrence of the inconvenience.

The hard frosts that concluded last week have once more given way to thaw and rain. It is to be hoped the latter may not continue, as already many parts in the southern and in other departments have suffered much from heavy rains and consequent inundations.

A variety of reports have been spread respecting the reorganisation of the Ecole Polytechnique. It appears, however, that the proposed changes go no further than removing therefrom the civil part of the institution, which is to be established in the Ecole Centrale of the Quartier St. Antoine, and making the Polytechnique wholly a military college. It is also probable that it will be removed to another locality, and that the present building will be converted into a barrack.

The organisation of the French army has been so much admired by the King of Sardinia that he has resolved on introducing various parts of the system into his own. Among other innovations, he has decided on substituting the statutes of the Legion of Honour for those now existing with regard to the Orders of St. Maurice and St. Lazarus, by which grades formerly non-existent are introduced, and others are modified.

Of the 105 magnificent copies of the "Imitation de Jésus Christ" which gained the grand medal for the Imprimerie Impériale at the late Exhibition, the Emperor has purchased 73. The 30 remaining copies were confided to the library of Victor Masson, under the express condition that they should only be sold in a manner worthy of so remarkable a production. After the Emperor and Empress's copies were delivered the next were presented to the Pope, another having been offered by the Emperor to the Queen at the period of her visit to Paris.

The Empress has just enriched the Museum of Natural History by the gift of two animals of a species not hitherto belonging to any zoological establishment in Europe. These creatures partake of the nature of the horse and of the wild ass. They were known by description to the Museum, but it did not possess even a skin or skeleton of these rare animals, which have been presented to her Majesty by the Viceroy of Egypt.

At the Tuileries the evenings fixed for the balls and soirées are the 19th and 29th inst., and the 4th February; the Princesse Mathilde gives a ball on the 17th inst. (this evening).

The entrance of the second division of the troops returning from the East has been, from some mismanagement, a source of much disappointment alike to them and to the Parisians. No announcement on the subject having been issued, the weary army entered Paris on a wet, miserable day, ankle deep in mud, fatigued and drenched, and passed through to their various quarters, unrecognised, and consequently unwelcomed, by those who would have given them a warm and cordial greeting. At the review, passed before the Emperor, every attempt was made to manifest how unintentional was the apparent neglect; but the first impression must have been none the less painful and discouraging at the time.

Another name has just been added to the already too-long obituary-list of celebrities carried off within a short space—that of David (d'Angers), so called from the name of his native town, added to distinguish him from several other sufficiently remarkable artists similarly entitled. David d'Angers was born in 1789. The son of a poor wood carver, his genius for sculpture early developed itself; but being checked by his father, who wished to apprentice him to a trade, the boy's despair was so great that he attempted to poison himself—happily in vain. Aided at last by a more enlightened friend of the family, he came to Paris, entered on the profession Nature had destined for him, and through poverty, discouragement, and political difficulties—for the child of '89 was baptised in the troubled waters of the period that gave him birth, and never altered the bias of his opinions—he fought his way to fame and excellence, till the name of David d'Angers stood among the uppermost ranks in the list of modern sculptors. His funeral was the meeting-point of some of the most remarkable illustrations of the Democratic party now remaining in Paris, as well as of the principal artists. Béranger became on this occasion the object of a complete ovation on the part of some of the young men assembled. A discourse was pronounced by M. Halévy, the perpetual secretary of the Institute: a second had been prepared by the sculptor Etex, but was not read, as it was considered unadvisable to do so in the interest of the order and tranquillity it might prove difficult to maintain with such elements assembled. Nothing, however, transpired to disturb the solemn nature of the meeting, which dispersed with perfect order.

Last week took place the first representation at the Opera, in honour of the return of the Army, at which the Emperor, the Empress, and the Duke of Cambridge appeared. A large number of the troops might have profited by the occasion, for the house was by no means full.

### FRENCH FINANCIAL REPORT.

The *Moniteur* of Wednesday publishes the report of the Minister of Finance to the Emperor upon the financial condition of France. The report concludes as follows:—

To resume, Sire. This simple sketch of the principal financial events of the past year shows us a commercial activity without a parallel; unheard-of progress in consumption; two enormous loans, paid up with the greatest regularity, and in a great measure before the payments were due; beside the loans, more than 135,000,000f.—a sum which had never before been known to have been employed in the purchase of rents for the departments; the direct contribution paid by anticipation and

almost without expense; a well-balanced budget; the floating debt reduced; and all this despite the war, despite the crisis in the high price of food, despite the very considerable outlay which a glorious war must have imposed upon us. What greater proof could be given of the vitality and richness of the country, and of all that France is capable of under a popular Government, with such resources wisely employed? Extravagance alone might be feared. Your Majesty will know how to obviate that danger by your high prudence, by firmly opposing the inconsiderate temptations of speculation, and by adjourning, in the interest of the enterprises already commenced, all those which do not bear the evident mark of urgency.

THE PEACE PROPOSALS—RUSSIA'S ACCEPTANCE.

The following narrative of what took place when the Russian answer was received is by the Vienna Correspondent of the *Times*, in a letter dated Jan 12:—

On Friday, the 11th January, a "Feldjager," who had quitted St. Petersburg on Saturday, the 5th, reached this city with despatches for Prince Gortschakoff, and before noon on the same day the latter had called on the Austrian Minister for Foreign Affairs and communicated to him their contents, which were neither more nor less than the reply of the Russian Government to the propositions made by Count Valentine Esterhazy in the name of this Government. The conditions relating to the Danube, to the neutralisation of the Black Sea, and to the Christian population of the Porte, were accepted; although the St. Petersburg Cabinet proposed that they should be worded in a somewhat different way. The alterations proposed were, however, unimportant, and the Allies would hardly have objected to them, had not the Russian Cabinet refused to agree to one of the stipulations contained in the first point, which (as your readers will probably recollect—relates to the Danubian Principalities. The stipulation referred to is the following:—

"As an equivalent for the fortified places and territory now occupied by the Allied armies, Russia agrees to a 'rectification' of her frontiers towards Turkey in Europe."

In its reply the St. Petersburg Cabinet took no notice whatever of the demand made by the Powers, that a part of Bessarabia should be ceded to Turkey, but it expressed its readiness to restore to Turkey the territory which it recently had lost in Asia Minor, if the Western Powers would agree to withdraw from the Crimea. In a word, Russia considers the Pachalic of Kars a fair equivalent for Kinburn, Eupatoria, Sebastopol, Kamesch, Balaclava, Kertch, and Yenikale

As Prince Gortschakoff expressed a wish to be made acquainted with the definitive resolution of the Allied Powers within as short a time as possible, Count Buol promised to give him the required information within twenty-four hours. As soon as the Russian diplomatist left the Foreign-office Count Buol hurried to his Imperial master, and, after having communicated to him what had occurred, and received his instructions, he held prolonged consultations with Sir Hamilton Seymour and M. de Bourqueney. Yesterday morning the three Allied Governments had already resolved on the course to be pursued; and when Prince Gortschakoff, at one o'clock, called at the Foreign-office, he learned from Count Buol that Austria, France, and England rejected the counter-propositions which had been made by Russia. Positive orders were yesterday sent to Count Esterhazy to quit St. Petersburg on the 18th, if the original propositions were not previously accepted *purement et simplement* by the Russian Government. Something has been said of a cession of the Danubian Islands; but such a proposal would not be taken into consideration, as the three great Powers have resolved to deprive Russia of the power to invade the Danubian Principalities at pleasure. During the last thirty-six hours the Austro-Russian party has done all in its power to shake the resolution of the Emperor, but his Majesty is as firm as a rock. A hundred conflicting reports are in circulation relative to the Russian counter-propositions, and it may, therefore, be well to observe that the information given above is perfectly authentic

AMERICA—THE PRESIDENT'S MESSAGE.

The mail-steamer *Asia*, which sailed from New York on the 1st inst, arrived at Liverpool on Monday last. The Message of the President was read before the Senate, at Washington, on 31st December. The House of Representatives had not at the time elected a Speaker, and great excitement was produced when the President's Message was announced. After a fierce debate, it was decided, by 87 against 126, that the Message should not be read until the House was organised

At the outset the President alluded to the satisfactory condition of tranquillity which the Republic was in, and thus proceeded to give an account of the difference with Great Britain regarding the terms of the Bulwer-Clayton treaty:—

By the convention of 1850 complete independence was secured to the States of Central America, and all claims on the part of either England or America were thereby relinquished, and no domination was to be assumed by either On his (the President's) accession to office, it became apparent that Great Britain still continued in the exercise of assertion of large authority in all that part of Central America commonly called the Mosquito coast, and covering the entire length of the State of Nicaragua, and a part of Costa Rica; that she regarded the Belize as her absolute domain, and was gradually extending its limits at the expense of the State of Honduras; and that she had formally colonised the smaller group known as the Bay of Islands, and claimed the right of right to that State. All these acts and pretensions, being contrary to the tenour of the convention, have been made the subject of negotiations, through the Ambassador in London. The correspondence between the two Governments shows a wide divergence of view between them as to the stipulations of the convention; Great Britain maintaining her Mosquito sovereignty with a sovereignty which, as derived from the acts of Indians, is not recognised by the public law of Europe or America. Vattel's rights have been pressed as against the Central American States. Le leg timate successors of all the rights of Spain to the territory. On the eastern coast of Nicaragua the interference of Britain appears in the shape of a protectorate over the Mosquito tribe of Indians. But the Belize and Honduras establishments approach to colonial governments as much as do those of Canada or Jamaica. It was impossible for the United States Government to acquiesce in such a construction of the convention. To a renewed call by this Government upon Great Britain, to abide by, and carry into effect, the stipulations of the convention according to its obvious import, by withdrawing from the possession or colonisation of portions of the Central American States of Honduras, Nicaragua, and Costa Rica, the British Government has at length replied, affirming that the operation of the treaty is prospective only, and did not require Great Britain to abandon or contract any possessions held by her in Central America at the date of its conclusion. The United States' Government, simply desiring the fulfilment of the convention in its essence and spirit, has not looked to rights which it might assert, independently of the treaty, in consideration of its geographical position, and other circumstances. The British Government, in its last communication, still declares that it sees no reason in a conciliatory spirit may not enable the two Governments to overcome all obstacles to a satisfactory adjustment of the subject. On this subject the President concludes:—"Assured of the correctness of the construction of the treaty constantly adhered to by this Government, and resolved to insist on the rights of the United States, yet actuated also by the same desire which is avowed by the British Government to remove all causes of serious misunderstanding between two nations associated by so many ties of interest and kindred, it has appeared to me proper not to consider an amicable solution of the controversy hopeless. There is, however, reason to apprehend that with Great Britain in the actual occupation of the disputed territories, and the treaty therefore practically null, so far as regards our rights, this international difficulty cannot long remain determined without involving in serious danger the friendly relations which it is the interest as well as the duty of both countries to cherish and preserve. It will afford me sincere gratification if future efforts shall result in the happy anticipated hereinfore with more confidence than the aspect of the case, truth to me now to entertain."

In regard to the difference with England arising out of the violation of the United States' neutrality laws, by the attempt to raise troops within our borders, the President presents no definitive view of the case. He says the action of the British Government not only a cessation of the wrong, but yet nothing specific is disclosed concerning the character of the reparation demanded or the disposition of the English Government to make it. The subject is yet under discussion.

In reference to the Sound Dues of Denmark, it is stated that the invitation of the United States Government to go into a convention with the representatives of all European States for the emancipation of the dues has been declined, though a willingness is expressed to compensate Denmark for all of her outlay in improving the navigation of the Sound or Belts

The difficulties with France, Spain, and Greece are all pronounced settled, or nearly settled.

Affairs were quiet in Nicaragua, and General Walker had dispatched a battalion to Honduras to assist the President

Advices from Mexico report the resignation of Alvarez, and the election of General Comonfort. The following is the new Ministry:—Foreign relations, Ross; Justice, Montes; Government, Lafragua; War, Salicio; Finance, Payne. Alvarez had departed for the south.

TITHE COMMUTATION.—The result of the corn averages for the ten years to Christmas last is that each £100 of tithe-rent charge will amount to £81 15s. 11d. for 1856, which is rather more than 4 per cent above last year's value.

## NOTES OF THE WEEK.

THE President of the United States has committed an act which makes a patriot recur to the window at Whitehall, or at least to the resolution of February, 1689. The King of the States has ventured on a *coup d'état*. The House of Representatives, having met, was unable to choose a Speaker, owing to the fierce struggle of parties; the key to which is said to be the fact that his Majesty, Frankland Pierce, has utterly lost the confidence of all the worthier part of the American people, owing to their belief in his reckless willingness to embroil them with this or any other foreign nation, for the sake of creating for himself a war-popularity. Regarded by this light, the hostility of the Representatives may be considered as a protest, on the people's part, against the sordid manœuvres of the White House. But the President's "Message" had been prepared with great elaboration, and privately printed, under lock and key, it is said, in his own residence, and the continued delay wore out the patience of Mr. Pierce. So, just before the last mail left, he sent in his secretary, Mr. Sidney Webster, with the document. The Representatives were naturally indignant, and declared that the Constitution had been violated; that the Message must be sent to them as a body, which was incomplete until a Speaker had been chosen; and that the President had at once committed a crime and offered an insult. The Sovereign's Message was not received; but the consideration of it was ordered to be adjourned. The next report will be interesting.

According to certain terrified writers, the British Constitution has also been violated, and ruin is impending. The House of Lords and the Throne itself are menaced through the expected abolition of the rights gained by primogeniture. Why these rights are expected to be abolished will naturally be the next question; and the answer is, that Judge Parke, whose retirement from the Bench we have already chronicled, takes the title of Lord Wensleydale, his patent limiting the existence of such peerage to "his own natural life." The honour is granted to the man who has earned it, but it is not to be transmitted to somebody who has not earned it, but happens to be related to the man who has. We have heard no official explanation of the arrangement; but it is be intended as a precedent we are heartily glad to record it. The House of Lords—whose judicial functions are a laughing stock to the country, owing to the ridiculously insufficient and irregular character of the proceedings—requires strengthening by the presence and advice of able lawyers; but a lawyer ought to have done some very remarkable service to his country before his heirs for ever are presented with an irresponsible share in the government of the people. These peerages for life seem extremely well calculated to meet the difficulty; and, as a general rule, this is the kind of honour which should be awarded to a successful soldier or lawyer, as it is to the successful member of the nobler and holier profession of a spiritual teacher. Why should Lord Saltersbath, or Lord Barnwell-and-Adolphus, leave us his son or nephew as our ruler, while the Right Rev. Lord Rubric is content with a life interest in his baronial coronet?

Sir William Codrington's despatch upon the subject of drunkenness in the British army is entitled to respect rather from the honourable feeling which prompted it than from its fairness or its logic. The gallant General is indignant that "the fathers and mothers and wives and sisters of the soldiery should be taught to think that they do nothing but drink;" and he does right to be angry. But military reasoning (always excepting the *ultima ratio regum*) is not invariably convincing; and in this short letter the Commander-in-Chief in the Crimea has managed to entangle himself in two awkwardnesses. He appears to the number of "crimes of drunkenness" as very small, "not more than one man in two days per company, estimated at 100 men." "Crimes of drunkenness" is a technical phrase, meaning crimes which the authorities punish. The fact notoriously was that the men, for lack of mental employment, and for want of that intercourse with their officers which would have prevented much vulgar vice, used to lie about among the tents in every state of intoxication, but without, in most cases, incurring penalties which the half-ashamed authorities were not in any hurry to enforce. We blame the soldiers in a modified degree only; they had money given them, drink-shops opened to them, and no better provision offered to them; but it would be absurd to deny the facts brought out by the letters from the Camp. Things will be better; means are being afforded to the men to send home their pay; books and newspapers are more largely supplied, and a good many of the grog-shops are abolished; and we do not quarrel with the General for being annoyed at the exposure, or for putting a good face upon the state of things as early as he could do so. But it was hardly worth while to play with phrases, or even to tell ignorant civilians to estimate the "companies" all round the army at one hundred, when it is notorious in the Camp that fifty—a number that materially alters the gallant General's calculations—would now be nearer the mark. Finally, our noble fellows in the Crimea may be assured that we in England know that they do much more than drink—that they work, watch, fortify, and fight, at need; and that, if their friends of the press—the best friends an army ever had since war was invented—point out a bad system and illustrate its evils, it is that the system may be amended.

Whatever may be thought of the Bishop of Exeter's views in ecclesiastical matters, there can be no doubt of his readiness and dexterity. It was not to be expected that his Lordship would omit notice of the decision of Dr. Lushington for removing the millinery and mediæval toys which one set of weak-minded people stick about the churches, to the frightful scandal of another set of weak-minded people, who are thereby prevented from worshipping. He has addressed the Doctor, vindicated the Puseyite ceremonies, and even intimated that he should not object to see the sacramental oblations carried in a procession. And with theological dexterity he flings in the case of Judas, who, when "the box of ointment, very precious," was broken at the feet of the Redeemer, complained of such a "waste," when the ointment might have been sold for a large price, to be given to the poor. Placing Mr. Hope and the other wealthy Belgravians who lavish their gold in decorating their churches in the position of the humble bearer of the ointment, the Bishop finds in their opponents a strong likeness to "Judas, that distinguished advocate for simplicity in devotion."

The Duke of Argyll has been afflicting a portion of his tenantry with a curious little Maine Liquor Law of his own invention. He has issued his high command—*no bruisan fuimen* where a landlord, with powers of eviction, is the Olympian Jove—that none of his tenants in a certain district shall use whisky, or other intoxicating liquors, at rejoicings, funerals, or other assemblages. But his Grace has been pleased to draw a line of the working of which those who do not know the property can scarcely form an idea. The tenants who come under this interdicting rule are those who do not pay more than £30 a year. We are not likely to be accused of joining in any vulgar claptrap about aristocratic tyranny, of one law for the rich and another for the poor; but it appears to us that the principle upon which such interference with social habits is based is a vicious one, and that such arbitrary edicts more nearly resemble the logical and practical sort of legislation which might emanate from some well-meaning, hasty feminine lawgiver, who would reform the world at a stroke from her drawing room window, than the rational administration of a landlord who, as a statesman and a philosopher, must know that people are not to be made virtuous by force.

POPULATION OF ROME.—The *Moniteur* (January 6) announces that the General Vicariate of Rome has just published an official census of the population of Rome, for the year 1855. In all, there are 177,461 inhabitants; among whom there are 36 bishops, 1226 secular priests, 2313 monks and other religious personages, 1912 nuns, and 687 seminarists. At Rome, therefore, there are, in all, 5861 priests, monks, nuns, or seminarists—that is to say, one to every 30 inhabitants.

## OBITUARY OF EMINENT PERSONS.

### THE MARQUIS TOWNSHEND.

GEORGE FERRARS TOWNSHEND, third Marquis Townshend of Raynham, in the county of Norfolk, and Baron de Ferrars of Chartley, Baron Basset of Drayton, Baron Lovaine, Bourchier, Compton of Compton, and Townshead of Lynn Regis, in the co. of Norfolk, in the Peerage of the United Kingdom: a Baronet, and High Steward of Tamworth; was the eldest son of George, the second Marquis, by his wife, Charlotte, second daughter of Eton Mainwaring Elcrker, Esq., of Ruby Park, Yorkshire. He was born the 13th Dec., 1778, and succeeded his father, as third Marquis, the 27th July, 1811. He married, the 12th May, 1807, Sarah Gardner, daughter of the late William Dunn Gardner; but was separated from her a year after the marriage. The Marquis Townshend died about a fortnight ago, at his villa near Genoa. He has had no issue, and is succeeded by his cousin, Capt. John Townshend, R.N., of Ball's Park, Herts, M.P. for Tamworth, now the fourth Marquis, who is married to Elizabeth Jane, eldest daughter of the late Rear-Admiral George Stuart, and has issue a son and three daughters.

### THE RIGHT HON. H. GOULBURN, M.P

THE Right Hon. Henry Goulburn, of Betchworth House, Woking, Surrey, M.P. for the University of Cambridge, was the eldest son of the late Member Goulburn, Esq., of Portland-place, by his wife Susan, daughter of William, fourth Viscount Chetwynd. He was born the 19th March, 1784. He was educated at Trinity College, Cambridge, where he graduated M.A. in 1803, having the year previously been returned to the House of Commons for the borough of Horsham. Mr. Goulburn married, the 21st Dec., 1811, Jane, third daughter of Matthew, fourth Lord Rokeby, and sister of the sixth Lord Rokeby, who is now with the army in the Crimea. Mr. Goulburn was made Under Secretary of State for the Home Department in 1810, under the Duke of Portland's Ministry, and continued in office during the administration of his Grace's successor, the unfortunate Spencer Perceval. At the general election in 1812 Mr. Goulburn was elected M.P. for St. Germans. In the same year he was appointed Under Secretary for the Colonies, an office he held up to 1821. In 1818 he was returned to the House of Commons for West Looe, and from 1823 to 1831 he sat for Armagh. He accepted the post of Chief Secretary for Ireland in 1821, and was then made a Privy Councillor. He held the Chief Secretaryship under the several Administrations of the Earl of Liverpool, Viscount Goderich, George Canning, and the Duke of Wellington; and in March, 1828, he was made Chancellor of the Exchequer. He continued at the head of the Exchequer Department until the Duke of Wellington retired, in January, 1830. At the general election in 1831 Mr. Goulburn was first elected one of the M.P.s for the University of Cambridge. Since then the right honourable gentleman has continued to represent the University, not without occasional opposition—particularly on a recent election, when he was opposed by Lord Feilding. On the formation of Sir Robert Peel's first Ministry, in December, 1834, Mr. Goulburn was appointed Secretary of State for the Home Department, which he held till the Administration broke up, in April following. When Sir R. Peel was again called upon, in Sept., 1841, to take office, he selected Mr. Goulburn for Chancellor of the Exchequer, in which office he materially assisted the Premier in his financial and free-trade measures. Mr. Goulburn did not join, like many of his former colleagues in office, the Earl of Aberdeen's Government, although he invariably gave the Ministry his independent support, and was among the minority in the division on Mr. Roebuck's motion in January of last year. Since he retired with the late Sir Robert Peel, in the summer of 1846, the right hon. gentleman has taken no very active part in politics, but has always supported those measures he deemed necessary to fully carry out the views of Sir Robert on the policy of free-trade. The late Sir Robert Peel appointed him one of his executors (Viscount Hardinge being the other), and guardian to his children until they attained their majority. Mr. Goulburn died on the 13th inst., at his seat, Betchworth House, near Dorking: he leaves issue two sons and a daughter. The right hon. gentleman's only brother is Edward Goulburn, Esq., Serjeant-at-Law, and a Commissioner of Bankruptcy; whose third wife, Catherine, second daughter of the fourth Lord Rokeby, is sister of the Right Hon. Henry Goulburn's widow.

### MR SERJEANT ADAMS

JOHN ADAMS, Esq., Serjeant-at-Law, and Assistant Judge of the Middlesex Quarter Sessions, was the third son of Simon Adams, Esq., of Analy Hall, in the county of Warwick, Recorder of Daventry, by his wife, Sarah, daughter of Caldwall Coker, Esq., of Leicester. Mr. Serjeant Adams was born in 1786, and, having early in life adopted the legal profession, he practised with marked success on the Midland Circuit, and attained the rank of Serjeant-at-Law. He was also the author of a useful essay on the subject of ejectment. Some twelve years ago Mr. Serjeant Adams was chosen Chairman of the Middlesex Sessions; and when the salaried office of Assistant Judge of those Sessions was created by Act of Parliament he was the first Judge appointed to it, which he has since continued to preside at the Sessions trials in Middlesex and Westminster up to the time of his death, with credit to himself and satisfaction to the public. Mr. Serjeant Adams, though eccentric and somewhat rough and abrupt in his manner, possessed much knowledge and sense. He was a humane man, and a thoroughly honourable and upright judge. He had, too, an honesty and a firmness of purpose that made him always respected. He took great interest in the improvement of the Criminal Law, and in the plans proposed for the dispersal and reformation of culprits. He frequently put forth his views and notions on these themes in essays and letters ably written. In private life Mr. Serjeant Adams was also very generally esteemed and respected. Mr Serjeant Adams married first, in 1814, Ann, only daughter of William Nation, Esq., of Exeter, by whom—who died in 1814—he had two sons, viz., John Adams, Esq., a Chancery barrister, author of "The Doctrine of Equity," who died in September, 1845, and the Rev William Adams, author of "The Shadow of the Cross," who died in January, 1848. Mr. Serjeant Adams married secondly, in 1817, Jane, daughter of Thomas Martin, Esq., of Nottingham, and by her (who died in 1826) he had a son, the Rev Henry Cadwallader Adams. The Serjeant married thirdly, in 1826, Charlotte Peisch, daughter and heiress of John Coker, Esq., and by her has had three sons, the eldest of whom is the Rev. Coker Adams, Fellow of New College, Oxford. Mr. Serjeant Adams died on the 16th inst., at his house, 9, Hyde-park-street.

### DR WEBB, MASTER OF CLARE HALL

THE Rev. William Webb, D.D., F.L.S., Master of Clare Hall College, Cambridge, was born in February, 1775, at Sutton Coldfield, near Birmingham, and died on the 4th inst., at the Vicarage of Lalington, Cambridgeshire. His father was master of Bishop Vesey's Grammar School at Sutton Coldfield, and his mother's maiden name was Barratt. He was educated at home until sent to Clare Hall, Cambridge, in the 1793. He graduated here in 1797, and was subsequently a fellow and tutor of the College. He succeeded Dr. Tovell, as master, in 1815, and became also Vicar of Lalington, Cambridgeshire. He married, in 1815, Ann, daughter of the Rev. Theodore V Gould, late Rector of Fernham, by which lady (who survives him) he has had two sons and a daughter, of whom the youngest alone is now living. In politics Dr. Webb was a staunch Tory: he was Chairman of the Election Committees. He was opposed to the University Reforms. He was an antiquarian and botanist, and has left a very valuable library of topographical, antiquarian, and botanical works.

ERRATUM.—In the Obituary, in our Journal of Jan. 5, for "Yerkson" read *Dickson*.

## THE BRITISH ARMY POST-OFFICE AT CONSTANTINOPLE.

*(From our Special Artist.)*

I SEND you a Sketch of the interior of the British Army Post-office at Constantinople, an establishment of no mean importance in the vast military operations now going on in the East; conferring, as it does, great advantages both on the Army and Navy, and in the midst of terrible bloodshed keeping up home ties, and carrying us back in thought to our peaceful firesides.

The staff employed consists of a postmaster and three assistant postmasters; eight clerks, who have been selected from the General Post-office in London; and two natives of Constantinople, who act chiefly as interpreters; for, though it was established as a British Army Post, many letters pass through it to and from the soldiers in the Turkish Contingent, &c. Two of the postmasters and three of the clerks are employed in the Post-office in the Crimea, assisted by two intelligent non-commissioned officers.

The scene on the arrival and departure of the mails is one of the great est activity. The boat from Marseilles brings from twenty to twenty-five bags, each as much as one of our strong-backed na ils (or porters) can stagger under; and the number of letters is said to exceed 12,000, and that of the papers 8000. This vast number is sorted into regiments, brigades, and divisions, and dispatched to the Crimea and Scutari in the short space of two hours. The courtesy and attention shown by the officials in this establishment to the public presents a vast contrast to the *brusquerie* of the other post-offices in this city.

THE BRITISH ARMY POST-OFFICE, CONSTANTINOPLE. (SEE DESCRIPTION, P. 61.)

# SKETCHES IN THE CRIMEA

ALOUCHTA.—FROM A SKETCH BY WILLIBALD RICHTER.

## ALOUCHTA.

MODERN travellers in the Crimea all unite in extolling the beauty of the coast scenery in the neighbourhood of Alouchta—a town situated on the southern shore of that peninsula, nearly half-way between Sebastopol and Kaffa. "Alouchta," says Mr. Danby Seymour,—

Is beautifully placed on the sloping side of a gentle elevation, near the sea-shore, and the cultivation of the vine has made here rapid progress. Its situation, in a wide and fertile valley, at nearly the centre of the southern coast, must always have rendered it an important place, although the only mention of it in ancient times is with reference to the castle built here by Justinian, the remains of which are to be seen on a little hill near the sea-shore. The ancient town of Alouchta was built in front of the fort on the right bank of the river Oulou Ouzène, but the place is now deserted and covered with the wild vine and tamarisk. Some remains may still be discovered of houses and of several Greek churches placed on the most elevated positions. The churches are nearly as large as those of Kherson and in the principal one a semicircular apse shows that either a bishop or at least a priest of high rank presided over the clergy attached to it. Alouchta is the limit between the eastern and the western coast, which are great rivals for public favour. There can, however, be no doubt that in remarkable scenery and romantic beauty the western coast has greatly the advantage. The igneous jets of ophitic granite do not come further east than Alouchta; and while the granite domes of Kastels, Aloudagh, and Lindéne form promontories and bays, and sublime variations of scenery, the eastern coast is a monotonous repetition of narrow ravines, covered with meagre vegetation, of the witch-elm (the commonest tree in the Crimea), the turpentine-tree, and the Oriental juniper, some specimens of which measure as much as a foot and a half in diameter.

The macadamised road does not extend along the coast further than Alouchta, and here turns off northward to Simpheropol, a distance of about forty miles. It mounts for the first twelve miles through the rich valley of Alouchta, till an obelisk marks the highest point, whence it descends through the cheerful little valley of the Angar, which runs into the Salghir. Here the Tchatyr-Dagh, the highest mountain in the Crimea, rises immediately on the left; and the valley is an enormous rent in the red pudding-stone of which the mountain itself is composed. A little further on, a shady spot, called Tavshan Bazar (the Hare-market), serves as a resting-place for carriages coming from Simpheropol, before they encounter the hilly part of the journey to the coast and from Tavshan Bazar to Simpheropol the road is good and even.

## TCHOUFOUT-KALEH.

THIS is a small town in the neighbourhood of Bagtcheserai, which has been inhabited for centuries by a colony of Jews. It is perched on an isolated rock, with houses overlooking the precipice. A road cut in the rock, and joining the one which leads to the southern coast, is the only communication to this singular little place, which is surrounded by a strong wall entered by gates, which are closed every evening

Mr. Danby Seymour, in his recent "Travels in the Crimea," gives the following description of Tchoufout-Kaleh:—

TCHOUFOUT-KALEH.—FROM A SKETCH BY WILLIBALD RICHTER.

Tchoufout-Kaleh means in Turkish, "the fortress of the Jews," and this name is not found applied to it till two hundred years ago. The ancient name was Kirker, which was the capital of the Khans before they removed to Bagtcheserai. From the earliest times this spot must have been a residence of men, for there is a crypt town built at the entrance of the gorge, in the strata of the chalk, with the isolated hill of Tchoufout-Kaleh behind it, which served as a place of refuge, formed by nature. All the other crypt towns in the Crimea, as those of Inkerman, Mangoup, Kh[illegible]rbinka-ew, and Tepekerman, are built in similar localities, and date from the time of the Tauro Scythians, many centuries before Christ.

This subterranean town is cut under the fortress in the sides of the little valley. There are in one place alone as many as fifty of these grottoes, and a path with steps is cut in the rocks lead ng from them up to the fortress. On the opposite side one of them is converted into the Monastery of the Assumption, and inhabited by the monks.

All the higher part of the valley, beyond a magnificent group of oaks, has been used for ages as a burying-ground by the Jews, and is called the Valley of Jehoshaphat. The tombs, great numbers of which are cut in the white chalk, are ranged under fine trees, and along the sides of the paths. Some of the monuments go as far back as the middle of the thirteenth century, and the most ancient are also the simplest, and resemble long stone coffins.

### CALENDAR FOR THE WEEK.

SUNDAY, Jan. 20.—Septuagesimus Sunday.
MONDAY, 21.—St. Agnes. New South Wales colonised, 1788.
TUESDAY, 22.—St. Vincent. Lord Byron born, 1788.
WEDNESDAY, 23.—William Pitt died, 1806. Duke of Kent died, 1820.
THURSDAY, 24.—Frederick the Great born, 1712.
FRIDAY, 25.—Robert Burns born, 1759. Prince of Wales christened, 1842.
SATURDAY, 26.—Brazil discovered, 1496. Dr. Jenner died, 1823.

Next week we shall engrave LARGE ILLUSTRATIONS of the PRESENTATION of MEDALS to the FRENCH CRIMEAN TROOPS, by H.R.H. the DUKE of CAMBRIDGE, at Paris. Also of the GRAND REVIEW by the EMPEROR of the FRENCH, &c., &c.

Now ready, bound in cloth, gilt, price 18s.,

THE ILLUSTRATED LONDON NEWS, VOL. XXVII.—from JULY to DECEMBER, 1855.

Containing upwards of 600 SPLENDID ENGRAVINGS; including a large number of Scenes of the War, from Original Sketches, by the Artists of this Journal at the seat of operations, as well as by Naval and Military Correspondents.—Office, 198, Strand, and Milford House, Milford-lane.

Covers for binding the Volumes are likewise ready, price 2s. 6d.

# THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, JANUARY 19, 1856.*

It is stated, evidently upon some kind of authority, and in order that the subject may be fully discussed as soon as Parliament meets, that the disastrous fall of Kars may in great measure be attributed to the personal hostility of our Ambassador at Constantinople towards General Williams. It is alleged that Lord Stratford de Redcliffe, who has a talent for hating, manifested this hostility as soon as General Williams began to show evidence of talent of another and more valuable kind, and that Lord Stratford had unhappily the means of rendering himself mischievous, by inducing the Turkish Government to withhold the assistance so urgently needed; and the want of which, if it have not disgraced our arms, has imperilled the fortunes of a campaign, and rendered peace more difficult to conquer and to maintain. Sixty-three despatches to Lord Stratford were, it is stated, sent by the accelerated express during the heroic defence of Kars. They all remained without reply. When, ultimately, the Ambassador was forced, by orders from home, to attend to General Williams's communications, it was too late to prevent the melancholy catastrophe. Lord Stratford has rendered great services to his country in former years; he has played a conspicuous and beneficial part in all the transactions immediately prior to the declaration of war against Russia; and is a diplomatist of such consummate ability that Great Britain would be much the better for half a dozen like him. Of the peculiarities of his Lordship's character the public have hardly to be informed, especially since the "Roving Englishman" let in a little coloured light upon them; but we should reluctantly believe that he had been guilty of conduct for which, if it be proved, there is no punishment in the statute-book too severe. In fact, if the charge be true, and Lord Stratford de Redcliffe, from private malice, has neglected his duty to his Queen's ally, he is a traitor. There is no use in mincing words. We sincerely hope that, for the honour of England, the veteran Ambassador may be able to clear himself before his Peers; for those who make the attack cannot stop short of impeachment.

It is the present privilege of this great nation to be able to carry on a just and necessary war without enduring its more palpable and immediate calamities. So little is the pressure felt, except in a slightly-increased amount of taxation, that no work of peace has fallen into abeyance; no good work of domestic charity previously commenced has been left undone; and legal, political, social, and educational reforms are severally wrought out to their conclusions, quite as steadily, and almost as zealously, as if we were at peace with the whole world. Thus, although the nation is at war, it has time for the consideration of such minor matters as the bestowal of a pension on an unfortunate author, and to debate the whole policy as well as the whole administration of a thing so comparatively unimportant as the Pension List. If it be true, as Dr. Johnson said, "that the chief glory of every people arises from its authors," and if it be true, as others have asserted, that both in war and in peace a great nation is bound in justice to itself to honour its chief authors if they be prosperous, and to succour them if they fall into unforeseen and undeserved calamity, what shall be said of the British Government that neither honours British authors nor rewards them? which grants them a niggardly allowance, not as a right, but as an eleemosynary contribution to save them from the workhouse? and which systematically robs them of by far the greater portion of the sum which a mean-minded Parliament sets annually apart for them? Mr. Hayda, a working man of letters, author of a very useful compilation, was stricken by paralysis while employed on a casual job in the service of the Foreign-office. A pension of £25 was shortly afterwards settled upon him; less than half the annuity which a country gentleman of moderate means would confer upon a coachman or a footman who had honestly served him in the days of health and strength; less by a good deal than a crossing-sweeper could scrape up in any ordinary thoroughfare of the metropolis; less by half than the wages of an omnibus conductor, and within a few pounds of as much as the careful State pays for the support and education of a criminal qualifying himself at the public expense to obtain a ticket of leave! To award such a pittance is an insult to Literature—a disgrace to the national character that will submit to it. The claims of Literature should be urged upon the nation not for the sake of Literature, but for the sake of the nation itself, that must suffer in its interests, no less than in its character, if its "chiefest glory" be wilfully or ignorantly degraded. We attach no blame to Lord Palmerston for the mean £25 bestowed upon Mr. Hayda; for his Lordship, by a private act, did much to relieve himself from the imputation which might in other circumstances have been thrown against his Government; but what the public ought to inquire is why and how the Minister has no larger sum at his disposal? Any Minister claiming to worthily represent his country should make it a point to demand of Parliament fuller powers in such matters, so as to place the bestowal of literary pensions on Ministerial responsibility, without reference to their amount. If the Pension List were carefully examined, it would be found that more than one-half of the annual £1200 supposed to be granted to Literature and Science is bestowed upon individuals who are totally unconnected with either. Why, for instance, should Lady Truro, the widow of an ex-Lord Chancellor, have been provided with two several pensions of £500 per annum out of such a fund? What claims had she upon it twice, or even once? What claims upon it had her Majesty's dancing-master? or her singing-master? If these persons estimable persons, no doubt—are to be pensioned, let Parliament pension them, and the nation will not begrudge the money; but to pension them out of a fund voted for the encouragement of Science and Literature is to rob Science and Literature, to plunder the poor, and insult two noble professions.

It has continually been urged that Literature and Science stand in no need of encouragement from the State; that the public is their best encourager and patron; and that, if they cannot prosper by such encouragement as the public can afford them, they ought to fall. We should be sorry to believe that this ignoble sentiment is that of a majority of the gentlemen of the House of Commons, or of the men who wield the authority of the State in the executive functions of the Government. Great genius is continually in advance of its age. The people can, and do, pay the writers who amuse them. They sometimes pay those who pander in literature to their vices and their follies, and who degrade the profession of letters. They seldom pay those who see far in advance of the present time, and who write the immortal works which scholars and philosophers—the "fit audience and few"—can alone appreciate. The business of a State, as regards Literature, should not be solely that of aiding unfortunate authors. It should strive to encourage them—to have the utmost possible amount of valuable work out of them to employ them in undertakings which are not strictly of commercial value, but of national importance. Why, for instance, should the State not distribute between several eminent literary men the task which no one man can satisfactorily accomplish, and which no bookseller or company of booksellers has yet been found to set on foot—the task of making a complete dictionary of our noble English language? No such work is in existence. Johnson's, if not obsolete, is woefully in arrear with the present state of knowledge, and is deficient in tens of thousands of words in common use in these islands. Richardson's is better, but by no means up to the requirements of our time. Webster's, the work of an American, is, next to Richardson's, the most valuable we have, but is full of errors of commission, while errors of omission are to be counted by thousands. The national archives want arranging and cataloguing, before the damp, the rats, or the cheesemonger shall number them among the things that were. Is there no literature for the English Parliament to pay for, but that of ponderous and unreadable blue-books, which annually consume an amount of money that would enable the Government to pension a thousand men of genius, if—which Heaven forefend!—a thousand men of genius should find themselves in the unhappy predicament of needing its assistance?

We hope, for the honour of Literature, that the next author who is offered a pension of £25 a year will be stronger in mind than poor Mr. Hayda, and that he will be able to expend one-and-sixpence on a good birch-broom, and take his stand with it opposite Whitehall, or between the Carlton and Reform Clubs. If he will do so, and place on his hat or his back a placard with the titles of the books of which he was the author, he will certainly, if money be his object, make thrice the Government dole, and perhaps shame our legislators into a more just and generous way of thinking. If the public is to be the only patron of Literature, Literature in its evil days will fare better by appealing to the public charity in the manner we have indicated, than by appealing to the harsh, cold charity of an aristocratic and callous Government.

## LATEST INTELLIGENCE.

### THE RUSSIAN ACCEPTANCE OF THE PEACE PROPOSALS.

If the following despatch from Berlin, dated Thursday night, may be relied on, there can be no doubt of the fact that Russia means to negotiate:—

Yesterday, at two o'clock, Count Nesselrode and Count Valentine Esterhazy signed, at St. Petersburg, a protocol containing the conditions proposed by the Allies, as the formulation of the preliminaries of peace.

The following despatch was posted at the Paris Bourse on Thursday:—

VIENNA, Jan. 16th, Even ng.

Count Esterhazy writes, that Count Nesselrode has just notified to him the pure and simple acceptance of the ultimatum, the propositions of which forwarded by Austria are to serve as the preliminaries of peace.

A despatch received from Dresden announces that an extra supplement of the official journal of Dresden has been published, in which it states, on reliable authority, that Russia has accepted unconditionally the Austrian proposals.

### THE WAR IN THE CRIMEA.

The *Ganges* arrived at Marseilles yesterday morning, with advices from Constantinople of the 10th, and from the Crimea of the 5th. The *Times*' Constantinople correspondent writes on the 7th:—

The *Superb** has gone down in the Black Sea with the whole crew, the Captain excepted. The transport *Talavera* has gone down in the Sea of Marmora. The crew was saved. At Kertch an attack was expected from the Russians. The Hon. A. C. Murray left Teheran on the 6th of December

* This is not her Majesty's ship *Superb*, 80, which appears by the last *Army List* to be laid up in ordinary at Chatham.

### THE COURT.

The hospitalities of the Court have been continued during the past week. Their Royal Highnesses the Duchess of Cambridge, and the Princess Mary, arrived at the Castle on Tuesday, and remained until Friday. On the same day the Maharajah Duleep Singh arrived on a visit. Among the guests honoured with invitations, have been—His Excellency the Austrian Minister and the Countess Colloredo, his Excellency the Belgian Minister, the Marquis of Abercorn and Lady Louisa Hamilton, the Marchioness of Hastings and Captain Yelverton, R.N., the Earl and Countess Granville, Lord Ashburton, the Right Hon. the Speaker and Mrs. Shaw Lefevre, Sir Charles and Lady Mary Wood, Sir Benjamin Hall, the Right Hon. Spencer Walpole and Mrs. Walpole, Rear-Admiral W. A. B. Hamilton, Lieut.-Colonel Chapman, R.E., lately serving in the Crimea; and Colonel M'Murdo, lately commanding the Land Transport Corps.

The Duchess of Kent has dined almost daily at the Castle.

On Saturday last Prince Albert, accompanied by the Count of Flanders, came to London. The Prince drove to Buckingham Palace, and returned to the Castle early in the afternoon. The Count of Flanders visited the Belgian Minister, in Portland-place, and also her Royal Highness the Duchess of Gloucester, at Gloucester House. His Royal Highness afterwards returned to the Castle.

On Sunday the Queen and Prince, the Prince of Wales, the Princess Royal, Prince Alfred, and the Princess Alice, the ladies and gentlemen in waiting, and the Maharajah Duleep Singh, attended Divine service in the private chapel of the Castle. The Hon. and Very Rev. the Dean of Windsor officiated.

On Monday Prince Albert, accompanied by the Count of Flanders, went out to shooting.

On Tuesday Prince Albert, with the Prince of Wales and Prince Alfred, lasted on the ice in the Home Park.

On Wednesday Prince Albert, accompanied by the Count of Flanders and the Maharajah Duleep Singh, went out shooting in the Royal preserves.

On Thursday the third dramatic representation of the present season took place in St. George's Hall.

Lady Canning will succeed the Marchioness of Ely as Lady in Waiting to her Majesty, and Lord Byron and the Hon. M. Sackville West have succeeded Lord De Tabley and Colonel the Hon. N. Hood as Lord in Waiting and Groom in Waiting.

Her Royal Highness the Duchess of Kent gave her annual ball to her Majesty and Prince Albert, the Prince of Wales, the Princess Royal, and other members of the Royal family, at Frogmore, last evening (Friday).

The Earl Granville, Lord President of the Privy Council, will give a Parliamentary dinner to many of Peers, on the 30th instant, at his residence in Piccadilly.

The Earl of Derby has issued cards for a grand banquet to a large number of political friends on the 30th instant.

The Viscount Somerton is about to form a matrimonial alliance with the Hon. Caroline Barrington, daughter of Viscount and Viscountess Barrington.

The marriage of Lady Jane Feilding with Captain Levett took place at Monk's Kirby Church on Thursday se'nnight. After the ceremony a breakfast was given at Newnham Paddox, the seat of the Earl of Denbigh, at his bride's father.

The marriage of Sir Robert Peel, Bart., with the Lady Emily Hervey took place at the Chapel Royal, Whitehall, on Thursday, in the presence of a large party of the friends of both families. The wedding breakfast took place in the Waterloo Gallery at Apsley House.

### METROPOLITAN NEWS.

OPENING OF THE BRITISH MUSEUM.—On Saturday night last a public meeting was held at the Museum Tavern, Great Russell street, at which a resolution was passed in favour of the opening of the British Museum during the six working days of the week. It was urged that under the present arrangements thousands annually went from the gates disappointed, especially visitors from the country, and that an institution so calculated to elevate, instruct, and improve the social habits of the people ought to be more accessible. Until it is under the existing regulations.

THE HALF-HOLIDAY MOVEMENT IN THE LAW.—The Lord Chancellor has been solicited to assist in the half-holiday movement on Saturday, and the interests of the profession in the law have been urged on his Lordship, who has promised to give the subject his anxious consideration.

EXTENSION OF FARRINGDON-STREET.—It has been decided by the Commissioners of the thoroughfare leading from Holborn-bridge to the Royal Mail Coach House, Clerkenwell, shall be opened for public traffic next July.

RELIEF OF WAR PENSIONERS AT BARTHOLOMEW'S HOSPITAL.—The governors of St. Bartholomew's Hospital have affixed placards on the gates notifying that pensioners will be permitted to pass through the hospital now that the Guildhall has ceased to be held in Southwark.

MURDER OF A SWEDISH GENTLEMAN IN BEDFORD ROW.—On Wednesday morning, at half-past seven o'clock, Mr. George Waugh, the senior partner of the merchant firm of Waugh and Metcalf, of No. 61, James-street, Buckingham-row, who had come into town as usual to transact his business, was walking to his office, when a man named Westron suddenly ran to the police court, and said that if it had not been for Waugh he should have had £800, but that he had thrown his (the prisoner's) affairs into Chancery and he could not get half that amount. He then drew a small pistol at him, and deliberately shot him in the face. The unfortunate gentleman gave a sudden spring in the air, and, with the exclamation, "O God! take him—hold him!" fell dead upon the pavement. The murder was witnessed by several persons close by, who immediately ran up, and Westron, who made no resistance, was at once taken into custody by Hutchins, the beadle of Bedford-row. On his way to the police court he said that if it had not been for Waugh he should have had £800, but that he had thrown his (the prisoner's) affairs into Chancery and he could not get half that amount. He afterwards said, "Mr. Waugh has ruined me, and has compelled me to commit a deed of horror to end my days." The prisoner was brought before Mr. Tyrwhitt, at Clerkenwell, in the afternoon, when the above facts were stated. When asked what he had to say to the charge, he said, very coolly, "Nothing at present." Mr. Tyrwhitt remanded him till Wednesday next. From the inquiries made by the police it appears that the prisoner and Mr. Waugh were connected in some law proceedings. The prisoner had frequently threatened the deceased, and it had been thought necessary on a previous occasion that he should be bound over to keep the peace, which was done.

DESTRUCTION OF A PIANOFORTE MANUFACTORY BY FIRE.—On Saturday night last Messrs. Hopkinson's extensive patent piano manufactory, Dean's place, New road, was consumed by fire. The men left the building at a quarter past seven, at which time the whole of the premises extending in length from the basement to the roof, was in flames. The loss is said to be about £20,000, the amount covered by insurance, £9,000.

## THE RUGELEY TRAGEDIES.

*(From our Special Correspondent.)*

No account of the Rugeley tragedies would be complete or quite comprehensible without some slight description of the town of Rugeley itself. If cities have, as it has been said, their destinies, as men have, then, unquestionably, Rugeley was built to be the scene of a tragedy There are many towns of the kind in Holland like Staffordshire. Seated in the centre of the railway system, the county, in the beginning, made great arrangements to develop itself. Every village made a rapid rush to be a town, and stopped half-way; and, at present, Staffordshire has only about two towns, neither of even second-class importance, while she is almost totally destitute of that beauty of less energetic shires—a village. Birkenhead has been described as a premature Palmyra, and, in a lesser way, Staffordshire is crowded with Birkenheads; places of pretension incompletely fulfilled, too big for the business, considerably "to let." Rugeley is the worst of these; for it seems to have fallen back—from the staring red brick, perfectly modern, out-works that can get nothing to do—upon the old village street, which is built of a sad, sullen-looking dirty-brown stone, miserable without the once-adjoining fields, and most disheartening to the passenger from the station by a road that winds between two churchyards—an old and a new one—and which seem to compete with one another in dismal suggestiveness. The people are neither country people nor townfolk, have neither rustic ease nor civic smartness, and the gloom of failure appears to pervade talk and "trade."

PALMER'S HOUSE, RUGELEY.

An inn in a town is always a representative place. In Rugeley the inns are as miserably inconvenient, insufficient, and uncomfortable, as posthouse inns in Poland. Like the other houses, they are drear in aspect; and the most drear, the principal inn, looks like an aged gaol; and the next most melancholy-looking building in Rugeley is that opposite the principal inn—and that building is the house of William Palmer the surgeon. A deserted inn, as the Talbot Arms is, was not a healthy sight for a surgeon, without practice, and heavy in debt, as William Palmer was. "The Talbot Arms," a dilapidated sign, swings in front, and its creakings at night must have wearied William Palmer's wife when she lay dying. The motto of the Talbots of Nihil humani alienum"—is emblazoned on the arms—a constant, heedless suggestion to the eyes of Mr. Palmer, but of which he availed himself in the manner sinister.

An account of the Palmer family is next necessary. It is an extraordinary family history, even if we are to reject, in considering it, one-half of the stories of the now cynical people of Rugeley; and the more it is examined, with the circumstances arising out of it, and implicating parties unconnected with the family, the more will the general public be inclined to think unfavourably of the character of the whole community of whom these Palmers formed but a portion. For we have to observe that, arising out of this Palmer case, there are two extraordinary charges now preferred, not by gossip but by authorities—one against the postmaster of the place, for systematic letter-opening, and another against the coroner in command of the inquiry, for undue partiality to, and improper correspondence with, Palmer. It is furthermore to be remarked that the case, in itself so extraordinary, is marvellous for the extent to which the evidence damages the characters of the witnesses themselves

The founder of the Palmer family was a sawyer, commencing life as a working man. He was a coarse, unscrupulous, insolent, pushing fellow who had no friends, and who yet made a fortune. He made the money by going into the timber trade and buying up, from the neighbouring nobility and gentry, "those excrescences nature grown by Providence to pay the debts of gentlemen"—trees. Stories are rife of his sharp practices with careless sellers and dishonest stewards and agents. It is enough to know that when he died he left (to his widow, chiefly, for her life, with portions to each of the sons) a considerable fortune—about £100,000, it is said—and an excessively bad fame. But he died suddenly, and it was said (it is not now said) of apoplexy. The sons were divided, as the sons of the middle class are when there is money enough to start all, into the different professions. One was sent into the church, another to the law, another to trade, another to medicine. It so happened that not one of the sons has, in his own life, purified the name of Palmer, to a proper extent, in the nostrils of Rugeley and its neighbourhood; while, on the other hand, it is to be feared that they had not the advantage of a good mother—some of Mrs. Palmer's letters to a man of the name of Duffy, and left by him in a portmanteau at a low public-house, having been unfairly disclosed to the town, and having been considered to justify the accumulated comments of fifteen years of scandal. The marriages of some of the sons were so unlucky as to increase the popular conviction that the family was not amiable. Neglect, drunkenness, and separations, seem to have been the rule. William Palmer, the surgeon, married Miss Brooks. She was the natural daughter of a Colonel Brooks. Colonel Brooks committed suicide not long after the marriage. The mother of Miss Brooks died, soon after the marriage, suddenly. Mrs. William Palmer had six confinements; but only one child lived. Walter Palmer is spoken of as "the best of the brothers;" and he was a bankrupt in trade, and so confirmed a drunkard that his wife, partial to him, and willing to be his nurse, found it impossible to endure the horror and disgust of living with him. In most cases of a newly-married Mrs. Palmer (and there are five or six brothers) found, on opening her house for visitors in her new home at Rugeley, that she was not the fashion. William Palmer was popular with the poor and with the public generally; for he had a pleasant manner, was never secretive of sporting news of value, and always glad to put money in the way of poor men eager for the excitement and the risk of betting. He thus obtained considerable influence in the town and in the sporting circles of the midland and northern counties. But he was never respected. Although young (about thirty-four), he has lived apparently an indefatigably mischievous life, and his character was tolerably well understood as a man who "would not stick at a trifle." His companions were of a low class, and he only differed from them in his temperate habits and equable tact of manner. His wife was greatly beloved as a gentle, amiable, extremely feminine woman; and his notorious unfaithfulness to her, his prolonged absences from her, and the extreme solitude in which she was left in that hideous house in that hideous town, induced dislike of him originating in pity for her. Now that all the dreadful story is divulged, the daring character of the man is well understood. His attempt to bribe the postboy to smash the jars containing the viscera of Cooke, as these jars were being carried to the station for transmission to London his taking from the telegraph-office the copy of the message—his hint to the weak postmaster to open and read a letter—his reckless misrepresentation to the insurance-offices of the social position of Bates, his stable-help—his attempt to seduce his maid-servant the very night of his wife's death—all these facts are sufficiently suggestive. But stories of that character have been rife for years about him. The day his wife died it was whispered by two or three persons in Rugeley that she had not been properly treated by him. We may infer from Cooke's dying hints that sporting men had "queer" ideas about the "Doctor," and when the insurance-offices began to make inquiries so long ago as September—that is, long before Cooke's death—they, of course, were influenced by the common talk about Palmer. If it should be proved in the end that he is one of the greatest of villains, it will also be ascertained that he was one of the clumsiest. There is none of the heroic finesse of the historical poisoners about him. His utmost art was to keep out of the way of vulgar arsenic and palpable prussic acid. If he selected refined agents of murder, his process was of the coarsest kind. That he attempted and did so much is accepted as proof of his ability. Of his infamous audacity there can be no question: but what the case proves is the stupidity and timidity of those around him in not sooner dragging him to justice. The utmost that he succeeded in, as a matter of management in his career, was in withholding from the mass of the people in Rugeley and Stafford any ground for believing in "motive" for crime. No one knew up to the last moment that he was heavily in debt. When his wife died people said that he must lose money by it, as the annuity left her by her father died with her. He had a large stud of horses; and had among his own neighbours the reputation of being a successful betting-man, while it was soon and known that he was not extravagant. It is now perceived that he was from the first, and continuously, in difficulties. In physique he presented none of the points of a man of finesse, either for a "book" or for a "poison." He was clumsily built, with a coarse red face. This figure and complexion, with the accompaniments in both cases of thin fair hair and sandy whiskers, have suggested the statement that "Palmer is the image of Manning." In strong, selfish, sensual natures there is probably a general resemblance. But Palmer looks, we are assured, more "gentlemanly" than Manning did.

The first time that the finger began to be pointed at the house of Wm. Palmer was four or five years ago, when a man of the name of Bladen, a brewer's collector, and a defaulter in his accounts (which is significant in a friend of Palmer's), on a visit to Palmer, fell ill at Rugeley, was treated by Palmer, and died after a few days' sufferings. But nobody knew a motive, and no one spoke above a whisper.

The whisper was again heard on his wife's death, which took place in September, 1854; but here there were natural appearances, and there had been an elaborate attendance of medical men, though friends and neighbours were kept off. Mrs. Palmer had been to Liverpool (where several families intermarried with the Palmers and with her own family reside) in company with her sister-in-law, Miss Palmer (a young lady, it is only fair to add, against whom no one has a word to say). She went, lightly clothed, to a concert at the St. George's Hall at Liverpool. She caught cold. Her unhappy confinements, her secluded life, had impressed her neighbours with an idea that she was a very delicate woman. She had been accustomed to take, she said to Miss Palmer, a great deal of medicine, as it would appear, under the direction of her husband; and, while away from his care at Liverpool, she missed, she said, her doses. She returned ill to Rugeley. She became rapidly worse. Her symptoms were those of cholera. The local surgeons said so. Dr. Knight, a very able man, called in from Stafford, said so. She died, and they certified that she died a natural death. Her husband had been kind and attentive during her illness, and had shed tears at her death. Her annuity died with her. Few knew that her life had been assured for £18,000. Those who did know knew that the insurance-offices paid, and they ought to know their own business. Who could say a word?

Mr. Walter Palmer, the brother of William, the bankrupt corn-merchant, the loose fish, the bad husband, the confirmed drunkard, died twelve months after, viz., in September of last year. On this occasion the life had been assured largely, and the insurance-offices refused to pay, having made inquiries which suggested a case of conspiracy, if not of murder. But there was this time not much suspicion in Rugeley or Stafford, and the circumstances were such as so sufficiently to account naturally for death—and the evidence of Dr. Taylor, on Monday, all but proves that the death was natural—that if William Palmer's hands had been clean, and if it had not so happened that he himself held the policy and had paid the premium, though he could only allege a debt due to him of £400, he would no doubt have contested and won the case. Walter Palmer had not been sober for years. For the last eighteen months of his life he had drunk from a quart to two quarts of gin daily, or rather nightly, within eight of each twenty-fours. He had so shattered his brain that he talked incoherently. He had so exhausted his system that he lived on an occasional meal of arrow-root. He was sick every morning. He had delirium tremens repeatedly. There is some evidence of William Palmer being with him the day and night he died, and of Walter telling the medical man appointed to attend him that William had given him—stating that they were from the regular medical attendant—two pills, which he (Walter) described as "twisters." This may have been the common delusion of the drunkard. If a fact, it may only mean that William had used the medical man's name to force his brother to take pills calculated to do him good, and which proved very strong to a dying man. William used all the proper remedies when Walter was taken in his final convulsions. No trace of poison is found in the system. William may have purchased prussic acid, as it is alleged, at about that time, but the fact would not overweigh the other facts. It is, at any rate, certain that in Rugeley Walter's was regarded as a natural death. How such a drunkard had lived so long was the only wonder. Walter was buried in the same grave, in Rugeley churchyard, with Mrs. William Palmer, Palmer sen., Mrs. Brooks, William's five children, and Bladen; and no more was said in Staffordshire.

What had been said in London, however, ought to have urged William Palmer to caution. Yet it is at this time that he began his extraordinary attempts to insure the life of Bates, a decayed farmer turned groom, who signed a proposal paper, in which he was described as "a gentleman," who understood (and that was all) that he was to get £600 for his share. It is at this time that his turf gambling became enormous, and that he was raising in London money on bills at the rate of 60 per cent for discount. A not capacious mind had evidently gone mad with monetary embarrassments. All caution even of manner now went. One evening in October last, when the insurance offices had sent down detectives to make inquiries, he was at the Junction Hotel at Stafford. He noticed the "odd lodgers" there: viz., the detectives. As usual at every hotel in the district, the groom or boots of the house was the fast ally of Dr. Palmer. He regaled the Boots about the detectives, and asked had they pumped Boots himself. He was restless and uneasy: he "stood" brandy-and-water for Boots, and, as Boots happened to be sick directly afterwards, Boots *now* insists that he was a-poisoned. If one were now to believe all the stories of gentlemen who had drank their liquor in Palmer's company of late years it would be demonstrated that he was hankering after murder day and night. At the inquest on Cooke, Mr. Bisher, wine-merchant and sporting-man, said, on one night of the Shrewsbury races he went into Cooke's sitting-room at the Raven Hotel, and found Cooke and Palmer drinking together. Cooke then complained that his drink "burnt him," and was sick. Mr. G. Herring, at the same inquest, deposed that at the Shrewsbury races he and others had been attacked with diarrhœa and pains in the stomach—so deposing the circumstance as to insinuate that Palmer was poisoning the stores of every booth on the course. All this of course partakes of exaggeration.

Yet, at the assizes in March, the counsel for the prisoner will doubtless, as a desperate resource, suggest the insanity of Palmer. It may be contended that in the proceedings in connection with Cooke there was the recklessness of the maniac even more apparent than the motive of the criminal. Palmer, known not to have any large practice, and rather supposed not to stick at trifles, goes specially to a chemist's shop in his own town, Rugeley, and buys six grains of strychnine. This was on the 20th November, 1855. At that time it is known that his friend Mr. Cooke is lying ill at the Talbot Arms, opposite Palmer's house. All the sporting world who had been at Shrewsbury races knew that Cooke had won largely, and, among other persons, of Palmer. Palmer had induced Cooke, a young man, but apparently a sagacious man, for he suspected Palmer, and talked freely his suspicions, to go over to Rugeley—a singular freak at any time, but especially in a time of illness. Palmer sends broths across to Cooke which make Cooke worse, and brings pills which kill Cooke. Cooke dies in the agony, "the body drawn like a bow," known to result from strychnine. The viscera being examined, Dr. Taylor gives his opinion that the cause of death was strychnine. Soon after death Palmer is detected by the chambermaid examining the pockets of the dead man's garments, and the betting-book and some cash are missed. Was there ever anything more clumsy in murder, short of braining the victim with a bludgeon? Suspicion is at once, at last, aroused. A *post-mortem* examination takes place. The Nemesian, Dr. Alfred Taylor, comes down. William Palmer, committed by his friend the coroner, found by a jury of his townsmen guilty of wilful murder, is an inmate of Stafford gaol. As it baffled in murder, he now attempts suicide, and after his customary uncouth fashion. He resolves to abstain from food. They inform him, after a few days' abstemiousness, that they will use the stomach-pump and make him live, that he may die the felon's death; and he now eats with all the calmness with which he killed

The inquest being further adjourned to the 23rd, public interest must be suspended upon all the collateral points of this case which have been freely raised by rumour. Of this there can be no doubt: the feeling of the Rugeley jury is so strongly against Palmer, that not only is it probable they will return another verdict of wilful murder in connection with the death of Walter Palmer, but it is also very likely they will call upon the Secretary of State to grant further orders for an exhumation, with a view to chemical examination, of other bodies—Bladen's and the mother-in-law's. But excitement may be at once set at rest with respect to the stories at first so eagerly received, that Palmer made away with the man Duffy—whose sudden disappearance has been accounted for—and that he was in some way instrumental in the death of Lord George Bentinck; respecting whom the reproduction of the facts has satisfied both relatives and the public. Another common report must soon be brought to the test. It is stated that bills to a large amount, purporting to be accepted by Mrs. Palmer, the mother, are out, and that these are forgeries by Wm. Palmer.

It may be suggested that, in a case of this importance, the Home Office ought to take more precautions for ensuring not only a satisfactory but a speedy inquiry. More than a fortnight has now elapsed since the Coroner and a team of solicitors took the investigation in hand. Mr. Wakley would have got through the whole business in a couple of days. The protraction may be attributed to the circumstances that the Coroner is very slow and very *fainenné*, taking the evidence tediously, and never venturing to interfere in the incessant squabbles of the solicitors; while these solicitors have neither the weight, the learning, nor the tact to conduct their business satisfactorily, even to themselves. On the jury there appears to be no one man of keenness. The result is that a mass of evidence of utter unimportance is taken at tedious length; and that the public, and the jury, and the witnesses, and the solicitors have to wait while the Coroner, who writes slower than most schoolboys, diligently scrawls.

The inquiry into the conduct of the postmaster—involving likewise an investigation into some alleged equivocal proceedings of the Coroner—proceeds meanwhile. As regards Mr. Cheshire, the postmaster, the case is complete. He confesses his offence. A letter was "lying open before him," he pleads, and he was so curious to know what Dr. Taylor (who marked outside the envelope, "cause of death") had to say respecting Cooke, that he could not forbear to read it; and he further admits that Palmer had spoken to him previously, and that subsequently he saw Palmer. Dr. Taylor's letter was not an opinion; it was a letter to the solicitor representing the executors of Cooke, asking for more information; but its negative character seems to have elated Palmer, who thereupon, injudiciously for his friend, wrote to the Coroner—it is not yet known what. As regards the result in Palmer's case, this transaction is rather curious than important. But as regards the Post office system the revelation is of the greatest consequence. What one postmaster not over-occupied in a gossiping little town may do, another postmaster similarly circumstanced may also do. The evidence in this particular matter is that an adhesive envelope can readily be opened by the practised hand, reclosed, and forwarded, in an apparently honest condition of letter, to its destination. Does this open an generally through Great Britain? We fear the inference is inauspicious; and that we must recur to the age of sealing-wax, or demand a *really* adhesive envelope.

## RECENT DISCOVERIES AT NINEVEH.

WE this week resume our Engravings of the latest Assyrian discoveries. They are all facsimiles of Mr. Boutcher's drawings, made on the spot a year ago, and now deposited in the British Museum. The large Illustration is quarter the size of the sculpture which is one of the three compartments forming the slab. For delicacy of workmanship and height of relief it is perhaps unrivalled by anything ever found in Assyria. The King, on horseback, has speared one lion through the mouth, and his lance-point issues from the back; whilst another lion has sprung upon the horse which he bears. Though the features of the King are correctly and finely cut, there is, as usual, no expression in his face to indicate the deadly encounter he is engaged in—the Assyrian sculptor represented the monarch battling with a desperate foe and quaffing wine in honour of the Queen with precisely the same quiet indifference. In all the slabs of this series, which was found *in situ* in Assur-bani-pal's palace at Kouyunjik (the mound opposite Mosul), the King wears an embroidered fillet on his head, instead of the pointed tiara with which Layard was regaled as a natural death. How such a drunkard had lived so long was the only wonder. Walter was buried in the same grave, in Rugeley churchyard, with Mrs. William Palmer, Palmer sen., Mrs. Brooks, William's five children, and Bladen; and no more was said in Staffordshire.

What had been said in London, however, ought to have urged William Palmer to caution. Yet it is at this time that he began his extraordinary attempts to insure the life of Bates, a decayed farmer turned groom, who signed a proposal paper, in which he was described as "a gentleman," who understood (and that was all) that he was to get £600 for his share. It is at this time that his turf gambling became enormous, and that he was raising in London money on bills at the rate of 60 per cent for discount. A not capacious mind had evidently gone mad with monetary embarrassments. All caution even of manner now went. One evening in October last, when the insurance offices had sent down detectives to make inquiries, he was at the Junction Hotel at Stafford. He noticed the "odd lodgers" there: viz., the detectives. As usual at every hotel in the district, the groom or boots of the house was the fast ally of Dr. Palmer. He regaled the Boots about the detectives, and asked had they pumped Boots himself. He was restless and uneasy: he "stood" brandy-and-water for Boots, and, as Boots happened to be sick directly afterwards, Boots *now* insists that he was a-poisoned. If one were now to believe all the stories of gentlemen who had drank their liquor in Palmer's company of late years it would be demonstrated that he was hankering after murder day and night. At the inquest on Cooke, Mr. Bisher, wine-merchant and sporting-man, said, on one night of the Shrewsbury races he went into Cooke's sitting-room at the Raven Hotel, and found Cooke and Palmer drinking together. Cooke then complained that his drink "burnt him," and was sick. Mr. G. Herring, at the same inquest, deposed that at the Shrewsbury races he and others had been attacked with diarrhœa and pains in the stomach—so deposing the circumstance as to insinuate that Palmer was poisoning the stores of every booth on the course. All this of course partakes of exaggeration.

Yet, at the assizes in March, the counsel for the prisoner will doubtless, as a desperate resource, suggest the insanity of Palmer. It may be contended that in the proceedings in connection with Cooke there was the recklessness of the maniac even more apparent than the motive of the criminal. Palmer, known not to have any large practice, and rather supposed not to stick at trifles, goes specially to a chemist's shop in his own town, Rugeley, and buys six grains of strychnine. This was on the 20th November, 1855. At that time it is known that his friend Mr. Cooke is lying ill at the Talbot Arms, opposite Palmer's house. All the sporting world who had been at Shrewsbury races knew that Cooke had won largely, and, among other persons, of Palmer. Palmer had induced Cooke, a young man, but apparently a sagacious man, for he suspected Palmer, and talked freely his suspicions, to go over to Rugeley—a singular freak at any time, but especially in a time of illness. Palmer sends broths across to Cooke which make Cooke worse, and brings pills which kill Cooke. Cooke dies in the agony, "the body drawn like a bow," known to result from strychnine. The viscera being examined, Dr. Taylor gives his opinion that the cause of death was strychnine. Soon after death Palmer is detected by the chambermaid examining the pockets of the dead man's garments, and the betting-book and some cash are missed. Was there ever anything more clumsy in murder, short of braining the victim with a bludgeon? Suspicion is at once, at last, aroused. A *post-mortem* examination takes place. The Nemesian, Dr. Alfred Taylor, comes down. William Palmer, committed by his friend the coroner, found by a jury of his townsmen guilty of wilful murder, is an inmate of Stafford gaol. As it baffled in murder, he now attempts suicide, and after his customary uncouth fashion. He resolves to abstain from food. They inform him, after a few days' abstemiousness, that they will use the stomach-pump and make him live, that he may die the felon's death; and he now eats with all the calmness with which he killed

The inquest being further adjourned to the 23rd, public interest must be suspended upon all the collateral points of this case which have been freely raised by rumour. Of this there can be no doubt: the feeling of the Rugeley jury is so strongly against Palmer, that not only is it probable they will return another verdict of wilful murder in connection with the death of Walter Palmer, but it is also very likely they will call upon the Secretary of State to grant further orders for an exhumation, with a view to chemical examination, of other bodies—Bladen's and the mother-in-law's. But excitement may be at once set at rest with respect to the stories at first so eagerly received, that Palmer made away with the man Duffy—whose sudden disappearance has been accounted for—and that he was in some way instrumental in the death of Lord George Bentinck; respecting whom the reproduction of the facts has satisfied both relatives and the public. Another common report must soon be brought to the test. It is stated that bills to a large amount, purporting to be accepted by Mrs. Palmer, the mother, are out, and that these are forgeries by Wm. Palmer.

It may be suggested that, in a case of this importance, the Home Office ought to take more precautions for ensuring not only a satisfactory but a speedy inquiry. More than a fortnight has now elapsed since the Coroner and a team of solicitors took the investigation in hand. Mr. Wakley would have got through the whole business in a couple of days. The protraction may be attributed to the circumstances that the Coroner is very slow and very *fainenné*, taking the evidence tediously, and never venturing to interfere in the incessant squabbles of the solicitors; while these solicitors have neither the weight, the learning, nor the tact to conduct their business satisfactorily, even to themselves. On the jury there appears to be no one man of keenness. The result is that a mass of evidence of utter unimportance is taken at tedious length; and that the public, and the jury, and the witnesses, and the solicitors have to wait while the Coroner, who writes slower than most schoolboys, diligently scrawls.

The inquiry into the conduct of the postmaster—involving likewise an investigation into some alleged equivocal proceedings of the Coroner—proceeds meanwhile. As regards Mr. Cheshire, the postmaster, the case is complete. He confesses his offence. A letter was "lying open before him," he pleads, and he was so curious to know what Dr. Taylor (who marked outside the envelope, "cause of death") had to say respecting Cooke, that he could not forbear to read it; and he further admits that Palmer had spoken to him previously, and that subsequently he saw Palmer. Dr. Taylor's letter was not an opinion; it was a letter to the solicitor representing the executors of Cooke, asking for more information; but its negative character seems to have elated Palmer, who thereupon, injudiciously for his friend, wrote to the Coroner—it is not yet known what. As regards the result in Palmer's case, this transaction is rather curious than important. But as regards the Post office system the revelation is of the greatest consequence. What one postmaster not over-occupied in a gossiping little town may do, another postmaster similarly circumstanced may also do. The evidence in this particular matter is that an adhesive envelope can readily be opened by the practised hand, reclosed, and forwarded, in an apparently honest condition of letter, to its destination. Does this open an generally through Great Britain? We fear the inference is inauspicious; and that we must recur to the age of sealing-wax, or demand a *really* adhesive envelope.

## RECENT DISCOVERIES AT NINEVEH.

WE this week resume our Engravings of the latest Assyrian discoveries. They are all facsimiles of Mr. Boutcher's drawings, made on the spot a year ago, and now deposited in the British Museum. The large Illustration is quarter the size of the sculpture which is one of the three compartments forming the slab. For delicacy of workmanship and height of relief it is perhaps unrivalled by anything ever found in Assyria. The King, on horseback, has speared one lion through the mouth, and his lance-point issues from the back; whilst another lion has sprung upon the horse which he bears. Though the features of the King are correctly and finely cut, there is, as usual, no expression in his face to indicate the deadly encounter he is engaged in—the Assyrian sculptor represented the monarch battling with a desperate foe and quaffing wine in honour of the Queen with precisely the same quiet indifference. In all the slabs of this series, which was found *in situ* in Assur-bani-pal's palace at Kouyunjik (the mound opposite Mosul), the King wears an embroidered fillet on his head, instead of the pointed tiara with which he is elsewhere delineated, to be an altar. The King is surrounded by attendants. On one adjoining slab are the King's horses, from one of which he has evidently just dismounted to preside at the ceremony; on the other slab more lions are being carried to the feet of the Monarch. The two upper compartments of this slab represent hunting-scenes: in one subject the King is killing the lion with a mace, in others with dagger and spear. There is likewise a representation of the cage from which lions are being released. Each subject has an inscription over it recording the circumstance portrayed

The two slabs, of which we have engraved compartments, are now on their way to England. The third Engraving represents a group of cattle, also found in Assur-bani-pal's palace. This slab, with others, was presented to the French nation, and is one of the ill-fated collection which foundered last summer in the river Tigris, and of which, unfortunately, no records remain but Mr. Boutcher's drawings. It is noteworthy how much superior is the representation of animals to that of men in the Assyrian sculptures. There is, considering the stiffness and hardness generally seen, a surprising grace and skill displayed in this small group. There is vigour, also, about the lions in the woodcut above them which has no counterpart in any of the human figures.

The only result of the last expedition which has yet reached England, besides Mr. Boutcher's drawings, some 180 in number) is a magnificent bed, ivory ornaments and other small articles found at Nimroud They are now placed amongst our national collection, and will repay a visit.

It is to be regretted that the British Museum does not complete its good work by publishing the whole of these works which have been at so great a cost collected, and which portray the latest and best works of Assyrian art.

We shall next week engrave the Libation Inscription, and append a translation.

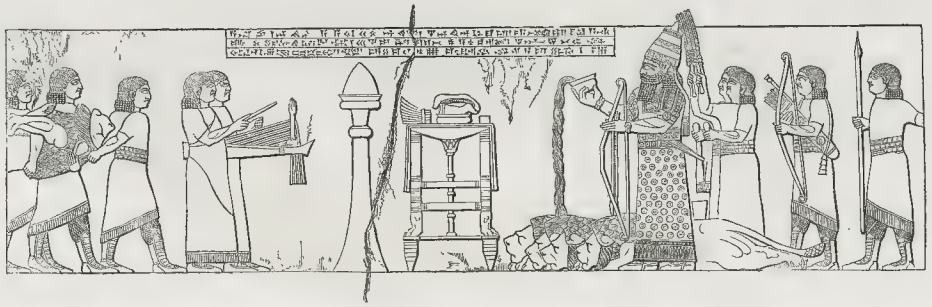
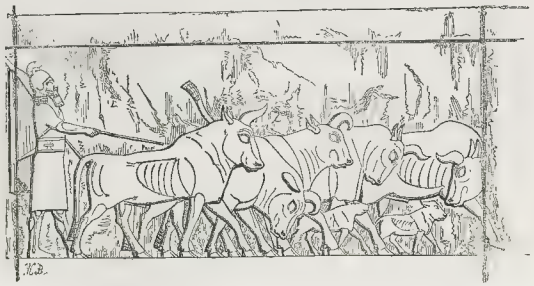
THE KING HUNTING LIONS.—(SEE PRECEDING PAGE.)



A LIBATION.



DRIVING CATTLE.

THE FRENCH IMPERIAL GUARD.—CAVALRY.—(SEE NEXT PAGE)

## DISTRIBUTION OF THE QUEEN'S MEDALS TO THE FRENCH CRIMEAN TROOPS.

ON Tuesday last the tried troops who lately made their triumphal entry into Paris amidst the plaudits of the population assembled before the doors of the Palace of the French Sovereign, to receive from the hands of a Prince of the blood Royal of England a medal, which he was deputed to give them in the name of Queen Victoria.

At a quarter past twelve all the troops had assembled. They were composed of the company of Engineers, the Foot Chasseurs, the two regiments of Voltigeurs, the Zouaves, the Grenadiers, Gendarmerie, and Artillery of the Imperial Guard, with the four regiments of the Line—20th, 39th, 57th, and 97th. The troops were massed by regiments, and drawn up first in the Court of the Tuileries and part in the Place du Carrousel. An immense crowd of persons were assembled in the neighbourhood, wherever a view could be obtained. At one o'clock the Emperor mounted his horse, accompanied by Prince Napoleon, the Duke of Cambridge, Marshals Vaillant and Magnan, Generals Canrobert, Bosquet, Niel, and Reginaise, and his Aides-de-Camp and orderly officers. The Empress at the same time took her place on the balcony of the Pavillon d'Horloge, surrounded by her ladies of honour.

His Royal Highness commenced by presenting the medal to the general and superior officers, and afterwards to a certain number of the other officers, sub officers, and privates of each regiment. In order to avoid the great delay that would have arisen in presenting so many thousand men at the same time, the medals were sent the evening before to the different barracks, so that the men wore the medals at the time of the filing off. The ceremony of distribution took place amidst the sound of military music, the bands of all the regiments playing the French and English national airs. We shall illustrate this interesting ceremony next week.

## NAVAL AND MILITARY INTELLIGENCE.

ALL ships preparing at Plymouth for service in the Baltic are ordered to be ready by the 1st of March.

A CONSIDERABLE number of mechanics, principally shipwrights and shipjoiners, at Sheerness yard have demanded and obtained their discharge, for the purpose of proceeding up the river Thames for employment in merchant yards. The inducement is the high rate of wages paid for job and task work by private builders compared with the dockyard rate of prices for similar work.

THE non-commissioned officers and men of the Royal Sappers and Miners, Chatham, are under the instruction of Captain Francis Du Cane in the use and working of the electric telegraph.

LANCASTER'S elliptical-bore rifle has been issued to the 17th, 24th, 77th, and 90th companies of the Royal Sappers and Miners; the 24th company is first for service, supposed to be for the Baltic.

AN order has been issued from the War-office to the military authorities at Chatham that the corps of the Royal Artillery and Royal Sappers and Miners shall be furnished with their daily rations from the Commissariat Department on the home stations, the same as the cavalry and line, commencing on the 1st of February.

AN additional number of forty sergeants and forty privates of the Provisional Battalion, Chatham, are to be placed under Captain W. Nott, 53rd Regiment, for instruction in the Enfield rifle practice.

AN order has been received by the Coast Guard authorities here to send up to head-quarters all the men of the Coast Guard under fifty years of age. The men in this force, especially on our northern shores, are admirable and generally fearless boatmen, and well acquainted with navigating small craft on a dangerous coast; and there can be no doubt that their services will be most useful on board the fleet of gun-boats which are being prepared against the spring campaign in the Baltic. The place of the men withdrawn will be supplied by extra men engaged in the districts.—*Glasgow Daily Mail.*

IT is contemplated to raise the walls of the Artillery stables on the north side of Brompton Barracks, for the purpose of making additional rooms for the accommodation of the Royal Sappers and Miners. It is supposed that the alterations will cost £20,000.

THE *William*, schooner, of Goole, is embarking from Woolwich arsenal a cargo of mixed stores for Portsmouth; and is likewise shipping two 13-inch mortars and mortar beds, with two 8-inch guns, for the *Sphinx*.

THE mortar raft, which is constructed on four pontoons, has now been refitted in the dockyard at Woolwich, and on Wednesday morning her 13-inch mortar and bed were hoisted into her, so that she is now fully prepared for another series of experiments

THE sailing transport *Bucephalus* arrived at Spithead on Wednesday from Balaclava. She is laden with spoils and trophies from Sebastopol. Amongst them are 75 guns and mortars of various calibre—most of them are in good condition. She has also a large quantity of gun-carriages and other artillery appointments. A valuable and interesting portion of her cargo consists of a number of Russian church bells one of them weighs two tons.

THE New Shipbuilding Slip, which was contracted to be raised by Messrs. J. and C. Rigby, at the east end of Woolwich dockyard, and which has been twelve months in the course of construction, is now completed. This slip has been built on a scale sufficiently spacious to obviate the difficulty hitherto experienced in Woolwich Dockyard—namely, of building ships of large burden. The new slip contains sufficient space for all the purposes of building men-of-war of the largest tonnage. Its dimensions are—feet length, with a proportionate breadth. As it is essential in structures of this description that the foundation and flooring of the shipway should be solidly secured, the foundation has been sunk to a considerable depth, a bed of concrete from ten to twelve feet in thickness forming the lower stratum, which rests on the chalk rock. This substance is covered by a body of brickwork. The floor of the building consists of large blocks of masonry fifteen inches in thickness. The masonry and brickwork are set in cement. A portion of the river wall in connection with the above is likewise completed.

## COLLEGES, UNIVERSITIES, &c.

ELECTION OF MASTER OF CLARE HALL.—On Monday last the Rev. Edward Atkinson, B.D., was elected to the vacant Mastership of Clare Hall, Cambridge, by the vote of eighteen out of the nineteen Fellows of which the society consists. This is the first time within the memory of man on which all the Fellows have met together—the late Master, Dr. Webb, having been unanimously elected by the thirteen Fellows who were present. This mark of unanimity is the highest possible distinction that in consequence of one of the Fellows voting for himself.

APPOINTMENTS.—*Rectories:* The Hon. and Rev. A. N. H. CANON to Redleston, Derbyshire; Rev. Charles Edward Oakley to Wickwar, in the diocese of Gloucester and Bristol. *Vicarages:* The Rev. F. F. Woodman to Broadwell, with the Helmcott, Oxfordshire; Rev. W. Standen to Burrant Monkton, near Blandford, Dorset. *Incumbencies:* The Rev. J. Bates to King's Sutton, near Bakewell, Derbyshire; Rev. W. Kingsford to Knowsley, Lancashire, Rev. A. Buckeridge to St. James'-District Church, St. Sidwell's, Exeter. Rev. E. Dumbleton to Vobster, near Wells, Somerset; Rev. C. N. Kingsford to Chellington, Somerset; Rev. W. Walton to Aslacton, near Long Stratton. Rev. Thomas Andrew Walker, M.A., to be Domestic Chaplain to the Right Hon. Lord De Tabley

ARCHDEACON DENISON'S CASE.—The argument upon the rule nisi granted in Archdeacon Denison's case in the Court of Queen's Bench is expected shortly to be heard, when the decision of the Court will be given, whether the rule shall be made absolute. If the decision is in the affirmative, the Archdeacon of the Archdiocese will proceed to the due course to hear the cause in a Court constituted for the purpose, according to the provisions of the Church Discipline Act.

THE COUNCIL OF WAR.—The Council of War assembles daily at Paris, under the presidency of the Emperor; but the strictest secrecy is maintained respecting the deliberations. The *Debats* of Tuesday says that one of the principal questions under discussion is the future of the command of the allied armies. The Paris correspondent of the *Independance Belge* believes that the campaign will be continued in the Crimea, and that the expedition to the Baltic, to be almost exclusively English, will be without an army for disembarkation. The same writer mentions a report that the new French loan "will be subscribed, if not entirely in England, at least with a solidarity of the resources of the two countries, and guaranteed by the two Governments."

AMERICA AND THE SOUND DUES.—The *New Prussian Gazette* states that the Government of the United States has offered to pay Denmark 60,000 dollars as an indemnity for the expenses incurred by the latter country for the benefit of navigation; and in addition, to contribute by an annual subsidy to the expense of the lighthouses of the Sound.

TESTIMONIAL.—The President of the United States has lately presented to Captain Thomas Beadet a handsome silver speaking-trumpet, according to the inscription, for "his humane and gallant conduct in rescuing from an...wreck the master and crew of the barque *Hope*, of Yarmouth, Massachusetts, 1855." The trumpet is characteristically ornamented with a cupid...ering the figure of a sailor, dolphins and a harpoon, a...chor, the American ...ch, the ...and stripes, &c., well executed in frosted ...

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE Civil Service Examination conducted at the Broad Sanctuary is proving too hard a matter for many of the candidates. Not a few break down in vulgar and decimal fractions; more in English history; and many—and those, it is said, the best dressed—in English spelling. Young men have come from John o' Groat's and the Land's End who have had to return to John o' Groats and the Land's End, inasmuch as they were unable to obtain the certificate of qualification for even temporary admission into the public service. This says little for the progress of education among the upper and middle classes. We believe that a few nominations to ragged schools would be found to give some excellent servants to the public. In the mean time we have just heard of an ingenious device that has been adopted, and has, it is said, in one case proved successful—that of *personation*. A bold young man, wisely doubtful about himself, appeared by proxy, though apparently in his proper person, passed a first-class examination, and has since been found anything but up to the certificate he received. The Civil Service Commissioners are now adopting certain securities to prevent future Perkin Warbecks and Pretenders from imposing on the public. The Commissioners, we may observe, seem to have been anything but up to the duties required of them. The letters they have issued abound in ill-expressed thoughts, delivered too frequently in ill-spelt English.

Ladies and old men (in the shape of old women) who delight in old china—and it is a taste which we occasionally cultivate ourselves—will be delighted with two auctions announced for the ensuing spring by Messrs. Christie and Manson. The lady who is mistress of herself when china falls (under the hammer of the auctioneer at a low figure and to her bidding) is much to be envied. This by way of parenthesis. The two sales will be those of the Rvng Mr. Fortune and the late Colonel Silsthorp. Mr. Fortune during his tea mission into China was curious, when not otherwise employed, about cups and saucers, and old enamel-work, and fine old crackle (what a charming sound is this for china-collectors!), Japan lacquer-work, and other things which Lord Macartney had no taste for. The result has been a really curious and unknown collection, enough to rouse Mr. Bernal and Colonel Silsthorp from their graves as bidders. Mr. Fortune's sale takes place next month. Another Bank dividend-day will be suffered to pass before Colonel Silsthorp's collection is scattered into other closets of collectors—those closets into which Charles Lamb (when in a new-to-him old house) delighted to look before visiting the library. Our old friend the Colonel was so passionate an admirer of old pottery and porcelain, that we have seen him in an absolute female rage at missing a lot (Palissy or Raphael ware) for which he had hurried from the House, or interrupted (on important business) a London deputation of his Lincoln constituents. The Colonel (he was a bit of an old woman) really did understand something about Dresden and old Chelsea—bade boldly—and secured some very choice specimens of the arts he loved.

That admirable imitation or parody in *Punch* of Mr. Longfellow's new poem called "Hiawatha" was written by Mr. Shirley Brooks. We believe we are divulging no secret when we state this. It is about the best thing of its kind since the "Rejected Addresses." In well-informed circles the able and amusing account in Mr. Macaulay's manner of the publication of the third and fourth volumes of his History is attributed to the same pen. It appeared in the *Press*.

The jewel presented by her Majesty to Miss Nightingale is said to have been suggested by the Darnley jewel which her Majesty bought at the Strawberry-hill sale, and by those enamelled jewels which her great predecessor on the English throne (Queen Elizabeth) gave to Drake, Raleigh, and other illustrious Englishmen of her reign. The design, from the description, seems very ingenious. The good sense of the revival of such appropriate gifts is not for a moment to be doubted. The medal which the Commonwealth of England gave to Admiral Blake is still the envy of every collector.

The Goths and Vandals of the Board of Works have not, under the plea of restoring, destroyed the famous pedestal of the statue of Charles I. at Charing-cross. They have let the pedestal stand, but have renewed the plinth on which the statue is fixed in granite instead of Portland stone. We will not quarrel with this, because the security of the statue had become a work of necessity. The snows and rains of London for more than a century and a half had so worn away the Portland stone plinth that a new one was more than needed. Scotch granite, however, does not harmonise with Portland stone; and here we might have been at least content with a Portland reproduction, leaving our children of A.D. 2000 to replace it in the same material (and from no false economy) out of their own pockets.

London, we are told and told truly—is singularly deficient in places of amusement to which the public can resort in all weathers. This deficiency the experienced men who tell us this are about to supply in their own way. They want an appropriate spot of ten acres (at least) easy of access from all parts of London. Hyde-park is not open to them (it was not open to the Crystal Palace Company); but they can obtain possession of the Surrey Zoological Gardens, of ten acres, with water and trees. This spot has been chosen by a company determined, we are told (and we are glad to hear), to supply the admitted want. They have secured Jullien as conductor of their music; have nearly raised the sum they require—£40,000; and have obtained designs for a music-hall to hold ten thousand people. The Coal Hole and the Cider Cellars have sunk before Canterbury Hall and Mr. Green's new building at Evans's, to which we alluded last week. Canterbury and Mr. Green will not be in a better position from this new project when once established.

Dr. Sandwith, the only one who escaped from Kars to London to tell in person the story of the gallant defence and the as gallant surrender of that fortress, is busy—pen in hand—with a narrative of the defence and of his own adventures.

We can confirm our own approbation of a book just published by the criticism of one whose judgment (were we to mention his name) all would regard with the high respect it deserves and receives. We have no greater want in English literature than a popular History of England. This Mr. Charles Knight has sought to supply; and though his work, from the number before us, will not satisfy a circle it was never designed to reach—the scholar and the antiquary—yet it is by far the best popular account of England we have, with all your Goldsmiths, and Pinnocks, and Keightleys, and a long et cetera put together. Mr. Knight is up with the most recent books of real learning on the subject he is handling, even the well-informed scholar may learn something of moment from his pages. No letter existing book on the subject could be put into the hands of any boy between ten and fifteen; we might say twenty, but lads of twenty are what men of thirty were (in some things) about thirty years ago.

WILLS.—The will of Sir Robert Abercrombie was proved in London, under £50,000 personalty, within the province of Canterbury, by James Morrell, Esq., of Headington Hill, Oxford, £160,000.—Charles Barclay (Barclay, Perkins, and Co.), £80,000.—W. N. Clarke, D.C.L., of North Brixton, £1,000.—Rev. John Sanford, Stanwell-place, £20,000.—John Williams, Esq., St. Asaph, £20,000.—W. Ashpitel Hawkes, chemist, Islington, £16,000.—W. W. Jones, Bankey, Shropshire, £6,000.—C. E. Rigby, R.A., £8000.—[illegible] Esq., Cheltenham, and Major Arthur Aug. Fred. Wellesley Pole, C.B., have also been moved in London.—Daniel Grant, [illegible] has bequeathed £500 to the Manchester Infirmary, £200 to the Manchester Lying-in Hospital; £200 to the Manchester Eye Institution, and £200 to the Birmingham Dispensary.

ST. ABBS EAST INDIAMAN.—This vessel was wrecked in June last off the coast of Madagascar, when Mr. W. H. Bell, second son of the late Lieut.-Colonel Charles Hamilton Bell, in the hope of obtaining succour for the passengers and crew, volunteered to swim ashore, and is supposed to have been lost in the attempt.

## EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Lord Canning, the new Governor-General of India, was still in Upper Egypt when the last steamer left, and the *Feroze*, which was to convey his Lordship to Bombay, was expected to arrive at Suez in a few days.

The Emperor of the French and the Duke of Cambridge drove on Monday out to the Bois de Boulogne. On reaching the lake they alighted from their carriage and took a walk round the ornamental water.

The King of Prussia has addressed a letter to General de Wrangel, through the Minister of War, thanking him strongly for having attended a Te Deum at the hotel of the Russian Legation at Berlin, in celebration of the taking of Kars.

Count Buol is said to have informed Prince Gortschakoff that the whole of the Austrian Legation would leave St. Petersburg on the 15th inst.

The Court of Directors of the East India Company purpose to invite Sir George Pollock to sit for his picture, to be hung up in the Examination Hall, or other public room, at Addiscombe

The ex-Queen of the French, Marie Amelie, has completely recovered from the grave malady which lately caused serious fears to her family.

In consequence of an autograph letter from Napoleon III. to the Emperor of Austria, the latter directed the property of Count Arese, Count Borromeo, and Marquis Trivulzi Patavacino, to be freed from sequestration.

The *Clonmel Chronicle* says:—"We understand a matrimonial alliance is about to take place between Captain Massy, 19th Regiment, and the Countess of Seafield."

The *Indépendance Belge* says:—"Great measures are in preparation with regard to the Empress. They will be of a nature to place in a striking light the dynastic importance of the event the realisation of which is now very near."

One day last week as the Earl of Eglinton was leaving the National Bank, Edinburgh, the packet was picked of £100, which he had just drawn.

The Institute of Sweden has unanimously admitted Prince Lucien Bonaparte, who now finds himself a member almost all the Academies of Europe.

The members of the Irish bar purpose entertaining Mr. Sausse, the new Bushy Judge, at a dinner of the profession, previously to his departure from Ireland.

General Mouravieff sent an officer of his staff to the Court of Persia to announce the capture of Kars, and to congratulate the Shah upon his victory at Herat.

On Monday last Viscount Raynham addressed the electors of Tenterden, and solicited their suffrages. It is said that the noble Lord will be elected without opposition.

The approaching marriage is announced of Prince Gabrielli with the Princess Lucette Borghese.

The Council of the Royal Society have appointed the Bishop of Oxford as Fairchild Lecturer for the present year.

Queen Maria Christina is about to marry her second daughter to Prince del Drago, the heir to a great name and to a considerable fortune. It is this Princess who was on the point of espousing Prince Castini, son of Count de Castiglione, Tuscan Minister of Foreign Affairs, but the Prince died while the preparations were going on.

Mr. G. Cleice, Mr. R. Beddulph, and Mr. Thomas Evans are candidates for the vacancy likely to arise in the representation of Hereford.

Three new French Senators are shortly to be named—the Duke de Maille, the Duke de Valmy, and the Marquis de Belbeuf.

Lord Panmure, Secretary of State for War, has been suffering for some days past from an attack of gout. The attack prevented his Lordship from attending the Cabinet Council of yesterday week.

The Prince and Princess of Prussia, and the Princess Louisa, arrived at Berlin on the 10th from Coblentz. The day after the Prince was received by the King.

The following names have been mentioned as those of parties to whom the honour of the representation of Cambridge University is likely to be offered:—Lord Robert Cecil, Mr. Spencer H. Walpole (B.A., 1828); the Marquis of Granby (M.A., 1835); and Lord John Manners (M.A., 1839), all members of Trinity College, Cambridge.

Mr. Henry Berkeley, M.P., has commenced an action for libel against the proprietors of the *Alliance Weekly News*—a teetotal paper.

Captain Isaac Smith, of the Russian Staff, ex-Inspector of the military hospital of Kowno, has been degraded from the rank of noble, and condemned to serve as a private soldier, for making away with the public money, as well as with sums belonging to private individuals.

Dr. Kennedy is going to Australia in the *Royal Charter*, with an express view to make experiments relative to the variation of the compass in iron ships in the southern hemisphere.

Among the presentations by the American Minister to the Emperor Napoleon on Sunday were Mr. and Mrs. Emmett—the former the grandnephew of the Emmett who suffered death for his attempt to revolutionise Ireland in 1802.

Lieut.-Colonel James, the head of the trigonometrical survey of the kingdom, and who was formerly attached to the geological survey of the country, is delivering a gratuitous course of lectures on practical geology to the members of the Southampton school of Art.

Liszt is about to visit Vienna, to conduct a grand musical solemnity, in honour of the centenary of Mozart.

M. Thalberg, the eminent pianist, has arrived at Lisbon from Buenos Ayres.

The *Louisville Courier* learns from private New Orleans despatches that Dion Boucicault is dead. He was manager of the Gaiety Theatre in that city, and was eminent as a dramatic author and as an actor. Mr. Boucicault was the author of "London Assurance," and many other popular plays.

The *Oesterreichische Zeitung* has become the property of the Austrian Lloyd's Company.

A Dumfries paper states that the Lord Advocate will reintroduce his Education Bill in the approaching Session.

A new planet was discovered on Saturday last by M. Chacornac at the Imperial Observatory of Paris. Its brilliancy is equal to that of a star of the ninth or tenth magnitude; it is situated in the constellation of Cancer, some few degrees to the south-east of the nebulous Præsepe.

A boy born last week, the son of Mr. G. Johnson, of Elizabeth-street, Cheetham, Manchester, has four great grandfathers—the whole number, of course, that he could have—now living.

Alexandria and Cairo now communicate with each other by railway and electric telegraph. By the former the distance is eight hours

At the opening of the Cork Sessions last week the Assistant-Barrister, Mr. [illegible], presented with a pair of white gloves by Mr. [illegible], Clerk of the Crown, in lieu of the customary fee. This being a criminal case whatever for [illegible] the first time such an occurrence has taken place in Ireland.

The Peruvian Legislature is about to sell all the guano in Chincha Islands, valued at [illegible].

A Royal proclamation orders the election of members of the Supreme Parliament of Denmark, which is convoked for the 11th February. The *Dagbladet* states that the elections must be concluded by the 22nd inst.

At the Epsom Quarter Sessions, held at Rye, on Thursday, there were no prisoners for trial. It was also stated that the gaol was empty.

The police of Berlin have forbidden newspapers to admit advertisements for wives and husbands, on the ground that they are contrary to propriety.

The Austrian Consul at Jerusalem has received from his Government a very large sum for the erection within the walls of the town of consular buildings, a chapel, and a palace for the Archbishop of Vienna.

The Greeks are in possession of about two-thirds of the land within the walls of Jerusalem, generally supposed to have been bought with Russian money

Mr. Wilkinson has resigned his seat at the Metropolitan Board of Works.

On Monday morning a boiler explosion took place at the new ironworks, Lea Brook, Staffordshire, by which four men were killed, and eight others injured.

The nomination and election of a member for the city of Lincoln, in the room of the late Colonel Sibthorp, took place on Wednesday, when Mayor G. W. Sibthorp, son and heir of the late member, was returned without opposition.

## CHARLES MACKAY'S NEW POEM.

ANOTHER of the poets has broken silence; and, thanks to whatever stars may have been dominant when the "Lump of Gold" came to light, the voice is no inarticulate sound, but manly, graceful, and lucid utterance. For the fulfilment of this first condition, so unhesitatingly neglected by most of the bards of the hour—that a poem shall be comprehensible—let us at the outset give all thanks to Charles Mackay. One of the old divines says that a poet, if he be indeed a poet, is "the bravest man in the world." We are disinclined to believe in the bravery of a good many of our modern lyrists. For if we accept the good old priest's definition as meaning that the chivalrous poet flings down an unmistakable truth before the millions and defies them to rend it in pieces, what is the courage of the challenger who presents a vague, elastic, aimless mass of phrases, that eludes criticism by its negativeness and incoherence? Such is not the poem before us. The writer knew what he meant to say; was, furthermore, skilled in the art which enables men to be understood; and, thirdly, has not been afraid to set his whole heart before us. -

This union of will and power has ever been characteristic of Charles Mackay. From his earliest effusions to those of his matured intellect he has always sought, as it appears to us, to set out his image, whether framed for the sensuous or the intellectual eye, with an artistic precision. He leaves no rubs nor blotches in his work. When he has to bid men prepare themselves for the battle, his trumpet—to use the inspired illustration—giveth no uncertain sound. His love-songs breathe love—not that mixture of endearment and sarcasm with which certain amourists seem to make atonement to themselves for condescending to such a theme as love. His description-pictures are finished works, in which the value of a steady master-touch is seen and felt. And after a pause from his poetical labours (a pause whose length we should not easily forgive him, were we not aware that he has been doing good work in other fields), we find, as might be expected, the same habit of conscientious and truthful utterance which gave to his earlier works a charm beyond that of the fascinations of form. In the graces of his art he was always skilled, and singularly so in the mastery of rhythm, and his power over the music of language is extraordinary; but there is a nobler and higher merit in his more important works—*spiritus intus alit*—and it is as a poet-teacher that the author of "Egeria" has acquired, and will retain, the honourable recognition of his age, and his passport to posterity.

Very wisely, as it seems to us, has the poet, in his new work, eschewed legend and history, allegory and vision, and spoken to the hearers of the scenes, the passions, and the sorrows of the day. The new volume contains upwards of thirty poems, of various length; but the most important, and that which gives name to the book, occupies some ninety pages, and is composed in a varied series of metres. It delineates the guilt, the despair, the restoration, and the happiness of Edward Aubrey, who, the husband of a lovely and loving wife, Lillian, the eldest daughter of a noble-minded clergyman, leaves her, in order to seek in the gold regions a rapid fortune. He is ambitious, not sordid; and his ardent thirst for gold is stimulated by the desire to place those whom he loves in the possession of every luxury, intellectual as well as material. He keeps proudly aloof from his companions in adventure, with the exception of one—Heseltine—who is worthy to be his friend. Accidentally he discovers an enormous lump of gold, and for the moment is beside himself with triumph, and revels in the visions of happiness in store for him and his. But, to his horror, he finds himself unable to remove the gold by his single strength; and he cares not call in the aid of others, who would at least insist on sharing his prize, or murder him in order to possess it all. While brooding over his treasure his steps are tracked by his friend Heseltine, who asserts, under their compact, a right to one half the gold. The newly-born devil of covetousness inspires Aubrey, and he strikes down his friend with a blow. Believing that he has slain him, he becomes a prey to remorse; the gold field is loathsome, and he flies from the shore he has polluted with blood, and hastens back to England, a prey to the fiercest mental agony. His reconciliation to life, the healing counsels of the pastor, the devotion of Lillian, and the consequent arrival of Heseltine, constitute the principal portion of the poem.

Recurring to the phrase of our old divine, we may here recognise the courage of the poet. The ordinary and conventional moral is scarcely glanced at, the machinery of the poem moving, as far higher do Aubrey's punishment comes upon him. It is true, by force of two accidental circumstances the discovery of the gold, and the strife with his friend; and this is in accordance with the truth of life; but his punishment is really dealt to him for the original crime of selfishness, for his neglect the good heart that he had won, yet undervalued, for the sake of winning the prizes of the world. And here the true poet-moralist is in the chivalry of his nature, the severe but necessary sacrifice of the affections, and, chiefly, of woman's affection, the teaching of the truth that is Love; and, by a skilfully-managed narrative, enriched with unusual pictorial graces, the author reconducts the chastised and instructed wanderer to the home he should never have left. *Felix culpa* (if one may somewhat pervert the phrase) *est bona tale datur*. Like all poems of true manliness, it is a woman's poem.

Our extracts have been purposely selected with a view of not marring the general effect of the poem by inappropriately isolated passages (in isolation), and herein we have adopted the course pursued by that usual with reviewers, who hesitate not to adorn their own commonplace with an author's choicest gems. We chiefly dwell upon the descriptive elements of the literary department of a journal, by preference selecting the character of a new poem. The following passage refers to Aubrey's dedication in London on his return.—

| | |
|---|---|
| "Madness broods over me! | I fashion rode homeward; |
| Kind-hearted Death— | In armune and down:— |
| Canst thou not shelter me? | Fashion and Beauty |
| Veils in my breath! | All jaded and worn |
| Take it and welcome— | Fled through the tempest |
| And low let me lie; | The steeds gallop'd on |
| Low in the quiet grave; | Fire from their clanging hoofs |
| Deep in the solemn wave; | Heavily shod |
| Weary of living, | 'Mid the black rain pools |
| Unworthy to die." | Flashed where they trod |
| | Indolent Fashion, |
| Down came the drenching rain, | Weary and warm, |
| Bubbling and swelling— | Saw from its chariot |
| Fierce blew the gusty wind, | That desolate form, |
| Roaring and yelling, | Beating its rapid way |
| The scene was silent, | Dead to the storm |
| Its orators fled, | "Mad!" said the Countess, |
| The ball-room was empty, | "Of drink!" said the Earl, |
| Its revels were dead. | "Or love," said a daughter |
| Lustless or half awake | Tearing her hair |
| Through the dull town, | Back into care! |

Morning breaks upon the view of the despairing man:

| | |
|---|---|
| | The moonlight received it, |
| In gold and in purple, | And died in a swound: |
| In amber and grey; | Hesperus saw it |
| Under the steeple vane, | And vanished discrowned |
| Eastward away. | Steeple and pinnacle, |
| Over the house-tops | Turret and spire, |
| Rushed the new day. | Crowded and countless |
| Filling and wholly | As hosts in a fire |
| Between square cup, | All the heavens |
| But faintly and slowly | As last [illegible] |
| Morn travelled up. | Emerged into morning |
| | And glimmered in light |

We have later an exquisite description of Vale, the large-minded, warm-hearted pastor, father of Lillian, Aubrey's wife. For the beautiful, half-quaint idea which we have ventured to mark, good old George Herbert would have hastened from the church porch to welcome the poet

| | |
|---|---|
| 'Twas Sunday morn, and Parson Vale, | Faith, Hope, and heavenly Charity— |
| Beloved of high and low, | Whate'er the good man taught, |
| With smiles for all men's happiness, | Whate'er his text, these blessed three, |
| And heart for every woe, | Were present to his thought. |
| Walked meekly to the parish church, | He never scorned his fellow men, |
| With hair as white as snow— | Or held the humblest cheap |
| Walked meekly to the parish church, | He warned the strong, he raised the |
| Amid his daughters three— | weak, |
| There were more angels at his side | And, like his Master mild, |
| Than mortal eye could see— | He helped and comforted the poor, |
| *The four were seven—for with them* | And loved each little child, |
| *went* | And, 'mid the mud and dust of life, |
| *Faith, Hope, and Charity.* | Went forward undefiled. |

Vale preaches Religion in Common Things. Here is an "olden tale" that he tells to his parishioners within the hearing of Edward Aubrey:—

THE BUILDER.

| | |
|---|---|
| "What art thou building, building, | When hunger bids, shall no man |
| So lofty to behold, | Be scorned or stinted here, |
| With the silver and the gilding, | But I raise these gates and turrets |
| The ivory and the gold, | To guard me from a fear. |
| And prophecy columns rising | |
| Like trees in the forest old? | "To guard me safe-enfolden |
| | Like a seed at the apple-core; |
| "Why place thy marble basements | Oh, bolts and barred golden, |
| So deep in the cold earth's veins; | Keep wal the outer door. |
| And thy towers and window casements | That SORROW may not enter |
| So high o'er the steeple fanes, | To sting me as of yore" |
| And why those ponderous portals | |
| With iron bolts and chains! | "Oh fool, in thy lordly palace! |
| | Oh fool, with bolts and bars! |
| "And why those guards and warders, | Thou'lt find her in thy chalice, |
| With horn and signal calls: | She'll float in the wid wind cars! |
| And, far on the furthest borders, | She'll glide in the air thou breathest. |
| The moats and brazen walls.— | She'll smite thee from the stars |
| Dost fear invading robbers, | |
| Or the foemen in thy halls?" | "She'll come to thee in the morning |
| | When the Light of day streams in, |
| "I build a house of splendour, | She'll sit with thee in the evening,— |
| Where, in the world's despite, | Thou fool, and child of sin! |
| I may force the hours to render | And whisper at thy pillow, |
| Their tribute of delight; | And claim thee of her kin. |
| A house on the hill-top shining, | |
| Far seen, like the star at night | "In spite of all thy building, |
| | And all thy warders stout, |
| "I dread her thief, nor foeman: | And all thy gold and gilding, |
| My board shall teem with cheer: | She'll hedge the round about:— |
| | Heavy, and goodness |
| | Alone shall keep her out." |

We could willingly increase the number of our extracts but, unwilling to spoil the interest of the story for a single reader, we will abstain from plunder and at once resign the "Lump of Gold" to our readers, assuring them that any true touchstone which their poetical chemistry may have taught them to apply will but convince them of the standard character of the ore. But they have known Charles Mackay long enough to take any gold he may present, not only with trust, but with thankfulness. We must not (we say this without mentioning that upwards of thirty smaller poems are added, and unite to compose one of the most delightful volumes of the day. Some of these poems have appeared in print, but the majority are new; and among them are some charming love-verses, some of the personal prize of the school which the author's name is inseparably connected; some thoughtful but playful versicles, and a noble war hymn. The journalist who sits to audit the world's accounts, and to note how Genius pays its debt to its age, has not often to record a claim more worthily discharged.

L. F.

## *MUSIC.*

MADAME GOLDSCHMIDT has commenced a series of "Miscellaneous Concerts" in the metropolis. The first took place on Thursday (last week); the second is announced for Friday next both at the Hanover square Rooms. She has given concerts of this description at Brighton and Liverpool. Having, by her appearances at Exeter-hall, established her supremacy as an oratorio singer, she is now exhibiting by means of these miscellaneous concerts, the extent and variety of her powers in music of a lighter character. The first was essentially a concert of display; its object being to show what marvellous things the fair prima donna can do in the mechanism of her art. It was evidently for this purpose, and not for its intrinsic excellence, that the music song by her was mainly selected. One of her pieces was a long scena, consisting of a recitative and air from Bellini's "Beatrice di Tenda," one of the weakest and least successful operas of this composer. The air, "Ma la sola," is a slight commonplace melody; one of those things which, having no substance in themselves, serve merely as an outline to be filled up *ad libitum* by the singer. Thus Jenny Lind did, showing her inventive genius as well as her vocal power; for her *fioritures* and embellishments were as original in conception as they were brilliant in execution. She clothed Bellini's meagre melody with a richness and beauty in which he had no share. Her next performance was still more exclusively a piece of display—a feat, we may call it, of musical gymnastics. It was not vocal music at all being a series of Chopin's *pianoforte mazourkas*, some of the most difficult things ever written for that instrument, and which none but a first-rate pianist can perform according to the author's intentions. These things Jenny Lind *sang*, surmounting their difficulties in a manner as marvellous as the famous one-stringed exploits of Paganini. The audience were astounded, and gave vent to their amazement in thunders of applause. Her whole performances, however, were not confined to such displays. There were other things in which she showed far higher and truer artistic feeling, simplicity and pathetic expression in which she is unrivalled. These were the beautiful prayer of *Agathe*, in the "Freischütz," breathed with heartfelt fervour; and the finest of all the Scotch ballads, John Anderson my jo," sung with a simplicity, truth, and tenderness which ravished every heart and moistened many an eye. She concluded with the Swedish "Echo Song" which she frequently sang during her former visit. It is a most quaint and curious specimen of [illegible] music.

Madame Goldschmidt played several pieces on the pianoforte - Beethoven's Concerto in C major, Mendelssohn's Capriccio in B minor, and Sebastian Bach's Saraband and Allegro in A minor. He showed himself a highly-accomplished performer of the pure classical school, and was warmly and deservedly applauded. In addition to the pieces already mentioned, the programme included two songs by Herr Reichardt—the aria, "Constanze," from Mozart's "Seraglio;" and the romance, "Pal Bianca," from the "Huguenots;" both of which he sang with his usual excellence and success. It is proper to add that the orchestra, under the direction of Mr. Benedict, consisted of the most eminent performers on every instrument. The room, notwithstanding the high rates of admission, was crowded to the door.

GRAND AMATEUR CONCERT AT WORCESTER.—This concert, which takes place on Tuesday next, is exciting great interest in the county and city, and promises to be most successful. It will be given in the Music-hall, which will be decorated throughout with festoons and trellis-work of flowers, from which will be suspended various-coloured lamps. The band and chorus will number upwards of sixty, and comprise all the leading amateurs of Worcestershire; among the vocalists we may mention Miss Lechmere, Miss Berkeley, Mrs Phipps, the Misses Wood, Rev. Mr. Temple, Lord Ward, Mr. Monat, Mr. Dering, Mr. Drummond, Mr. Isaac, Mr. Peel, &c. The programme will be very varied, and will include the introduction to Spohr's "Jessonda," Sir H. Bishop's "Daughter of Jephtha," the opening of the second act of "Il Trovatore," two pieces from Meyerbeer's "Etoile du Nord," "Ombra Adorata" of Zingarelli, "Adelaide" of Beethoven, Overture to "Zampa," a new Concertina Solo from "Il Trovatore" by Mr. Blagrove, and a selection from Verdi's "Ernani" for fourteen concertinas.

## *THE THEATRES, &c.*

COVENT GARDEN. The Wizard of the North has long announced his intention of enabling the London public to judge of his histrionic talents in the performance of *Rob Roy*. We were not taken by surprise at this; we had frequently heard from competent witnesses that Mr. Anderson's look of mingled Anglo-American and Scotland considerably prejudiced the character, and really supported it with remarkable force and effect. On Monday the Proteus gave us the opportunity of judging for ourselves on the points of which the public also largely availed itself, for the house was crowded in the dense masses in the pit and gallery were unmistakable testimonies of the extraordinary interest excited by the occasion. We were not disappointed, not only the play, but the hero, was worth seeing. Mr. Anderson's *Rob Roy* is rough, rugy, and energetic. Mr. Stalwart person aided the illusion; and the force of his elocution admirably corroborated that of the dramatic situations. The play was capitally placed on the stage—indeed, at great cost, for the various groups with the public also largely availed itself, for the house was crowded in the dense masses in the pit and gallery were unmistakable testimonies of the extraordinary interest excited by the occasion. few days of the patriarchal age of 94; and, at the close of a long and useful life, he awaited the approach of death with serenity, rejoicing in the hope of eternal life.

## THE MALVERN MONSTER BEACON.

ALTHOUGH the Malvern Monster Beacon did not originate with some "young sparks"—as was jestingly asserted by the *Athenæum*—but was primarily enkindled in the glowing imaginations of "grave and reverend *seniors*," yet, like many other monster undertakings, it grew out of small beginnings.

In the first instance it was intended to have been a simple bonfire to commemorate the lighting of Malvern with gas; and, therefore, only locally interesting. But the project increased in importance as it became more widely known, and was carried to the height which it finally assumed by a letter from the distinguished naturalist, Mr. Edwin Lees, which was published in the *Worcester Herald*, and, from thence, copied into the London and provincial papers. The attention of scientific men was thus drawn to the subject; and, as the inland position of the 'Worcestershire Beacon"—which, as being the highest portion of the Malvern range, was fixed upon as the best spot for the bonfire—and its elevation of 1444 feet above the level of the sea, made it a very advantageous position for scientific purposes, it was at length decided by the promoters of the bonfire scheme that a beacon should be raised of such dimensions as

THE MALVERN MONSTER BEACON.

should make a fire sufficiently brilliant for accurate observation at great distances. Mr. Lees' letter contained a list of the hills and eminences from which, under propitious circumstances, the beacon would be visible; and, the night and time for the lighting being duly fixed, many thousands of the inhabitants of a score of English and Welsh counties were on the *qui vive* of expectation for the evening of the 10th of January.

It came—cold, clear, and starlight; a most unlooked-for change from the unpropitious weather of the previous days. The Beacon had been raised, or rather built, by Mr. M'Cann, of Malvern, and towered up like a huge Druid idol. Twelve iron-banded poplar trees, marking out a circle of thirty-five feet, that narrowed to its summit, kept together the *materiel*—450 faggots, 5 cords of wood, 12 tar-barrels, 2 tons of coals, 3 or 4 loads of hop-poles, 2 loads of furze, 2 barrels of tar, and 1 of naphtha. These combustibles had been procured at the cost of more than £50, three-fourths of which had been raised by a public subscription, to which the Lady Emily Foley, the Earl Beauchamp, the Hon. Colonel Scott, and many other influential persons contributed; and, at the expense of Mr. M'Cann, had been hauled to the summit of the hill by a new waggon-road, made for the occasion. The poplar-trees were taken up in a waggon, drawn by nine horses—this being, doubtless, the first appearance of such a vehicle on the summit of the Worcestershire Beacon.

Hundreds of visitors poured into Malvern, and a far larger number took up favourable positions in the vicinity. The promise that this fashionable watering-place was to shine in the unwonted brilliancy of gas was but partially kept; nevertheless, there were some unaccustomed lights in "V. A." and "N. E." illuminations, which flickered fitfully among the waving flags of the Allied Powers that decorated the front of the Belle-Vue Hotel. Gaily-appareled confectionery stalls also contributed to give the place a festive, not to say a fair-y, appearance.

At six o'clock the Chairman of the Committee (P. Marriott, Esq.), Mr. Lees, Professor Buckman, and the other members of the Committee, with their friends—in all, sixty in number—set out from St. Anne's Well, and, torch in hand, proceeded to the summit of the Worcestershire Beacon. The effect of this torchlight procession as it wound up the zigzag path was exceedingly picturesque as long as it lasted or, ere they could reach the Beacon, the furious north-east wind had puffed out first one and then another of the torches, until at length the procession was left to conclude the ascent in darkness. The ascent, too, was rendered a toilsome one, not only by the cutting force of this nor'-easter, but also by the snow, which had drifted in some places to a considerable depth. The continued procession of sight-seers, however, soon beat out a path; and by the time that the Beacon was lighted, upwards of 1500 people had assembled on the summit of the hill. A large proportion consisted of "the curious daughters of Eve," who had braved the toil of the ascent, the cutting wind, and the intense cold, in order to have their laudable curiosity gratified. Among this section of the spectators round hats and Malvern-poles were in great favour—the latter being more useful than the former. Indeed, even with the assistance of a Malvern-pole, it was at times next to impossible for a lady (or, for the matter of that, a gentleman) to stand on the ridge of the hill, without being propelled by the high wind some distance (be it more, o be it less) into Herefordshire. To avoid these disagreeable consequences as much as possible, the spectators descended a little way on the Herefordshire side of the hill, where comparative shelter was afforded to them, although the drifted snow was frequently driven in an uncomfortable rain upon their heads.

At a quarter before seven a blue light was burnt, succeeded by a red light. At seven o'clock, Greenwich time, a magnificent flight of fifty rockets rushed into the heavens, and burst into a galaxy of falling stars—the signal to distant spectators of the lighting of the Beacon. This was shortly accomplished, though not without some difficulty. The fierce wind, instead of allowing the flames to mount perpendicularly, drove them out horizontally with all the fury of a blast-furnace, in the direction of Herefordshire. It is to this circumstance that the Monster Beacon probably owed its want of success, for unsuccessful, or partially so, it certainly was; for, while it was very visible in the south and west, it was barely perceptible in the east and north: thus, in Gloucester, the correspondent of the *Worcester Herald* states the result to have been "highly satisfactory," and says "the fire must have been of immense

THE MALVERN MONSTER BEACON.—SKETCHED NEAR MADRESFIELD.

NEW AQUEDUCT AT TRIESTE.—THE MACHINE-ROOMS.

altitude to have shown at so great advantage;" while the Dudley correspondent of the same paper, who was posted on the tower of the Castle, "on the highest land in this kingdom," states that he discovered the Monster Beacon with great difficulty, after bringing a telescope to bear upon it; and at Worcester (ten miles from Malvern) "a small dull red light, such as a brazier of incandescent charcoal would give out," was the only visible result of the Beacon. In fact, a local paper goes further than this, and says, "The Bath road was crowded with curious spectators, who, from six p.m. till ten, resolutely bent their regards on Malvern; but no beacon glare rewarded their perseverance. There were a number of carriages on the spot, whose freight were destined to suffer the like disappointment; and, gradually, the disgusted crowd drew off, some of them vehemently declaring the whole thing was a hoax."

They would not have said so, however, had they been on the summit of the Worcestershire Beacon and in the hot vicinity of the monster fire. Whatever may have been its effect in a scientific point of view, its pictorial effect was undoubtedly great; and our modern Rembrandts might advantageously have studied its wondrous changes of light and shade. There was the tall pile of the Beacon, dark at the summit, but at its base alight with red and orange flames that rushed out longitudinally into wreathed masses of velvety smoke, and drove a fiery rain of sparks far into the darkness; there was the hill, white with snow, though partially irradiated with the light of the fire, the brown and red rocks "cropping out" in places, the short grass showing in others; there were the spectators massed in dark groups, lighted up with fiery reflections; and, over all, was the deep blue sky studded with silvery stars. It was a scene of great "effects," which

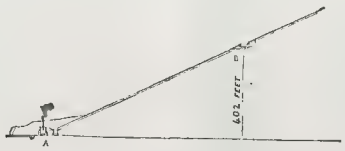
fierce extremes employ

and might worthily have been transferred to the canvas by a Turner or a Millais, or any other artist (if there be one), who could as successfully, as truthfully, depict "the leaping pulses of the raging fire."

The last beacon lighted on Malvern-hill was the one mentioned in Macaulay's famous Armada ballad, when—

Twelve fair counties saw the blaze from Malvern's lonely height.

According to Mr. Lees, it was possible for the following seventeen counties to have seen the beacon:—Worcester, Hereford, Gloucestr, Salop, Warwick, Stafford, Leicester, Northampton, Oxford, Wilts, Berks,



A. End-view of Machine-rooms. B. Side-view of the Beam.

NEW AQUEDUCT AT TRIESTE.

Somerset, Glamorgan, Monmouth, Brecon, Radnor, Montgomery; and it might also have been seen from the summit of Snowdon, and from the observatory erected (for this occasion) by Sir T. D. Acland, on Exmoor.

Our Illustrations—from original sketches by Mr. Cuthbert Bede—represent the lighting of the Monster Beacon; and a view of the Malvern range, taken in the neighbourhood of Madresfield, the seat of the Earl Beauchamp.

## THE NEW AQUEDUCT AT TRIESTE.

Of late years, in consequence of the extension of its suburbs and the increase of its population from ten to sixty thousand, the supply of water in Trieste has fallen greatly short of the demand. The municipality has, at different periods, gone to a considerable expense in having the environs of the town explored and studied, but none of the numerous reformatory projects met the exigencies of the case. At length, however, when the railroad was planned between Vienna and Trieste, the Austrian Government interfered in the matter, as it was found that the engines would require large supplies of water at Trieste. A company was accordingly started under the auspices of Baron Bruck, the Austrian Minister of Finance, and founder of the Austrian "Lloyd's"—for the purpose of erecting a new aqueduct to convey water from a spring at the side of Mount Santa Croce, about two leagues distance. The first Illustration is the plan for the machine-rooms; the second Illustration represents the profile of the mountain, showing the height to which it is necessary to raise the water, and the direction of the tubes of the aqueduct; and the third, the state of the works at the present time.

*The range of temperature during the week* was 19·3°

*The weather* very fine, with frost which commenced on the 9th, and was very severe; the greatest cold, on grass, on the 13th was 16°, 11th 13°, and 15th 13·6°. On the 8th Aurora Borealis, and on the 11th slight fall of snow.

*The direction of the wind* was N. till 5 a.m. of 9th, then N.N.E. till 3h. 45m. a.m. of 10th, then N.E. till 9h. 30m. a.m., then N.N.E. till 7 a.m., N. till 11 a.m., N.N.E. till 5h. 45m. a.m., then N. till 9h. 30m. p.m. of 11th, then S.W. till 11th. 59m. a.m., then again N. till 11 a.m. of 12th, then N.N.W. till 3h. 45m. p.m., then N.N.W., becoming N.W. at 7h. 15m. p.m. and N. at 7h. 30m. p.m., again N.N.W. at 11h. 30m. p.m. till 12th. 46m. a.m. of 13th, when N.W. till 12h. 15m. p.m, when W.N.W. at 12h. 46m p.m. became W., at 8h. 42m. a.m. the wind veered suddenly round to N.E., in which quarter it remained till 4 p.m., when N.E. became E. at 5 p.m., E.N.E. at 6 p.m., changing to N.E. at 7h. 15m. a.m of the 15th, and to N. by W. at 7h. 25m. a.m. to N.W. at 10 a.m., to W. at 10h. 30m. a.m., to S.W. at 11h. 18m. a.m., then to S.S.W. at 2h. 30m. p.m. to S.W. at 3h. 30m. p.m., to W. at 5h. 40m. p.m., in which quarter it remained

The Trent became frozen over on the night of the 14th. The greatest cold on grass at the Beeches, Highfield House, on the 14th was 10·2° below 32°; colder than that at Highfield House. The barometer rose ½ inch to the 15th, and fell three-quarters of an inch to the 15th. E. J. LOWE.

THE MURDER OF MISS HIGGS.—There is a hope, perhaps—but a vague one—that justice has at length overtaken the parties implicated in the brutal murder of Miss Higgs. In the *Dublin Mail* of Monday night it is stated that several men are now lodged in Cavan Gaol charged with being concerned in the mid-day butchery. They are, it seems, with one exception, tenants on the estate of the victim. A man named James Murpl y, from the county of Leitrim, is accused as a principal, and one Thomas Dunn is charged as being the chief conspirator and concocter of the diabolical plot.

SARDINIAN NAVAL PREPARATIONS.—A letter from Genoa of the 6th, in the *Constitutionnel*, says:—"The greatest activity prevails in the arsenal and building-yard here, in order to launch with the least possible delay the seven steam-frigate the *Vittorio Emmanuele*, of fifty guns. The sailing-frigates which have been lyi g here dissmantled are also to be got ready for sea, and a levy of 1000 sailors is now in course of operation. The Sicilies is not to join the Allied forces in the Baltic, but will proceed to the mouths of the Danube, if the efforts of Austria to bring about peace do not succeed."

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

THERE has been a decided improvement in all National Stocks this week from the many numerous large purchases of Consols which were made for money, in consequence of a rumour having gained currency—though not generally believed—that Government was about to issue a large amount of £1 notes, in order to relieve the pressure upon the Money-market. The arrival of news from Vienna on Thursday to the effect that Russia had unconditionally accepted the propositions of the Allies as the basis of peace produced very great excitement in Consols, and the quotations rose rapidly. The Unfunded Debt has, likewise, become more saleable, and there has been less demand for money. The rates of discount, however, have been freely supported, and most of the private banks are still charging 5½ per cent for the best 60 days' bills. In the Bank rate no change has taken place We have had an arrival of £171,860 in gold and silver from the Pacific and the West Indies, and about £7000 in silver from Belgium; but the bullion removed from New York brought no specie, arising from the unfavourable state of the exchange. Silver has been in good request, and several large parcels have changed hands for shipment to India by the next packets.

On Monday Bank Stock was done at 207½. The Three per Cents Reduced were 88½; Consols, for Money, 88½ to 88⅝; Ditto, for the Account, 88⅝ to 88¾; New Three per Cents, 88¾; Ditto, Stock, 212 to 220; India Bonds, 3s.; Exchequer Bills, 2s. to 5s. dis. We had a slight improvement in the quotations on Tuesday, when the Three per Cents Reduced were marked up to 88⅝; Consols, for Money, 88⅝ to 88¾; for the Account, 88⅝ to 88¾; New Three per Cents, 88¾ to 91; Long Annuities, 1860, 3⅜; Ditto, 1885, 16⅜; India Bonds, 3s. dis.; Exchequer Bills, 2s. to 3s. dis.; Exchequer Bonds, 98¾ to 97. On the following days prices further advanced; Bank Stock, 208½ to 208; Three per Cents Reduced, 88⅞ to 87⅞; Consols for Money, 88⅞ to 89; New Three per Cents, 87½ to 88¾; New Two-and-a-Half per Cents, 70 to 74; Long Annuities, 1885, 16 3-16; India Bonds, £1000, 3s. to 6s. dis.; Exchequer Bills, 7s. to 2s. dis.; Exchequer Bonds, 97½. Large transactions took place on Thursday, and prices ranged as follows:—Three Cents Reduced, 87⅞ to 88; Consols, 87⅞ to 89; 88¾ New Three per Cents, 88⅜ to 91; Long Annuities, 1860, 3⅜; Ditto, 1885, 16⅜ 5-16; India Stock, 217; India Bonds, 2s.; Exchequer Bills, 1s. to 2s. discount; Consols for Account, 87⅞ to 90⅜. A great improvement was observed throughout the day except towards the close, when Consols were rather weaker.

In the Foreign-house the transactions have been very moderate, yet Turkish Bonds have improved in price, and the value of other securities has been fairly supported. Russian Five per Cents have realised 99¾. Ditto, New, 98⅜. Mexican Three per Cents, 19; Russian Four-and-a-Half per Cents, 90 to 87¼ ex div.; Sardinian Five per Cents, 97; Spanish Three per Cents, 40¼; Ditto, New Deferred, 21½; Ditto, Passive, 6¾; Turkish Six per Cents, 90 to 89¼ and 87; Ditto, New Scrip, 4¼ to 3⅝ and ¼ discount; Venezuela Four-and-a-Quarter per Cents, 30¾; Ditto, One-and-a-Half per Cents, 11; Dutch Two-and-a-Half per Cents, 63¾ to 64 ex div.; Dutch Four per Cents, 94¼; Ecuador, 5½; Ditto, New Consolidated, 14; Peruvian Four-and-a-Half per Cents, 74 to 75; Portuguese Four per Cents, 45.

The last returns of the Bank of France show the following results, when compared with the previous month:—

| | | |
|---|---|---|
| Coin and Bullion | decrease | £771,600 |
| Bills discounted | increase | 1,487,200 |
| Notes in Circulation | ,, | 2,116,000 |
| Treasury Deposits | decrease | 2,000,000 |
| Private Deposits | increase | 583,200 |
| Advances on Foreign Securities | ,, | 1,187,600 |
| Advances on Railway Securities | ,, | 191,200 |

Considering that the Bank of France received very large supplies of bullion from this side during the month—certainly over one million sterling—the above return exhibits very unfavourable results. The previous return showed an increase in the stock of gold of £294,000; but that recovery is proved to have been merely temporary.

The dealings in Joint-stock Bank Shares have not increased. Bank of London have marked 57; London Chartered of Australia, 13½ ¾; Ditto, New, 1 discount, 30½; City, 64; London and County, 41½; Union of Australia, 74. A dividend at the rate of 16 per cent per annum has been declared by the directors of the London and Westminster Bank.

Miscellaneous securities have been heavy. Australian Agricultural, 20¾; Canada Company's Bonds, 124; Ditto Government Securities, 105; English and Australian Copper-Smelting Company, 1; General Screw Steam Shipping Company, 1½; Peninsular and Oriental Steam, 84; South Australian Land, 24; Derby Canal Shares, 84; Grand Junction, 36 ex div.; Loughboro-ugh, 650; Staffordshire and Worcestershire, 61; Kennet, 75; West Middlesex Waterworks, 101 ex div.; Hungerford Bridge Shares, 12. Va hall, 21.

There has been an improved feeling in the Railway Share-Market, and prices generally have been well supported The forthcoming dividends of the London and Brighton will be £2 15s. per cent for the half-year. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 21¾; Bristol and Exeter, 84; Caledonian, 86; Eastern Counties, 29; Edinburgh and Glasgow, 91; Edinburgh, Perth, and Dundee, 21½; Great Northern, 91; Ditto, A Stock, 75; Great Southern and Western (Ireland), 103; Great Western, 85; Lancashire and Yorkshire, 78½; London and Blackwall, 6⅞; London and Brighton, 99¾; London and North Western, 96¾; London and South-Western, 86¾; Manchester, Sheffield, and Lincolnshire, 34¾; Midland, 69¾; North British, 50; North-Eastern—Berwick, 79; Ditto, York, 79½; Ditto, G.N.R. Purchase, 10¾; Ditto, Leeds, 124; Ditto, York, 4; North Staffordshire, 9; Oxford, Worcester, and Wolverhampton, 21½; Scottish Midland Junction, 45; South-Eastern, 65; South-Western, 104; Shrewsbury and Birmingham, 15; South Staffordshire, 6¾; Wear Valley, 11.

PREFERENCE SHARES.—Eastern Counties 1st Extension, 3 pm.; Great Northern, 1st Guaranteed, 103; Ditto, North Britain, 87; North-Eastern—Berwick, 89; Oxford, Worcester, and Wolverhampton, 90¾; Waterford and Kilkenny, 2¾.

DEBENTURES.—Antwerp and Rotterdam, 2¾; Dutch Rhenish, 1st ex all; East Indian Five per Cent, 103 ex. int.; Ditto, Extension, 1¾ ex. int.; Grand Trunk of Canada, A issue, 10 ex. int.; Ditto, 1½ ex. int.; Great Central of France, 11¾; Great Indian Peninsular, 93¾ ex. all; Great Luxembourg, 4¾; Ditto, Obligations, 8 ex int.; Great Western of Canada Shares, 26; Ditto, New, 84; Northern of France, 36 ex. int.; Paris and Lyons, 46¾ ex. int.; Royal Swedish, 2.

Mining Shares have been firm in price. On Thursday Brazilian Imperial were 2¾; Ditto, Cocaes and Cubita, 2¾; Ditto, St. John del Rey, 28, Fortunas, 1¾; United Mexican, 4¾.

*Friday Evening.*

There has been less excitement in the market for National Securities to-day, and prices have ruled lower than yesterday, owing to numerous parties having realised. The Three per Cents for Money are 88¾ ⅞; for the Account, 88¾ ⅞ to 89; the Reduced, 88¾ ⅞; and the New Three per Cents, 89¾ ⅞. Arrivals of bullion are reported from Australia and the United States. Foreign Bonds and Railway Shares are steady.

## *THE MARKETS.*

CORN EXCHANGE (Friday) The quantity of English wheat on sale on to-day's market was very limited. Accordingly, however, to the currents of previous days, the trade was in a most dull and quiet state, and the quotations were nominal. To have effected sales a concession in the above prices must have been submitted to. Foreign wheat commanded no attention, and the demand for barley was very inactive at last week's quotations. In malt very little was passing. The arrivals of oats were extensively large, about 1600 quarters being on sale. Prices ruled very low, and the trade was in a most depressed state. Beans and peas were extremely heavy.

*Average of the Week.*—English wheat, 120s; barley, 34s; malt, 72s; oats, 21s; flour, 25s.

1855. Irish oats, 20s. Foreign, 22s.; 1854, 27s.

*English* Wheat, Essex and Kent, red, 82s to 90s.; ditto, white, 84s. to 94s.; Norfolk and Suffolk, red, 82s. to 89s., ryp, 87s. to 95s.; grinding barley, 33s. to 36s distilling ditto, 36s to 38s.; malting ditto, 37s. to 43s.; Lincoln and Norfolk malt, 70s to 80s.; brown ditto, 64s to 68s.; Kingston and Ware, 75s. to 78s.; Chevalier, 80s to 85s.; Yorkshire and Scotch, 70s to 76s.; tick beans, 37s to 38s.; pocket ditto, 38s to 40s.; harrow ditto, 40s to 42s. per qr.

*Scotch* oats, second in size, 24s to 25s.; fine ditto, 26s to 27s.; potato ditto, 27s to 28s.; Dutch and Friesland ditto, 25s to 26s.; Yorkshire and Lincolnshire ditto, 25s to 26s.; Essex and Kent, ditto, 24s to 25s.; Devon and Somerset ditto, 23s to 24s.; Irish ditto, 22s to 24s.; Galway and Sligo ditto, 23s to 24s.; Limerick and Waterford ditto, 24s to 25s.; Cork, Youghal, and Kinsale ditto, 25s to 26s.; Belfast and Newry ditto, 25s to 26s.; Londonderry, Coleraine, and Portrush ditto, 25s to 26s.; Dublin and Drogheda ditto, 25s to 26s.; Sligo, Galway, and Limerick ditto, 24s to 25s.; Waterford and Cork ditto, 24s to 25s.; Youghal

George Bain, Esq., 18 Parliament-street
James Coppock, Esq., 3, Clement's-inn, Strand
James Weld, Esq., Charing-cross

BANKERS.—Messrs. Cocks, Biddulph, and Co., 43, Charing-cross.

SOLICITORS.—Messrs. James, Esq., 16, Furnival's-inn.

SECRETARY pro tem.—Wilbert Beale, Esq., 4, Regent-street.

The Act of Parliament of the last session affords an opportunity of applying the principle of limited liability to purposes in at present for most serious—the entertainments and amusement of the people of this great metropolis, and of the thousands of visitors constantly resorting thereto

London is singularly deficient in places of amusement, to which the public can resort at all times, and in all weathers, with a certainty of finding entertainment worthy of the name. This deficiency it is sought, by this Company, to supply.

The Royal Surrey Zoological Gardens afford the only ground within a reasonable and easily-accessible distance of the heart of London that can be obtained for the purpose of such a Company They are situate within one mile and a quarter from any of the Bridges—within a minute of access both from the East and West end of London—they consist of more than ten acres, is sufficient, if laid out in tasteful style and well-grown ornamental trees, will afford a most favourable opportunity for ornamental gardening, and even in the present condition, they are unrivalled for their open-air entertainments, which the public require accommodation beyond that which any single proprietor would venture to give. The application of capital, in the present but fallacious outlay, is imperatively called for—and now by the limited liability Act, no danger can accrue to the parties supplying it.

It is proposed to erect buildings of character and magnitude to command the attention of the public—comprising a Music Hall for the performance of Vocal and Instrumental Music, capable of accommodating 10,000 persons, and a Concert Room for 2,000 persons; Baths; Horticultural and Horticultural Exhibitions, Winter and Summer Fêtes of every kind.

To the Music Hall will be added Saloons for Refreshment, and all needful appurtenances (subordinate to view the Exhibitions of Fireworks, Conservatories for choice Flowers, Caverns for the display of beautiful and rare birds, and Aquaria, for a exhibition of marine plants and fishes, arrangements as to be to a large extent self-acting, buildings sheltered from the weather whilst Exhibitions of various kinds with be forwarded in the Gardens, affording amusement and variety.

The eminent services of Mons. JULLIEN have been secured, on advantageous terms, for a period of five years—his unrivalled skill and popularity as a Conductor assure the success of this department The Gardens will be open for a short season, and will for this at the most eminent performers of the day Vocal talent, of the very highest order, will be engaged

The Artistic departments of Painting and Fireworks will be confided to the most celebrated men; and the Refreshments will be of a quality inferior to none, at moderate prices

Calculations, made with every attention, have led the promoters to believe that the sum of 40,000 will be ample to complete all that is required. The Plan and Estimates have been carefully prepared, and the intentions of the Promoters are to carry out the Scheme in every particular

No commercial enterprise of the present day affords such certainty of success, with so large a prospect of profit. The estimated revenue is to be derived less than calculated from the gratuitous services of which the Gardens have produced, and upon the increased receipts which will be realized from attractive and bring

Application for Shares may be made to the Secretary, at the Offices of the Company, 25, Golden-square; to the Committee of Management, at their Residences; or at the Royal Surrey Gardens.

A large portion of the capital being already subscribed for, early application is desirable

Information upon the allotment of Shares and payment of Deposit will be given during the Business Hours, on application to the Secretary Solicitor, and officers of the Company; thus avoiding the necessity of sending a Direction possessing the confidence of the Shareholders

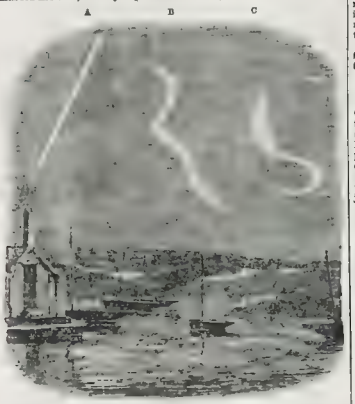
clouds. The day, however, was very mild, with scarcely a "catspaw" on the water. Sun shone at mid-day, and warm at times. About 4.30 p.m., however, the weather became all at once very cold to what it had been. At 4h 30m. p.m., as I was looking to the southward from East Cowes, I observed a ball of fire descend vertically, S.S.W. by compass, which seemed to have shot forth from the heavens from an altitude of sixty degrees, and descended in a straight line and burst at an elevation of about twenty or twenty-five degrees, presenting the most brilliant colours, from bright silvery white to deep yellow—then red and blue, in every respect similar to a sky-rocket. The train which



THE METEOR, AS SEEN OVER THE MEDINA, ISLE OF WIGHT.

t left behind appeared about fifteen degrees or more in length, like a rod of silver. After remaining so about twenty or thirty seconds, it gradually expanded itself and bent in the centre; and exactly five minutes afterwards (4h. 50m.) assumed a serpentine appearance (as indicated Fig. B) At five p.m., it appeared like a white fleecy cloud (Fig. C); and at 5h. 5m. it entirely disappeared. But when it assumed the form B, I observed with a spy-glass, the "train," or "tail," to be composed of myriads of sparks until it gradually appeared like smoke. I attributed the serpentine shape to have arisen from an upper current of air. From first to last the object was visible fifteen minutes. Many persons here fancied it fell at Osborne; but, from subsequent knowledge, I find the same meteor was observed at Bembridge, Shanklin, and other places at the back of the island, and fell into the sea in the S.E. quarter.—JOHN SMITH.

Wareham, Dorset.

On Monday afternoon, about a quarter before five o'clock, a very large and beautiful meteor was seen to descend rapidly from the zenith, taking a direction S.S.E. At first a small streak of vapoury light was seen to rush from a great elevation, gradually increasing in breadth, and as it reached the denser atmosphere, its head became intensely brilliant—descended with increased velocity, and, leaving a broader train, suddenly exploded, and fell in sparks towards the earth. The time occupied in its descent was but a few seconds; but the cloud which it left behind expanded in size, and about the middle spread out considerably in the form of a crescent, as if the upper and lower portions were acted upon by the wind, from its greater lightness, while the more massy crescent-shaped portion remained stationary, rolling over and over in vast volumes, not unlike cumulus clouds brilliantly lit up in a clear sunlight, and it is probable its brilliant whiteness may, from its great elevation, have derived its appearance from a similar cause. The cloud-like appearance remained stationary for about two minutes before it assumed the shape above described, and it retained its brilliant whiteness for several minutes, assuming a fainter hue at the extremities.

I heard the opinion, from the length of time it remained visible, that it must have been at a high elevation. It was seen at Wareham and its immediate neighbourhood in the direction above named, the observers looking south-east; while at Swanage, ten miles distant, the observers faced the north; so that if any meteoric matter fell from it on exploding, it must have been midway between these places—probably a little west of Ulwell. Altogether it remained visible about fifteen minutes—an amazing period when we recollect that in most cases these phenomena may be described as momentary only.

The ruins in the Sketch are the noted remains of Corfe Castle; and the hills flanking these ruins, the equally well-known range of chalk hills that run through the Isle of Purbeck. C. G.

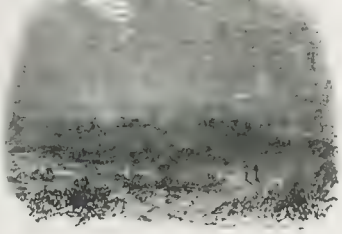
## TESTIMONIAL TO LORD DYNEVOR.

On the 2nd inst. the Shire-hall of Llandilo, in North Wales, was the scene of a very gratifying event, upon the occasion of the presentation of a well-deserved Testimonial to the Right Honourable Lord Dynevor, who, as Colonel Trevor, was for thirty-five years the able representative of the county of Carmarthen in the Commons House of Parliament, upon Constitutional and Conservative principles. Throughout this long public career, Lord Dynevor has been universally respected for his liberal sympathy with all objects calling for the exercise of Christian kindness as well as for his affability and courtesy. "In some of the most extraordinary political and social incidents of this period," says the *Carmarthen Journal*, "Lord Dynevor has taken part. But during the long and heated controversy respecting the Reform Bill—pending the desperate Corn-law agitation—amidst the more local excitement of the Rebecca riots (when his zeal and efficiency as Vice-Lieutenant of this county were pointedly apparent, and were, we are glad to say, duly appreciated by his Sovereign), or whilst matters of any kind of importance or moment were under discussion and deliberation, Lord Dynevor has displayed the same unvarying consistency, affability, and urbanity." Among his acts of charity may be mentioned the establishment of the Carmarthenshire Infirmary, the recent voluntary offer to construct the new national schools at Llandilo at his own expense, and the undeviating support given to the Welsh schools in London.

THE RIGHT HON. LORD DYNEVOR.—FROM THE PRESENTATION PORTRAIT, PAINTED BY J. LUCAS.

Soon after the elevation of Colonel Trevor to the Peerage a fund was raised for presenting his Lordship with a testimonial, which it was arranged should be a portrait of himself. The commission was intrusted to Mr. J. Lucas, who has painted a remarkably fine whole-length impersonation of his Lordship, whence the accompanying illustration has been engraved.

The ceremony of presenting this fine picture took place in the Shire-hall, which was well filled by an aristocratic and anxious assemblage, and



THE METEOR, AS SEEN NEAR CORFE CASTLE, WAREHAM, DORSET.

a numerous portion of the humbler classes was present to testify their appreciation of the noble Lord's worth. The chair was taken by Sir John Mansel, Bart.

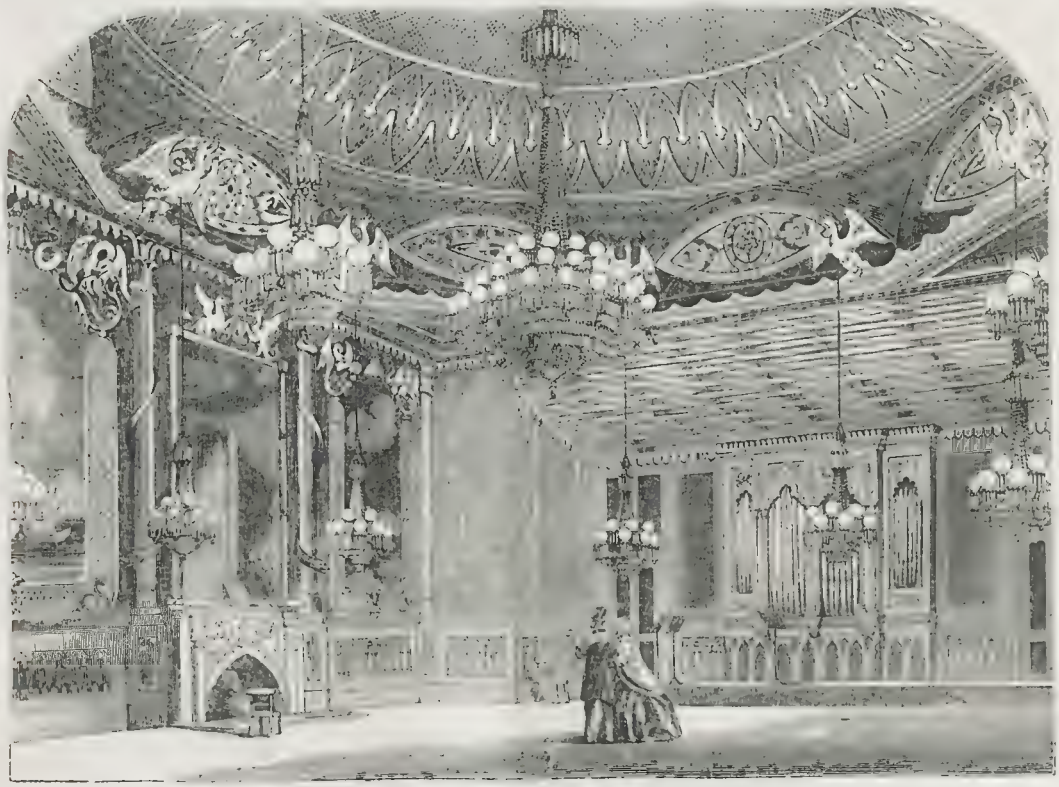
In the picture, Lord Dynevor wears the uniform of Aide-de-Camp to the Queen; in the distance are the ruins of the ancient Dynevor Castle, verdant woods, and sweetly-flowing Towy. The picture is in Mr. Lucas's best manner, and his mezzotinto engraving from it is of equal merit.

The proceedings of the presentation were commenced by Mr Spurrell, Secretary to the Committee, reading the resolution passed at the meeting of the Committee on the 5th of July last.—

At a meeting of the subscribers to the Testimonial to Lord Dynevor, held at Llandilo, on the motion of the Earl of Cawdor, seconded by Viscount Emlyn, it was resolved that Sir John Mansel, Bart., be requested to present, on behalf of the subscribers, the Portrait to Lord Dynevor, painted by Mr. Lucas, and to ascertain from his Lordship the time and manner that may be agreeable to him to receive it.

Sir John Mansel then presented the Portrait, after an eloquent address; and Lord Dynevor, who was visibly affected, thanked the company for the gift; which, he added, he would place beside the portrait of his late father, alike presented to him by subscription, and painted by the artist of the present picture.

A vote of thanks to Sir John Mansel was then proposed by the Earl Cawdor, seconded by Mr. David Jones, M.P., and carried unanimously. Sir John Mansel returned thanks, and the proceedings terminated.



THE MUSIC-ROOM, IN THE PAVILION, BRIGHTON.—(SEE PAGE 70.)

## LADY MORGAN.

FEW of the literary characters of the present age can boast of a more uninterrupted popularity, or of a more constant prosperity, than the amiable lady whose portrait graces this day the columns of the ILLUSTRATED LONDON NEWS.

We understand that Lady Morgan is now collecting, out of her diaries and extensive correspondence, materials for a full account of her "Life and Times." As the autobiography of a lady who has been so long and so prominently before the world, with whom the most distinguished personages of this and other countries have at all times courted acquaintance and intimacy, will prove to be little less than the revelation of the life behind the scenes of a whole generation, we deem it expedient to refrain from any crude sketch or memoir of our own which we might only, at the utmost, either gather up from the vivâ voce of some of Lady Morgan's friends, or pick out of the many party and calumnious attacks or silly rhapsodies which have appeared in reviews, cyclopædias, lexicons, &c., in which the name of her Ladyship has been taken in vain; and in one of which (the "Universal Lexikon of Leipsic"), amongst other such pleasantries, it is gravely stated that "Lady Morgan, in a fit of disappointed love, put an end to her life by the aid of her own cambric pocket-handkerchief."

It has been said thus that Lady Morgan is to be numbered amongst self-educated geniuses. But that her education was sedulously attended to from her earliest years is proved by her knowledge of foreign languages, and early acquaintance with English classical literature, apparent, to the very verge of pedantry, in her first works; and her musical attainments, like those of her late sister, Lady Clarke (whose compositions were so popular in her native country some years back), were sufficiently attractive to render the author of "Kate Kearney" and other Irish melodies (which Moore acknowledged to excel his) an attraction in Dublin society from her childhood.

Though Ireland was, to use a phrase of her own, Lady Morgan's first "inspiration and her theme," and Catholic Emancipation the motive which inspired her national novels, and obtained her considerable popularity in Irish society, still Lady Morgan may be said to have begun her more brilliant social career in the *salons* of the Marquis and Marchioness of Abercorn, with whom she frequently resided, both in England and Ireland, to the time of her marriage under their roof with Sir Charles Morgan. "The Missionary" was written, we understand, amidst all the gay bustle of that centre of politics and fashion, Stanmore Priory, and was sold to Stockdale, Pall mall, in the study of Lord Castlereagh, then Prime Minister, who accompanied the young authoress to town, with the good natured intent of aiding her in the bargain with the bibliopolist. Many grave statesmen listened to her reading out that more than romantic tale of the "Missionary" chapter by chapter, as she wrote it, for the amusement of the most fastidious circle in Europe; for among the guests were Lord Aberdeen, Lord Castlereagh, Lord Ripon, Lord Palmerston, the Duke of Devonshire, and, on some occasions, her Royal Highness the Princess of Wales, the Duc de Berri, and the ex-King of Sweden. Lady Morgan's anecdotes of this brilliant epoch of her varied life were told with a gracefulness and *tact* always favourable to the illustrious persons with whom she was then associated, and, if she much extenuate, "she set down nought in malice."

For the rest, only few of Lady Morgan's intimate friends know enough of her early history, notwithstanding the great *naïveté* and expressiveness with which her Ladyship is ever ready to allude to it in the warmth of genial intercourse. Her contemporaries have seen her sparkling forth at the very earliest period of her girlhood with a fertility, versatility, and at the same time strength and maturity of genius, perfectly unequalled by any of her age or sex. Gifted with a fervid imagination, with exuberant powers of invention, with an astonishing command of language, she possessed also in an eminent degree that faculty which ungallant critics are fain to deny to the ladies of the creation—humour—genuine, golden, inexhaustible—and even rollicking Irish humour—and a few chapters of "O'Donnell" have made us cry with tears of laughter, such as—be it said with due reverence—even Dickens or Thackeray has not often elicited from our eyes.

Notwithstanding her strong juvenile patriotism, her knowledge of Irish life, and her innate relish of Irish fun, Lady Morgan seems to us, however, to be quite at home in the more elevated, colder, and more rigid sphere of English fashionable life. No writer, in our opinion, ever hit off the Lords and Ladies of the Almack's of that day with a vein of humour happier than the "Wild Irish Girl" whose genius of country brought amongst them; and it is no slight proof both of the fair and impartial generalisation with which she chose her characters, and of the inoffensive though piquant style of her portraiture, that the caricatures in which so many of her best friends might have recognised some of their traits never were received as personalities, never were known to give offence, never diminished by one member the happy circle which loved to crowd round the gifted artist.

If we apply to Lady Morgan the appellation of the *doyenne* of our lady-writers now living, we hope we shall be guilty of no invidious reflection upon the lady's number of years. She has certainly lived at least three lives, but they were three existences—literary, domestic, and social—blended into one; as her literary career never interfered with her domestic happiness, and her domestic circle was only the centre of a social intercourse, of which she was the soul and life. Time was when the reading world looked out for one of Lady Morgan's novels at Colburn's as one of the necessaries of life; and there are now many a wit, statesman, scholar, and man of science who would as soon omit to answer the muster-call of one of Lady Morgan's pleasant *réunions*, as in the good old days of French society Voltaires and Larochefoucaults would have thought of deserting the *ruelle* of the Hôtel de Rambouillet or the Carnevalet.

Like Sydney Smith, whose Christian name, by a strange coincidence, her Ladyship bears, Lady Morgan will be even more renowned by her sayings than by her writings. It is in conversation especially that she excels: it is by that power chiefly that she has obtained, and maintains, so great a hold of that stately, but staid, un-astonishable, un-amusable set of people which goes by the name of the "fashionable circle." Her unbounded, unfading, unfailing freshness of memory—her liveliness of description, her inexhaustible wealth of anecdote, the readiness of repartee, the variety of humour, the pliability of wit, the occasional richness and *abandon* of fun, the great faculty of adjusting herself to all moods, of drawing out all minds, the sovereign gift of making everybody pleased with himself, pleased with everybody else, and, above all things, pleased with the amiable *reconnue* herself;—such is the charm which makes Lady Morgan's boudoir the pleasantest afternoon or evening rendezvous of London to all who have privilege of admission. From the year 1820 to 1845 Lady Morgan has intimately known every person of note either in London, in Paris, or in the most conspicuous cities of Italy. Her house is a repository of works of art, autographs, and other memorials, such as has seldom been revealed to the world; and we can well understand the eagerness of the many who are pressing her Ladyship to let the imprisoned thoughts and feelings of so many great characters into the light of day to which they belong. But, when all has been said on her moral courage, great domestic worth, the high and self-earned social position and bright gifts for which Lady Morgan was by nature endowed, it must be owned that it is on the sincerity and fidelity of her friendship that she must lay her greatest claims to the world's respect and regard. There is, we confidently assert, no instance of any of Lady Morgan's friends or acquaintances being at any time set aside, disregarded, or overlooked. The memory of the heart is with her particularly strong and retentive. However intended to shine in wide circles, Lady Morgan—we appeal to the testimony of all who know her—is never so engaging as *en petite comité*: however gracefully at ease amongst the highest, however all alive amongst the brightest, she is, nevertheless, never so perfectly at home as amongst her friends. Her wit and humour are never so irresistible as when blended with natural and generous outbursts of feeling. We are under no apprehension of offending her Ladyship if we say frankly that her heart is better than her head—that, though her intellect is decidedly masculine in its extent and depth, yet what we most value and cherish in her is the perfect femininess of her tastes, impulses, and affections.

SYDNEY, LADY MORGAN, AUTHORESS OF "THE WILD IRISH GIRL."

NEW PICTURE IN THE NATIONAL GALLERY.—"CHRIST DRIVING THE MONEY-CHANGERS OUT OF THE TEMPLE."—PAINTED BY BASSANO.—(SEE NEXT PAGE.

## THE NATIONAL GALLERY.—"CHRIST DRIVING THE MONEY-CHANGERS OUT OF THE TEMPLE." BY BASSANO.

GIACOMO DA PONTE (born 1510, died 1592), better known as Il Bassano, from the place of his birth, was an artist endowed with many natural gifts, which, however, he improved capriciously. He had but little tuition first from his father, an artist of moderate powers, and afterwards from Bonifacolo, a second-rate master of the Venetian school, whose works Pinsell, in his lectures, complains are sometimes sold as those of Titian by dishonest dealers. He is also said to have had the advantage for a time of studying under Titian himself; but of this we are not positive. Certain it is, however, that Bassano, in his earlier manner, aimed at imitating the grand colouring of this great master; whilst in composition he emulated the grace—undoubtedly somewhat artificial and mannered—of Parmigiano. At this period he produced some historical works in the grand style, amongst others of which are instanced the "Flight into Egypt," and a "Nativity," painted for the church of St. Girolamo; and a fresco of "Sampson Slaying the Philistines." The works, however, by which the artist is known in this country, and, indeed to which he chiefly devoted himself during the greater portion of his life, are of an altogether different character; and, if less ambitious than those we have mentioned, evince a style more peculiarly his own—a style in which the faithful and pleasing treatment of natural objects was associated with the representation of known passages in Scripture or profane history. It appears that this change was wrought in him on returning to his native place on the death of his father, when he was yet a young man, and when he was so pleased with the charms of landscape scenery, of animal life, and rustic occupations, that from that moment he rarely willingly painted anything else—the story chosen for illustration being often only a secondary consideration with him. He did not often attempt the naked figure; on the contrary, his daughters, who usually sat for his Magdalenes, Madonnas, his Hebrew matrons, and his peasant girls, are always seen fully draped, generally rather heavily so, and sometimes incongruously; and it is remarked that their feet are never seen. He painted with great rapidity, for gain; and his works, which are abundant, generally attained the point of respectability—never that of excellence, in the highest sense of the word.

In the picture before us, which was presented to the National Gallery by Phillip L. Hinds, Esq., we have a fair sample of his powers and his peculiar predilections. Amidst the confused crowd of money-brokers, cattle, dogs, and dealers in live-stock, we recognise none of those sublimer attributes usually aimed at in the treatment of sacred subjects.

We cannot conclude our notice of this picture without animadverting upon the taste and judgment of the "Hanging Committee" of the National Gallery, in assigning it a place of prominence which neither the sound of the artist or its individual merits, it was entitled to. It would hardly be believed that to this picture the post of honour has been given—at the upper end of the principal room: beneath it being suspended Raphael's "Portrait of Pope Julius II." and Titian's "Christ and St. Peter," side by side—a most incongruous assortment (save perhaps in historical associations between his Holiness and his Apostolic predecessor); and that, to effect this arrangement, the magnificent "Raising of Lazarus," by Sebastian Del Piombo—perhaps on all accounts the most valuable picture in the country—has been removed from the place it so well filled to another most inferior position, in the corner of the opposite wall, which is broken by the entrance-door, with Tintoretto's "St. George and the Dragon" by its side, its sole companion. This arrangement is so bad in every respect that we really are at a loss to account for it, or to characterize the feeling or judgment which directed it in the language it deserves. We hope that on the first opportunity for a move this matter will be redressed, and Del Piombo's masterpiece restored to its place of honour.

## THE PHOTOGRAPHIC SOCIETY'S EXHIBITION.

[SECOND NOTICE.]

ARCHITECTURAL subjects would, to the ordinary observer, appear to present the fewest difficulties and the greatest uniformity of treatment by the photographer. The pictorial aspect of a stone wall or tower would seem unchangeable; and so, perhaps, it would be were there no such thing as chiaroscuro. The artist-photographer, however, knows that in sunshine the play of light and shade, constantly varying, imparts to the simplest object a Protean character, and the observant artist will be found better in the morning or in the evening, and he will carefully watch for the fit hour. In the studies under notice we see that one artist selects extreme sharpness of outline, as in "Dryslk Abbey" (No. 346), and in "West Front of Peterborough Cathedral" (No. 336). Another studies boldness and breadth, as in "Canterbury Cathedral" (No. 36), by V. A. Prout, whose productions constantly remind us of the drawings of his illustrious namesake. In this section of the ret the work of Mr. Bedford appear to us most completely to satisfy the requirements of art. It is scarcely possible to conceive anything more beautiful than this artist's views of Canterbury Cathedral (Nos. 152, 183, 203, and especially Nos. 467 and 469). We are tempted to pause here, and to place first in the rank of artist-photographers. In the selection and treatment of subjects his taste is always refined, and their execution, especially in colour, unexceptionable. We may refer for confirmation of our opinion to his "Studies from the Studio" (No. 128) and "More Gleanings from my Portfolio" (No. 356).

Messrs. Dolamore and Bullock have attacked Kenilworth Castle, and returned with magnificent spoils. We greatly admire the breadth of treatment which characterises their "Ivy Tower" (Nos. 44 and 71), "Leicester Gateway" (No. 45). We may also notice, as something remarkable for clearness of atmosphere and sharpness of outline, the "Views in Paris" (Nos. 349 and 353) taken by Mr. C. Thurston Thompson. The views of Mr. Archer are also worthy of attentive examination. Mr. Buckle still haunts Peterborough Cathedral, but he does not appear to keep pace with the progress of his art. His subjects, however good in themselves, are not so well printed as they might be, and consequently he shows to disadvantage. Mr. H. Fox Talbot contributes two interesting views, inasmuch as they were printed in 1844, and have stood the test of time upwards of eleven years, sufficient to quiet the fears of those who are constantly croaking about the fading of photographs.

We will now consider the portraits, which probably constitute the severest test of a photographer's skill and taste Conspicuous in subjects are those by Mr. Mayall, Nos. 337, 338, and 339, which are portraits of "Sidney Herbert," "Lord John Russell," and the late "Sir William Molesworth." The first is the most successful; that of Lord John, being taken on too large a scale, fails in giving a correct notion of the original. It would lead one to expect a person of athletic proportions, such, as is well known, the honourable subject does not possess. Nos. 371, 372, and 373, also by Mr. Mayall, being portraits of "Sir George Grey," the "Earl of Aberdeen," and "Sir George Cornewall Lewis," are truly excellent and satisfactory in every respect.

A very striking portrait picture is that of "Prince Napoleon" (No. 218), by Mr. Roger Fenton: the resemblance to the "great uncle" is quite startling. Mr. Fenton exhibits many excellent specimens of portraiture, among which we may instance that of "Sir Colin Campbell" (No. 316). His other productions are interesting Assyrian Inscriptions from Nineveh" (No. 201), and a frame of four subjects of antiquities (No 210). Mr. Delamotte exhibits a "Portrait of the Rev. J. R. Major," which possesses remarkable excellence; the *pose* is natural and unconstrained, and the picture full of character.

On the edge of the second screen are two unnumbered portraits, but which we at once recognise to be the productions of Mr. Heanah. they possess all those excellent qualities for which his portraits have been esteemed.

Mr. Rejlander's portraits are admirable in *pose* and carefully studied: they form in many cases good pictures, as well as portraits. Nos. 120, 154, 270, and 393, are most excellent.

There are also good specimens of this branch of the art by Messrs. Newcombe and Quin, Barber and Mark, Horne and Thornthwaite, J. Watson and Co., Sharp and Melville.

Mrs. Verschoyle exhibits a frame of portraits (No. 432) of remarkable excellence. Of the coloured portraits we give the preference to those by R. Locke, for their evident truthfulness and general harmony of treatment.

There are two remarkable studies from life (No. 406 and 407) by T. R. Williams, which may be truly called Rembrandtish. The portrait studies of Dr. Diamond are remarkably good.

In subjects from "still life" we remark some studies of dead game—No. 50 and 52, by V. A. Prout; and No. 410, by Dr. Diamond—all excellent. The studies of shells do not appear so successful as they might be; and those of flowers utterly fail from the unsuitable backgrounds: the *lights* in these subjects appear but as blots an evil very easily remedied.

Mr. C. Thurston Thompson has enriched his portfolio with some interesting subjects from the Louvre. Nos. 389 and 397 are very beautiful; and No. 400, from an enamel of Francis II., is especially good

The existence of three photographic exhibitions at the present time in London may be taken as a significant fact of the wide-spread interest taken in the art, which must have a powerful influence in the education of the taste both of the public and the artists. Accustomed to the fidelity of the photograph, to its breadth and detail, and precision of outline, the public will gradually be led to regard accuracy of form as well as brilliancy of colour in the productions of the easel. Artists must look to this in time, else the public will soon become, as it is fast becoming, far in advance of them, and the demand for high art when it comes will not be met. We regret to see in the catalogue of this Exhibition the introduction of sentimental puerilities in the titles given to objects. Photography is not art *par excellence*, and its disciples should leave the punning and mawkish titles to those who have hitherto revelled in them—the small fry of ill-conditioned daubers. What we want in art is truth and elevation of ideas: these are not to be attained by lame puns and bad rhymes.

## THE CURRENCY QUESTION.

### THE BANK CHARTER.—No. II.

GOVERNMENT NOTES, ALTHOUGH NOT CONVERTIBLE INTO GOLD ON DEMAND, PROVED TO BE CONVERTIBLE AT A FIXED VALUE, INTO EVERY ARTICLE ITS POSSESSOR REQUIRED, INCLUDING GOLD, AT THE MARKET PRICE.

*Ex-M.P.:* We have made some progress by showing that a Government note could not possibly be depreciated by over-issue; and, as it is not possible for such a note to be depreciated in any other way, it may be assumed as granted that its depreciation would be morally and practically impossible—but if any corroboration were wanting, it might be found in the fact that the Bank of England note was not depreciated from 1797 to 1819, although not convertible into gold on demand was never depreciated.

*Lord Overstone:* Not depreciated! when it requires one pound-note and seven shillings to purchase one guinea, which ought to have been purchased for one pound-note and one shilling!

*Ex-M.P.:* Assuredly the note was not depreciated: principally on account of hoarding in more troubled times, and also in consequence of the war, gold had become very scarce—had therefore risen very much in value, and was appreciated—the note was not depreciated.

*Lord Overstone:* Surely it was in reference to gold?

*Ex-M.P.:* Do not let us dispute about words. If you go into the market and find wheat 1s 4d. per quarter higher than the preceding week, you do not say your sovereign is depreciated because it will not buy so much wheat. The best proof that the note was not depreciated consists in the fact that, when it required one pound-note and 7s. to purchase a guinea, 26s. in silver would not have purchased one. Did your Lordship ever hear of bank-notes being offered for 19s?

*Lord Overstone:* Certainly not. But you overlook the fact that gold was the standard of value, and the bank-note its representative for a certain specific amount in value and in weight. When it ceased to be the representative of that amount, it ceased to be depreciated.

*Ex-M.P.:* In other words, the Legislature attempted the impossibility of fixing the supply and demand for gold; and the demand being greater than the supply, the price increased, and the bank-note was therefore no longer the representative of the specific amount; so you passed a law abolishing its representative character for the amount in value, but rendering it a substitute for the same amount in quantity as a standard and measure of value.

*Lord Overstone:* I do not remember seeing the question put in that manner before: it was from this you got your notion of the Government note being a substitute for a certain quantity of gold. But really I do not see how you apply the enactments of 1797 and those of 1856.

*Ex-M.P.:* Indeed! If "history be philosophy teaching by example," surely nothing can be more important that what occurred in this country during twenty years, when the bank-note was the substitute for a certain quantity of gold as a standard of value between individuals, and gold itself an article of commerce like corn or cotton.

*Lord Overstone:* And proving the truth of my prediction, if we were again to have inconvertible notes, whether of the Government or of the Bank of England; namely, that every one foreign would leave the country, and we should never see the colour of gold.

*Ex-M.P.:* Take both sides of the question. When the demand was greater than the supply no doubt a guinea was a rare article, and was seldom seen; but when the supply was greater than the demand they came back, and gold was as plentiful in 1818, or rather far more so, that it was in 1796. How did it get back? and was the country better or worse in consequence of the dearness or scarcity of gold?

*Lord Overstone:* Surely a country must be badly off that has little or no gold.

*Ex-M.P.:* I cannot see that, and facts are, to my mind, better than opinion: and you cannot deny that, notwithstanding the enormous expenditure and waste of the commercial classes, there has been much more frequent and of greater intensity since the return to cash payments than during its restriction. The truth is this, and you know it—and the people are beginning to see it—your boasted convertibility into gold is a "myth," and the only question between us is one of detail, and not of principle.

*Lord Overstone:* Assuredly I will never admit that the difference between a note convertible into gold on demand, and a note not so convertible, is merely one of detail.

*Ex-M.P.:* And you would be right if the fact were consistent with your statement; but you well know that last week the Bank had issued notes payable on demand to the amount of £24,421,180, and that all the gold coin and bullion in their coffers was only £9,941,180. Your Act of 1844 permits the deficiency, or, to use the proper term, insolvency, to the extent of nearly £14,475,000, and yet you have the assurance to insist upon the convertibility of the bank-note into gold on demand.

*Lord Overstone:* Surely, my dear sir, paper money is a strong word.

*Ex-M.P.:* Strong or weak is of little importance compared to the truth What would be your term for such a state when applied either to a company or to an individual who had claims against him payable on demand to the amount of £24 000, and only £10,000 to meet it?

*Lord Overstone:* That is a larger proportion of gold than any private bank would think of keeping.

*Ex-M.P.:* Undoubtedly; but all private banks issuing notes have resources by which they could immediately procure gold to pay all their notes; while all the Bank of England could do would be to run to the Government and exclaim, "Make me a bankrupt! for I am insolvent." A pretty situation for a commercial country to be subject to in consequence of following the myths of bullionists!

*Lord Overstone:* I do not see how you can call our principle a "myth," when it merely consists of the attempt to approach as nearly as possible to that which every one admits to be the perfection of a currency—namely, one that is purely metallic.

*Ex-M.P.:* Why that is another "myth"—one which never did exist; and which we may, therefore conclude, never will. Can your Lordship point to any age or to any country where pure metallic currency ever existed; or, if it did, that it satisfied the wants of the community?

*Lord Overstone:* Admitting that there never has existed any such country, it does not follow that a pure metallic currency is not the perfection of currency; and, if so, surely we ought to endeavour to obtain such a blessing for this country.

*Ex-M.P.:* And ruin thousands of your industrious fellow-subjects in the pursuit of your "myth." I thought we had started by your admitting "that the best possible currency must be that which is least liable to fluctuation?"

*Lord Overstone:* And I do not wish to withdraw the admission, but believe that a "pure metallic currency" would be less liable to fluctuation than any other.

*Ex-M.P.:* In quantity or quality?

*Lord Overstone:* In the latter certainly, and probably in the former also

*Ex M.P:* Then you must assume one of two propositions—either of which would, I should think, choke a political economist. Either the price of gold would not be regulated by its supply and demand: or every other country in the world would have exactly the quantity it desired. On which term would your Lordship's metallic currency "myth"?

*Lord Overstone:* I do not see the dilemma. We may attempt to approach perfection as near as possible after we know we cannot attain it.

*Ex-M.P.:* Your Lordship is surely getting sleepy, or you would never forget that you are now arguing as a banker—viz., that a pure metallic currency is the best; for I believe such a currency to be a "myth" in such a country as this; and that if ever it did exist it would be the most fluctuating of any currency. Of course, your Lordship recognises bills of exchange as currency and cheques also?

*Lord Overstone:* Of course.

*Ex-M.P.:* With such admission, how can you fancy your metallic currency to be anything more than a "myth"? And if so, then it is as clear as that two and two make four that which I deny—viz., that a pure the wants of such a country as this, convertible into gold on demand, is also a "myth;" whose worship, like the Car of Juggernaut, can only be maintained by the occasional ruin of thousands of your fellow-creatures.

*Lord Overstone:* One of the leading features of my Act of 1844 was to give due notice to all of the impending danger.

*Ex-M.P.:* Yes; and from which knowledge the rich alone could profit. Your Act has made cheap money cheaper, and dear money dearer: when cheap, it has encouraged every system of profligate speculation; when dear, it has prevented the honest industry of the country receiving the usual accommodation in their legitimate business, causing the ruin of thousands. Remember, it is not I alone who say this, but a large section of bigoted bullionists.

*Lord Overstone:* I am well aware of this, and think they are far more unreasonable and illogical than you, and those who think with you respecting the advantages of a paper currency. Yours is a sound conclusion from premises which I consider unsound; theirs is an unsound conclusion from premises in which they agree with me. With such illogical reasoners as they are I never could agree; with you I might, if you could convince me of the accuracy of your premises.

*Ex-M.P.:* So to convince you would be a miracle. You have for so many years been wedded to your system, and it has been so profitable to you, that you will not quit it except with life. But when you reflect on the distress and the ruin which your system has brought upon your fellow creatures, I am not without hope, that you may some day seriously exclaim "Almost thou persuadest me to become a Christian."

## FASHIONS FOR JANUARY.

NOTWITHSTANDING the pressure of income-tax and high prices, there seems no abatement in the richness and costliness of ladies' attire. And yet, paradoxical as it may seem, this circumstance is no proof of want of thrift on the part of purchasers. The truth is, sensible people have found out that cheap may be dear and dear may be cheap, and that nothing is such extravagant wear as a showy fabric of poor quality. This opinion, always prevalent among the higher classes, has spread simultaneously with the improvement of taste through all grades of society; and one of the consequences is that, without on an average spending more money than formerly, women dress a great deal better than they did. Manufacturers, who are always prompting and observing the public wants, are, of course, ready with a supply to meet all demands; and, if they sell one rich dress in the place of two of inferior quality, they are no doubt equal gainers, while the wearer has, most probably, a triple advantage.

We have been led to these remarks by observing the substantial quality of the fashionable fabrics for this season, and the exquisite taste of their designs, which are, in many instances, so beautiful that we cannot fancy any weariness or desire for change to arrive in connection with them.

One of the greatest novelties we have seen is a rich silk, of that peculiar shade of green called *vert d'Isly*, with three deep flounces. Each flounce has, interwoven with the silk, a broad band of black velvet, and at the edge of this band an inweaving of black upon the green, which exactly represents a fall of black lace with its natural folds and involutions—the velvet band and lace being together nearly a quarter deep. Jacket to correspond, for which the inwoven trimming is of course provided

There is a black silk dress with five flounces, each flounce being edged with a violet or cerise satin brocade; this coloured brocade being spotted with jet and velvet. The jacket may be trimmed with knotted and tasselled fringe to correspond or with velvet or lace.

There is another black silk, the flounces of which are edged with a satin brocade, spotted with bright colours.

A brown silk, with a rich flower pattern of black and brown brocade at the edge of the flounces, is in very good taste.

A blue silk, with horizontal stripes of white and blue satin brocade on the flounces, is also very pretty.

For more matronly wearers we may notice a rich silk of dark blue, barred crossways with black satin, and between the trellises thus formed a diamond of black satin shades off into the blue. A moiré antique, with brocade stripet five or six inches wide, is also a novelty. And we may mention *en passant* that there is likely to be a revival of plain satins, so long out of vogue, thanks to their being approved by the Empress of the French. Velvets are, of course, much worn during the winter season; and blonde, interwaved with narrow black velvet, is often a substitute for lace. Under-sleeves of tulle and blonde, made with full puffings, are most in favour; and they generally have loops, or ends of velvet, or ribbon, between the puffings. Another very pretty sleeve is composed of several rows of lace of a graduated width.

Mantles are generally of velvet or cloth. There is a very elegant one of black velvet, ornamented with a broad band of moiré antique, laid on with an edging of gimp. Another of black velvet has no trimming whatever, except five or six rows of black velvet ruche, from the peculiar shape of the mantle, and their skilful arrangement, hang with much grace.

There is a grey cloth mantle trimmed with grey moiré antique and velvet, and lined with stamped brown cloth, so that it is adapted to be worn on either side. Another cloth mantle is ornamented with fringe and stamped black velvet, and is lined with red cloth.

A pelerot of brown cloth, wadded, and made with pockets, is calculated for travelling in severe weather

We are sorry to say that bonnets are no longer worn absurdly at the back of the head. It is true they are still small and coquettish; but our neighbours appear to have had it long ceased to be good taste to leave the crown of the head exposed—a fashion that was absolutely dangerous at all seasons, since severe headaches are the consequence to the sun, and neuralgic colds in the winter, have in numerous instances attested the folly of the fashion.

The mixture of black and coloured velvet seems a favourite style for bonnets this winter. There is one of black and purple velvet, with a black feather, the bird-of-paradise form, which is very elegant.

There is also a black velvet bonnet, trimmed with a feather and a rich ruche of black, and purple and gold, which, from its peculiar shape of the mantle, and their skilful arrangement, hang with much grace.

There is a grey cloth mantle trimmed with grey moiré antique and velvet, and lined with stamped brown cloth, so that it is adapted to be worn on either side. Another cloth mantle is ornamented with fringe and stamped black velvet, and is lined with red cloth.

A pelerot of brown cloth, wadded, and made with pockets, is calculated for travelling in severe weather

We are sorry to say that bonnets are no longer worn absurdly at the back of the head. It is true they are still small and coquettish; but our neighbours appear to have had it long ceased to be good taste to leave the crown of the head exposed—a fashion that was absolutely dangerous at all seasons, since severe headaches are the consequence to the sun, and neuralgic colds in the winter, have in numerous instances attested the folly of the fashion.

The mixture of black and coloured velvet seems a favourite style for bonnets this winter. There is one of black and purple velvet, with a black feather, the bird-of-paradise form, which is very elegant.

There is also a black velvet bonnet, trimmed with a feather and a rich ruche of black, and purple and gold, which, from its peculiar shape of the lace, has a novel and rich effect. Inside there is on one side a bunch of flowers to correspond with the ribbon, and on the other a tuft of black lace.

Another very pretty bonnet is of violet satin and black velvet, with white flowers and violet velvet leaves inside.

Some of the bonnets have a fall of black lace, several inches deep, which passes round the curtain.

A straw-coloured ivory velvet bonnet is intermixed with claret-colour velvet, and has a triple fall of black lace at the back. Inside is a full blonde cap, with flowers of stone colour and claret velvet.

For attendance at a wedding in the winter season is a bonnet of white terry velvet, having a curtain edged with deep white fringe, and on a side feather on one side. White roses inside

For demi-toilet caps the mixture of black and white lace still prevails. A very pretty cap of this description is trimmed with blue ribbon and pink flowers, and has a long ends of blue ribbon and lappets.

Another has a foundation of black tulle, nearly covered with white blonde, and a trimming of vine-leaves and grapes, and narrow ribbon where the black and white lace unite.

A third cap has a full head dress of white blonde with pink flowers and a waterlily; and black or coloured velvet with gold is often adopted. We may remark that the coiffures are worn more at the top of the head than heretofore.

We propose shortly to give a full description of evening dresses; meanwhile we may mention two or three which are novel and becoming:—

A pink silk, the corsage of which is nearly covered with a berthe formed of two rows of blonde, edged with a feather fringe, the short sleeves being ornamented to correspond. The skirt is covered half-way down by a flounce of blonde set in at the waist, and below this flounce are three rows of blonde; all four being edged with the feather fringe

A blue silk dress with a deep berthe of black lace, two frills of the same entirely covering the short sleeves. The skirt has three deep flounces of black lace; and these flounces, as well as the berthe and lace on the sleeves, are barred across with narrow black velvet, the bars terminating at the top and bottom of the lace with little knots of velvet and floating ends.

Another evening dress is of rich silk, with the corsage cut square; rows of lace edged with pipings of ribbon forming a stomacher, and another row passing across the shoulder.

Occasionally dresses, instead of flounces, have rich longitudinal trimmings —a becoming style to short persons. Some of the new silks, indeed, are brocaded in this style, a flowering pattern, narrow at the waist, widening as it descends.

While mentioning evening dresses the *sorties de bal* must by no means be forgotten. They are made in a variety of materials—often of white satin quilted; and always with a hood trimmed with fringe or lace, so arranged as to fall like a veil over the face, in a peculiarly becoming as well as convenient manner.

[For our information on Dress and Fashion we are indebted to the courtesy of Madame EINSTEIN DEVY, 73, Grosvenor-street, Grosvenor-square.]

INSURRECTION IN MONTE VIDEO.—An attempted insurrection broke out in Monte Video on the 25th of November, and for four days that city was the scene of a fratricidal war. Between 90 and 100 persons were killed, and a much larger number wounded. On the 28th the city was declared by the Governor to be in a state of siege. On the 29th ministers of friendly powers interposed to stay the shedding of blood: an amnesty was granted, order was restored, and Jose Maria Muniz, with 123 of the revolutionary party, embarked for Buenos Ayres in the steamer *Constitucion*. It thus appears that the party of Flores and Oribe has triumphed.

# Memorabilia,

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*"A little chink may let in much light."*—OLD PROVERB.

### CUPS AND SPOONS,

PRESENTED TO CHRIST'S COLLEGE, CAMBRIDGE, BY THE FOUNDRESS.

Of these beautiful cups presented to Christ's College, Cambridge, by the foundress, Margaret Beaufort, and now preserved among the treasures of that College, the "Cambridge Portfolio" gives the following description:—"The foundress' cups are silver gilt, and possess singular elegance of form: one, a quart, 6 inches in diameter and standing 12 inches; the other, a pint, 5 inches in diameter, and standing 9 inches. The spoons, six in number, called after the foundress, and said to have been presented to her by her godmother, must be noticed as curiosities. The bowl is of the old spoon-bill form, and all is quite plain, except that the handle terminates in the figure of one of the Apostles. There are three salts, the simplicity of which accords with their antiquity. They stand 9½ inches and 2½ inches, and have diameter 6 inches: their mass is great, but their capacity is very small, and their shape the most inconvenient that could be devised."

### NOTES.

INSCRIPTION BY BEN JONSON.—Some years since I saw in the possession of a friend a copy of Ben Jonson's "Sejanus his Fall 4to, Art London, printed by G. Eld for Thomas Thorpe, 1605." It was a remarkably fine large paper copy, and on a blank leaf at the beginning was the following inscription, written in "Rare Ben's" exquisitely neat autograph:—

To my perfect Friend, Mr.
Francis Crane,
I erect this altar
of Friendship,
and leave it as the eternall
witnesse of my Love.
Ben Jonson. EDWARD F. RIMBAULT.

THE "FOUR POINTS" OF OLD.—Bayle records it as a jcke current in his time, that *"pendent que les François font leurs cheres sur les bordes du Rhin, ou les Turcs dans le Hongrie, les Allemands font DIETE à Ratisbonne:"* i.e. while the French make good cheer on the banks of the Rhine, and the Turks in Hungary, the Germans make a Diet at Ratisbon.—BERM.

ALPHABETICAL BANQUETS.—OSTENTATIOUS PRODIGALITY.—The following extract is taken from a Black-letter work, entitled "Certaine Secrets, Wonders of Nature—containing a description of sundry strange things, seeming monstrous in our eyes and judgment, because we are not prone to the reasons of them. Gathered out of diuers learned authors, as well *Greeke* as *Latine*, sacred as prophane. By E. Fenton. Ayres fortune espoir. Imprinted at London by Henry Bynneman, dwelling in Knightriders-street, at the signe of the Mermaid. Anno 1569." After giving an account of Cleopatra dissolving a large pearl, at the banquet she gave to Antony, the chapter thus proceeds:—"And yet was this prodigalitie little or nothing in respect of the magnificall pompe which the Emperor Gaeta vsed in his publike banquettes: for he caused himself to be served at the boorde with dinerate of meates, as fishe and fleshe, in the order of the Alphabet, for all fishe and fishe that he could recouer that began with A, he caused to be set on his table as a first course, as Anstriges and suche others, proceeding the like in the seconde course with B, as Basturde, Bitter, and suche lyke, the same not fayling to come immediately after ye first seruice was taken awaye: and so consequently euery letter was honored with a seruice till the whole Alphabet was performed, basing in deeds Cookes and Caters appointed for that purpose only. But what standes we so longe in the searche of fonme prodigalitie in banquettes, seeing (amongst a nūber of others) our time hath stirred up a mōstrous exampie that waye, in *Augwin*, at such time as mine authour studied the laws vnder *Rowland Farretus*, in whose tume there was a Prelate stranger, whose name I will conceale, as well for the honour of his profession as to mauke superstition in himself, who one daye inuited to a banquette the nobilitie of Augnon, as well men as women, where, for a first beginninge of his pompe, at the very entrie into the halle where the banquette was appointed, haye spread vpon a curious bordo a greate beefe with his heade pulled of, and purged in his intrailes, having in his belle a whole harte or deare of the like dressing, stuffe full of little birdes, as Quailes, Partriches, Larkes, Peasants, and other lyke, the same being so cunningly inclosed in the belle of the seconde beaste, and they so artificially conioned ye one within the other, that it seemed some excellēt Mathematician had bene the workeman thereof. But that whiche made the matter both straunge and wonderfull was that all the birdes so assembled did roste and turne all aces vpon a broche by certaine compasse and conduites withoute the ayde of any men: For the firste course and order of the table, his gestes were presented with store of curious pastrie, wherein were wroughte and inclosed meany little birdes quicke, who, asome as they cruste was taken of, began to flie about the hall: there were besides sundrie sortes of siluer plate, full of jellie so subtillie conueighed, that a man might have seen in the bottome a number of little fishes quicke, swimming and leaping in aweate water and maske, to the greate delite and pleasure of the assistaunts: neither is it lesse straunge that all the foules which were serued upon the table were larded with Lampraye, albeit it was in a season when they coste halfe a crowne a piece: but that which seales up the superstitious pompe of this proude Prelate, was, that there was reserued as many quicke birdes, as he was served with deade foules, at his table, the same contayning suche indifferent number that if there were a Peasant sent dressed to the borde, there were gentlemen (appointed for the purpose) which presented another alive, and al to shows the magnificence of the Prieste, to whom what remains for the consummation of his prodigall delites, but that the Gentlemen which served him had their faces covered with a vaile leaste their breathe should offende either him or his meate." Who the "proude Prelate" was that gave the above sumptuous feast to the "nobilitie" of Avignon perhaps some of our readers can tell. Fenton says it occurred in "our times"—that is about 1569

CORSLETON CORPORATION.—I may mention that there is in the custody of the body a Bible, to which there is attached a somewhat singular legend. The Bible is of the edition commonly called the "Breeches Bible," and is in excellent preservation. The legend is that it originally belonged to one of the churches in the town, and was pawned with the then present possessors by the clerk, who was also bearward of the township, to enable him to provide a bear to be baited according to custom at the wakes.—CESTRENSIS.

"AS YOU WERE."—'In London," Euphues says, "are all things that may either please the sight or dislike the smell; either feed the eye with delight, or fill the nose with infection." BERM.

"THERE is a lake about Armsch, in Ireland, into which, if one thrust a piece of wood, he shall find that part which remaineth in the mud converted to iron, and that which continueth in the water turned to stone."

WHOLESALE POISONING AND THE REASON WHY.—In the correspondence of Addison, to which large additions have been made in Bohn's edition of Addison's works, there is an extraordinary case of poisoning, related by Mr. Fleetwood, the English consul at Naples. Under the date of June 11th, 1717, Fleetwood writes to Secretary Addison that three Neapolitan women, one of them a nun, had the previous week been hanged for making and selling a poisonous water, called *aqua tufanas*, by which above 600 persons were poisoned. "They pretended," says Fleetwood, "religion and conscience to keep the world in ease and quiet, by giving the husband means to rid himself of his wife, the father of a disobedient son, a man of his enemy, &c." This is, certainly, one of the most remarkable "cases of conscience" upon record. For an account of Tophania and the "Slow Poisoners" of England, Italy, and France, see Dr. Mackay's interesting work "Memoirs of Popular Delusions."

### "OH, MISTRESS, MINE."

FROM SHAKSPEARE'S "TWELFTH NIGHT."

This charming melody, for which we are sure to receive the thanks of our musical readers, is contained in both the editions of Morley's "Consort Lessons," 1599 and 1611, and is found also in Queen Elizabeth's Virginal Book, arranged by Byrd. Being found in print so early as 1599, it proves either that Shakspeare's "Twelfth Night" was written in or before that year, or that, in accordance with the then prevailing custom, "O, Mistress, Mine," was an old song introduced into the play.*

* See Chappell's valuable work now in course of publication, called "Popular Music of the Olden Time, a collection of Ancient Songs, Ballads, and Dance Tunes, illustrative of the National Music of England," &c. London: Cramer, Beale, and Chappell.

Mr. Payne Collier has proved upon the authority of a small MSS. diary of a student of the Middle Temple, extending from 1601 to 1603, now in the British Museum, that the play was publicly performed on the 2nd February, 1602, at the Candlemas Feast of the Middle Temple, but there is no evidence to show it was known so early as 1599.

In act II, sc. 3, the *Clown* asks:—

"Would you have a love song, or a song of good life?"
*Sir Toby*: A love song, a love song.
*Sir Andrew*: Ay, ay; I care not for good life.

O, MISTRESS, MINE.

Moderate time and very smoothly.
O mistress mine, where are you roaming? O mistress mine,
rall.
where are you roaming? O stay and hear; your true love's coming,
a tempo
That can sing both high and low: Trip no fur-ther,
pret ty sweet-ing, Jour - neys end in lo vers' meet-ing,
Ev' - ry wise man's son doth know.

What is love?—'tis not hereafter;
Present mirth hath present laughter;
What's to come is still unsure;
In delay there lies no plenty,
Then come kiss me, sweet and-twenty,
Youth's a stuff will not endure.

### QUERIES.

"OH, DEAR, WHAT CAN THE MATTER BE."—Some of your musical readers—pose by Dr. Rimbault or Mr. W. Chappell—will perhaps be good enough to tell me the origin of the above "household" tune.—CROTCHET.

CHRISTMAS HYMN.—There is a hymn almost universally sung at Christmas in Yorkshire and Lancashire, though not so well known in the south of England, beginning—

Christians, awake, salute the happy morn!

Can any of your readers inform me who was the author of these beautiful verses, as I never yet saw them printed with the author's name attached. The hymn is always sung to one particular beautiful and appropriate tune, and I should be glad to learn who composed the music as well as the words.—C. A. HULBERT, Jun., Staithwaite, Huddersfield.

CAN any of your readers inform me the derivation of "Ug," prefixed to many of the names of places in the North Riding of Yorkshire, as Ugthumby, Ugthorpe, &c.?—A YORKSHIREMAN.

CAN you oblige me with any information relative to the genealogy of the Constables of Upsall, in Yorkshire—a branch, it is supposed, of the Constables of Flamborough? The latter is mentioned in Burke's "Extinct Baronetage;" but no allusion is made to the Constables of Upsall there.—ANTIQUARIAN.

THERE is a common amusement about the Christmas time in some parts of Scotland which consists in some young men and boys dressing themselves in "motley"—paper I omets with streamers of gaudy colours, and particoloured coats, &c.—and visiting the neighbouring houses, and there acting (for their own benefit) some small pieces—generally, I think, from the history of Scotland. One of the performers generally gets slain in a combat with wooden swords, and falls on the floor (generally of stone) with a force truly edifying to the spectators. The "Doctor" then comes up, and, giving the watchful slain one something from his pocket (it matters not whether it be ink or arsenic), the latter is so powerfully affected that, at the request of the "Doctor" to "Get up, Jack, and sing a song," he springs to his feet and commences some song in which the words "Bruce," "Wallace," "Bannockburn," and "cause Southron," are heard at intervals. They call themselves Geysers—excuse the spelling if it be wrong, for I am ignorant of the orthography of the word. Will any of your correspondents be so kind as to give me any information on the subject?—W. W.

### ANSWERS.

THE GOOD COUNTESS OF MONMOUTH.—Elizabeth, the good Countess of Monmouth, who died at her house at Watford, Herts, 1630, was the wife of Sir Robert Carey (third son of Henry, first Baron Hunsdon), appointed Warden of the Marches towards Scotland A.D. 1598. He carried the news of Queen Elizabeth's death to James I., in Scotland, was created Viscount Leppington in 1622, and Earl of Monmouth in 1625. He died 1639. Their son Henry, second Earl of Monmouth, died without issue male in 1666 when the title became extinct.

SOUTH WALES CUSTOM.—A few years ago a prize was offered by the Abergavenny Eisteddfod, for the best treatise on the "Origin and History of Mari Lwyd," or the Horse's Head, which is carried about from house to house during the Christmas festivities in some parts of the counties of Monmouth and Glamorgan. The prize was awarded to the Rev. Wm. Roberts, of Blaina Iron-works, Monmouthshire, who has since published the essay. On application to him our friend J.M. may be supplied with the book, containing the origin and history of this ancient Welsh custom.—WILLIAM JONES.

A DEVONSHIRE CUSTOM.—Four and a half miles from Combmartin, is a cove called "The Rapparee (Irish rebel), Cove." Against its south, at the north-east angle of the cove, just out of the reach of the flood tide, and scarcely below the surface of the earth, are an immense number of human bones, the bodies appearing to been thrown there indiscriminately, not coffined. Is it possible that when O'Donnell the Red, Chief of Tirconnell, and son-in-law to the rebel Earl of Tyrone, fled from Ireland (1602), he, or some of his followers, instead of reaching Spain, landed at this cove? and that many of them being here killed, others concealed themselves and were hunted by the country people in the woods between Berrynarbour and Combmartin? If such an event took place it must have been in the time of the Devon historians, Pole, Risdon, and Westcote—the last of whom possessed by marriage property in Combmartin and Berrynarbour. They do not, however, even mention the custom spoken of by H. S. P. In what year was it discontinued? —V.

### TO CORRESPONDENTS.

A. B. COOK.—THE SHAKESPEARE FORGERIES.—That those notorious fabrications were the work of W. Ireland we never before heard questioned. They are kept in the MSS. department of the British Museum, and we have lately seen a detailed account in Ireland's hand of the whole process of their execution, which he presented to a friend shortly after the monstrous swindle was exposed.

CORSEARIUS, Perpiratur, M. E. D., Bedford; E. P., A. E. R., P. P., Ivy.—Such enquiries do not come within the scope and purpose of our "Memorabilia."

CENTENNIS, E. DENSON, J., Stonehouse, W. H. F., W. A. J., Tassom, C. R. W., T. W. Taylor, S. Sessington, Ardello, Pauline Evaline, X. Y. Z., A Constant Subscriber, D. P., Alfred Barrett, V. C., New York, Archæologist, A Leicestershire Clergyman, Ornithesis, Worcester Coll., L. S., D. C. L., Cambridge. Courtenay Read—Received.

J. S.—The above works, we believe.

HOTSPUR.—You must be mistaken. The cricket has nothing to do with the superstition in question.

## CHESS.

### TO CORRESPONDENTS.

PHILO-CHESS, D. G., F. P.—The new series of the French Chess Magazine, under the editorial control of MM. de Rivière and the leading supporters of the game in Paris, was announced to appear on the 15th inst. We have not yet received the opening number, but from our experience of the excellence we have no hesitation in predicting that the new candidate for popular honours will secure the patronage of all the most respectable and intelligent of the Chess fraternity, both in France and England. In answer to your inquiries and those of other correspondents respecting the annual subscription, we can only recommend an application to Messrs. Williams and Norgate, foreign booksellers.

CAROLUS, Dundee.—It admits of two solutions.

W. G., Whitley; H. T., and others.—The best plan by far in preparing diagrams of Chess problems is to write in blank ink the initials of the men, thus: for White King—W K; for Black Queen—B Q &c. All representations of the pieces lead to mistakes; besides they take up a great deal of time for no good purpose.

LANCASHIRE.—The two leading players of the Manchester Chess-club, Messrs. Owen and Kipping, are so equally matched, that it would be invidious to express the opinion you ask for. They have played together now a great number of *parties*, and there is only the difference of a game or two in the scores.

STAPLE FITZJAMES.—The solution of Diagram No. 15, in the *Chess Player's Handbook*, is correctly solved in this wise:

| WHITE. | BLACK. | WHITE. | BLACK. |
|---|---|---|---|
| 1. R to R 8th (ch) | R takes R | 2. Kt to K 4th (ch) | |

(If Black now take the Kt, then the Pawn takes Pawn, discovering check, and Black must take again with Queen, thus gaining White under a stale-mate. If Black does not take the Kt but moves his King, then follows—)

| | | | |
|---|---|---|---|
| 3. Kt takes R P (ch) | K moves | 4. Kt to Kt 6th (ch), &c., | |

giving perpetual check.

T. M. C., Dover.—There is a Chess-club at Folkestone under the presidency of Captain Hathorn, R.N., which meets at the Harbour House. An application to the President will doubtless obtain you admission on one of the evenings of play.

JAMES F. C.—It shall have attention.

CAPT. B., Gosport, M. P., W. C. T., and others.—The solution given in our last as of Problem 519 is that of 5.6. The true solution of 5.6 is this—

| WHITE. | BLACK. | WHITE. | BLACK. |
|---|---|---|---|

TUMKIN.—Both correct, but received too late for acknowledgement in the customary list.

HIGH FIELD.—Yes, under those circumstances the game must be considered drawn.

S. G., Newbury.—A smart little game on the attacking side, but the defence is so extremely feeble that the victory yields no glory.

HETHERAL CHESLY, H. W., Clifton.—Too easy, we are sorry to say. Try again.

CHESLEA, KUHS.—One is indifferent, the other impracticable. In future it will be well to number your diagrams.

SOLUTIONS OF PROBLEM No. 518, by W. W., M. P., Major G., Gregory, Mus. Doc., Old Salt, M., L. B., Templar, Little Derrit, Rev. W. R. P., Mercy, and others.

SOLUTIONS OF PROBLEM No. 519, by M. C. C., Omega, Little Derrit, Manxman, Boxer, Rev. J. Spencer, M. P., R. H. W., Hairion, Miles, A Working Smith, Bonnerdier, F. R. of Norwich, C. P. J., Oxford, are correct.

SOLUTIONS OF PROBLEM No. 520 by F. R. of Norwich, Bombardier, A Workman, Clericus, H. T. B., Major W., B. A., Canth, D. D., Medicus, Dunvom, M. and E. P., Fitzjohn, are, correct.

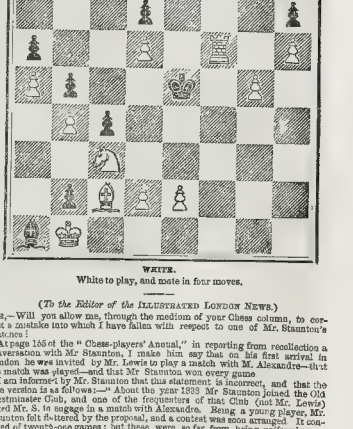
### PROBLEM NO. 522.

By Mr. W. GRIMSHAW.

BLACK.



WHITE.

White to play, and mate in four moves.

*(To the Editor of the* ILLUSTRATED LONDON NEWS.)

SIR,—Will you allow me, through the medium of your Chess column, to correct a mistake into which I have fallen with respect to one of Mr. Staunton's matches?

At page 155 of the "Chess-players' Annual," in reporting from recollection a conversation with Mr Staunton, I make him say that on his first arrival in London he was invited by Mr. Lewis to play a match with M. Alexandre—that the match was played—and that Mr Staunton won every game.

I am informed by Mr. Staunton that this statement is incorrect, and that the true version is as follows:—"About the year 1838 Mr Staunton joined the Old Westminster Club, and one of the frequenters of that Club (not Mr. Lewis) asked Mr. S. to engage in a match with Alexandre. Being a young player, Mr. S. auton felt flattered by the proposal, and a contest was soon arranged. It consisted of twenty-one games; but these were so far from being uniformly won by Mr. Staunton, that he confesses to a distinct remembrance of the mortifying defeat he experienced during all the earlier sittings of the match.

I remain, Sir, yours faithfully, CHARLES TOMLINSON.

12, Bedford-place, Ampthill-square, Jan. 14, 1856.

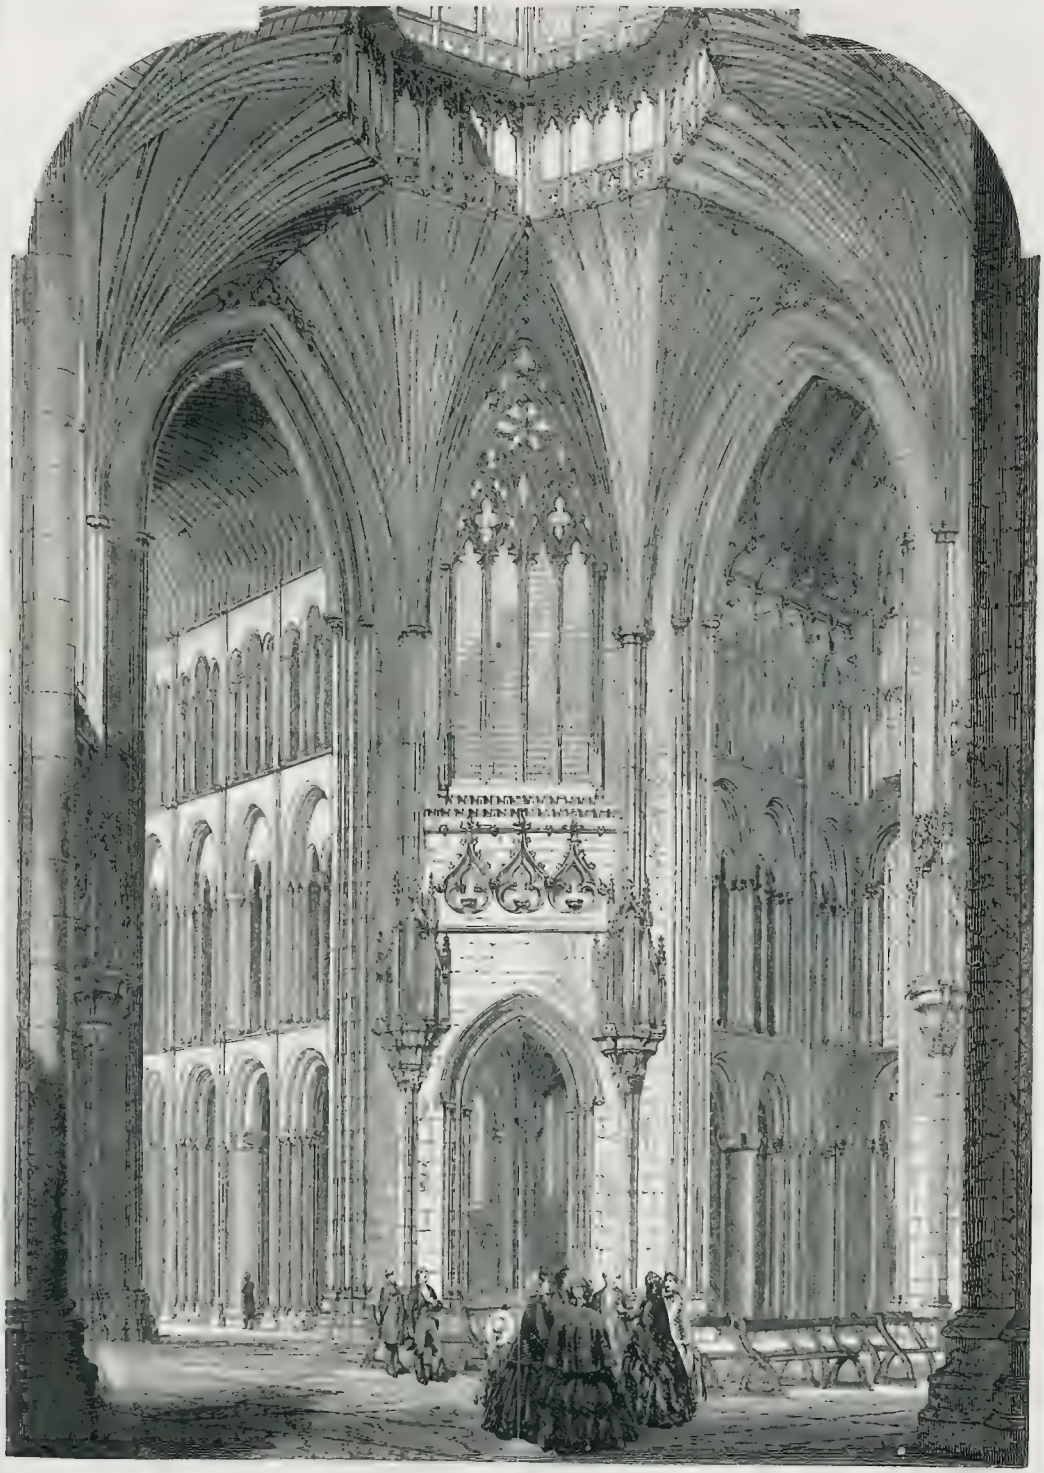
ELY CATHEDRAL, RESTORED.—THE CHOIR.—(SEE PAGE 78.)



ELY CATHEDRAL, RESTORED—THE OCTAGON.—(SEE NEXT PAGE.)

## RESTORATION OF ELY CATHEDRAL.

THE foundation of the magnificent ecclesiastical pile of Ely is due to the piety of St. Etheldreda, who was born at a small village called Exning, near Newmarket, about the year 630. The early part of her life she devoted to the cloisters. About the year 652 she married, at the solicitation of her parents, Tonbert, a nobleman of East Anglia. By this marriage the island of Ely fell to her as a dowry; and thither, after the death of Tonbert, which occurred about three years after their espousals, she retired to her former pious meditations.

She afterwards married Egfrid, son of the King of Northumberland, and by this alliance eventually became Queen. She then withdrew from court, with the sanction of the King, took up her abode in the Abbey of Coldingham, took the veil; and at length retired to Ely, and laid the foundation of her church and monastery, over which she reigned Abbess about six years. Her fame for piety and her gentle sway endeared her to all around; and she died, honoured by all, A.D. 679, leaving the island of Ely as an endowment to this convent. Her sister, Sexburga, succeeded her, and lived twenty years as Abbess. This lady was followed by her daughter Erminilda; and Erminilda, by her daughter Werberga. Little is known after this of the heads of the convent for a number of years.

During the troublesome incursions of the Danes the monastery shared the fate of many other places—it was pillaged, its sacred walls destroyed, and the people put to the sword. This occurred about the year 870

About the year 970 the monastery was restored by Ethelwold, Bishop of Winchester. It was successively governed by nine Abbots; the ninth being Simeon, the founder of the present structure—that is to say, of the choir, transepts, central tower, and a portion of the nave. These parts were begun A.D. 1083; but Simeon did not live to see them finished. They were completed by his successor, Abbot Richard. Of this work it is ascertained that little more than the lowest story of the great transept remains. The nave, composed of twelve bays, is very noble in effect. It is in the Norman style, and was completed about the year 1174. The great tower at the western end was built about 1189. The Galilee, for which Ely is so famed, forms a porch at the western end. It is a fine specimen of the Early English style; and is decorated with four rows of arches and pillars, externally. Internally, the length is taken up by two large pointed arches, under which are two tiers of smaller size—five and three—supported by slender shafts, originally of Purbeck marble. The Rev. Mr. Millers, in his description of Ely Cathedral, thus accounts for the term "Galilee":—"As Galilee, bordering on the Gentiles was the most remote part of the Holy Land, from the Holy city of Jerusalem, so was this part of the building, most distant from the sanctuary, occupied by those unhappy persons, who during their exclusion from the mysteries, were reputed scarcely, if at all, better than heathens." This portion of the fabric was built by Bishop Eustachius about 1200—1215. The falling down of the central tower, about 1322, gave rise to the formation of the great octagon and lantern, and the three splendid arches on each side the choir—executed during the episcopacy of Bishop Hotham. The little chapels of Bishops Alcock and West are of the respective dates of 1488 and 1534, and are rich specimens of the period. We have now given briefly the early history of the Cathedral. It only remains for us to notice the restorations lately made.

Our Engravings represent the Choir, taken from the north-east; and the Grand Octagon, from the south-east, angle. It is quite impossible to enter this venerable and interesting fabric without feeling how well the restorations have been executed and carried out, in mass and in detail. There is one fault about restoration which cannot, unfortunately, be avoided—it takes away the pleasing effects which time alone can give by its softening influence to the stone and to colour. The restorations of Ely Cathedral have been going on quietly—first under the superintendence of the present talented Dean, Dr. Peacock; and lately, from the year 1847, under the able direction of Mr. G. Gilbert Scott, the eminent architect, of Spring-gardens. Much of the building remains to be repaired; but, as the choir and octagon are complete, with the exception of the altar-screen (a representation of which we have already given)—a really lovely piece of work, in stone and alabaster—Divine service is not checked.

The entire appearance of the choir is now, so thoroughly has it been cleansed and decorated. The ceiling, with its groinings and gilded bosses, has been renewed. The old stalls have been retained and repaired; the sub-stalls are quite new, as is also the rood screen, seen in our View across the end of the choir. This last is a marvellous piece of work, designed by Mr. Scott, to harmonize with the stalls—it is executed, as well as the stalls, by Rattee, of Camberwell. It consists of open arches, on richly-twisted columns to the gates, are by Hardman, of Birmingham. Under the canopies of the upper stalls, are a number of figures—statuettes of benefactors to the church: these are designed by Mr. Philip, of Pimlico, and partly executed by him and Mr. Rattee.

The organ-case is by the last-named eminent carver, and painted and gilded by Castell, of London. The propriety of the position of this organ may be a matter of opinion; to us it appears to change the effect of Hotham's lovely arches, and produces a feeling that the instrument will fall on those who may be beneath it. The choristers' desks are light and elegant in form, painted in pale blue and yellow: the framework is by Peto, of Lambeth.

The entire flooring has been relaid in encaustic tiles and marble, the latter in lozenges. A marble slab has been laid in the flooring to the memory of Bishop Hotham, with his arms and those of the see in brass. The presbytery, or that portion of the choir forming the intermediate front of our Illustration, is floored also with encaustic tiles, only more varied, and richer in pattern. The altar-table has an ante pendium of crimson velvet, having near the top the following inscription:—"Agnus Dei, qui tollis peccata mundi, dona nobis pacem. Kyrie eleison, miserere nobis," in gold letters. The centre represents the figure of Our Saviour upon a deep blue ground, surrounded by radiating beams; it is the work of the Misses Blenkowe, of Lynn, in Norfolk.

The tombs to Bishops Redmayne, Kilkenny, and De Luda, have all been carefully restored; and the Purbeck marble columns have been repolished.

Whether seen from the east or from the west, the Octagon forms a grand feature in the Cathedral of Ely. Millers, in his History of the Cathedral says, "Elegance, magnificence, and strength are so happily blended that it is impossible to determine in what respect it is most admirable." Advancing toward its centre from the nave we have the beautiful Norman transepts on each side, with their stained-glass windows, by Wailes, of Newcastle, and Gerente, of Paris; and immediately opposite, the lovely screen of the choir. It originally formed the centre of the choir; but in 1770 it was removed, and the choir thrown back to its present position. The whole of this, like the choir, has undergone complete repair, from floor to lantern.

## CHARADE.

BY F. K. HERVEY.

III.

THE trooper arose at the dawn of day,
And saddled his good grey steed,
And furnished himself for his long, dull way
With all that a trooper might need.
He threw on his cloak—with a martial air,
And buckled his belted sword,
And he shouted aloud for my FIRST—as a pair—
In the terms of a compound word.

The trooper he rode with a trooper's speed,
Yet the hour was dark and late
When, weary, he sprang from his weary steed,
'Mid the lights at the barrack gate.
He threw off his mantle, unbuckled his sword,
And, impatient to part with my First,
For my SECOND he called in the very same word,
With its double terms reverst.

Now,—good though he might be in foray or fight,—
Our trooper seems somewhat absurd,
What he called for at morning to banish at night
By the trick of the turn of a word.
What—mortal or magical, blest or accurst—
Were the things could thus do and undo,—
Whose Second, to serve him, had power o'er the First,
And, as One, was the master of Two!

ANSWERS TO CHARADES IN OUR LAST.

No. I.—Bedford. II.—Nightmare.

THE PRUSSIAN MERCHANT NAVY.—An official return just published at Stettin shows that the merchant navy of Prussia at the beginning of the present year consisted of 900 vessels, of 139,368 tons burden; which is three vessels and 3275 tons more than at the corresponding period of last. In the course of last year 67 vessels were built, but 30 others were lost, and 14 sold.

## A CADGER'S REMONSTRANCE.

It's very well, my noble swells, to rail at such as me,
Because I send the kinchins (a) out to ask your charities;
It's very well to call us names, like "trulls" and "wagabones,"
Because we ply the cadging (b) lay instead of breaking stones.
It's gape-seed (c), isn't it, my swells, that, while you drinks your wine,
We slews our ivories (d) with a drop, and then kicks up a shine? (e)
Afore you calls us names agen, just listen unto me,
And hear my bringings-up, and then say what else could I be.
I'm workhouse born and gutter-bred, for soon as I could crawl
They left me in our unswept "lane" alone for hours to sprawl;
My little limbs was like a crust of dirt from day to day;
On filthy straw—'twas called a bed—like some brute-beast I lay.
A drunken mother born like me, her mate a fashman (f) bold,
Who'd served the braggadocia (g) more times than could be told;
But growing tired of the jugs, (h) as once I heard him say,
Because "he know'd 'em inside out," took to the cadging lay.
And I was taught by downy Sal each artful dodge she knew,
To gammon (i) shivers, sores, and all the tricks which money drew;
But then the cold was very sharp—and so our kinchins find,
But they must do as I have done—or else they'll hear my mind.
I've shivered in the snow and rain, and had my share of blows.
Who cared for me in my young days? Why, no one, that I knows!
P'raps, if I'd not been bred a beast, I might have been a man,
And thought it was a shame to live the best way that I can.
I might have worked and earned my bread, had some one taught me how.
But Lord! I'd rather steal than dig—I can't do nothing now.
As I am getting old and weak (I'm wellnigh forty-three),
I don't mind saying this, my swells, you're more to blame than me.
You leaves our young to learn of us the dodges that we know;—
You let us sow the seeds of ill, then wonders that they grow.
Just think of that, my noble swells, when next you rail at me,
Because I sends my kinchins out to ask "your charitee."—M. L.

(a) Children. (b) Begging. (c) Wonder. (d) Wash the teeth. (e) A row. (f) Thief. (g) Short imprisonment. (h) Prisons. (i) Counterfeit.

## WATER SUPPLY.

THE great importance of the use of pure water for domestic and dietetic purposes is now so generally recognised that it might seem almost superfluous to insist upon the noxious influence exercised upon the human frame by the constant use of this fluid when teeming with vegetable and animal putridities at once offensive to the palate and sufficiently evident to the eye. It may not, however, be so generally known that water which to the ordinary observer may seem clear and limpid and pleasant to the taste, especially when first drawn from the receptacle in which it has been preserved, may contain within it the seeds of disease most hurtful to the body, as has been abundantly proved by the microscopical observation and analytical examination of the most eminent scientific inquirers of the present day.

During the epidemic of cholera in 1848-49 the strong influence of the use of impure water in predisposing to attacks of that disease was sufficiently proved; and in the epidemic of 1854 still more striking statistical evidence of this fact was elicited. The great outbreak of cholera in Broad-street, Golden-square, and the surrounding neighbourhood, in the latter epidemic will be long remembered; and the great mortality from this attack has been clearly traced to the impure water used by the neighbourhood, and more particularly to that obtained from the Broad-street pump, while those who drank that obtained from another source were comparatively free. In several instances the drinking of this water was followed by cholera, even by persons living at some distance from the district, to whom the water was sent. In the workhouse where this pump water was not used only 5 deaths occurred; whereas 80 would have been a ratio proportionate to the neighbourhood around. In a factory near, employing 200 people, where the water was drunk daily, 18 people died; while 70 men, employed at the Brewery, in Broad-street, never drank the water and all escaped cholera. The water of this well was afterwards proved to be contaminated by the escape into it of the contents of sewers and drains. Still, when first obtained, it was clear and limpid, and was preferred. If, however, a glass of it was kept for a short time exposed to the air, it soon became putrid and offensive.

One more instance of the tendency of impure water to produce this disease is very remarkable. In the epidemic of 1849 the cholera was more fatal in the districts supplied by the Southwark and Vauxhall and the Lambeth Water Companies, than in any other. The former company supplied water from the Thames, at Battersea-fields, about half a mile above Vauxhall-bridge; the latter from opposite Hungerford market. The pipes of these two companies pass together down the streets of several of the south districts. Between 1849 and 1853 the Lambeth Company removed their works from opposite Hungerford market to Thames Ditton thus supplying water, quite free from the sewage of London. Now in the first four weeks of the cholera epidemic of 1854, 286 fatal attacks took place in the houses supplied by the Southwark and Vauxhall; but only 14 in the houses supplied by the latter: the proportion of deaths to each 10,000 houses being—Southwark and Vauxhall, 71; Lambeth, 5. The difference, it will be observed, is very considerable, and can readily be explained by the peculiarities of the water. In addition to these very marked instances there can be no reasonable doubt that the increased mortality from diarrhœa and other diseases of an epidemic character is greatly increased by the impure supply of water—the impurities being much augmented by the long-continued heat of the weather, especially in the autumnal months.

There are three principal means of purification of water. *Purification by deposition* is effected by collecting water in large basins or reservoirs, and allowing it to remain stagnant till the mechanical impurities are deposited at the bottom, after which the supernatant fluid is drawn off. By this means the impurities that are held in suspension are alone separated, while the large size of the reservoirs and the long time required for subsidence, render the amount of water which can be obtained in this manner very small in proportion to the outlay required; and the putrefying gases which must result from the decomposition of the organic matter which subsides cause the water so obtained to be anything but agreeable.

The second method is that of *purification by reagents*—as alum or lime—which form a weighty precipitate when added to the water, and, while subsiding, take down with them certain organic matters. These processes resemble somewhat in principle the common domestic operation of clarifying liquids, as coffee, by boiling it with the white of egg. This, although found to answer in the laboratory, is difficult of application on an extended scale

The third method is that of *purification by filtration*. To be perfect a filter should be capable of separating both mechanical and chemical impurities. To effect this the water is passed through a porous substance, which will arrest the progress of mechanical impurities, and at the same time act chemically and withdraw such matters as are in solution.

On a large scale the process of cleansing now adopted consists essentially in making the water pass through a considerable thickness of gravel, sand, or finely-divided stones, arranged in a succession of layers. In some cases the water is first purified by subsidence as above mentioned, and afterwards made to traverse these layers. The nature of the stone depends much on the locality of the reservoir, and other circumstances, sometimes the natural constituents in the soil supplying the most appropriate material. In addition to those substances which act by separating mechanical impurities only, other materials, especially animal charcoal and certain species of clay, are used, and these substances possess the remarkable property of withdrawing all traces of animal and vegetable matter, even when in a state of perfect solution. In some forms of filter the water is made to pass from above downwards through the various purifying media, while, in others, the current is sent in an opposite direction passing from below upwards, so that the pure water passes to the top, and is drawn off from that surface.

For domestic purposes numerous varieties of filters have been brought before the public. Wool and sponge, as media for filtration, have had their respective advocates: they act mechanically merely. The expense of the former would render it inapplicable on a large scale, and the latter would require frequent renewal: the heavier earthy matters might be retained; but the minute organic and animalcula contents would not be arrested thereby. It is in the removal of these that animal charcoal is particularly useful—its peculiar absorbent powers, both for gaseous and other organic matters being very remarkable. So strong is the affinity which it possesses for vegetable and animal matters, that water containing the most poisonous substances, after being passed through a layer of animal charcoal may be taken with impunity. Vegetable charcoal possesses the same properties, though in a less degree. Laudanum, which is of a dark port-wine colour, if passed through it, comes out free from colour and odour.

We have, then, in this material a most valuable disinfectent agent. When used alone as a medium for filtration, it soon becomes, however, more or less completely matted together, and the rate of filtration becomes very slow. Hence it requires to be mingled with some other substance, as fine sand, stone, &c., which will hasten the process, and prevent the clogging up of the filter; but as the supply of this material is small, and can be obtained only from certain districts, at some expense, its general use has not been rendered practicable. The patent stone of Messrs. Ransome and Co., which can be manufactured with any amount of porosity, according as it may be required; and its incapability of being affected by ordinary menstrua, afforded a means of artificial filtration which happily suggested itself to the inventor, and which has been employed for that purpose with the most satisfactory result. By the use of plates of this substance and layers of charcoal, and the adoption of the principle of ascension, the most complete separation of impurities, whether in suspension or in chemical solution, or of gaseous matters, the products of putrefaction, can be readily effected.

It will be obvious that the first stratum of materials though which water containing much mechanical impurities must be especially prone to become clogged up, so that a uniform supply of clear water must be difficult to obtain, while the occasional removal of such matters will be difficult without disturbing the water which has been already filtered through it. In the method of filtration which is now most common, that namely by ascension, this difficulty is overcome.

Amongst the prominent filters of the present day, as combining the above requisitions, &c., we would notice those of Messrs. Ransome and Co., in which these gentlemen have happily contrived the most perfect medium for filtration that has come under our notice, and adapted in various forms, for all the requirements of personal, domestic, or manufacturing purposes. By the employment of discs or boxes of a peculiarly fine yet porous stone, enveloping a bed of animal charcoal, they secure the most effective apparatus in an incredibly small space, thus rendering their filters exceedingly portable and light, whilst at the same time, owing to the perfect simplicity of construction, the filtering medium can easily be removed and renovated at pleasure.

These gentlemen have recognised the importance of the principle of filtration by ascension, and their filters and water-purifiers are constructed so as to secure this end, by means of which the mechanical impurities separated from the water subside at the bottom of a chamber prepared for that purpose, instead of being deposited in the heart of the filter, as has hitherto been the case in filters of the ordinary construction.

Our space will not allow of our describing more in detail the various forms of filters manufactured by this firm; they are as numerous as the requirements of the public in this respect—and doubtless full information will be readily furnished to any inquirer, either at their manufactory, Ipswich, or at their dépôt, Whitehall-yard, Cannon-row, Westminster.

ALLIANCE BETWEEN BRAZIL AND THE ARGENTINE CONFEDERATION.—It is rumoured, says the *British Packet*, of Dec 1, that an alliance has been formed between Brazil and the Confederate States against the Government of Paraguay. It is said that the Imperial Envoy has stipulated to give the President 2,500,000 dollars to equip a contingent of 3000 men, to act in concert with an Imperial land and naval force; and that moreover there is a reserved stipulation, by which the empire engages to guarantee the integrity of the Argentine territory.

RUSSIAN STATISTICS.—The almanack for the present year, published by the Academy of Sciences at St. Petersburg, gives the following statistics:—The number of births in 1854 were 2,672,152 individuals of the Greek orthodox religion, 75,352 Lutherans, 18,590 Armenians, 95,358 Catholics, 48,076 Jews, and 99,253 Mussulmans, making 2,992,781 births. The deaths amounted to 2,272,936; consequently, the increase in the population is 470,456. The mines in the Ural mountains, Siberia, and the Caucasus, produced in the same year 1,284,9 lb. of gold and 1,284,9 lb. of silver.

NEW ROAD BETWEEN RASSOVA AND KUSTENDJEH.—The *Presse d'Orient* says that the construction of the road between Rassova and Kustendjeh, to facilitate the communications of the Danube with the Black Sea without passing by the mouths of the Danube, has been completed; and the road is now practicable. The engineers who had come to superintend the operations are about to return to France. "This undertaking (says the *Presse*) has given rise to interesting observations connected with the medical climatology of the Dobrudscha, which has been represented as impregnated with deleterious miasma, has not been fatal to one of the 300 workmen who have been employed by the engineers. Such a fact is worthy of notice, particularly when we bear in mind the effects frequently produced by works of this kind, in the most favoured countries, when opened for the first time. It must be mentioned, however, that the men employed were Moldavians and Wallachians, all vigorous, sober, and well inured to fatigue."

COMMERCE OF BELGIUM.—The foreign commerce of Belgium increases yearly. In 1854 the imports for home consumption amounted to 343,500,000 francs; and the exports of Belgian produce to 339,000,000 francs. Amongst the chief articles exported figure:—Grain, 79,535,000 kilos.; flax, 2,500,000 kilos.; refined sugar, 21,500,000; hops, 3,600,000 kilos.; horses and colts, 30,000 head; cattle, 222,400 head, (against 100,000 imported); and cloth to the value of 19,000,000 francs. The chief commerce is with France, and goods to the value of 118,800,000 francs were exported from Belgium in 1854. The value of 108,000,000 francs were dispatched to England, chiefly in provisions: amongst which figure 28,800,000 kilos. of grain, 45,451 head of cattle; 1,249,000 kilos. of meat; 3,300,000 kilos. of butter; and 1,200 000 francs' worth of eggs. Holland and the Zollverein figure in the third and fourth rank of the commercial relations of Belgium. The receipts of Belgian customs duties in 1854 amounted to 11,659,000 francs. The following, according to the tables just published at Antwerp, is the list of maritime disasters which occurred in the year 1855:—Wrecks, 1363; collisions, 743—of which 69 were lately lost; destroyed by fire, 62; steamers lost, 123—11 being French, 44 English, 55 American, and 13 Dutch.

SUPPRESSION OF THE SANTHAL INSURRECTION. The Santhal insurrection seems now over: the last of the insurgents in the field have been surrounded, and Kanoo, the only leader of note remaining amongst them, has been captured. The troops, it is supposed, will be ordered to return to quarters, the police being considered sufficient from henceforth to maintain the peace. The latest operations against them are of some interest, as being more decided and vigorous than most of those preceding them. On the 20th of November a body of troops were dispatched to Roxadungal; and, though none were found at this particular point, their track was discovered by men sent up in the trees. The troops pushed on, and found all at once, to their surprise, in the centre of a great encampment, with the cooking pots still on the fire, and which had not been abandoned for above ten minutes. The insurgents, to the number of 1500, were surrounded by parties of from 250 to 300 in the hardwood all around, over a space of four or five square miles in extent. The troops at length came in contact with them, plunged into a tremendous bamboo jungle, and drove the Santhals before them. They finished by burning from twenty to twenty-five villages, and by showing the enemy that none of their fastnesses were impenetrable. On the 30th detachments were sent out by General Lloyd, it is possible, to capture the remaining insurgents, and on this they were entirely successful, Ranga Alen having arrived the following day with all the most important prisoners in charge, Kanoo included.—*Bombay Times*, Dec. 17.

BERLIN AND LONDON AT VARIANCE.—It appears that the Earl of Clarendon, at an interview which he had recently with the Prussian Ambassador at London, had with him, complained of the conduct pursued by Prussia in the Eastern question. The Earl expressed himself very unequivocally as to the pretended neutrality of Prussia; he complained that that Power continued to supply Russia with large quantities of warlike stores, and that the Prussian Government, by tolerating such conduct, gave assistance to the enemy of France and England. He also expressed his surprise that superior officers of the Prussian army should have been present at the fete organised by the Russian Ambassador to celebrate the surrender of Kars; and that the name of Kars should have been used as a rerrier at Berlin as a *mot d'ordre*, as if the victory gained by the Russians was glorious for the arms of Prussia. "If England," continued his Lordship, "does not see in all these facts so deeply demonstrated in favour of Russia, she cannot avoid remarking the carelessness with which Prussia maintains her moral co-operation. England will, therefore, find herself compelled to adopt serious and even hostile measures, if the Cabinet of Berlin does not change its attitude." The Prussian Ambassador addressed a confidential despatch to his Government, in which he related in detail the result of his interview. This despatch arrived at Berlin when M. de Manteuffel was in Lusatia, and he returned to Berlin the instant he was informed of the receipt of it. A council of Ministers was assembled, under the presidency of the King, and the communications made by the Earl of Clarendon to the Prussian Ambassador were the subject of a long discussion. Although the declarations of England have produced a deep impression here, it does not appear that Prussia makes any attempt to put an end to the acts of which the English Minister complains. It is, therefore, considered very possible that the Prussian ports in the Baltic will be placed in a state of blockade.—*Letter from Berlin in the "Danube" of Vienna.*

None but First-class Goods made by SHRIMPTON and HOOPER
Albion Works, Studley; and 19, King's-square, London.

**CAUTION.—PATENT EVER-POINTED** PENCILS.—S. MORDAN and CO are daily receiving complaints of the non-existence of their Patentees' Name and Address S.M. and Co. therefore caution all purchasers to see that the Patentees' name be stamped legibly on the case. A quantity of counterfeits are constantly pressed on the public, as they yield a greater profit to the vendor, but will be found of no value in use
Perhaps the above caution is even more strictly necessary when Cumberland Lead Pencils are purchased for refilling the Ever-pointed Case Unless these have been most accurately ensured to the exact size of the pencil point, they will be found utterly useless
Each box of genuine lead pencils is stamped "Warranted S. MORDAN and Co." Manufactory, 23, City-road, London.

**FINE ARTS.—S. MORDAN and CO. beg to** inform the public that they are enabled to supply a genuine pure Cumberland Lead DRAWING PENCIL without a particle of grit, or any other impurity. S. M. and Co. have no hesitation in asserting that such pencils as they now supply have never yet been produced, and in confirmation of this the highest testimonials from all the first artists, architects, and engineers have been received The following is an abbreviated List:—

| | |
|---|---|
| Charles Barry, Esq., R.A. | Samuel Prout, Esq., F.S.A. |
| C. L. Eastlake, Esq., P.R.A. | Philip Hardwick, Esq., R.A. |
| C. R. Bronzi, Esq., F.S.A. | Cayley Fielding, Esq., F.W.C.S |
| Clarkson Stanfield, Esq., R.A. | W. Wyon, Esq., R.A. |
| Richard Westmacott, Jun., Esq., R.A. | David Roberts, Esq., R.A. |
| H. C. Wilson, Esq., Director of the Government School of Design. | J. M. Wilkinson, Esq., A.R.A |

Each pencil is stamped with their name.

**ORNAMENTS for the DRAWING-ROOM,** LIBRARY, &c.—An extensive Assortment of ALABASTER, MARBLE, BRONZE, and DERBYSHIRE SPAR ORNAMENTS, Manufactured and Imported by J. TENNANT, 149, Strand, London.

**FOR FAMILY ARMS,** send Name and County to the HERALDIC OFFICE. Fee, search and sketch, 3*s.* 6*d.*; or stamps. Arms painted, quartered, &c.—Observe, H. SALT, the Heraldic Office, Great Turnstile, Lincoln's-inn.

**CHUBB'S LOCKS, Fireproof Safes, Cash and** Deed Boxes.—CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Wolverhampton.

**GUNS, RIFLES, REVOLVERS, AIR-** CANES, &c.—Large assortments of double guns, ditto in pairs, double rifles, Adams', Colt's, and all approved systems of Revolvers in endless variety.—REILLY, Gunmaker, New Oxford-street.

**CARTS for FARM USE;** also for EMI-GRANTS, BUILDERS, &c.—W. AMEY and CO., Manufacturers, Swan-lane, Upper Thames-street, London-bridge

**LIGHT SPRING-CARTS;** also, DOG-CARTS, of the best Description, at the lowest prices.—W. DRAY and CO., Manufacturers, Swan-lane, Upper Thames-street, London.

**MANGLES** of every Description. No Family should be without one. Prices, with full description, sent on application to W. DRAY and CO., Manufacturers, Swan-lane, Upper Thames-street, near London-bridge

**MAYALL'S PHOTOGRAPHIC GALLERY,** 224, Regent-street.
Photographs, Stereoscopes, and Daguerreotypes Taken Daily.

**MEDICINE CHESTS,** containing Eleven Stoppered Bottles, Scales, Weights, and Measure, in Polished Oak Case, with Lock, 21*s.* Mahogany Chests at proportionate prices, at WILLIAM T. COOPER'S, 76, Oxford-street, London.

**THE CORK RESPIRATOR** is the Lightest, Cheapest, and most Effectious ever invented. Thousands are daily deriving benefit from its use. Price 3*s.*, free by post, of WILLIAM T. COOPER, 76, Oxford-street.

**LAVEMENT or ENEMA APPARATUS of** every description at wholesale prices. The Apparatus No 3 in Illustrated Catalogue is particularly recommended at 12*s.* 6*d.* Free to any Railway station. WILLIAM T. COOPER, 76, Oxford-street, London

**TOOTHACHE PREVENTED.—The Teeth** rendered clean and white, the gums strengthened, and a delightful fragrance imparted to the breath, by COOPER'S ANTISEPTIC CAMPHOR DENTIFRICE POWDER Price 1s 6d. and 2s 9d per pot. Manufactory, 76, Oxford street, London. Agent for Ireland Mr James Light, 32, Fleet-street, Dublin.

**TOOTHACHE CURED, &c.—TAYLOR'S** LIQUID STOPPING, 1*s.* and 1*s.* 6*d.* a bottle, is sent free by A. E. TAYLOR, Chemist, Hastings, on the receipt of twelve stamps; and sold by most Chemists See the numerous Testimonials.

**PHOTOGRAPHIC ARTISTS and AMA-** TEURS are respectfully informed that BARNARD'S PHOTOGRAPHIC WATER-COLOURS and PAPERS are now to be obtained on application.—336, Oxford-street.

**PHOTOGRAPHIC APPARATUS,** Complete, with Double Achromatic Lenses, Chemicals, &c., the Art Taught Gratuitously, for £3, £5 5*s.* and £10.—Specimens may be seen at GILBERT'S Establishment, 498, New Oxford-street. Author of "First Steps in Photography," price 6*d.*; by post, seven stamps.

**THERMOMETERS, Self-Registering, showing** the extreme temperature of the day. Also, the New Chimney Thermometer, with very low scale, at CALLAGHAN'S, 424, New Bond-street (corner of Conduit street). A Manufactory for Thermometers and Barometers of all kinds.

**MAPPIN'S "SHILLING" RAZOR,** sold everywhere, warranted good by the Makers. JOSEPH MAPPIN and BROTHERS, Queen's Cutlery Works, Sheffield, and 67, Mortgage-street, City, London.

**MAPPIN'S SUPERIOR TABLE KNIVES,** as made for the Crystal Palace, Sydenham, handles cannot possibly become loose; the blades are all of the very first quality. Any fault over Sheffield manufacture. Papers supplied at their London Warehouse, 67, Moorgate-street, City; and Queen's Cutlery Works, Sheffield

**PURE FRENCH COLZA OIL,** 5*s.* 6*d.* per gallon. CAUTION.—MARTIN and CO. (late Gosnell and Co.), Patentees, Paris, sole Depôt in England: The London Soap and Candle Company, 76, New Bond-street. Cash

**THE SULTAN'S PERFUMED VAPOUR-** BATH (is the greatest luxury in bathing). Warm, Sulphur, Harrogate, and Shower Baths. Always ready.—10, Argyll-place, Regent-street, and 5, New Broad-street, City. Warm Baths sent out within the limits of London.

**MODELLING in LEATHER.—See to what** perfection this Art is brought by an Inspection of the PRIZE SPECIMENS at the Soho Bazaar Entrance and at the Manufactory, 13, Soho-square. "Plain Directions" by R. W. GILBERT. Armours supplied with PROPER materials

**1855-6.—210, REGENT-STREET.—** WEDDING, BIRTHDAY, and CHRISTMAS PRESENTS, DAVENPORT'S, and WORK-TABLES, of superior design and manufacture, at moderate prices.—JOHN WELLS and Co., 210, Regent-street, London.

**PISTACHIO NUT TOILET POWDER** imparts a natural and delicate tint and youthful colour to the skin, unattainable by any other means and removes all the spots, tan, pimples, freckles, &c., from the face, neck, and arms, rendering the skin soft, clear, and beautiful. Sold in boxes, 2*s.* 6*d.*, made only by PIESSE and LUBIN, 2, New Bond-street, London

**SLACK'S NICKEL ELECTRO-PLATED** is the best substitute and quite as durable as Silver Tablespoons or Forks, 24*s.* and 42*s.* per dozen; Desserts, 18*s.* and 30*s.*; Teaspoons, 12*s.* and 20*s.*; Candlesticks, with 700 engravings, and Catalogue of Electro-plate, Table Cutlery, and every requisite for furnishing, at the lowest prices, may be had gratis or post-free. Orders above 2*l.* carriage-paid.—RICHARD and JOHN SLACK, 336, Strand.

**HAIR DESTROYER.—1, Little Queen-street,** High Holborn.—ALEX. ROSS'S DEPILATORY, for removing effectually and instantaneously, from the face, neck, arms, and hands, without the slightest injury to the skin. A.R. will warrant it not to irritate the flesh in the smallest degree, and the hair to be entirely destroyed. Sold in bottles at 3*s.* 6*d.*, 5*s.* 6*d.*, and 10*s.* 6*d.*; or applied at the Hair-dyeing Establishment as above. Forwarded for stamps, free by post, 8 extra.

**MARK YOUR LINEN.—The PEN SUPER-** SEDED.—The most easy, permanent, and best method of marking Linen, Silk, Cotton, or Books, is with the PATENT ELECTRO-SILVER PLATES. Any person can use them. Initial Plate, 1*s.*; Name, 2*s.*; Set of Numbers, 2*s.*; Crest, 5*s.* With directions sent post-free (for stamps) by the Inventor and Sole Maker, T. CULLETON, 4, Long-acre (one door from 66, Martin's-lane).

ANTIQUITIES FOUND NEAR HEAD-QUARTERS, BEFORE SEBASTOPOL

THE present page presents considerable attractions for the lover of antiquities, akin to the interest of the site as the seat of the War. Both Illustrations are from the pencil of our Special Artist, Mr. Goodall. The lower Engraving shows the interior of the Church of St. Vladimir, in the Russian Cemetery, on the French extreme left. The edifice is circular in plan; and the walls and room are embellished with portraits of sacred character, in addition to what appears to be a celestial representation above the large figure on the cross. The group of objects engraved above the view of the Cemetery Church, are specimens of the various antiquities found in an ancient building discovered by Colonel Monroe, 39th Regiment, near the Head-quarters in the Camp before Sebastopol. The discovery is thus graphically related in one of the able letters of the *Times* Correspondent:—

"All about the plateau of the Chersonese, you find traces of old buildings scattered about in various directions, and easily recognisable from the number of large cut stones lying about. One of these heaps, just on the top of the Col de Balaclava, a few hundred yards from the English head-quarters, must have struck every one last year coming up from Balaclava to the plateau. During the winter, however, French cavalry was encamped near the spot, and the consequence was that most of the stones which were lying above ground were taken away for hut and kitchen building, and thus were scattered about, leaving no mark on the place where they had been taken from. On October 26th a party of the 4th Foot was collecting stones in that place, and one of the men found an old coin, which he brought to his officer, Lieutenant Nash; who, in his turn, told the thing to Captain Patton, of the same regiment. This latter went up with the coin to Colonel Munroe, of the 39th; who, being himself an antiquary, took up the matter, and received permission from head-quarters to employ every day fifty men of his regiment in excavating these ruins. The result richly repaid the labour, and a circular building, about thirty feet in diameter, with the traces of two lateral lines of walls—one running in a southerly, the other in an easterly direction—have been laid open. The circular building is divided from north to south by a wall; in the eastern part of the semicircle thus formed is the door, which faces south, and a kind of well, narrow at the mouth, and then expanding as it descends lower down: opposite to it is a large slab, forming a parallelogram of about eight feet by four, standing upright, and surrounded by a circular wall of small stones, different in construction from the rest of the building, which is composed of the regularly-cut stones of Greek architecture. But the most curious thing in this compartment is a slab horizontally imbedded in the corner formed by the north side of the outside wall and the partition wall. The edges of it are somewhat higher than the middle, and on the end of the slab which faces the interior a kind of gutter is cut out, as if to facilitate the running down of fluid. A similar stone is on the other side of the partition-wall, only having the gutter in a right angle with that of the slab in the first compartment. The second compartment itself is divided from east to west by a wall, on both sides of which the whole remaining space is filled with the remains of thirteen large circular earthen vases, of about four feet in diameter. They are all broken to pieces, and only held by adhering to the earth in which they lie. They must have been of an amphora shape, narrow at the mouth, as one can see from the fragments of edges which have been dug out. On the sides of some there are triangular rivets of lead, very likely old repairs; two of the vases are double, one inside the other. Neither the parts of the buildings yet laid open, nor the different objects found in the rubbish throw much light on the nature of the building. The objects found consist of eight or ten brass coins, all of the same kind, marked on both sides with what looks like a cross, with the points split and inclining downwards; a heap of remains of jars, on a piece of which I thought I recognised Arabic characters: some bones of animals, and the figure of a man from the legs downwards. Colonel Munroe thinks it may be a Grecian temple; that the earthen jars were there to receive the blood of the victims, which flowed in from the two slabs, which he supposes to be the altars where the sacrifice was performed. I cannot help thinking it resembles more the circular tower of a fortress with the well, which resembles exactly the wells abounding in the neighbourhood of Eupatoria, and still in use. Nearly at the head of every ravine leading down from the upper part of the plateau of the Chersonese towards the sea or the harbour of Sebastopol you can see traces of buildings, with the same kind of square stones: and there are often two corresponding ones, as is the case on the spot where the excavation has taken place. On the opposite side, just below the French head-quarters, there is another such heap of ruins as I remember to have seen on the site of the excavation last year, which contains very likely a similar building. Between the two, in the hollow formed by the beginning of the ravine, which is no other than the ravine leading to the Dockyard Creek, is a well, which ought to be perhaps brought into connection with the two buildings. Of course, it is only by further excavations that the question can be decided. The earthen jars seem the greatest puzzle, unless one perhaps supposes them to have been magazines for grain, which are even now not uncommon in some parts of the East.

Our Artist's selection from these interesting fragments of ancient art includes the lower portion of the vase; a lamp; some coins; a terra-cotta head; and some pieces of pottery bearing figures and specimens of classic ornamentation. The circular building, or rather portions of its roof, were engraved in the ILLUSTRATED LONDON NEWS for Dec 8.

CHURCH OF ST. VLADIMIR IN A RUSSIAN CEMETERY, FRENCH EXTREME LEFT.

London: Printed and Published at the Offices, 198, Strand, and Milford House, in the Parish of St. Clement Danes, in the County of Middlesex, by WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, JANUARY 19, 1856

## THE PEACE NEGOTIATIONS.

THE Emperor of Russia is either sincere or insincere in his acceptance of the Austrian propositions—four of them definite, and one indefinite. If he be sincere, as many people are willing to believe, it is essential for the proper conduct of the negotiations that the Allies should keep in remembrance the agencies by which he has been brought to so wholesome a state of mind. If he be insincere—as, judging from the avowed and long-pursued policy of his country and his dynasty, and from his own antecedents as well as those of his immediate predecessor, it is not very uncharitable to suppose that he may be—it is equally essential that Great Britain and France should remember that insincerity understands no argument so well as that of the strong arm; and that, in order to restrain him whom words will not bind, they must retain in their hands the physical power to coerce and punish.

Assuming it as true that the Czar sincerely desires to end the war, and that he has consented to take upon himself the humiliation of acceding, without *arrière pensée*, to the demands of Austria, it must be clear that no abstract love of peace, no mere sympathy with Quakerism of the school of Sturge and Bright, has operated his conversion to sentiments so praiseworthy. If he be willing to take peace from the dictation of that Francis Joseph whose empire was not long ago saved from destruction or dismemberment by the legions of his father, it is not because he loves peace, or Francis Joseph, or because he has ceased to covet Constantinople, but because he fears the might of France and England; because he was beaten at the Alma, at Inkerman, and at the Malakoff; because Sebastopol is in our power; because his southern fleet is at the bottom of the sea; because his northern fleet dares not show more than its topmasts which peep from behind the granite defences of Cronstadt in a security that is not likely to be perpetual; because Bomarsund and Sweaborg have been destroyed; because his maritime trade has been annihilated; because the Crimea trembles in his grasp; because defeat has followed upon defeat, and humiliation upon humiliation; because he can no longer depend upon the aid or the neutrality of Germany; because Sweden, longing to repossess her ancient Finland, has entered into alliance with his enemies; and because there reaches him in St. Petersburg the mighty sound of the preparations of England for a Baltic campaign; and because he knows that such an amount of gun-boats, and of other ships of war fitted for the great enterprise, will appear before Cronstadt in the early spring, if peace be not made in the mean time, as will dim the *prestige* of his arms to the uttermost confines of his empire, and inflict upon his power a shock that will reverberate through Europe and Asia. It is the conviction that the Allies have done so much, and are ready to do so much more, that has made the

DISTRIBUTION OF THE QUEEN'S MEDALS TO THE FRENCH CRIMEAN TROOPS, BY H.R.H. THE DUKE OF CAMBRIDGE, AT PARIS.—(SEE NEXT PAGE.)

Czar reasonable if reasonable he be. And shall Great Britain and France, at the first rumour that their enemy is weary of the war, lay down their arms as if the final victory was won? Shall they, because he consents to accept a basis for negotiation, be such "greenhorns" as to stop short in their preparations for another campaign? Shall they act as if it were only in the affairs of great nations, that there never comes "a slip between the cup and the lip"? Shall they forget that between a desire to negotiate and the result of negotiation there is a wide gulf? and that if they throw down their arms they will cut away the bridge which can best enable them to cross it? Surely the people and Governments of these two mighty nations are not such fools? There are no merchants in the city of London, or speculators in the Bourse of Paris, who in their commercial transactions would act on such a principle; or rogues would never honour their acceptances, and trade would give place to brigandage. There has been some talk of an immediate armistice, and it is even asserted that Russia has sent orders to the Crimea for the suspension of hostilities; but we believe all such statements are premature or unfounded. If Russia have sent such orders, the Allies have no cause to display any extraordinary gratitude—for it is the elements which have suspended hostilities. This is one of the reasons why negotiation has been proposed; but, until a treaty of peace is signed, sealed, and guaranteed, it would be in the highest degree unwise in the Governments of Great Britain and France to consider the war at an end, or to intermit a single preparation for its vigorous prosecution when the elements shall permit.

Of course, if the Czar be insincere—if he merely seek to gain time, and pretend to negotiate, in the hope that dissensions from which he may profit may arise among the Powers of Europe, before the terms of a peace mutually acceptable to all parties can be agreed upon, every argument that was strong on the supposition of his sincerity is strengthened a thousandfold. It is safer and wiser to believe in his insincerity, until he himself remove all possibility of doubt by his actual concessions, and the guarantees he gives, than to believe in the good faith which never declared itself until it was treated as bad faith, and operated upon by sword and gun. Neither the Czar nor his friends can complain of a mistrust which the whole policy of his country for a hundred and fifty years has created and strengthened. Words and treaties have never been able to prove what Russia really meant. The passage of the Pruth and the massacre of Sinope were facts of which no one could mistake the meaning or the intention. It is much better to be accused by the Russians and pro-Russians of want of generosity than to be laughed at for want of common prudence and common sense. If the British Government stop the building of a single gun-boat on the faith of the new conferences; if it interfere to prevent the already-ordered destruction of the docks of Sebastopol; if it relax in the slightest degree its efforts for the continuance of the war—it will commit an error which may yet cost Europe seas of blood, and prepare the way for the downfal of England.

The Allies are willing to negotiate; but they know too much of Russian ambition and treachery to place any faith in negotiations commenced in Russian interest—not in theirs—and carried on by the friends of the Czar, for purposes which are only partially theirs, and in a less degree those of Turkey. No one is wicked enough to refuse to listen to terms of peace, whether proposed by Russia herself, or by Austria in her behalf; but in order that peace may result we must negotiate with arms in our hands. Peace is probable, because we have been successful in war. It will become more probable the more we show our determination neither to be bamboozled by diplomacy, nor to be dismayed at the probable cost or the possible penalties of war. Thanks to the events of 1855, we know both the strength and the weakness of Russia, and how to deal with her.

## THE DISTRIBUTION OF MEDALS TO THE FRENCH ARMY.

THE review by the Emperor of the different corps of the Imperial Guard and Army which lately returned from the Crimea, of which we gave a brief notice last week, took place on the 16th inst. on the Place du Carrousel

This military solemnity, as our readers are aware, had for its principal object the distribution of the commemorative medals granted by Queen Victoria to the French officers, non-commissioned officers, and soldiers, who took part in the glorious campaign in the Crimea. General Regnault de St. Jean d'Angeley had the chief command of the troops. General Mellinet commanded the infantry of the Imperial Guard, composed of two brigades—the first under the orders of General Manique, and consisting of the Engineers, Foot Chasseurs, and the 1st and 2nd Regiments of Voltigeurs; and the second, under those of General Clerc, formed of the Zouaves, the 1st and 2nd Regiments of Grenadiers, and the Regiment of Gendarmes. The artillery of the Guard was commanded by M. de Rochebouet. General Forey was at the head of his division, which was composed of the 20th, 39th, 50th, and 97th Regiments of the Line, formerly two brigades under the command of Generals Reynaud and Bazanchard. The seventeen lines were composed as follows:—First line, a company of Engineers and a battalion of Foot Chasseurs; 2nd line, the 1st battalion of the 1st Voltigeurs and three companies of the 2nd; 3rd, three other companies of the 2nd battalion and the 3rd battalion of the same regiment; 4th, the 1st battalion of the 2nd Voltigeurs and three companies of the 2nd; 5th, three other companies of the 2nd battalion and the 3rd battalion; 6th, the 1st battalion of Zouaves and three companies of the 2nd; 7th, three other companies of the 2nd battalion and the 1st battalion of the 1st Grenadiers; 8th, the 2nd battalion of the 1st Grenadiers and three companies of the 3rd; 9th, three other companies of the 3rd battalion and the 1st battalion of the 2nd Grenadiers; 10th, the 2nd battalion of the 2nd Grenadiers and three companies of the 3rd; 11th, three other companies of the 3rd battalion and the 1st battalion of Gendarmes; 12th, the 2nd battalion of Gendarmes. The four following lines were formed of the 20th, 39th, 50th, and 97th Regiments of the Line; and the 17th line of batteries of artillery of the Imperial Guard.

At half past twelve platoons of honour of the Guard repaired to the Tuileries to bring out the colours, and at one o'clock the Emperor mounted his horse at the Pavillon de Flore. His Majesty was accompanied by his Royal Highness the Duke of Cambridge, Prince Napoleon, Marshals Vaillant and Magnan, Generals Canrobert and Niel, Admiral Lyons, General Martimprey, chief of the staff of Marshal Pelissier, General Lepaisse, and a numerous and brilliant staff, among whom were a number of English and Sardinian superior officers. The cortège of the Emperor was partly composed of his municipal Aides-de-Camp, and a detachment of Cent Gardes. At the same moment the Empress, followed by her Ladies of Honour took her station on the balcony of the Pavillon de l'Horloge, and all the windows of the Palace were in an instant filled with ladies elegantly attired. The Emperor having reviewed the troops placed himself, with the Duke of Cambridge, before the Pavilion de l'Horloge when the distribution of the medals commenced. They were announced to his Royal Highness by Colonel Francoutier, First Aide-de-Camp to the Minister of War, and distributed them himself to the superior officers, one Captain, one Lieutenant, and one sub-Lieutenant of each regiment. The following address was delivered by his Royal Highness to the French army:—

Her Majesty the Queen of England has deigned to charge me with the office of presenting to the generals, officers, and rank and file of the French army—my brave and worthy comrades—these medals, as a token of the cordial esteem and friendship which exist between the two nations, and of the admiration which her Majesty and the English nation have felt in seeing the glorious feats of arms performed by the Army of the East. It was in the great combats of the Alma, Inkermann, and Sebastopol that the alliance of the two nations was ratified by the two armies. God grant that this great alliance may always continue for the advantage and glory of both nations! As for myself, my dear comrades, the honour which has been conferred on me is the greater that I have served with you, and have seen with my own eyes your bravery, your great military qualities, and the devotedness with which you have supported so many fatigues and so many dangers. I sincerely thank the Emperor for his kindness in allowing me to have the honour of distributing these medals in his presence.

The defile began about two o'clock, and each platoon, as it passed by, cried "Vive l'Empereur!" "Vive l'Impératrice!" "Vive la Reine Victoria!" and "Vive le Duc de Cambridge!" the bands of the different regiments alternately playing the English and French national airs. The defile lasted until half-past three. There were about 22,000 men on the ground.

## FOREIGN AND COLONIAL NEWS

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

THE sudden, and indeed unexpected, announcement of the result of Austria's mediations with Russia has produced here an effect differing considerably from the sensation with which it was, and still is, generally viewed in England, both by the press and the public. In France little or no doubt is entertained of the pacific result of the negotiations pending. From the moment that the news of Russia's acceptance of the proposed points became generally known the establishment of peace was accepted and announced as a fact accomplished, and the satisfaction felt was universal. So the matter is still regarded.

A new movement has been given to the official and other fêtes in consequence of the confidence which reigns on this subject. The ball of the Princess Mathilde, which took place on the evening of the day on which the announcement was made, was singularly animated and brilliant. The Emperor and Empress were present, and both, more especially the former, made no secret of the satisfaction the intelligence had caused them. Their Majesties retired towards midnight, but the ball was kept up with much spirit for some hours later. Among the guests were remarked the Queen Dowager of Spain and her daughter, whose marriage with the Roman Prince del Drago takes place this week at the Malmaison. The fête at the British Embassy, though arranged at so short a notice, was very brilliant. The Empress, though dressed with much magnificence, did not display her usual taste on the occasion: her gown was of blood-coloured velvet, decorated with quantities of gold trimming, which had a heavy, glaring effect. The Prince Jérôme, M. Fould, &c., have given grand dinners; and the ball at the Hôtel de Ville, which had been postponed, is now named for the 30th inst.

It appears that the attention of the Government has of late been called to the learned bodies, in consequence of a certain degree of opposition supposed to exist among them, and which some of their discourses are found to express. Indeed, contrary to a usage established for years, these have, in consequence of this tendency, been refused admission to the columns of the *Moniteur*. At the last lecture of M. Nisard some trouble was expected from the feeling entertained against the professor by the students, and a considerable body of the gendarmerie were on the spot, to prevent any outbreak. The lesson passed without interruption; but at the conclusion a certain degree of hostile feeling was exhibited by the students, who, however, dispersed without any positive disturbance.

An amusing trait of the ideas still existing on religious superstition in the provinces is evinced by a gift lately presented to the Empress. At a village in the department of Tarn-et-Garonne, the patroness, Saint Livrade, after whom the vi lage is named, is supposed to possess marvellous gifts for the aid of women under her Imperial Majesty's present circumstances. La Curé has, therefore, in sober sadness, blessed a scarf in the Saint's church, and presented it, as an appropriate and efficacious offering, to the Empress.

The Théâtre Français has celebrated the anniversary of Molière with considerable éclat. "L'Ecole des Femmes," "La Critique de l'Ecole des Femmes," both works of the great dramatist, and "Les Muses de Molière," a series of dialogue verses, written by M. Philoxène Boyer, were presented at this occasion. At the Odéon, Tisserand repeated an *éloge* of Molière, written by M. Roger de Beauvoir, in excellent verse.

At the Théâtre Lyrique Hermann Léon has just just entered in the part of *Faistef*, in an opéra comique composed by M. Adolphe Adam: the music is light and graceful, and the work promises to have a tolerable success. It appears that the report cited in our last letter relative to the idea of replacing the François I. of Clesinger in the Court of the Louvre by a Venus de Milo, on a pedestal of malachite and gold, is a pure *canard*: and that, whatever may be the merits or demerits of the statue, or the opinion of the public thereon, it is a fixture, and will so remain.

We beg to inform all of our readers whom the fact may interest that the exquisite bouquet carried by Lady Emily Peel, on the occasion of her marriage, was made up in, and sent from, Paris, being offered as a respect ful homage by an intimate friend of the bridegroom. The orange-trees that produced the blossoms of which it was principally composed were forced for some weeks previously, in order to solve the problem of orange-flowers in January.

At the late Court ball the Princess Mathilde was prevented by indisposition from making her appearance. The Princes Jérôme and Napoleon were present. The Empress was looking well, despite the trying effect of a yellow dress—a colour somewhat singularly chosen for a blonde—and seemed to be in good spirits, and suffering little from fatigue.

## THE WAR IN THE CRIMEA.

THE news from the seat of war still continues without interest, nor is it likely to become more so while the peace negotiations are pending.

A letter from Kinburn of the 5th inst. announces the arrival in that fortress of the French General of Artillery Le Bœuf. The General had visited the fortifications of the place and the means of defence afforded by the flotilla, and pronounced the place to be in a condition to repel successfully any attack of the enemy. According to the report of deserters, an attack was to be made on the 6th. The Russians, they stated, had concentrated 16,000 men at Ochakoff, and had assembled another corps d'oee to the isthmus of Kinburn, so as to attack simultaneously on two points. The first was to cross over on the ice, with twenty pieces of artillery, while the other was to attack in front. In the night of the 3rd two English armed boats proceeded to reconnoitre the coast of the isthmus, on the Black Sea side; but, after exchanging a few shots with the Cossacks, they returned without having been able to ascertain the position or force of the enemy. In the morning of the 5th General Le Bœuf proceeded in the *Milan* steamer on a reconnaissance in the same direction, but without discovering any large body of troops. On the 4th the *Phlegthon* explored the coast of Otchakoff, and perceived no hostile movement. The garrison and flotilla, however, were on the qui vive, and well prepared, and determined to give the assailants a warm reception.

## SUSPENSION OF HOSTILITIES BY RUSSIA.

The following statement, which appeared in the *Morning Post* of Wednesday, is contradicted by the Paris correspondent of the *Times*, who says, "It would be contrary to all diplomatic usage to issue such orders before the preliminaries of peace have been signed":—

We believe that authentic intelligence has been received from St. Petersburg that, on the 18th inst., the Emperor dispatched an order to the Russian Generals in the Crimea to suspend hostilities.

This important public step argues the sincerity of Russia's desire for peace a desire which we hope may soon be gratified on complete and sufficient conditions. At the same time, it is only right to observe that the acceptance by Russia of the Austrian ultimatum does not justify us in yet suspending hostilities. We must ourselves sign preliminaries of peace before we can abstain from acts of war. It is also but fair to remark that, at the present season of the year, an order to suspend hostilities, where none can go forward, amounts to a mere formality. As such, however, it is indicative of the anxiety which no doubt exists at St. Petersburg to commit us to a pacific course.

We cannot, however, forget that all that is now peaceful in the aspect of affairs is purely owing to our past successes and our present preparations, and that, if we would be sure of peace, our surest and safest course is to continue our active exertions until we sign with Russia the preliminaries of a treaty—a step which will, *ipso facto*, be succeeded by a cessation of hostilities.

So far as this country is concerned, it is satisfactory to know that the warlike preparations in our dockyards and factories are going forward with unfinishable briskness. The *Globe*, which has the best opportunity of knowing, speaks very strongly on this point:—

Gun-boats are being completed and commissioned, mortars are being cast, recruits come in increased numbers in consequence of Lord Panmure's recent change in the bounty, drill and rifle practice are carried on with assiduity, stores are being shipped off—all with an energy unsurpassed at any period of the war. As an indication that our preparations are not decreased in point of extent, we may mention that within the last few hours a requisition has been sent for transport accommodation for 4000 horses—nearly 60,000 tons of shipping. General Codrington's army, according to the latest accounts, numbered more than 54,000 men, in admirable condition and spirits, and were fast approaching the highest discipline. Some of the regiments, we hear, present a picture surpassing the most brilliant display of infantry movements that Hyde-park has witnessed for several years. This training and preparation for a campaign will go on until we know absolutely that there will be no campaign.

It is not necessarily to be argued from all this that the Government distrusts the desire of Russia to come to terms in the interest of European security. A knowledge of her internal circumstances would perhaps suggest a different presumption. But Lord Palmerston has the honour of England in his keeping, and while meeting cordially the advances to peace, he will carefully provide for a possible failure of diplomacy, by bringing into full working order that machinery which, in conjunction with the arms of our allies, has hitherto been so instrumental in achieving success.

## THE PEACE NEGOTIATIONS.

The slow rate at which the diplomatic world moves is the subject of general complaint, but the public must make allowance for the distance between St. Petersburg and London. It is, no doubt, true that the telegraph enables us to send and receive messages in a few minutes, but diplomatic forms require something more elaborate and official than the telegraph can convey.

The Russian acceptance of the Austrian propositions as announced at Vienna, by telegraph, is no doubt an official fact, but not a fact diplomatically completed, the consequences of which may be legitimately followed out. All action must be suspended till the arrival of the courier from St. Petersburg, bearing a copy of the protocol signed by Counts Nesselrode and Esterhazy, and full powers for Prince Gortschakoff to sign the preliminaries of peace. The courier could not reach Vienna till Tuesday or Wednesday. The Austrian Cabinet will then have to dispatch to Paris and London copies of the document signifying Russia's acceptance. The English and French Governments will, in turn, have to send similar powers to their representatives at Vienna; so that the mere preliminaries of peace can hardly be signed in time for mention in her Majesty's Speech on Thursday next. In fact, considering the season of the year, it will be well if the distances can be got over so that all parties shall be in a condition to take the first united step towards peace by the 2nd or 3rd of February.

The *Indépendance Belge* of Tuesday, after stating that the signature of the preliminaries of peace can hardly be an accomplished fact before the 2nd of next month, says:—

We may take it for granted, that so soon as the representatives at Vienna of the interested Governments have received their full powers, they will place their signatures at the foot of the Austrian propositions, which, as already stated, will then constitute in themselves alone preliminaries of peace. That act accomplished—and it cannot be more than ten or twelve days' distant—a great step, we might almost say decisive, will have been made towards the complete and definitive establishment of harmony amongst all the States of Europe. We know already that its first consequence will be the immediate proclamation of a general armistice.

Then also, for the first time, the town will be named where will follow definitive negotiations. All the propositions at present made on the subject are at least premature. The only thing which is positive is that Vienna is excluded from the list of cities where the Congress may be held, by this fact, that the preliminaries of peace will be signed in that capital; the diplomatic custom being that the preliminaries and the definitive treaty are never signed in the same city. Paris continues to have a good chance of being the theatre of these negotiations. That is all that can be said at present.

The *Indépendance*, as also some of the Paris papers, states that the specific terms implied in the fifth point of the Austrian propositions include the establishment of Consuls in the Russian ports of the Black Sea, a precise definition of the Russian frontiers in Asia, and the abandonment of the Aland Islands as a fortified post.

A Russian diplomatic circular has been issued in which Count Nesselrode makes known to the representatives of Russia in foreign countries the motive for accepting the propositions of Austria.

The circular declares that Russia has made concessions with a view to the re establishment of peace, out of deference to the representations of friendly Powers, but not because the interest of Russia calls for the conclusion of that peace.

A despatch from "Berlin, Wednesday," says:—

The acceptance of the Austrian propositions has been published officially at St. Petersburg. The announcement was made at the chief condition is the neutralisation of the Black Sea, to be secured by a treaty between Russia and Turkey. Russia is ready to discuss the other points

Letters from Vienna state that the Esterhazy propositions are interpreted by the Russian party there to permit the maintenance of Nicolaieff, and also of the Russian forts on the Circassian coast, as well as the rejection of those which have been partially destroyed.

## TEXT OF THE PROPOSITIONS ACCEPTED BY RUSSIA.

The following is the text of the propositions accepted by Russia, as given in the official *Vienna Gazette* of Sunday last. It does not differ greatly from what appeared in our publication of the 12th inst., but we have thought it worth while, on account of the great interest of the document at the present moment, to reproduce it according to the official text

THE DANUBIAN PRINCIPALITIES—COMPLETE ABOLITION OF THE RUSSIAN PROTECTORATE.

Russia shall exercise no private right of protectorate over, or interference with, the internal affairs of the Danubian Principalities.

The Principalities shall preserve their privileges and immunities under the sovereignty of the Porte; and the latter, in concert with the contracting Powers, shall moreover grant to the Principalities, or confirm to them, an internal organisation conformable to the wants and wishes of the people

In concert with the suzerain Power, the Principalities shall adopt a permanent system of defence, as demanded by their geographical situation. No armed mem shall be offered to the extraordinary measures of defence they may be called on to take in order to repel al. foreign aggression

In exchange for the strong places and territories occupied by the Allied armies, Bessa consents to a rectification of her frontier with European Turkey. That frontier thus rectified in a manner conformable to general interests, will start from the environs of Chotym, will follow the line of the mounts as extending in a south-westerly direction, and will end in Lake Salyk. The line shall be definitively regulated by a special treaty, and the territory conceded shall return to the Principalities and to the suzerainty of the Porte

THE DANUBE.

The freedom of the Danube and of its mouths shall be effectually ensured by joint-pon institutions, in which the contracting Powers shall be equally represented, with the exception of maritime riparian States, especially to the States communo with the river, which shall be regulated on the principles established by the Congress of Vienna on the matter of river navigation.

Each of the contracting Powers shall have the right of stationing one or two light vessels of war at the mouths of the river, to ensure the execution of the regulations relative to the freedom of the Danube

THE BLACK SEA

The Black Sea shall be neutralised. Open to the mercantile marine of all nations, its waters shall remain forbidden to the military marine.

Consequently, naval arsenals for war purposes shall neither be created nor maintained there

The protection of the commercial and maritime interests of all nations shall be ensured in the respective ports of the Black Sea, by the establishment of institutions conformable to international law and the usages established in the matter

The two Powers on its shores mutually engage themselves to maintain only the number of small vessels, of a defined force, necessary for the service of their coasts. The convention, that shall be concerted between them to this effect, after having been previously agreed to by the Powers signatory to the general treaty, shall be annexed to the said treaty and have the same force and value as if it formed an integral part of it. This separate convention is not to be annulled nor modified without the consent of the Powers signatory to the general treaty.

The closing of the Straits is to admit of the exception applicable to the vessels to be stationed as mentioned in the article preceding.

THE CHRISTIAN POPULATIONS SUBJECT TO THE PORTE

The immunities of the Rayahs subject to the Porte shall be established without any derogation of the independence and dignity of the Sultan's Crown. Deliberations having taken place between Austria, France, Great Britain, and the Sublime Porte, for ensuring to the Christian subjects of the Sultan their religious and political rights, Russia shall be invited, at the peace, to associate herself to them.

SPECIAL CONDITIONS

The belligerent Powers reserve the right that belongs to them, for the interest of Europe, of producing special conditions beyond the Four Guarantees.

## *NAVAL AND MILITARY INTELLIGENCE.*

LORD PANMURE has obtained the sanction of the Crown to a measure of vital importance to the success of recruiting for the Army. A warrant will immediately be issued granting to soldiers the bounty-money without the deduction of a single shilling on account of necessaries. An entire kit will be given to the soldier at the public expense.

THE corps of the Royal Sappers and Miners now stationed at Brompton Barracks is 1460 strong, and every preparation is being made for their instruction in fieldworks and pontooning.

IN consequence of an order from the Horse Guards the whole of the men of the 46th of the 12th Regiment under nineteen years' service are to be immediately inspected at Chatham, previously to their embarkation for Australia, to join the head-quarters of their corps.

THE Queen, who has manifested such sympathy for the sick and wounded by presents of various kinds, has again sought to lighten the monotony of hospital routine, by sending several copies of appropriate songs for the amusement of the inmates of the General Hospital, Fort Pitt.

A PETITION from the inhabitants of Cork to the Lords of the Admiralty points out the distressed state of Cork harbour, and asks for the formation of an arsenal, building-yards, steam-factory, and all the appliances of a comprehensive naval establishment."

FOUR brass guns, captured from the Sikhs, have arrived at the depôt of the East India Company in London. One gun, cast long, and are intended to be placed on the granite platform at the base of the column erected in the grounds of Chelsea Hospital to the memory of the heroes and men who fell at the battle of Chillianwalla.

ON Saturday last an order from the Horse Guards was sent to the Commandant of the Battalion, Colonel Henry Jervis, for those men who volunteered into the Provisional Battalion into regiments now in the Crimea to hold themselves in readiness to proceed to join the depôts of those corps now in different parts of England and Ireland. The men, 700 in number, assembled on parade at Chatham Barracks in the morning, received half their bounty-money, 10l., the other half to be paid them on their joining their depôts

AN experiment is now being tried at the proof-butt in the Royal Arsenal, Woolwich, to test the strength of a six-pounder gun made entirely of iron from the mines of Nova Scotia. The gun is about five feet long, and weighs above five cwt. It has been fired with a charge of 1lb. of powder, and cylinders equal to the weight of 12 lb., or two shots; 16 lb. or three shots; up to 30 lb., or five shots. The experiment is to test the resisting properties of the iron; for which object it will be fired by successive charges until the charge reaches 90 lb. of an iron cylinder.

A CIRCULAR has been issued cancelling all the former "volunteering instructions" issued since the commencement of the war. It consists of revised special instructions for carrying into effect the volunteering from the Militia, and effects many improvements in detail on the plan, which was frequently attended with much confusion and inconvenience. The volunteering is to be superintended by a steady (if possible a Field) officer, with a surgeon, whose approval will be final. The height must be 5 ft. 6 in. for the Guards, 5 ft. 5 in. for the cavalry, 5 ft. 4 in. for the infantry. Volunteers will, if over nineteen years of age, be allowed to reckon one-half their Militia service (over 12) as re service, and their good-conduct pay, &c., is to be preserved to them ally as if they remained in the Militia.

A NUMBER of schooners and other craft have arrived at Woolwich during the last few days, and are discharging large cargoes of shot from the Scotch foundries. Great activity continues to prevail the whole of the departments there. The building of the paperwork is progressing rapidly, and it has received a portion of the machinery

A WARRANT has been issued from the office of the Director-General stating that the pay of all Acting Assistant-Surgeons, which has been 6s. a day, is to be increased to 10s. 6d., and that the order of the sum of £40 which was to have been given to each at the end of 5 years' service, is forthwith to be cancelled, in consideration of such increase of pay, for the former warrant the £40 was only to have been given to such as had passed some of their time on foreign service, but the present warrant makes no distinction.

IT is the intention of the authorities of the War Department to increase the company of the Royal Sappers and Miners and to equip them as drivers for the service of that corps when in the field; so that when any movement takes place the whole of the stores belonging to that branch of the service, such as the pontoon-bridges and intrenching tools, may be conveyed with them; if having been found, when the troops landed in the Crimea, that horses and carriages could not be obtained for that purpose. To make preparation for this additional force the artillery stables on the north side of the barracks at Chatham will undergo great alterations.

A NAVAL PATRIOTIC ASSOCIATION has been formed at Sunderland, with the view of raising a sum of money for the purpose of manning one or more of the gun boats building on the Wear. A meeting of the members was held on Monday, when it was resolved to offer a bounty of 10l. to each volunteer

NO relaxation has taken place at Portsmouth, in consequence of the probabilities of peace that may exist, in the equipment of the line-of-battle ships, gun-boats, mortar-vessels, or in other departments bearing the war. Everything goes on as actively as before.

REWARD OF ARCTIC DISCOVERY.—The Lords Commissioners of the Admiralty, by a proclamation of the 7th March, 1850, offered—A reward of £20,000 to any party or parties who, in the judgment of the Board of Admiralty, should discover and relieve the crews of her Majesty's ships *Erebus* and *Terror*; and, 2nd. The sum of £10,000 to any party or parties who, in the judgment of the Board of Admiralty, should discover or relieve any of the crews of her Majesty's said ships *Erebus* and *Terror*, or should convey such intelligence as should lead to the relief of such crews, or any of them; and 3rd. The sum of £10,000 to any party or parties who, in the judgment of the Board of Admiralty, should, by the future efforts of his or their own ships or vessels in ascertaining their fate, thereby give notice that, Dr. Rae having claimed to be entitled to the reward of £10,000 under the terms of the third paragraph of such proclamation, they will proceed within three months from the date hereof to adjudicate on such claim, and that all persons who by virtue of such proclamation deem themselves entitled to the whole or any part of the reward in question must prefer their claims within such time, and after the expiration of which no claim will be entertained.—*London Gazette*

THE QUEEN'S VISIT TO FRANCE. It will be recollected that the municipal Council of Boulogne, in the early part of October last, voted unanimously the sum of 12,000fr. (£480) towards the erection of a column, in the neighbourhood of that port, to commemorate the landing of Queen Victoria upon the soil of France, as a guest to the Emperor of the French. It now appears that this sum of 12,000fr. is to be increased to 20,000fr., and that the order for the erection of the column will be given to M. Rude, the sculptor of the "Departure of the Volunteers" on the Arc de l'Etoile, at Paris. The Emperor receives the Queen of England at Boulogne." The group will exhibit the following words:—"In memory of the 18th and 27th August, 1855. The Municipal Council of Boulogne-sur-Mer." Two medals are to be struck in gold for presentation to the Emperor and the Queen, 100 in silver for the Ministers, Ambassadors, and other high functionaries of the Government, and 1000 in bronze. It was further resolved, after a lively discussion at the Municipal Council, that the twenty-seven members of such Council should be entitled to receive a silver medal each

## NOTES OF THE WEEK.

A FEW days will bring the opening of Parliament, and Lord Palmerston's circular, apprising his supporters that business of very great importance will be brought on immediately, may have more significance in it than is usually contained in that Government formality. Of the importance of the subjects which *should* occupy Parliament there can be no doubt; but whether the time-honoured custom of conver tiog a serious discussion into a faction fight will be abandoned upon the present occasion remains to be seen. Certain sanguine politicians have always a great and instinctive interest in the meeting of the House, and in its probable doings; but towards mid-session this feeling has subsided, and, by the time the papers begin to announce that the grouse are likely to be healthy, the most confiding "outsiders" are as ready to dismiss the senators as they are to go. We shall be very happy if circumstances permit us to record a different state of things in August next. That we may look forward to some spirited debating there is no doubt; for there is the fall of Kars, to be laid upon Lord Panmure, and shifted to Lord Stratford de Redcliffe; and then Mr. Disraeli has to show that the Ministers have fulfilled the prediction with which he closed last Session, namely, that during the recess they would make a shameful peace; and then Lord John Russell, who has long since forgiven himself his Vienna "mistakes," will again put forward his statesmanship; and then the Peace party are pledged to embarrass the Minister; and then there is the battle between Sir C. Napier and Sir J. Graham; and there is the rebellion in India to be explained by Mr. Vernon Smith; and the Central American difficulty by anybody who understands it—all "good business," as the actors say; to leave out smaller battles, as the question of the Peerage for life, and the road through St. James's Park, and the Sunday dispute, and the new translation of the Scriptures. There is plenty to say, and plenty of people to say it.

Most readers may recollect, in "Smollett's England," that the historian takes notice of a certain period, early in last century, when a singular number of crimes, of a dark character, were committed; and he instances several strange murders, and is half-inclined to attribute them to a species of epidemic. What would he say to the present condition of England? Murder upon murder is reported in the daily journals, and we are within the correction of our readers if we exaggerate in saying that scarcely a day within the last fortnight but has brought news of some such act of more or less hideousness. Some days have recorded two. Some of these have been the result of sheer brutality, some of madness; some, we shudder to say, of want (as where a woman destroyed her child from absolute fear of its being starved, and awaits her execution), and some of private vengeance. The murder of the attorney near Bedford-row was evidently the act of an insane person, irritated into frenzy by what he conceived to be personal wrong. Mr. Bright has taken the opportunity of entering an illogical protest against capital punishment, and with the habitually wretched reasoning of most of his order, reasoning that almost drives to anger those whose intellect has been properly educated, instances a doubtful case or two where the spectacle of a hanging has not deterred from murder, in proof that thousands of ruffians are not restrained from the last outrage by the terror of the last punishment. The trash has been talked so often as to be stale, and refuted so often as to be impertinent.

The wilful murderer (according to a coroner's jury) in the Rugeley case has been brought to London, more, it would appear, for the purpose of creating a sensation, than with any legal object; for, while he was actually within the walls of the court, counsel stated that he was not to be "called." The determination was changed, however, and Palmer was placed in the witness-box, where his mother had previously stood, to announce that to queries of her name had been committed; and he then declared that his wife—the woman whom the inquest reports that he slew—had forged his mother's name. His self-possession was simply brutal. He even corrected the counsel, who asked, "Your wife?"—"She was my wife!" No person in court believed the statement, nor will it be credited elsewhere. Mr. Serjeant Wilkins began to earn his fee by a blatant philippic against the press; but it was too clumsy even to be smiled at, under the circumstances of the case. He did not have recourse to any hydraulic display—probably reserving his tears for the trial.

The election for Cambridge University, vacant by the death of Mr. Goulburn, lies between the Hon. George Denman and Mr. Walpole, the Opposition leader. The former is a man of great ability, *tam Marte quam Mercurio*, having taken high honours, and being also eminently successful in athletic pursuits. He declares himself unfettered by party, and of politics Liberal, but Conservative. Mr. Walpole just fiably appeals solely to his antecedents. The choice will most probably fall upon the late Home Secretary; though, were the decision left to the residents, Mr. Denman would be returned—and this would be preferable for the reason that the House has already the advantage of Mr. Walpole's courtesy and learning, to that Mr. Denman would be a clear gain. On the other hand, Mr. Samuel Warren, the novelist, is to offer himself for Midhurst, for wh ch Mr. Walpole sat. A still more remarkable Parliamentary incident has marked the week. Mr. Macaulay retires from the representation of Edinburgh, on the ground that his health will not permit him to discharge his duties. He has taken so very little share in the proceedings since his last election—no doubt whether he has seen four times, except to present petitions—that the great writer will scarcely be missed in debate, and no one will reasonably grudge him to the enduring and honourable labour for which he finally resigns political life.

Railway revolution is at hand, and it is wise in those immediately concerned to see that changes come from within and not from without. A very important meeting has been held, Mr. Malins in the chair, for considering a plan for better management than has hitherto marked these undertakings. The meeting was scarcely more than a preparatory or preliminary one, but much good sense was uttered, and the subject addressed itself, not to one or two lines, but to all, and to all persons engaged, either as capitalists or as the executive. The chairman stated, on the authority of Mr. Stephenson, that the number of individuals engaged in connection with our railways amounted to 20,000.

The American House of Representatives had, up to the last advices, continued without a Speaker, and continued also to refuse to receive the Presidential Address. Some compromise will have to be effected; and we are apprised that Mr. Pierce still hopes to avail himself of a possible dissension with England, not upon the last story, but upon the older question of the Clayton-Bulwer Treaty, to regain his waning fortune. The good sense of the two nations has been too prominently manifested of late to justify any particular apprehension from this unworthy manoeuvring. The quest on itself, however, is not so unimportant as it has been represented, nor can England surrender her rights except under far more stringent guarantees than it is apparently within the power or the will of the present Presidential Government to grant against piracy and filibustering. The matter may, and should be, amicably discussed; and, as Sir Francis Head reminds the Americans, England has good naturedly submitted to a good deal of insult and injustice from individual States, including the "repudiating" defaulters, and therefore is entitled to expect at least as much good humour as she has displayed, when the Union itself is her antagonist at the Council Board. Sir Henry Lytton Bulwer (who, it is said, is to succeed Lord Stratford de Redcliffe at Constantinople) is alleged to have rather outwitted the American diplomatist. We care less than nothing for such successes, and only wish that a question of interest to civilisation may be settled by the two great nations in a fitting and permanent manner.

Mr. Joseph Haydn, author of the "Dictionary of Dates," to whose case and to whose pension of year reference was made last week, has died, and is. 4½d. per day is saved. Perhaps Government is looking round for some other meritorious literary man whom it would like to insult. We dare say that such a man might be found. If, instead of pensioning men who have deserved well, Government would employ them, and not reserve all honourable and lucrative employments for mere barristers of six years' standing—happy men, who seem to be eligible for anything and everything—the country would be better served, and the Court saved some unmerited obloquy.

## OBITUARY OF EMINENT PERSONS.

### THE DOWAGER COUNTESS OF ERROLL.

THE Dowager Countess of Erroll, formerly the Lady Elizabeth Fitzclarence, was sister of the late and aunt of the present Karl of Munster. She was born the 13th Jan., 1801; and was married, the 4th Dec., 1826, to Walter George Hay, seventeenth Earl of Erroll, K.T., by whom—who died the 19th April, 1846—she leaves issue one son, William Harry, eighteenth and present Earl of Erroll, and three daughters, two married—viz., Viscountess Campden and Lady Agnes Duff, and one unmarried, the Lady Alice Hay. Lady Erroll died on the 16th inst., at Edinburgh, while on her journey from the seat of her son-in-law, Mr. Duff, in Scotland, to attend the sick-bed of her brother, Lord Adolphus Fitzclarence.

### THE DOWAGER COUNTESS OF STRADBROKE.

CHARLOTTE MARIA, Dowager Countess of Stradbroke, was daughter of Abraham Whittaker, Esq., of Lyston House, Herefordshire, and was born the 17th March, 1769; she became, on the 23rd Feb., 1792, the second wife of John Rous, first Earl of Stradbroke, by whom (who died the 17th August, 1827) she had three daughters and six sons: three sons survive her; viz., John Edward Cornwallis, present and second Earl of Stradbroke, Rear-Admiral the Hon. Henry John Rous, and the Hon. William Rufus Rous. The Countess Dowager of Stradbroke died on the 16th inst., at her town residence, 33, Hertford-street, Mayfair.

### THE HON. MRS. VILLIERS

THIS lady was the Hon. Theresa Parker, daughter of John, first Lord Boringdon, by his second wife, the Hon. Theresa Robinson, second daughter of Thomas, first Lord Grantham. She was born on the 22nd of September, 1775, and was married to the Hon. George Villiers, third son of the first Earl of Clarendon, on the 17th of April, 1798; and by him, who died in March, 1837, she had a numerous family, of whom survive the present Earl of Clarendon, the Right Hon. Charles Pelham Villiers, M.P., the Hon. and Rev. H. Montagu Villiers, and the Lady Maria Theresa, who was married, first to Thomas Henry Lister, Esq., who died the 5th June, 1842; and, secondly, to the Right Hon. Sir George Cornewall Lewis. The Hon. Mrs. Villiers died on the 12th inst. at the Grove, the seat of her son, the Earl of Clarendon, near Watford.

## *METROPOLITAN NEWS.*

### THE MEETING OF PARLIAMENT.

Lord Palmerston has issued the following circular to members of the House of Commons understood to be favourable to his governmental policy:—

Downing-street, Jan. 19, 1856.

SIR,—I have the honour to inform you that the meeting of Parliament having been fixed for Thursday, the 31st of this month, public business of great importance will be brought forward without delay after Parliament has met. I beg leave to express my earnest hope that it may be consistent with your convenience to be in attendance in the House of Commons at the opening at the Session.—I have the honour to be, Sir, your obedient and faithful servant, PALMERSTON

THE Lord President of the Council, Earl Granville, as leader of the Peelite party in the House of Lords, gives a full-dress banquet on the 30th, to which [the following Peers are invited:—The Lord Chancellor, the Duke of Argyll, the Duke of Wellington, the Marquis of Lansdowne, the Earl of Clarendon, the Earl of Harrowby, the Earl Spencer, the Earl of Beesborough, the Marquis of Breadalbane, Viscount Sydney, Lord Stanley of Alderley, Lord Panmure, Lord Foley, Lord Wodehouse, and the mover and seconder of the Address.

THE ROAD THROUGH ST. JAMES'S PARK.—On Saturday last several of the residents in the immediate vicinity of St. James's Park—including Lord Monteagle, Mr. Hawes, Mr. Keating, M.P., Mr. Atherton, M.P., Mr. Whiteley, Q.C., Mr Turner, Mr. Tomlinson, Mr. Tustin, Mr. Lavie, and Mr. Radcliffe—had an interview by appointment with Sir George Grey, at the Home-office, relative to the contemplated road across the inclosure of St. James's Park. Mr. Keating stated in detail, on behalf of the gentlemen present, the strong objections entertained by the inhabitants in the neighbourhood and the public generally to any encroachment upon the inclosure of the park, the source of so much enjoyment to so many of their families and the public at large, and asked to be informed whether the interference apprehended had been resolved upon by her Majesty's Government? Sir George Grey said, in answer, that the necessity for increased accommodation for the public caused by the present inconvenient approach to the park through the Stable-yard, had engaged the attention of the Government; that several plans had been suggested at different times, including that to which reference had been made, in order to obviate the inconvenience complained of, but that up to the present time no plan had been decided on; that there would be full opportunity given for the discussion of those plans, and ample time for objecting to any of them; and that the preparation of the plans did not imply any foregone conclusion on the part of the Government.

GLYCERINE.—On Wednesday evening Mr. G. F. Wilson, F.R.S., read to the Society of Arts a very interesting paper on the "Manufactures of Price's Patent Candle Company;" in which he popularly illustrated the various chemical elements of the raw materials of candle-making, and more especially the nature and use of Glycerine. Mr. Wilson stated that, in photography, Mr. Maskelyne, of Oxford, has made a number of promising experiments with distilled glycerine, and Mr. J. D. Llewelyn made about two hundred negatives on collodion, trials, and continues to be persuaded that it will prove a most valuable photographic agent. In conjunction with honey it works admirably, and is thus an important improvement on Mr. Shadbolt's process, rendering the preservation film far more soluble in water than the honey alone. Among the medical applications, Mr Wilson mentioned that in Edinburgh a large compound, three times a day, has been given with great success for an affection of the mucous membrane. Mr. Wilson's account of the several manufacturing processes was heard with great attention. To show the great extent of the company's operations, he stated that, in 1840, they employed seventy-four men and ten boys, and manufactured about twenty tons of cocoa-nut candles, value £1500, and about twelve tons of stearic and composite candles, value £1227, during the month. In 1855 the company employed 1038 men and 1191 boys and girls, and manufactured of stearic and composite candles and night-lights about 707 tons, value £70,000, for the month.

GAROTTE ROBBERY AND ATTEMPT TO MURDER. About one o'clock on Thursday morning, as Mr. E. C. Clarkson, barrister, of Clevaland-square, Paddington, was returning home along the Bayswater-road, having a carpet-bag and an umbrella in his hands, he was suddenly seized hold of by a man who came behind him, and who afterwards grasped his throat with both his hands. Another man came in front of him, and made a snatch at the Albert gold chain which was suspended from his neck, and to which was attached a gold watch in his waistcoat pocket. The chain broke, but he succeeded in taking possession of the watch with a portion of the chain. While the one robber was doing this Mr Clarkson struggled with the other, who called out to his companion to take the pistol out of his pocket and fire at Mr. Clarkson. The latter got free, however, and having attacked them with his fists, they both ran away. He pursued and over took them, and, by the aid of a policeman, succeeded in capturing one of them. The prisoner, who calls himself Edward Bailey, was brought up at Marylebone Police-court on Thursday; and, after a short examination, was remanded for a week

THE BEDFORD-ROW MURDER.—The adjourned inquest on Mr. Waugh, the solicitor, was brought to a close on Wednesday last, when the jury returned a verdict of "Wilful Murder" against Charles Westron; who has been committed to Newgate for trial. It was stated on behalf of the prisoner that his father destroyed himself in a state of mental derangement; that his uncle destroyed him if; that his aunt died in a lunatic asylum; and that he had also committed acts which proved he was insane.

THE TELEGRAPH IN TURKEY.—It is now contemplated to make a telegraphic line by Adrianople to Belgrade, and then branches to Salonica and to Cattaro, connecting thus all the provinces of European Turkey by means of the electric wire. Another project is a line from Constantinople to Alexandria. The Turkish Government will have to lay down the wire to the entrance of the Dardanelles; thence the Suez-Indian Telegraph Company will do it.

A SUSPECTED RUSSIAN FRIGATE.—The barque *Dido*, of Cape Town, which arrived here yesterday, reports the following remarkable circumstance:—"*Prins Hendelskap*, outer roads, bound to Swansea, second day after leaving was fired at by a large frigate; we hauled the American ensign, when she kept away after a large ship to the westward of us, and it coming thick weather we could not see, but distinctly heard the report of cannon." The captain is of opinion it was a Russian, mounting about sixty guns.—*Helena Herald, Nov. 22*

# SKETCHES IN JAPAN.

GATEWAY AND BELFRY AT HAKODADE.

On the 9th October, 1855, the convention made between the Queen of England and the Emperor of Japan, regulating the admission of British ships into two of the Japanese harbours, was ratified; and though it does not admit us to trade, or confer any commercial privilege, but merely gives us access to ports of refuge to effect repairs and obtain fresh water, provisions, and such other articles as may be necessary to the health of the crews and the safety of the vessels, still the event is memorable, and may be the precursor of more important advantages.

In 1612 the English East India Company, on the invitation of William

TEMPLE AT HAKODADE.

TEMPLE AT HAKODADE.

Adams, a native of Jellingham, in the county of Kent, and a pilot by profession, made a successful effort to trade with Japan. In 1598 Adams engaged to pilot a fleet belonging to the Dutch India Company; it was scattered by tempests, but on the 29th April, 1600, Adams made the coast of Japan, and anchored at the port of Bingo. His ship alone escaped the perils of the voyage; and, out of a crew of twenty-four only six could perform their duty, the others being ill or completely exhausted by the hardships they had undergone. A Jesuit came on board and acted as interpreter. He was either a Spaniard or a Portuguese

STREET IN HAKODADE, AND FUNERAL PROCESSION.

and on his report the King of Bingo acted most humanely to the sick sailors, who were conveniently lodged on shore, while Adams was sent to the Emperor, on whom he made a most favourable impression. Adams was a man of considerable ability and acquirements. At the command of the Emperor he built a ship of eighty tons, which afforded great satisfaction, and also gave his Majesty lessons in geometry and mathematics. The grateful pupil provided most liberally for his teacher, bestowing on him a large salary, a manor, and a hundred slaves or servants to cultivate the land; but he would never allow Adams to quit the country. Adams, however, obtained the release of the captain of his ship, and the crew; by whom he sent letters to the English, many of which are curious and instructive. He describes the geography of the country, the character of the people, their trading products, and says, "If a ship come from England to traffic at Japan, not any nation should receive a better welcome; if any ship come near the easternmost part of Japan, let them inquire for me. I am called in the Japan tongue 'Augin Samma;' by that name I am called all the sea-coast along. Nor fear to come near the mainland, for you shall have barks with pilots to carry you where you will."

On the 12th June, 1613, the ship *Clove* arrived from England, with a letter from King James, and presents for the Emperor of Japan. It was commanded by Captain Saris, who was called the Company's General. A treaty, or charter of privileges, was obtained without the least difficulty, and a factory opened. The *Clove* anchored at Firando, and was visited by King Foyne and his nephew, accompanied by Adams. The King of Firando sent Captain Saris to Jeddo, the capital, and there the Emperor ratified the treaty with the East India Company, and addressed a most friendly letter to King James.

The Dutch became jealous of the English, and, as they had a superior naval force in those waters, did not hesitate to act as buccaneers, seizing our ships, plundering the cargoes, and murdering their crews. Their Admiral, Westerwood, even offered a premium for the slaughter of the English. Adams died on the 16th May, 1620, and with him we lost our best friend. He had enjoyed in a higher degree than any other Christian the favour of two Emperors: he had at all times access to them, when many Japan Kings could not obtain an audience. In the year of Adams's death arrived the *James Royal*, of 1000 tons, direct from London, and the admiration excited among the Japanese by so large a vessel inflamed the most envious feelings among the Dutch and Portuguese, for the Emperor and Royal family paid the captain the distinguished honour of going on board. But the actual disruption of commercial intercourse between England and Japan is traceable to the reign of Charles II. England was in alliance with Portugal, and the Portuguese had been expelled from Japan because some of their missionaries had been detected in attempts to change the religion of the country, for which they were crucified by the King of Firando. About this time we had a naval war with the Dutch; and their officers represented to the Emperor that King Charles, having entered into a treaty with the Dutch, violated it, and formed an alliance with France, and then made war on Holland, although the Dutch and English were of the same religion, while the French and Portuguese were of an opposite religion. They then asked the Emperor what faith he could repose in the English who had acted in so perfidious a manner, and who had moreover decapitated one of their Kings? These statements had great weight with the Emperor, whose moral feelings were rudely shocked by this narrative, more especially by the fact that a people should ally itself with people of another religion, to slaughter their co-religionists. From that day his friendship cooled, the English were soon expelled, and ever since the Dutch have been in the ascendant at Japan. It may be as well to give the words of the prohibitory edict which was served on the Captain of the English ship *Return*, in the year 1673:—"Inasmuch as the King of England was married to a daughter of the King of Portugal, their greatest enemy, they could not admit the English to reopen the factory, and for no other reason."

ENGLISH AND RUSSIAN BURIAL-GROUND, AT NAGASAKI, SECURED BY TREATY, NOVEMBER, 1855.

In 1796 Captain Broughton visited the Japanese islands on a voyage of discovery; and in 1808 the *Phaeton* frigate went to the same waters to intercept Dutch vessels trading between Batavia and Japan, and obtained wood and water. In 1811 Sir Stamford Raffles, being Governor of Java, attempted to renew the trade; and in 1818 Captain Gordon sailed from Bengal to the Bay of Jeddo, and anchored in the bay of Shimada. He remained there seven days in negotiation; at the expiration of which time he was told that permission to trade could not be granted, and ordered to sail with the first fair wind.

The population is estimated by Sir Stamford Raffles at 25,000,000; by Captain Gordon, at 30,000,000; others raise it to 35,000,000;—who are divided into eight classes. The empire of Japan is formed of three separate islands, called Niphon, Keswsew or Kiusiu, and Sikof. It also embraces such of the Kurile islands as are not yet occupied by the Russians. The largest is called Matamai, also known as the twenty-second Kurile—the Russian islands numbering from one to twenty-one. Miyako is the capital, seated on a branch of the river Yado on the island of Niphon. Its walls are said to be ten leagues in circuit; and its greatest curiosity is a bronze idol, so huge in its dimensions that a man, with his arms extended, cannot encompass the thumb of the right hand.

By the kindness of a Correspondent, we are enabled to append a few

JAPANESE OFFICIALS ON BOARD "THE WINCHESTER," AT NAGASAKI.

OMEPSK AND ORUNGO, AT NAGASAKI.

details of the ratification of the Treaty, contained in a letter from one of the officers of H.M.S. *Winchester*:—

Nagasaki, Oct. 10th, 1855.

After some preliminary discussions it was arranged that the ratifications should be exchanged on the 9th of October: and we yesterday proceeded to the city in *Tartar*, steam tender to the flag-ship, Admiral, Captains, and various officers to the number of twenty-one. We started about ten, when the Japanese officials came on board to conduct us. We passed quickly through the pretty scenery described last year, received the usual honours from the Dutch steam corvette, and a visit from her commander; saw the Japanese steamer with her new flag (white with red ball)—a recent present through an old acquaintance of ours as Dutch Loemburg; and anchored off the landing-place.

We officers got on shore to receive the Admiral, and joined our Japanese Court friends; we then proceeded with rather less state than last year to the Governor's house, where we found the Deputy-Governor waiting to receive the Admiral, and to conduct him to the presence of the Commissioners. In the audience-chamber were ranged the old and new Governors, and the old and new Omeshai. Friendly greetings were exchanged, and inquiries duly made for the health of the Queen, Admiral, and officers. We then retired to an outer room, which was enlarged to suit our party. Tea and pipes, with the usual box of sweets, were placed before us: the latter we marked with our names, for future use.

The audience-chamber being made ready for the great ceremony by a double dais for the Grandees and arm-chairs for us, and smoking materials being arranged for the use of everybody, we were ushered in, and found the four principal personages seated, or rather squatted, on the ground. My Sketch will give you a good idea of the figures they presented. The conference began, and after some conversation our ratified treaty was produced in the simplest style from an envelope, and the seal and subscribed name of Carendon shown to them, with a little explanation thereof. Meanwhile, the Japanese treaty was brought in by their officials. A large box was opened, and the silk-covered book or treaty carefully unwrapped from its crape cover inside a lacquered case. Its silken cords loosed; and all being ready, our Admiral stood forth, surrounded by his officers, and tendered to the Governor, Arsco Iwamuno Kami, the treaty of friendship in the name of her Majesty; and the Governor of Nagasaki, on the part of the Emperor, presented the Japanese version. Several well-turned speeches were made by the new Governor, and we had the satisfaction of seeing the affair successfully closed. We then withdrew to make room for the banquet, which was to be given by the Governors to the Admiral and officers.

First came pipes and tea, then a procession of minor officials in Court dresses, bearing little tables or trays with covered cups and lacquered ware, various saucers, trays, cups, chopsticks, and paper napkins, with a silver spoon and fork (of Dutch manufacture) for each person. The food consisted of rice, fish soup, with mushrooms, stewed fish, a whole fish baked, pickles, omelettes, raw fish with vinegar and pomegranate, raw salt fish and jelly, artichokes and cassada; cake, hot and sweet, was served round. Altogether the repast did not equal that at Hakodadi. We had a final cup of tea, and withdrew again by a hint from the Japanese interpreter, in order to allow the display of the presents for the Admiral and officers to take place, and the Admiral was to touch them in mark of acceptance. The round of ceremonies being now finished, we thanked them for our hospitable entertainment; we made our farewell bows and walked smartly down to our boats.

The presents came on board in the evening: there was a large lacquered bowl and cover, a tray and case, with some specimens of silk and crape, for the Admiral and officers who had been present at the conference.

The Sketches I have sent you will give you a good idea of the sort of country and the public buildings among the Japanese. The burial-grounds and temples present a peculiarly neat appearance from the sea; and the sketches of the figures convey an adequate impression of the appearance which these singular people present. Their loose hanging sleeves are stitched at the lower part, and that makes a good pocket, in which they put their handkerchiefs, fans, or paper.

### CALENDAR FOR THE WEEK.

SUNDAY, Jan. 27.—Sexagesima Sunday. Mozart born, 1756.
MONDAY, 28.—Admiral Byng shot, 1757.
TUESDAY, 29.—Swedenborg born, 1689. George III. died, 1820.
WEDNESDAY, 30.—Charles I. beheaded at Whitehall, 1648.
THURSDAY, 31.—Hilary Term ends. Guido Fawkes executed, 1606.
FRIDAY, Feb. 1.—Pheasant and Partridge shooting ends.
SATURDAY, 2.—Purification. Candlemas Day

## THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, JANUARY 26, 1856.*

THE Austrian propositions for peace, which, when first promulgated, made the stockjobbers of Vienna, Paris, and London frantic with joy, and well-nigh turned the heads of many honester people, do not improve upon acquaintance. The more they are studied, the less precise and satisfactory do they appear. There is already a strong revulsion in the popular feeling with respect to them. An impression prevails, and grows, that the Allies (to use a vulgar but expressive phrase) are about to be "sold;" and that, if an armistice be agreed upon while such vague propositions are to be discussed, Russia alone will gain the advantage. If the war continue, there is no reasonable ground for doubting that England and France will be able before next winter to dictate much more satisfactory terms, and to lay down the basis of a pacification broad enough and strong enough to last for a quarter, if not for half, a century; but if an armistice be concluded—if the season of activity in the Baltic be allowed to slip away in palaver—if the whole conduct of the world's business be left to diplomatists at Vienna, Berlin, Frankfort, Aix-la-Chapelle, or any other place that has been named or suggested—the result, we believe, will be anything but satisfactory to the true friends of the peace and independence of Europe. Three out of the five points of the Austrian scheme—to which Russia is said to have given her "pure and simple" adhesion—are of such a nature that a "pure and simple" adhesion to them may mean nothing. If we take, for instance, the proposed cession of a slice of Bessarabia, so as to leave the mouths of the Danube within the line of the Turkish territory, we find that the fortress of Chotym may or may not be included in the arrangement. If not included, Moldavia and Wallachia may be as easily overrun by a Russian force as at the present time, when the Pruth is the line of boundary. Again, if we examine the proposal for the "neutralisation" of the Black Sea, we shall find a great, if not insurmountable, difficulty in defining what is meant by neutralisation, and what peculiar sense Russia attributes to the word. The Black Sea was neutral before the declaration of war, so that to redeclare it to be neutral means little or nothing. The Austrian proposition would go to prohibit Russia from constructing "arsenals" on the coasts of the Euxine; but again we are met by a difficulty. Are arsenals and fortresses identical? and, if not, what is the difference between the two words—or, rather, the two things? And Sebastopol—of which there is an ugly rumour afloat that its docks are not to be blown up;—may that be rebuilt as a fortress, if Russia undertake not to make it an arsenal? And Anapa? Was that a fortress or an arsenal? Russia, it appears, is to be allowed to have establishments for the defence of her possessions in the Euxine; but what treaty or protocol can define what is necessary for pure defence without being available for aggression? Any fortress strong enough to resist Turkey would, in Russian hands, be not only strong enough, but ready enough, to harbour the means of offensive warfare against that Power whenever the moment seemed favourable for the renewal of those projects which Russia may postpone, but will never abandon—except upon compulsion. The Fifth Point is even more vague. It is supposed to refer to Bomarsund, and may or may not include a stipulation against its re-edification either as fortress or arsenal. At present the world is in the dark on the subject: though we may be sure that Russia will not yield a point so humiliating as that would be, unless a strong pressure be put upon her both by Austria and by Prussia. The question does not interest Austria; and, if it interest Prussia at all, it is in a way adverse from the interests of Great Britain and France, and their new ally, Sweden. The *Journal de St. Petersbourg* has already put forth an official, or semi-official, announcement, of which the object seems to be to prepare the way for a denial of any right on the part of the Allies to moot this question. "Out of consideration for the general wish of Europe," says the Russian organ, "the Russian Government has not sought to impede the work of reconciliation by accessory negotiations, in the hope that due account will be taken of its moderation." What is meant by *accessory negotiations*, if they be not those included under the fifth and supernumerary clause of the Austrian propositions? Russia will keep this point in the background, and allow the discussions on the rest to proceed, trusting, as usual, to the chapter of accidents, and to the hope that the Powers which would not draw the sword, to fight either for her or against her, will fight for her with the tongue. It is bad enough to darken counsel, but the darkening of counsel could be endured if the paralysation of the right arm of Victory were not involved in the obfuscation. Count Nesselrode denies, with true Russian bravado, that "the interests of Russia call for the conclusion of peace," and asserts that Russia merely shows her present willingness to listen to terms "out of deference to the representations of friendly Powers." France and England can judge by this of the temper of the enemy they have to deal with. The great, the invincible, the magnanimous Russia does not ask for peace—not she! Peace is begged of her by her good friends, and she will not be so unmerciful as to decline to listen to their overtures. But, if Russia have good friends, so have Great Britain and France. Their friends are the justice and the purity of their cause, the openly-avowed or secret sympathy of all the nations of Europe, the indomitable energy, the wealth, and the resources of their people; and last, not least, fleets and armies for the Euxine, and gun-boats for the Baltic, numerous enough to make St. Petersburg tremble. Peace may result from the negotiations; but, if it do, it must be because the Allies mistrust Russia and her friends, not because they confide in them. We have not yet heard what English statesman has been selected to watch over the interests of Great Britain at the approaching Conference; but, of all the persons suggested, Lord Clarendon seems to us to be by far the most eligible. He is a practised diplomatist, and, what is of as great if not of more importance, he is a clear-headed and honest statesman. In his hands the interests of England would be safe; and, while his own countrymen would implicitly confide in his honour and ability, his name would excite no jealousy or mistrust in any quarter.

THE instructive documents periodically published by the Board of Trade are of incalculable service to all engaged in commerce; and, coupled with the Trade Circulars published by eminent mercantile firms, enable the public to compare, from year to year, the increase or decrease of business in the varied departments of industry. It has long been regretted that similar facilities for obtaining accurate information in rural economy have not been furnished on the responsibility of Government, for a Board of Agriculture is only inferior to a Board of Trade. Attempts have, however, been recently made to supply the defect. The Irish returns conducted by the Constabulary are very valuable; those entrusted to the Poor Law Commissioners in England have hitherto failed. The second Report on Scotland is now before us, and is of a most gratifying character, diligently and gratuitously prepared by the district enumerators. "These gentlemen," to quote the language of the official document, "constitute a selected body of above one thousand of the tenant-farmers of Scotland, and their assistance is not only of the greatest value in obtaining correct estimates of produce, but their co-operation stamps the statistical inquiry with an amount of agricultural approbation, and lends to it a weight of agricultural influence, which has materially conduced to its success."

A periodical census shows us the amount of population with almost unerring accuracy, and with equal exactness we ought to know how much food our native resources can supply from year to year for their sustenance. This knowledge would enable us to calculate on the extent of cereals we should require from foreign countries, depriving the corn trade of a speculative character, and averting those panics, founded on vague rumours, which frequently give rise to civic tumult. An eminent political economist, who is looked up to as an authority, estimated the average produce of wheat in Scotland at 1,137,500 quarters, and of barley at 1,800,000 quarters, and he was believed on the reputation of his name; but it appears from the ascertained and enumerated returns in 1855 that the yield of wheat was only 632,814 quarters, and of barley 762,362 quarters. Errors of this magnitude reduce statistics to a mere guess, and render them worse than valueless. The following is the estimate of the gross produce of the subjoined articles in 1855 and 1854:—

| | | | 1855. | 1854. |
|---|---|---|---|---|
| Wheat, | in bushels | ... | 5,962,540 | 4,845,679 |
| Barley, | ,, | ... | 6,998,904 | 7,645,128 |
| Oats, | ,, | ... | 30,579,714 | 34,095,047 |
| Bere, | ,, | ... | 556,376 | 645,418 |
| Beans and Peas, | ,, | ... | 1,183,847 | 1,081,263 |
| Turnips, | tons | ... | 6,481,476 | 6,411,419 |
| Potatoes, | ,, | ... | 732,142 | 520,915 |

It may be well to observe that the return for 1854 include beans only; that for 1855 embraced both beans and peas.

In 1855 there were 43,462 occupants, and the total acreage under tillage was 3,529,902½ acres. In comparing the two years wheat culture increased by 23,007½ acres, while that of barley decreased by 21,426½ acres. Taking the gross returns for the two years, as regards the area under wheat, barley, oats, rye, bere, beans, and peas, they only vary from each other by 176 acres. In 1854 there were 1,374,015½; and in 1855, 1,374,191½ acres. The increase on the total stock of 1855, as compared with 1854, is 937,630, while that on horses and sheep alone is 623,107. The total stock for 1855, including horses, milch cows, other cattle, calves, sheep, lambs, and swine, was, in 1855, 6,081,014 head; and in 1854, 6,043,384.

The list of occupants (43,462) is confined to those who have a purely agricultural *status*—the names of householders, farm-owners of villas, &c., being struck out. Where the same individual leases more farms than one in a parish, those farms have been scheduled together, so that the roll is made up of occupants not of tenements. A distinction is made between tenants renting at above £20, and those renting at and above £1. The former class contains 4330 occupants in the counties of Argyle, Caithness, Inverness, Orkney and Zetland, Ross and Cromarty, Sutherland, and in the Isle of Arran; the second 31,123, renting at £10 and upwards, in the remaining counties. The remainder are below these rates of rental; and the report observes—"Though the number of such occupants is great, the statistics of their holdings is unimportant; and, not being subject to sudden fluctuations, it was conceived that the results obtained last year may with safety be readopted."

### *THE COURT.*

The hospitalities of the Court continue to prevail at Windsor Castle, a succession of distinguished visitors receiving the Queen's commands as other guests take their departure. Among those who have been honoured with invitations during the past few days may be mentioned the Premier, who arrived on Saturday last, and remained at the Castle until Monday; the Earl of Aberdeen, the Earl and Countess of Ellesmere and Lady Blanche Egerton, the Earl and Countess of Durham, Sir George and Lady Grey, the Earl and Countess of Shelburne, Lord and Lady Colville, Lord Ashburton, and the Rev. Dr. Philpott of Catherine Hall. The Duke and Duchess d'Aumale paid a visit to her Majesty on Saturday.

On Sunday the Queen and the Prince, the Prince of Wales, the Princess Royal, Prince Alfred, and the Princess Alice, the Ladies and Gentlemen of the Court, and the domestic household, attended Divine service in the private chapel of the Castle. The Hon and Very Rev. the Dean of Windsor officiated, and the Rev. Dr. Philpott preached the sermon. The Duchess of Kent and Viscount Palmerston were also at the service.

On Monday the Prince Consort, accompanied by the Count of Flanders went out shooting. In the afternoon the Count took leave of her Majesty, and, travelling to Dover, embarked the same evening for Ostend.

On Tuesday the Queen and the Prince walked in the Home Park. The Earl of Clarendon had an audience of her Majesty during the morning.

In the evening the Royal dinner party included the Duchess of Kent, her Royal Highness the Princess Royal, the Earl of Aberdeen, the Earl and Countess of Ellesmere and Lady Blanche Egerton, and Sir George and Lady Grey.

On Wednesday the Queen drove out in an open carriage, accompanied by the Princesses Helena and Louisa. His Royal Highness Prince Albert went out shooting. Lieut.-Colonel Challoner had the honour of accompanying the Prince.

On Thursday a dramatic performance took place at the Castle. Shakspeare's "Merchant of Venice" was the play selected for representation. At eight o'clock the Queen and the Prince, accompanied by the Princess and Princesses of the Royal family, and a numerous circle of distinguished guests, entered St. George's Hall, when the performance immediately commenced.

The Court will arrive in town on Wednesday next, for the opening of Parliament.

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary have arrived at their residence at St. James's Palace, for the season, from Cambridge Cottage, Kew. The Duke of Cambridge visited the Duchess and Princess shortly after his return from Paris, on Tuesday.

The Earl of Cottenham met with a severe accident a few days since, whilst skating with a Christmas party assembled at the seat of Mr. Herbert, of Llanarth. His Lordship is recovering.

MARRIAGE IN HIGH LIFE.—The marriage of Sir Henry Marwood, Bart., of Theobald's Park, Hertfordshire, M.P. for that county, with Miss Louisa Caroline Brudenell Bruce, eldest daughter of Lord Ernest Bruce, M.P., Vice-Chamberlain of her Majesty's Household, and Lady Ernest Bruce, took place at the British Embassy, at Paris, on Saturday last. The marriage service was performed by the Rev. Dr. Hale, chaplain to the Embassy.

### *CHURCH, UNIVERSITIES, &c.*

APPOINTMENTS. *Recently*: The Rev. J. C. T. Patterson to Acaster, Donnington, with the Incumbency of Kingston-upon-Soar, Nottinghamshire; the Rev. C. Baring to Limpsfield, Surrey; the Rev. R. C. Glanville to Shevington, near Devonport; the Rev. J. Griffith to Neath, with Llantwit, Glamorganshire; the Rev. R. Farquharson to Long Load, Somersetshire; and Melcombe Horsey, Dorset. *Vicarages*: The Rev. A. Gubbins to Barham, and Finningham, Suffolk; the Rev. W. F. Hickmore to Kenilworth; the Rev. W. C. Holmes to Little Hampton, Sussex. *Incumbencies*: The Rev. R. P. Cornish to Ivybridge, Devonshire; the Rev. W. E. Evans to Shelfbrooke, near Doncaster; the Rev. R. Wood to Christchurch, Peckham; the Rev. J. P. Webb to Woburn Episcopal Chapel, Tavistock-square, London; the Rev. H. W. Brooks, to St. Stephen's Church, Westbourne Park, Paddington. *Curacy*: The Rev. H. F. Gray to Borley, Essex (and not to the Incumbency, as stated in our Journal of Dec. 1). Her Majesty has been pleased to constitute the colony of Western Australia to be a Bishop's See and Diocese, to be called the Bishopric of Perth, and to appoint the Venerable Matthew B. Hale, Archdeacon of Adelaide, to be ordained and consecrated Bishop of the said See.

THE Great Western Royal Hotel is full of company. Jenny Lind (Mdme. Goldschmidt) has a suite of apartments in the house.

## THE RUGELEY TRAGEDIES.

*(From our Special Correspondent.)*

"BUT," said Mr. Serjeant Wilkins, in the Bail Court, during the Palmer forgery case, on Monday, "for the wicked, unconstitutional, and cruel attempts which have been made for weeks past by those who ought to be the protectors and guardians of our liberties and rights—but for the infamous calumnies heaped upon the head of a man whose name appeared in this transaction this case would not have occupied more than ten minutes." Mr. Serjeant Wilkins generally makes himself understood; and, in this instance, speaking as counsel for the Palmer family, he desires to convey assurance upon the press for the fulness and completeness with which, beyond and above the usual reports of the formal legal proceedings, they have conveyed what may be emphatically called the news—the edited talk of the neighbourhood and of society in general—respecting that extraordinary series of transactions which are freely termed the Rugeley Tragedies. Now, if the reader will look to the conclusion of that episode in the epic story—the trial on Monday of the action for forgery—he will perceive that the Counsel on both sides, and the Court, after a discussion and evidence enduring much beyond the ten minutes, declared that the investigation that day had been of a most proper character, and, technically, was of a most satisfactory description. This proper investigation might never have taken place but for informal and "premature" newspaper accounts. The satisfactory result is attributable to the circumstance that the press has aided the law in flooding the case with light. So far Mr. Serjeant Wilkins has no right to complain.

On general grounds it may be argued that this Bar talk against the press is mere cant, like other Bar cants such as that a barrister is bound to use *all* means to gain the cause for his client—a position which it is well known Mr. Serjeant Wilkins does not flinch from. That a jury should come to a trial with unbiassed minds is very desirable; and that every man should be held to be innocent until he is proved to be guilty is an unimpugnable axiom. But in these days of newspapers no great case is ever considered a jury completely without opinions thereon, and, obviously, in a case of this character, the more discussion the better; for the rumour of one day is tested the next, a blunder is rectified, a mistake contradicted, the press having no interest but in accuracy; and, at any rate, what is commonly talked, despite all forensic conveniences, may be better submitted for comment and criticism by being printed, the actual trial bringing everything to the test; and every jury in a mere criminal case coming to their final conclusions on the case as it is presented to them at the last moment by the scrupulous Judge. With regard to the rule that no man should be considered guilty until proved to be guilty, it is not violated on this occasion. A coroner's inquest is as constitutional an investigation as any in which Mr. Serjeant Wilkins takes part; and a jury of twenty three persons, friends and townsmen of the accused, have thrice, in three different cases, found William Palmer guilty of "Wilful Murder." It is not often that the finding of a coroner's jury is set aside by an assize panel; none in a case like this, in which the moral convictions of mankind will insist on setting aside all the trivialities of that technicality to which the evidence—certainly only circumstantial—is exposed; and it is, therefore, without any consciousness of violating law, justice, or propriety, that we continue collecting all the newest points of the case as they have arisen, to furnish the public and the possible jurymen with the facts of the most dreadful case that has occurred in the annals of crime since the horrible exploits of that German nurse (immortalised in the volume published in 1846 under Feuerbach) who poisoned in every family into whose service she entered.

The circumstances of the trial at Westminster on Monday have, in one sense, not been "satisfactory" to the counsel for Palmer; for, though actions for forged bills appear to be stopped (nay, we suspect, without some collusion "wicked and unconstitutional," if not "cruel"), yet Palmer's statement, in evidence, that it was his wife who forged his mother's name, has served, apart from belief or disbelief in the statement, to increase the public feeling against him. The "explanation" in court when he, with masterly coolness, made this astounding declaration represented the thrill of surprise with which the charge has been received by the world outside. The reader will recollect the character given of Mrs. William Palmer by all her neighbours: her meekness and gentleness; her sobtary life; her patience under neglect; and her inexpensive habits. They will also recollect that she was instructed to be silent on the subject of her mother-in-law. The forged bill was taken by Palmer to the Mr. Padwick who discounted it. One of two things is certain—either she never did write her mother-in-law's name on the bill drawn by her husband; or, if she did, it was under compulsion from her husband. In any case this husband's accusation against his dead wife, according to Palmer, is poisoned—wife is infamous. The terms on which he stood with his mother—confidential, both in a family and in a financial sense forbid the idea, even if there was any assumption of any kind to support it, that he was deceived by his wife. The bill was drawn in July, 1854, at three months' date. When it fell due Palmer paid £1000 on it, and gave subsequently two cheques (both dishonoured) for the balance; and execution by arrest was done on it in December, 1855. The transaction then lasted eighteen months. The mother must have heard of it, therefore; and must have known that it was a forgery. The son knew who forged it. But not until Monday is the dead woman arraigned as a forger.

The revelation was made dramatically. Virtuous grief and conscientious pain were the expression of the scene. The counsel who had to defend the mother, and to show that the bill was not signed by her, declined to call as a witness, in her defence, the son who was prepared to exonerate the mother by an accusation against the wife. When the exigencies of the case demanded that all delicacy should be discarded, the son made his statement with reluctant precision—as a victim to love of truth. He was not brought into the witness-box until the last moment, to create a climax. And as the nature of his assertion is in accordance with the reckless hardihood of his whole career, so was his manner in keeping. It was in a smooth, easy, pleasant way that, as he is charged, he killed his wife; and it is still in a smooth, easy, pleasant style that he attacked her fame. The spectators could not withhold their admiration at the calm of his deportment while under the eyes of the court, and while contributing the stab to the spouse whom he was already supposed to have poisoned. We hear that this complacent ease of manner, which he retained amid all the excitement of the monstrous accusation, and all the agonies of his conspiracies, does not desert him in the least during his imprisonment. The kindly nod and affable smile which procured him his influence among the vulgar of the turf are still at the disposal of all persons approaching him. His first notions on being sent to gaol, of baulking a vindictive country by resorting to suicide—a resolution by no means reconcilable with a consciousness of innocence—seems to have given way to the encouragement suggested by the views taken by his friends and resources of the law. His mother, who is rich, it is stated, determined that he shall have all the advantages of the best counsel: and his friends—and the names of well-known sporting personages are mentioned as those of his friends—ply him with the assurance that the evidence is utterly insufficient for his conviction. Hence, perhaps, his firmness. Those who saw him between his gaols, on Sunday and Monday, and in the cab going to and from Westminster, state that he did not appear in the least appalled by the furious curiosity of the crowds. In court he is described as "quiet and gentlemanly."

Lawyers are confident that he *must* be acquitted. Lawyers are always abusing juries, and yet they now pay a prospective jury the compliment of thinking that it will decide in strict and refined conformity with the most subtle laws of evidence. But they stipulate that he must be tried in London, or, at any rate, not at Stafford, among the community whose instincts have already unreservedly condemned him. Whether this favour will be conceded to him remains to be seen; if it be, the argument would amount to this—that no offence would be tried near the place where it is committed, which would, of course, be quite consistent with the ordinary circuit arrangements of the English assize: The general case against Palmer is conceded. He was not in practice, and yet was perpetually purchasing poisons of all sorts. Wife, brother, children, mother in-law, a couple of intimate friends, die suddenly, all but unaccountably, as regards natural causes, under his treatment—all but two of the dismal catalogue actually under his roof. He gains, through an insurance, by the wife's death. He attempts, by the same plan, to gain by the brother's death. To pay the premiums on the policies he borrows money at the rate of 60 per cent. The friends who die suddenly under his treatment—one of them under his roof—are his creditors. The betting-book of one friend is missed after death. The wife of the other friend protests against the statement of accounts between them made by Palmer. The wife of the brother indignantly denies a similar statement of accounts, and to this wife an untrue statement is made by William Palmer respecting the circumstances of her husband's (Walter Palmer) death. People who drink with him are taken sick after the hilarity. The insurance-office refuses transactions with him because of the suspicious nature of his proceedings. Of the bottles he keeps in his surgery few are at all full, and of those kept replenished they are bottles marked "poison." He seduces his maid servant. He asks a postmaster to open letters. He asks the Coroner to direct a favourable verdict. He induces a stable-help to attempt a fraud on an insurance-office. Lastly, he either induces his wife to commit a forgery, or he benefits, silently, by a forgery committed by her. Out of such admitted facts we are not forbidden to construct a hideous picture, therefore, dropped. But William Palmer and Bates were only two of a set of conspirators. The medical referees, the friendly referees, and the "parties" acting as William Palmer's agents in London, are all involved. Hence the intended examination arranged for last Wednesday of Mr Pratt, solicitor, of London, who has been continuously engaged in these insurance matters for William Palmer. In respect to Walter Palmer's insurance some remarkable statements have been made in advance. The wife appeared to know nothing of it. Her evidence is otherwise singular. Her husband visited her at Liverpool, twelve days before he died. He then appeared to be in good health, and to have abandoned his drinking habits. He was offered wine at dinner, but would only drink ale, and that sparingly, and drank no spirits. Now, the evidence of his servant, or keeper—he man paid by William Palmer to take care of Walter—given at the inquest on Monday week, led to an idea that Walter had been drinking to excess uninterruptedly for months. The evidence of this fellow—Walkenden—is further contradicted in another particular. He stated deliberately that William Palmer had not visited Walter Palmer from the Saturday before his (Walter's) death until the morning of the day on which he died. The diary of William Palmer himself gives the lie to this assertion he was with his brother constantly during the week previous to the decease. On this point the Boots of an inn at Stafford, near the house in which Walter Palmer convulsively gave up the ghost, is of significance, taken in conjunction with facts and inferences. The day Walter died, William left some "medicine" in the Boots' care, and a few hours after the death he took this medicine away with him. Was the medicine one of the poison-bottles from the tragic surgery at Rugeley?

In reference to this case, the statement of Mr. Farren, solicitor and secretary at the Gresham Life Insurance Office, is of great value and weight. Mr. Farren received a proposal to insure the life of Walter Palmer for £15,000. This proposal was left at the office by a "person unknown." It was ascertained that Walter Palmer had been a drunkard, and had had *delerium tremens*. But it was also ascertained, on examination, that he was not organically diseased in any part; and that, supposing him to live for the future temperately, his was not a life which ought on the whole to be rejected. A course, probably customary in doubtful cases, was suggested. We will insure him, said the Gresham Office, provided that if he die within five years we be not called upon to pay. "The office made this condition, feeling assured from the medical examination made by Mr. Smee that, if Walter Palmer resisted the temptation of drink for five years, his natural constitution was so sound and good that his life might be then fairly insurable." Wm. Palmer demurred to these terms, and asked whether the life would not be accepted upon some more favourable conditions, urging that his brother's life, now that he had reformed, was as good a life as could be found. Mr. Farren said that if these were so, and that Mr. William Palmer were really going to take care of his brother, and had such an excellent opinion of his life, he could not reasonably refuse to be the insurer himself for five years. William Palmer's reply was, "That would not suit my book at all." This is the report of an interview which the two brothers had with the officers of the Gresham in London. During this visit Walter Palmer seems to have been spoken to in an inner room, in the absence of his brother William. Mr. Farren put it to him—had he really any honest intention to reform his life? Walter, in a very low spirits; had apparently lost all self-respect; and answered that he always wished to reform; but that, somehow, "drink was always ready for him," and he could not resist the temptation.

The recklessness of the insurance-offices, as disclosed incidentally in this evidence, appears to have been marvellous. This bald fact has at last insured in the Prince of Wales Office for £13,000, half-a-dozen other offices sharing the risk, according to the usual system. This was a great stroke of business. But Palmer was not content. He wrote to the office to raise the amount to £25,000. Mr. Pratt says that he was assured by William Palmer that advances to this amount had been made by William to Walter, and that the enormous policy was needed to cover these advances. Mr. Pratt is, clearly, a credulous man; for he asks the Prince of Wales Office, in the first instance, to increase the risk. The Prince of Wales Office declines; and not astonished apparently, and certainly not baffled. Mr. Pratt goes about to other offices with William Palmer's proposals on the life of Walter Palmer. It is to be believed that Palmer bill-discounting solicitors are less trustful. Mr. Pratt lent William Palmer, from first to last, £11,200, £8000 actually in cash, on bills, generally accepted, or purporting to be accepted, by Sarah Palmer, the wealthy widow of Rugeley. Sometimes, as he knew, William Palmer was raising money at sixty per cent, and yet Mr. Pratt was slow to suspect any thing wrong or risky with his client. He insured Walter Palmer for him, and he tried to insure Bates for him, until it was made quite clear to the offices who Bates was. He excuses himself by a reference to a quality scarce in solicitors who "do" bills—his simplicity and credulity. Yet, strangely, Mr. Pratt had sometimes, on these bill transactions, to threaten Mrs. Palmer (the mother) with law, to sue her, and to send writs down to her. However, Mr. Cheshire was postmaster, and stopped the writs: and no answer was ever received from Mrs. Palmer, except through William Palmer. One day Mr. Pratt became enraged, and went down to Rugeley to see this phenomenal old lady. She was sick and would not see him; and he returned to town without seeing her, and still, it would appear, acted as William Palmer's agent and solicitor in London.

All the revelations regarding William Palmer's monetary arrangements indicate a financier of at least enterprise. When his father died he got very little ready money, the great mass of the fortune rapidly and suspiciously acquired by the old sawyer being left to the widow. His mother stated on Monday that the gross sum she had advanced to her son William did not exceed £4000. This is received as money on his marriage, and only £13,000 on his wife's death. He had no practice as a surgeon. Yet he kept seventeen race-horses. He betted constantly, assiduously, and largely. He was always on the move, from course to course, from town to town, hotel to hotel. He kept carriages, which were always at his door, on the Sabbath, of Mrs. Cheshire, wife of the manageable postmaster of Rugeley. He never got into debt at Rugeley or Stafford, which kept off suspicion of motive for years, during a series of catastrophes in his solemn-looking house. And he was not "in the ring," as it is, on the contrary, keeping up well with his bets, and getting the reputation of making a safe book. The incidental expenses he was at seem very great. He was free of his money with cabers, grooms, messengers, and all that class whose good opinions are bought by petty *pour-boire* bribes. He was profuse in his presents of game to the class next in degree, and who could not receive the casual half-crown—to coroners and postmasters. He was generally generous to women. Walkenden, his body-servant, lived on William—and Walkenden must have been well paid. The sums needed to pay the premiums on policies of £15,000 were not trifling. How did he manage all this? Men of fortune find it difficult, unless very successful, to keep up seventeen race-horses, their establishments, grooms, and jockeys, and, at the same time, to bet to the extent practised by William Palmer. This Rugeley surgeon, however, without practice, with a wife commanding only a few hundreds per annum, and without nothing more to base his pecuniary schemes on than professional expectations from a healthy and strong-minded mother, faced the world with a pleasant smile, and "kept things going" with a persistency scarce even in fast life. But there was, after all, about his finance as little as about his poisoning. People with such capacities generally can satisfy bill-discounting solicitors, who chose to use their relatives' names without the relatives' knowledge, who give sixty per cent for money, and who insure bad lives with aforethought, can manage to carry on as long as William Palmer did—which was a very little time. He is only about thirty-four, and yet was desperately placed when he "attended" Cooke in December last. Then everything was found so rotten that, had Cooke lived and no suspicion been aroused, he could not have gone on another month. Horses, furniture, every thing was mortgaged; and bills were out to an amount beyond *his* finesse. He was a clumsy poisoner, and was as clumsy a financier.

The chief constable of Staffordshire, Mr. Hatton, has, it is reported, gone deeply into the connection between Cooke and Palmer, and there is some probability that the motive in that dark mystery, which, as it stood, suggested that Palmer was a blundering maniac, may be developed. Why were the betting-book and other papers of Cooke concealed or destroyed? "It was no good to anybody," said Palmer, referring to the missing book. For the few hundreds left off from town to Rugeley. At one of the stations (it is not exactly known which), on the way down, he met Wm. Palmer. This was not by appointment, for Palmer was on his way up to London. Palmer immediately took a ticket back to Rugeley, and there slept in Mr. Stephens's company. Mr. Stephens took up his quarters in Rugeley at the Talbot Arms, in which Cooke had died, or been killed. He invited William Palmer (who lived opposite) to step over, and drink a glass of wine. William Palmer told Mr. Stephens all about the death. Mr. Stephens was very friendly with him; but the conversation was turned on the missing betting-book: and then Mr. Stephens began to suspect—for who could have had an interest in taking it but William Palmer? Then a solicitor was consulted, the first charge was made, and down came the whole system of chicanery, fraud, and, according to a jury, wilful murder.

An error crept into the account last week of the antecedents of Palmer. Colonel Brooks (a retired East India officer), the father of Mrs. William Palmer, did not commit suicide during the marriage of his daughter: he died before it, but it was a question at the time if he had committed suicide. The mother of Mrs. William Palmer did not call herself Mrs. Brooks, but Mrs. Thornton. She was a very violent woman. She detested her daughter's husband. For many years she refused to go over to Rugeley from Stafford, where she resided, to see her daughter. She only went when informed that Mrs. William Palmer was "dangerously" ill, which was during one of her early confinements. She is reported to have said, on leaving Stafford, that she knew she should never be allowed to return. She never did return. She died in her son-in-law's gloomy house in Rugeley.

There was also an error in stating that Mrs. William Palmer bore six children, and that only one lived. The number was five, four of whom died soon after birth. In some instances the consternation excited by the case seems to have bewildered otherwise reliable people. The nurse who attended Mrs. William Palmer in her fatal illness deposed that the unfortunate lady received the last consolations of religion from a clergyman—the Vicar of Rugeley, Mr. Atkinson—who, she further represented, offered up a prayer, the words of which she gave. Now, the nurse is a little deaf, and it was considered strange that she should have heard the prayer with such distinctness. But the respectable member with such accuracy, she bears an honest character—had no possible motive for an untrue statement—and she was credited, as a matter of course. Among those who heard her give this evidence in the inquest room was the Rev. Mr. Atkinson himself, and he listened to her without interrupting her. But when he got out, and into the open air, he spoke to his friends, and assured them that he had called at William Palmer's house at the time in question for the purpose of seeing Mrs. Palmer; but that, so far from seeing her, he had never entered the house on that occasion. Another of the women about William Palmer's house told her neighbours that Mrs. Palmer had exclaimed the day after her return from Liverpool, and when her husband arrived in Rugeley, "What: is that villain come home? hell murder me!" Nothing of the sort occurred. Mr. Atkinson, however, is so struck with the nurse's statement in respect to himself that he now (we hear) distrusts his own memory. Such are some of the inevitable little facts that complicate a case, extending over months, and dependent on a mass of circumstantial evidence; but such are not the incidents upon which the press have dwelt.

The further evidence of Dr. Taylor, taken in the Walter Palmer case, at the adjourned inquiry on Wednesday, is also likely to lead to controversy. Dr. Taylor offered no distinct opinion of his own, but so spoke on the general facts as rather to urge the jury, eager to push the case to the utmost against William Palmer, to find a verdict of "Wilful Murder." Under the circumstances, and considering the foregoing cases, it is a very proper verdict, there can be little question: but Dr. Taylor will be told that, speaking as he does with such great authority, he should speak with more precision, or remain silent. His evidence, analysed and cross-examined by Mr. Serjeant Wilkins, himself trained to medicine, and with no inconsiderable knowledge, is not, in this instance, likely to benefit his reputation.

It is said that Government has directed a special inquiry into the conduct of Mr. Ward; and that it is not unlikely that an investigation will take place into the circumstances attending the death of Bladen, the brewer's collector, who died—suddenly, of course—in William Palmer's house, about five years ago.

AUSTRALIAN MAILS, VIA SINGAPORE.—At Sydney, advertisements have been issued by the Government for tenders for the conveyance of the mails between Sydney and Singapore, via Torres Strait, and the contract is to commence from month to month. According to the evidence of Capt Towns, the communication proposed would be accomplished at the cost of £30,000 per annum, without reckoning the postage. The vote of the Legislature only amounts to £25,000; but we presume that if something in excess of that sum should be absolutely necessary, it will not be refused by the Government, or grudged by the future Legislature.—*Australian and New Zealand Gazette*

A ZOUAVE TESTIMONIAL OF GRATITUDE.—The Cercle Graslin, at Nantes, last year opened a subscription to purchase tobacco for the soldiers in the Crimea. As a mark of gratitude for that act of kindness, it has just received a mortar for pounding coffee, invented by the Zouaves. The lower part is formed of a shell of a very large calibre, and the end of the pestle of a small ball. This souvenir of the Crimea occupies a prominent place in the saloons of the Cercle. —*Gelignani.*

VALUE OF SLAVE LIFE.—A few weeks ago two intoxicated Kentuckians found a negro asleep in a hotel at Cincinnati, and, for amusement, they took a camphine lamp, and, pouring the fluid over his whiskers, ignited it, and the poor fellow's head and neck became instantly wrapped in an intense blaze, which continued until the fluid was consumed. The sufferings of the victim were dreadful in the extreme. The excitement of the torture must have produced more excruciating misery. But, strange to say, death did not release him from torment until after the lapse of two weeks. No legal investigation took place, and the young man arraigned the master by paying the landlord of the hotel 1200 dols. for the loss of his servant.—*American paper.*

REMAINS OF THE GARRISON OF KARS.—Straggliers are still coming in from KARS. I met some yesterday, toiling over the snow-clad plain that lies between this and the Euphrates. They showed weary and footsore, poor things, but had not the wild hungry look of those who had preceded them. They had probably been recruiting at the villages on the road. But report states that no less than 1500 out of the 6000 that surrendered at Kars have perished in the snows of the Shavildagh.—*Letter from Erzeroum, Dec. 24.*

FINANCES OF VICTORIA.—The revenue returns of Victoria for the year ending September 30th, have been published. It appears that the total receipts from all sources were £3,384,907. Deducting from this one-half of the land fund, or say £470,000, there would remain £2,914,000 available for the ordinary expenditure of 1855. While for the year 1854 the amount was only £2,640,000. Therefore the legitimate funds in the hands of the Government are actually larger than the previous year. On the whole, therefore, the Government may be congratulated on the favourable condition and prospects of the public revenue; and we have not the slightest doubt that, with ordinary prudence, the Government can without difficulty carry out a system of finance which shall at once enable them to recommence the public works, and relieve them from every embarrassment.—*Australian and New Zealand Gazette.*

THE MALVERN LIGHT AND THE METEOR.—The Malvern light on the 16th instant was distinctly seen from the Beacon-hill, in the range of the Ockbury, at Chequer's-court, near Aylesbury, being about seven hundred feet above the sea-level, and nearly seventy miles from Malvern. The fire had the appearance of a comet lying on the horizon, and having a tolerably bright centre surrounded by a nebulous haze. At Chequers the sky was cloudless, the air dry and perfectly clear. The Meteor of the 7th inst. was seen from the Bilton County Lunatic Asylum, at Stone, near Aylesbury, by Mr Millar, the resident superintendent. Its first appearance was at an altitude of 20 deg above the horizon, and 13 deg. west of the meridian; and it burst at an altitude of 5 deg. 30 min. above the horizon, and 11 deg. west of the meridian. At other accounts lead to the supposition that it fell about 150 miles to the south of Stone, we may conclude that it first became visible at about fifty-four miles above the surface of the earth, and burst at about twenty-two miles above it. These particulars respecting the Malvern Fire and the Meteor were communicated to the British Meteorological Society, at its meeting on Tuesday last, by the Rev. J. B. Reade.

THE Jesuits have purchased a pretty little castle and estate near Vienna, and are about to establish a seminary.

UPWARDS of 200 of the Lincolnshire Militia at Cork have volunteered during the last few days into the Coldstream Guards, the Lancers, and some infantry regiments

In consequence of the large and increasing extent of undetected crime the magistrates of the county of Somerset have in contemplation the establishment of an efficient county police.

According to a telegraphic despatch received at Vienna last Saturday, the firman relative to the Kustendje Canal was signed by the Sultan on the 14th January.

DISTRIBUTION OF THE QUEEN'S MEDALS TO THE FRENCH CRIMEAN TROOPS, BY H.R.H. THE DUKE OF CAMBRIDGE.—(SEE PAGE 82.)

PRESENTATION OF THE GRAND CORDON OF THE LEGION OF HONOUR TO THE SULTAN, AT CONSTANTINOPLE.—(SEE NEXT PAGE.)

## PRESENTATION OF THE CROSS OF THE LEGION OF HONOUR TO THE SULTAN.

On Saturday the 22nd ult. M. Thouvenel went in great state from the French Embassy to the Palace of Tchiragan, to present to his Majesty the insignia of the Grand Cross of the Legion of Honour, and an autograph letter from the Emperor Napoleon.

In his speech to the Sultan, M. Thouvenel alluded to the sentiments of ill. h esteem and sincere attachment which the Emperor Napoleon entertains for the Sultan; and concluded by saying that these insignia were a new pledge of the memorable alliance between Turkey and the Western Powers, for the purpose of repelling the unprovoked aggression of Russia, and taking such steps as may be deemed necessary to maintain the independence of the Ottoman empire.

The reply of the Sultan was not less complimentary.

## *MUSIC.*

At Madame Goldschmidt-Lind's Sacred Concert on Monday last "Elijah" was repeated. Notwithstanding the very inclement weather, Exeter-Hall was as crowded, and the audience as enthusiastic, as ever. The fair singer was in the fullest possession of her powers; and her perfo mance of the grand aria, "Hear ye Israel," was as remarkable for brilliancy of voice and execution as for the matchless sublimity of its expression. The character of the Prophet was on this occasion performed by Mr. Weiss, the only singer in England who is capable of sustaining it worthily. We have repeatedly paid a just tribute to this gentleman's talents. He has long held the undisputed rank of the first of English baritones; but he has also been constantly rising, and he is now undeniably equal to any singer of that class who has been heard in England in our day, whether with regard to the quality of his voice, his powers of execution, the extent of his attainments in his art, or his intelligence, energy, and feeling. His performance of *Elijah* on Monday evening was the greatest of his achievements. He was in no degree inferior to any of his three great foreign rivals who have sung this part in England—Staudigl, Formes, and Belletti; while as an Englishman, he had the advantage over them all in his pure and impressive utterance of the inspired language of the Holy Scriptures. In other respects the oratorio was performed as before; the other principal singers being Miss Dolby, Miss Messent, Mr. Lockey, and Mr. Lawler.

The appearance of M. Otto Goldschmidt at Madame Goldschmidt's first miscellaneous concert was not, as was generally supposed, that gentleman's debut in England. In the summer of 1849 he played at one of the concerts of the Musical Union; and Mr. Ella, in his "Record" of that season, described his performance with warm and deserved eulogy.

There was a remarkable musical performance at the Crystal Palace on Saturday last, being one of a regular series which are now given weekly. It consisted not only of full orchestral pieces by the Company's excellent band, but of choral and concerted vocal music (an entirely new feature in the entertainments of the Crystal Palace) and instrumental pieces by eminent solo performers. The concert was held in the Music Room, in the north wing of the building, the musical capabilities of which have been described before. The selection was excellent. The programme included Cherubini's Overture to "Lodoiska," Mendelssohn's Overture "The Isles of Fingal;" a number of German part-songs and English glees, sung by sixteen male voices belonging to the "Orpheus Glee and Choral Union," under the direction of Mr. Edwin Ball, of St. Paul's Cathedral; a grand polonaise played on the pianoforte by the young Arthur Napoleon; and a solo on the violoncello by Mr. Collins. The whole concert was most agreeable, and the introduction of vocal music was perfectly successful. The part-songs and glees (by first-rate German and English composers) were admirably sung, and their harmony was full and resonant. The concert of this day (26th) is to commemorate the centenary of the birth day of Mozart, and is consequently to consist entirely of pieces selected from his works; under the direction of Mr. Edwin Ball, of St. Paul's Cathedral; a grand polonaise played on the pianoforte by the young Arthur Napoleon; and a solo on the violoncello by Mr. Collins. The whole concert was most agreeable, and the introduction of vocal music was perfectly successful. The part-songs and glees (by first-rate German and English composers) were admirably sung, and their harmony was full and resonant. The concert of this day (26th) is to commemorate the centenary of the birth day of Mozart, and is consequently to consist entirely of pieces selected from his works; under the direction of Mr. "Idomeneo," several songs from his operas sung by Miss Grace Alleyne and Miss Palmer, and a movement from his last symphony. These elegant entertainments will greatly increase the attractions of the Crystal Palace.

Miss P. Horton's Entertainment.—This lady is again announced to appear before the public in her musical entertainment, origi nally called "Illustrative Gatherings," in which some few months since her very clever impersonations won such marked approbation at St. Martin's Hall. The management of the undertaking has been confided to those whose experience in business arrangements renders them better qualified for the task than the lady herself; and she is coming forward at the Gallery of Illustration, Regent-street, where she will be the first person who has essayed an entertainment which does not consist exclusively of dramatic representations, in which artists are engaged in preparing the scenery, with a view to sustain the reputation which this establishment has always borne for pictorial effects.

The Edinburgh people are carrying on their musical entertainments with much spirit, and no small éclat. The third season of their opera commenced on Monday when the Theatre Royal was crowded by a most fashionable audience. Verdi's "Trovatore" was, on the whole, well represented, and the Edinburgh papers are loud in their praise of the principal performers. The prima donna, Madame Rodor, is especially lauded, both for her vocal powers and her talents as an actress, and the tenor, Signor Beraldi, appears to have created a *furore*. The seconda donna, Mome. Widmann, and the baritone, signor Monari, are described as good performers; and the orchestra, under the able direction of Signor Orsini, is said to be the most complete and the best that has ever been heard in Edinburgh. The Scotch have more *nationality* of spirit than we have. While we affect to despise our own beautiful music, and neglect it so shamefully that it requires the researches of a Chappell to show that, in variety and interest, it equals the music of any other nation in the world, the Scotch are proud of theirs, and cherish and cultivate it. In Edinburgh at this time there are regular concerts of Scottish music, which fill the magnificent Music-hall of that city with crowds of delighted auditors. In speaking of one of these concerts last week the *Edinburgh Advertiser* says:—"The entertainment was made up of Scottish music, in the shape of melodies adapted to various forms, introduced into the overture, suited to the quadrille, and arranged as an orchestral piece. These were recognised in their various guises, and welcomed by the audience. In the vocal form they were not so attractive; but that assuredly for lack of native talent rather than from want of inherent beauty. The dance-music was the great feature of the performance, and once more did the joyous measure warm the heart of many an aged matron of our ancient strathspeys, who listened to them with the fond recollection of the days of yore. Taking the evening's entertainment from beginning to end, we are certainly not saying too much in affirming that a better-pleased and more highly-gratified audience never left the Music-hall."

Richard Wagner's celebrated opera, "Tannhauser," was produced at Berlin a few days ago with the utmost success. It was got up with great splendour under the direction of Dorn, the eminent Kapelmeister. The prima donna was the composer's niece, Johanna Wagner; and the part of *Tannhauser* was performed by Theodore Formes. This opera has been received with enthusiasm in all the great theatres of Germany; and a week never passes in which we do not observe a notice of its performance at some one or other of those theatres. Our knowledge of the work is limited to its perusal, as it has never been produced in England; but, with the above facts before us, we find it difficult to believe in the soundness of the opinions regarding it expressed by some critics.

Amateur Concert at the Music-hall, Worcester. The city of Worcester, faithful to its ancient musical prestige, again assembled, on Tuesday evening last, the amateurs of the county and neighbourhood in its Music hall. The room was tastefully decorated with wreaths of evergreens suspended between each bracket light. From the centre of each wreath hung gaily-coloured baskets, filled with artificial flowers and ever-greens. The organ and orchestra were as much concealed from view as awnings of white and pink calico and trellis-work covered with shrubs would permit; a temporary platform for the performers being advanced into the body of the room, so as to place them more on a level with the audience. The *coup d'œil* was very striking, every effort having been made to give the scene the appearance of a private assembly. The programme of the entertainment was well selected, and surpassed those of previous occasions. Among the vocalists who deserve particular mention were Miss Lechmere, who sang "Robert toi que j'aime," and "O Isaac di quest' anima,' with much feeling and brilliancy of execution; and Mr. Drummond, whose performance of Beethoven's aria of "Adelaida" was honoured with an enthusiastic ovation. The band and chorus were perfectly drilled, and contributed not a little to the success of the entertainment.

The iron trade of Birmingham protest against the increase of freight for iron ore on the London and North-Western Railway.

The Cortes has approved finally of the project for establishing a new General Society of Credit and Spanish Capitalists' Bank by the moneyed classes of Madrid.

## *THE THEATRES, &c.*

Princess'—The comedy of "The Jealous Wife," having been performed before her Majesty on Thursday, was on Monday acted at this theatre. The piece has been considerably strengthened by the omission of three acts. It is needless to say that this play is one of the most successful on the boards; possession of which it has retained to the present hour. In all its leading characteristics the drama is very judiciously constructed. Taking his plot from Fielding's novel of "Tom Jones," the elder Colman aimed at the public of his day and hit the Drury Lane audience so effectually that the reception of this comedy is in theatrical annals recorded as "astonishing." But the author was careful to sustain the originality of his genius in the characters of *Mr.* and *Mrs. Oakley*, which are so distinctly marked that they are sure to tell. Wisely eschewing the passionate points of female jealousy, the author has drawn his heroine as a wife less fond of her husband than ambitious of dominion in the family circle; jealousy with her, accordingly, whatever she may think to the contrary, is rather the pretended than the real motive of her conduct. She is, of course, self-deluded; and furthermore encouraged by the pleadings and easy-mindedness of her husband in her course of domestic usurpation. Immediately he resumes his authority her power is gone. Mrs. Kean was always great in *Mrs. Oakley*, and she still maintains her supremacy in this difficult and arduous part. It requires immense physical strength, as well as continuous mental exertion, to give the requisite vitality and colour to so highly-wrought a dramatic personage. Then the contrast which Mr. Kean presents is perfectly delightful. He is just the very man to be "henpecked"—we are not quite sure he don't like it, so calmly patient he takes the infliction. Let us also award our tribute of praise to Mr. Cooper's *Major Oakley*, which most forcibly reminds us of the high and palmy days of the classic British stage. Last Thursday there was another morning performance of the pantomime; the theatre being again closed in the evening on account of the Royal theatricals at Windsor.

## EDUCATIONAL SOIREE AT THE GORTON LOCOMOTIVE WORKS.

On Saturday evening last the opening of a literary and educational institution, in connection with the extensive works of the Manchester, Sheffield, and Lincolnshire Railway Company, at Gorton, was celebrated by a soiree, at which upwards of 700 persons, including the workmen and their families, together with several gentlemen connected with the Company, were assembled.

The Chairman, Mr. Edward Watkin, General Manager of the Company, after proposing the health of the Royal family, gave "Prosperity to the Gorton Literary Institution," in an address of great length. After expatiating on the promising condition of the institution, Mr. Watkin observed, with regard to the meeting, that its great object was education, and it was well to bear in mind that, in these times of progress and improvement, the ignorant man was nobody. Although we might often see men rising from an obscure and humble station to a high position as regards wealth, we never found an instance where even the greatest progress as regards mere opulence had made an individual assume that position in society which, after all, was the great object to struggle for. The ignorant man, whatever his position in society, was always found out. Men might conceal, and did conceal a great deal in this world, but they never could conceal the fact that they had allowed their intellect to lie dormant. And even if we chose to look at the matter merely as it affected our pecuniary interest, we might depend upon it that education was a wages question. The educated man, to whatever rank of life he belonged, was always able to command a position, and a rate of remuneration to which the ignorant man could never attain. It was a most lamentable fact that in this country nearly forty per cent of our whole population could not read or write; whilst in the United States we might traverse that country from east to west and from north to south, and not find a native American so ignorant. But the most important question was the education of the young. There were people who complained that the tendency of such institutions as this at Gorton was to give only a partial and imperfect knowledge, more injurious than beneficial. He, however, had no fear of the result of communicating a single atom of knowledge; because, if a man's opinions should, from a partial education, become for a time erroneous, the very fact of Le going honestly wrong would bring him at last honestly right. Others objected that this system of education was productive of doubt. That was doubt but the action of an inquiring mind? It was doubt that set Newton upon writing his "Principia;" it was doubt that assisted Newton in discovering the laws of gravitation; it was doubt that made Franklin inquire and investigate, till at last he brought down the lightning from the clouds, it was doubt that led Galileo to discover the movement of the earth—in fact doubt was the great agent employed in the revolutions of the world (Cheers). He cared not that the knowledge given to the working man was small—let him attempt to make it greater; he cared not if the system given him were erroneous—let him correct them and get right; he cared not whether our education was not altogether as we wished it let us once begin the good work, and it would go on and prosper, for the very mistakes of the commencement would set us on that sound inquiry resulting in the improvement of all our conclusions (Cheers). There was one question which should be asked of himself or herself by all of us in the institution. Shall we consent to be mere parts of that inanimate and sluggish mass which in old times was called "the swinish multitude," which had been stigmatised as "the mob," but which had now been canonised "the great substratum of society;" that mass of population which, like old Bichat's definition of matter, was worked upon "as a thing which moveth not, save when it is moved?" Or shall we determine to be active, intelligent and thinking members of society in a country which will prosper only in proportion as its individual members are intelligent? For those who chose the former path, on their heads be it. Those who chose the latter might be assured that, by that choice alone, they had set their feet upon the first round of the ladder of social and material progress (Cheers). He had great satisfaction in presiding at their inauguration, because he believed that, in anything they might do there, quietly and with out ostentation, to improve the minds of themselves and of their children, they were assisting the onward progress of civilization, they were tending to promote and increase the happiness of all around them, and they were fostering the coming of that glorious time, sung by poets, predicted in prophecy, and looked for by all, when the Genius of Freedom fair daughter of Peace and Intelligence—shall settle on the earth, and gather under her wings the whole family of man (Loud cheers).

METEOROLOGICAL OBSERVATIONS AT THE HIGHFIELD HOUSE OBSERVATORY, NEAR NOTTINGHAM,
FOR THE WEEK ENDING JAN. 21.

| Month and Day | Thermometer | | | Mean Temperature | Rain in inches | Mean Temperature | Amount of Cloud. (0-10) | | Mean amount |

*The range of temperature during the week* was 19°.

*The weather* mild and rainy from the evening of the 17th, slight snow on 21st; a thaw commenced on the evening of the 16th.

*The direction of the wind* was on the 15th W.S.W., becoming S.W. at 10 p.m., W.S.W. at 4 a.m. following through the W. to N. at 8 a.m., became N.N.E. at 10 a.m., N.E. at 4 p.m., E.N.E. at 5h. 30m. p.m., E. at 7h. 30m. p.m., becoming S.S.E. at 7h. 40m. p.m., S. at 9h. 30m. p.m.; became S.E. at 1h. 20m. a.m. on 17th, S.S.E. at 5 a.m., S. at 8 a.m., S.S.W. at 9h. 30m. a.m., S.W. at 10h. 30m., S.S.W. at 12h. 30m. p.m., S.W. at 1h. 30m. p.m., W.S.W. at 2h. 30m. p.m., W. at 3h. 30m. p.m., W.S.W. at 4h. 30m. p.m., S.W. at 5h. 30m. p.m., W.S.W. at 6h. 30m. p.m., S.W. at 7h. 30m. p.m., W.S.W. at 8h. 30m. p.m., S.W. at 9h. 30m. p.m., W.S.W. at 10h. 30m. p.m., S.W. at 11h. 30m. p.m., W.S.W. at midnight, S.W. at 1h. 30m. a.m., W.S.W. at 2h. 30m. a.m., S.W. at 3h. 30m. a.m., W.S.W. at 4h. 30m. a.m., S.W. at 5h. 30m. a.m., W.S.W. at 6h. 30m. a.m., S.W. at 7h. 30m. a.m., W.S.W. at 8h. 30m. a.m., S.W. at 9h. 30m. a.m., W.S.W. at 10h. 30m. a.m., S.W. at 11h. 30m. a.m., W.S.W. at noon, S.W. at 1h. 30m. p.m., S.W. at 11 p.m.; at 1a.m. on 21st, moved through the W. to N. at 8h. 30m. a.m., N.E. at 7h. 30m. a.m.; E.N.E. at 12h. 30m. p.m. on 22nd, E. at 3 p.m., and thereabouts it remained. Thus the direction of the wind was very variable during the week.

E. J. Lowe.

The Proposed Campaign of 1856.—The Paris correspondent of *Le Nord* says that the following obtains belief in diplomatic circles in that city:—"Baron de Seebach informed Count Nesselrode that, if the negotiations failed to establish peace, the plan of campaign for this year would consist in making Austria and Prussia cede Gallicia and the Duchy of Posen in order to reconstitute the kingdom of Poland; an Austrian Archduke would become independent Sovereign of Poland, and a land force would operate in Finland. The English would engage to take Cronstadt. The Principalities would be ceded to Austria, with the frontiers pushed back in Bessarabia as far as the line of mountains fixed in the first of the four propositions. Finally, the Prussian ports would be strictly blockaded."

## *EPITOME OF NEWS—FOREIGN AND DOMESTIC.*

Lord Stratford de Redcliffe has sent Mr. Alison, one of his secretaries, on a secret mission into the Danubian Provinces, for the purpose of ascertaining the state of public feeling there.

The Prince of Servia has dismissed the editor of a Servian journal for having published an article extracted from the *Northern Bee* of St. Petersburg.

Lord Ashburton has offered to engage a gentleman at his own expense, for one year, to deliver a series of lectures before the members of the Yorkshire Mechanics' Institutions, on subjects of interest to them, and to place him under the direction of the committee of the Union.

The physicians despair of saving the life of Prince Paskiewitch, the cancer has manifested itself externally. At present he is under the magnetic treatment of Baron Klotz.

The Marquis and Marchioness of Londonderry, who have been staying for some time at Nice, intend to visit the Crimea and Sebastopol before returning to England.

Prince Ghika, the Hospodar of Moldavia, has addressed a official declaration to his Suzerain, the Sultan, to the effect that, at the expiration of the term of his government (the 1st May, 1856), he will resign his functions.

Mr. S. Warren, Q.C., is to be the Conservative candidate to fill the vacancy at Midhurst of Mr. Walpole, who resigns.

A lady is likely to succeed Count Ouvoroff as President of the Academy of Sciences at St. Petersburg. Two male candidates are in the field—M. Nordf, Minister of Public Instruction, and Baron Modeste de Korff. Both the electors are said to be in favor of the Grand Duchess Helen.

Mr. Pashley, the barrister, has been appointed the Judge of the Middlesex Sessions, in the place of Mr. Serjeant Adams. The salary is £1200 a year. Mr. Bodkin, it is said, declined the offer of the appointment by the Government.

Preparations are being made in Germany to celebrate with great pomp the hundredth anniversary of the birth of Mozart, which will fall on the 27th June next. At Gotha, Berlin, Vienna, Munich, Dresden, Carlsruhe, Darmstadt, and Hamburg, the Governments have devoted ample funds for the purpose.

A number of students at the Finland University have been sent to prison for drinking "Success to the Allies," and "Prosperity to Sweden."

Dr. Vehse has been allowed to go at large after giving securities to the amount of 4000 dollars, for his appearance to answer the charges of libel brought against him at the instance of Prince William of Mecklenburg.

Instructions have been sent by the French Minister of War to the Generals commanding military divisions and subdivisions for the distribution of the English medal to military men of all ranks who have taken part in the campaign of the Crimea, and who are now in France.

On Tuesday last workmen were engaged in removing the hoarding round the statue of Sir Robert Peel at the end of Cheapside, and setting up the lamps and ornamental railings.

The arrangements on the Egyptian Railroad give great satisfaction. The railway carriages are very superior; each one cost £500.

In the Bernese Oberland, especially on the St. Gothard route, the temperature is just now extraordinarily mild. The snow melts and falls in heavy avalanches.

The Commissioners of Customs have granted permission to forty foreign wines in bond with British spirit.

The bill for the loan of thirty millions has been adopted by the Sardinian Chamber of Deputies by a majority of 109 to 28.

The new iron auxiliary screw-steam-ship *Royal Charter* sailed from Liverpool on the 18th for Melbourne, with 260 passengers, including Dr. Scoresby. It is confidently expected that she will make the run in less than sixty days.

An extraordinary mine of gold, yielding five to seven ounces to the ton, has been discovered on the Isthmus of Panama, and is easily accessible from the sea. The gold is found in four immense veins of quartz.

The French Minister of War has just entered into a contract with the debouchures of Marseilles for the supply of 14,000 metres of cloth for the army, to be delivered during the present year.

It is generally understood that the Queen will open Parliament in person on the 31st instant.

Orders have been given by the Emperor Alexander scrupulously to observe, in the approaching reunion of the Catholic Archbishop of Wilna and the terms of the convention made with the Pope.

The Emperor of Austria has signed an organic decree in reference to the Protestants in his dominions, which is said to be liberal, with the exception that it prohibits the marriage of any Catholic priest converted to Protestantism.

The address in the Commons will be moved by the Hon. G. H. Long, M.P. for Tavistock; and will be seconded by Mr. W. E. Baxter, M.P. for Montrose.

On Sunday last the French Emperor and Empress received several foreigners of distinction, who were presented by the Apostolic Nuncio the Ministers of Austria, Bavaria, Wirtemberg, and Mecklenburg-Schwerin. The British Ambassador presented to their Majesties sir William, Lady, and the Misses Gomm, Colonel Darville, and Lieutenant-Colonel Airey. The Emperor afterwards gave a private audience to M. Olozaga, the Spanish Minister, recently returned to Paris from Spain.

Orders have been received at Pembroke-yard from the Admiralty to prepare a set of drawings of the *Victor Emmanuel* (late *Prinzessin*) for his Majesty the King of Sardinia.

When the Emperor of Austria appeared at the Opera on the 18 inst. he was received with such prolonged applause that he was obliged to rise three several times. It appeared as if the audience wished to express its approbation of the recent policy of the Monarch.

The King of Prussia has been prevented during two or three days from quitting his apartments in consequence of a slight catarrhal indisposition. The ball intended to be given at Court last week was countermanded in consequence.

An Imperial decree nominates Mr. Brassey, the well-known railway contractor, a Knight of the Legion of Honour.

The Emperor Napoleon has created Commander Ducrest de Villeneuve, and Lieutenants Cavaroz, Filan, and Morell Cheverere, of the "Imperial order of the Legion of Honour," for distinguished service in the field, and at the storming and capture of sabbages on the 4th of August. The wounded soldiers—seven—received medals.

The Duke of Cambridge, General Della Marmora, General Airey, Sir Harry Jones, Admiral Sir Edmund Lyons, and Admiral Dundas arrived at Dover, on their return from the Conress of War at Paris, at five on Tuesday morning.

The *Gazette des Mids* announces that Louis Philippe's widow has had a relapse. Dr. Astros, of Marseilles, left on the 16th for Nervi, to visit the august patient.

On the 18th inst. the representatives of France, England, Belgium, Denmark, and Hanover, assembled at the house of Count Buol, at Vienna. After this conference, the Ministers of France and England dispatched couriers to their respective Governments.

General Luders has been appointed Commander-in-Chief of the armies in Southern Russia and in the Crimea. "Prince Gortschakoff is to have another appointment."

Sir Hamilton Seymour, who, from not being able to find a suitable house, is still residing at the Hotel of the Roman Emperor, is at present in treaty with Prince Lichtenstein for a suite of apartments containing forty rooms in the Prince's Palace, Herrngasse, No. 201, to take possession in April next.

It is very generally believed that Prince Metternich will not long continue to represent Russia at Vienna. Count Rechberg will not knowledge that he made what in Italy is called a "

The Right Hon. Spencer Horatio Walpole has accepted the office of Archbishop's Church Estates Commissioner, vacated by the executed decease of the Right Hon. Henry Goulburn. The income attached to the office is £1000 a year.

A cricket match on the ice took place at Long Meadows, Oxford, the other day. Every player was an expert skater, and the falls were not many.

An American schooner, the *Alexander Mitchell*, is said to have lately shipped and carried off upwards of 300 slaves between Cape Palmas and the Brights, after leaving Monrovia, where she had called in with a cargo of American produce.

The Government shipwrights at Dantzic are engaged upon the construction of two 26-gun steam-corvettes, of 300-horse power, to be named *Gazelle* and *Arcona*.

The eighty economical food-kitchens established at Paris at their own expense by the Emperor and Empress have admirably succeeded. Placed under the direction of the Sisters of Charity, they sell, or rather distribute, food of excellent quality every day, from nine a.m. to four p.m., to a multitude of indigent consumers.

## THE FRONTIER LANDS OF AUSTRIA, RUSSIA, AND TURKEY.

THE proposal for a rectification of the line of frontier between Russia and Turkey, and for the establishment of the government of Moldavia and Wallachia upon a new basis, freed from the protection of Russia, formulated in the Austrian ultimatum, naturally attracts attention to that portion of the map of Europe which embraces the boundaries and territories in question. These lands, though their history has not been so prominently before the eye of the general observer as some other parts of Europe, nevertheless teem with interesting associations—with events scarcely second in importance to any which have occurred in modern history.

As the Low Countries and the Rhenish provinces were during two entire centuries the battle-field upon which the Middle and Western Powers of Europe supported their pretensions, and finally arranged the balance of power between them, so the territories north of the Danube as far as the Baltic, and to the east as far as the Dnieper, have been the theatre upon which the States of the Middle and West of Europe have, during an equal length of time, been combating the assaults and encroachments of two rival Eastern Powers—the once haughty Ottoman, the now insolent Russ: upon the ultimate adjustment of whose position will depend the future fate of Europe and of civilisation generally. We propose now to take a bird's eye view of the vast territory of mixed nationalities forming the frontier lands between Austria, Russia, and Turkey—making some observations on their past history as connected with the general scheme of European policy.

And first, stretching across the north, as far east as the Dnieper; just above the boundaries of Hungary and Moldavia, the eye lights upon a tract of country which it is impossible to contemplate without shame and regret. Eighty years ago, all this tract was part of ancient Poland—whose partition by Prussia, Austria, and Russia has been forcibly described as "the crime of an age"—an age by no means free from other offence.

Passing now to Hungary, we find antecedents somewhat similar to those of Poland; the main difference being that in this case there has been absorption of Sovereignty without partition. The race of Guss—its hereditary Kings—failing in 1301, the throne became elective, and passed successively to various Princely families. At length Ferdinand I. of Austria, who had married Anne, sister of Louis II., King of Hungary and Bohemia, pretended to claim succession to the Crown as of hereditary right. John Zapolski, Waywood of Transylvania, however, was elected King by the Hungarians, and, feeling himself too weak to support his right against Ferdinand, called in the Turks to his aid, and thereupon followed a series of wars, in which, at different periods, the arms of the Infidels seriously threatened the very existence of Christian Germany. It was not until 1687 that the Crown of Hungary was declared hereditary in the House of Austria—a declaration renewed and confirmed by the voice of the nation in 1723. How nobly the Hungarians rallied to the support of their Queen Maria Theresa in 1740 is known to all; and how ill their loyalty has been since requited, their nationality trampled under foot within our own days, is a subject too painful for generous minds to contemplate. There can be no doubt that the subjugation of the liberties of Hungary in 1849, by the aid of Russian bayonets, has had a direct influence in hurrying on the Russian scheme of aggression which we are now endeavouring to frustrate.

Transylvania occupies an important site—between Hungary on the west, the Austrian-Polish States on the north, and Moldavia and Wallachia on the east and south. It is naturally a strong position, the very name meaning "beyond the forests" implying its rude and primitive condition—being surrounded on all sides by mountains covered with trees. This province was ceded to Austria by the Turks by the treaty of Carlowitz in 1699. In common with the neighbouring provinces of Wallachia and Moldavia, it is rich in agricultural and other natural products.

The fertility of the soil of this important and favoured territory has from the earliest period of history been celebrated throughout Europe. "The fertile soil (says the author of the "Frontier Lands of the Christian and the Turk") still as productive as it was when the Emperor Trajan obtained supplies from his 30,000 Roman colonists for the army which he sent against the Scythians and Sarmatians, was a bait for the covetousness and ambition of Peter; for he foresaw of what advantage might be to him the possession of such a resource in his wars with Turkey—so varied are the articles produced in the wooded and picturesque tracts of country near the Carpathian Mountains, and in the bar, flat, and marsh plains towards the Danube. Grain of different kinds, wool, butter, honey, wax, tallow, salt, timber, and salted provisions, were already exported in great quantities to the market of Constantinople; and horses, oxen, hogs, and hides, were poured into Germany to a vast amount."

This is exactly the class of goods which might be advantageously exchanged with a great manufacturing and commercial state. England might carry on an almost unlimited trade here, yet such has been the baneful effect of Russian interference, that our dealings in this quarter have hitherto been few and insignificant. Previously to the breaking out of the war, the whole annual amount of our exports to the Danubian Provinces, including Bulgaria, having a population of upwards of eight millions, was only £700,000, or less than two shillings a head. There is little doubt that when those provinces are free and happy, and the navigation of the Danube is thrown open, this commerce will be quadrupled.

One very injurious feature in the Turkish policy as regards the Moldo-Wallachian Principalities is that by which they are treated precisely as Foreign States, and the least favoured of Foreign States. This policy has been sedulously promoted by the arts of Russia, who saw her gain in severing the Moldo-Wallachians from the Ottoman empire, in circumstances, and feelings, and interests. Accordingly, a complete barrier has been established between the two banks of the Danube: the produce of the right bank paying a duty on entering the Principalities, merchandise having already paid full duties in Turkey, being again taxed on the left bank of the Danube, although it is still within the empire, and goods purchased in Bulgaria being prohibited on the opposite shores of Wallachia and Moldavia, even when purchased for the purpose of exportation. It is needless to say that Moldavia, Wallachia, and Bulgaria have been alike losers by this pernicious policy.

The importance of the Danube navigation as a question *per se*, has been, up to a recent period, very much overlooked by European States. Amidst the din of arms, and the clamour and intrigues of diplomacy at the principal seats of Government, the unpretending claims of commerce, as associated with the banks of this river, have been little thought of, and less understood. Russia alone has been aware of the money value of the interests involved, and has been, during a series of years, sedulously employed in arranging matters so as ultimately to convert this field of wealth entirely to her own use; and, in the interim, to prevent its being enjoyed by others, in a way to enter into competition with herself. By the Treaty of Adrianople, in 1829, the extended Russian jurisdiction on the Danube is thus defined:—

The frontier line will follow the course of the Danube to the St. George's Mouth, leaving all the islands formed by the different branches in the possession of Russia. The right bank will remain as formerly in the possession of the Ottoman Porte. It is, however, agreed that the right bank, from the point where the arm of St. George departs from that of the Soulnah, shall remain uninhabited to a distance of two hours (two *stages*) from the river, and that no kind of structure shall be raised there; and in like manner on the islands which will remain in the possession of the Court of Russia. With the exception of quarantines, which will be there established, it will not be permitted to make any other establishment *or fortification*.

Russia took advantage of the last sentence in this Article to establish, under the semblance of quarantine stations, fortifications and fleets of gun-boats, which gave her the absolute command of the navigation of the river; and this power she has frequently used to prevent the transit of vessels even of neutral and friendly nations. That this has been done more upon commercial than strategic considerations, with a view to the perquisition of roubles, is undoubted. Every shipload of tallow, or grain, or hemp, or peltry exported would enter into competition with the trade of Odessa and St. Petersburg; and as such it became obviously necessary to restrain the trade of so dangerous a rival. A document was issued some years back at Odessa, under the authority of Count Woronzow, which set forth those views very plainly, and without any attempt at disguise. It states —

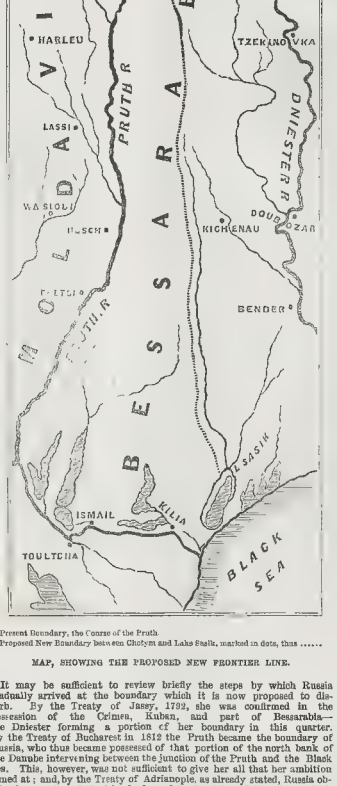
Although the three principal mouths of the Danube are in the power of Russia, it is only a small number of her products that are exported by the two ports of Bessarabia—Ismail and Reni. The towns of Galatz and Ibrail, the only *débouchés* of Moldavia and Wallachia, pour the superfluity of these rich provinces into the commerce of the Black Sea. The protecting sceptre of Russia has created these formidable rivals of herself. If the obstacles which have hitherto impeded the navigation of the Danube come to be entirely removed, this will much facilitate the vent of Austrian articles of merchandise in the Provinces, and will open for some of them a way to arrive at other countries

The advantages of this navigation for the trade of the Principalities, which consists principally in exchanges for the products of Austria, are incalculable. Galatz, especially, will gain by it greatly as an entrepôt for Austrian goods, which will be sent thence to the Levant and the ports of the Black Sea. Austria may even export by the Danube the wheat of the Banat, which can be bought on the spot at eleven roubles the *chetvuert*, and is said to be of a superior quality. The hemp of Hungary, of which the English have already made great purchases, and formed depôts at Apathin and at Essek (whence it is sent by water to Sissek and Carlstadt), and from these places by land to Trieste (might here find, perhaps, an easier route than by Trieste, as well as timber, which is at present sent with difficulty to Fiume. Galatz and Ibrail are about to cultivate virgin countries, and of great extent. Ismail and Reni (the Russian ports) must necessarily attach themselves to these giants, which threaten to overwhelm them. So long as those who are engaged in the trade of Ibrail and Galatz shall be free from every impost, it would be necessary at least to reserve to the merchants of Bessarabia the same immunity to prevent their leaving the country, as many of them have already done.

These statements speak for themselves; they reveal the motives of Russia in her policy in this quarter, and set in their true light the momentous interests which are at stake in the adjustment of her pretensions to naval supremacy in the Black Sea, and its great tributary river.

### THE PROPOSED NEW FRONTIER LINE.

The accompanying smaller Map shows the line of the existing, and the proposed new, frontier line between Russia and Turkey. The main object in view in the new boundary is to push back Russia from the immediate neighbourhood of the Danube, and to free the commerce of that noble river from influences which, as has just been shown, have proved so adverse to the interests of neighbouring States and of the general community.



Present Boundary, the Course of the Pruth
Proposed New Boundary between Chotym and Lake Sasik, marked in dots, thus .....

MAP, SHOWING THE PROPOSED NEW FRONTIER LINE.

It may be sufficient to review briefly the steps by which Russia gradually arrived at the boundary which it is now proposed to disturb. By the Treaty of Jassy, 1792, she was confirmed in the possession of the Crimea, Kuban, and part of Bessarabia—the Dniester forming a portion of her boundary in this quarter. By the Treaty of Bucharest in 1812 the Pruth became the boundary of Russia, who thus became possessed of that portion of the north bank of the Danube intervening between the junction of the Pruth and the Black Sea. This, however, was not sufficient to give her all that her ambition aimed at; and, by the Treaty of Adrianople, as already stated, Russia obtained possession of the islands formed in the delta of the river, which afterwards enabled her to usurp the complete control and dominion over the traffic of the river.

In now rectifying this abuse, the Austrian negotiators propose to restrict the territorial possessions of Russia as little as possible. They do not go back to the time of the Treaty of Jassy, and replace the boundary at the Dniester; but they take a middle course, which cuts Bessarabia in two unequal portions. This proposed line (marked in dots upon the map) is to commence at the fortress of Chotym, on the Dniester, and follow a line of mountains running in a south-eastern direction to Lake Sasik. The gore-shaped strip of land thus cut off and lying between the chain of mountains just spoken of, and the Pruth is to be added to the Principalities, under the suzerainty of the Porte. It is said that the portion of territory thus to exchange hands is, intrinsically, of no great value, but in point of policy its possession will be of the highest importance. Chotym was the northernmost fort of the Ottoman empire down to the end of the eighteenth century. We understand that the Russians may endeavour to retain this important fortress, but this could not possibly be allowed—it being the key to Moldavia.

It has been suggested by the friends of Russia that to secure the navigation of the Danube from Russian control, it would be sufficient to have drawn a line from the junction of the Pruth with the Danube at (say) Reny to near Lake Sasik, and it is supposed that some proposition of this kind was contained in the Russian terms sent by Count Stackelberg. But the idea carries absurdity upon the very face of it, and could not be listened to for a moment. This plan would still have left Russia in possession of one bank of the Pruth, and consequently of the right of outlet into the Danube; and it would also have left the capital of Moldavia (Jassy) in dangerous proximity to the Russian frontier, which, under the arrangements proposed in the Austrian ultimatum, will not be the case.

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THOSE who really look in earnest for consolation may find it at every turn. We are not carrying our Table Talk into the pulpit. Wednesday's papers announce that the public loses for ever the Parliamentary services of one well-known author, and is about to acquire the Parliamentary services, for the first time, of another well-known author. If Edinburgh loses Mr. Macaulay, Midhurst gains Mr. Samuel Warren. The brilliant historian and essayist is about to retire from the fever of politics and the violence of party into literary life. The lively novelist is about to surrender the pay of Mr. Publisher Blackwood for the chance of office and the storms of Parliamentary success. If we lose in Mr. Warren by this change other novels like "Ten Thousand a Year," we are likely to gain at an earlier date other instalments of that history which Whigs condemn as too Tory in its tone, and Tories denounce as too Whiggish in its feeling.

By the way, there is some humour in the reason assigned for the long delay that has occurred between the publication of the first portion of Mr. Macaulay's "History" and the appearance of the second. The author is so much enamoured of his model hero, it is said, that he is unwilling to kill King William. He cannot part with his hero.

Men of mark are commenting freely on the admirable concluding article in the *Times* on Mr. Macaulay's "History." The critic has arrested two pompous interments done with as lavish an expense of theatrical effect in words as the Duke of Wellington's funeral was lavish in blacks and undertaker's trappings. For the sake of a pointed paragraph Mr. Macaulay has buried Lord Chancellor Jeffreys in the Tower, by the side of the Duke of Monmouth—the oppressor by the oppressed.

> Drop upon Fox's grave the tear,
> 'Twill trickle to his rival's bier.

But, alas! Jeffreys was never buried in the Tower. The Judge of the Bloody Assizes sleeps securely in another quarter of this vast city. Then, for the sake of effect, Mr. Macaulay has led his readers to believe that the great Duke of Schomberg was buried with Kingly state in all funeral pomp, in the Abbey at Westminster, and that the order for his interment was that afterwards adopted in our own time for the great Duke of Wellington; just as he tells us that the order pursued in giving the thanks of the Commons to the Duke in 1814 was based on that which was adopted in giving the thanks of the House to the Duke of Schomberg. Alas for historical truth! Schomberg was buried beneath a nameless stone in the Cathedral of Dublin; and owed his monument and epitaph, not to the "hero William," but to that poor retainer of Temple's whom he taught—and it was all he did for him—to cut asparagus in the Dutch fashion.

We are sadly in want of a life of Sir Harry Vane the younger. We have nothing of the kind that is even ordinarily decent in that way. Yet Vane was one of those men who filled a most conspicuous, and often a secret but influential, part in the history of England between 1640 and 1660 a memorable period in the story of this country. We have been induced to make these remarks after reading the will of this "brave Senator"—a curious document, to which no allusion that we can find has hitherto been made, and which (through the courtesy of the Rev. James Raine, jun., an excellent antiquary himself, and son of the learned historian of Durham) we are enabled to print for the first time:—

WILL OF SIR HENRY VANE THE YOUNGER.

In the name of God amen. I Henry Vane of Raby Castle in the county of Durham Esqr being at present in perfect health and memory (blessed be God) doe make this my last will and testament. 1. I bequeath to my most deare mother the Lady Vane the case of diamonds which incloseth the King of Sweden's picture desiring if shee please to put therein my father's picture and she to weare it in remembrance of me. 2. I bequeath to my sister Frances Vane the two lesser stones of the King of Denmarke's ring which hee gave me desiring shee will pardon the littleness of the guift. I give her alsoe a bond which I have of hers to me among my papers for about twelve pounds sterlinge. 3. I give unto my second sister Alice Vane the middle great stone of the aforesaid ring as alsoe the King of Sweden's picture which is in the case shares both now in the hands of Mr. William Stanley. I desire alsoe that my red trunck may bee given into her hands wherein are all my papers. 4. I bequeath unto my sisters Dorothy Vane Anne Vane and Margaret Vane my little black cabinett to divide the things amongst them. 5. I bequeath unto my brother Thomas Vane the embroydered orange velvett saddle and bridle which the King of Sweden gave me. 6. As for my mad Owen I desire that as hee hath served me very diligently and well hee may bee rewarded out of my estate. And in witnesse that this is my true will and testament I hereto sett my hand and seale this second June ann Oppenhagen in the yeare one thousand six hundred and sixty [illegible] H. VANE

[Administration granted to Dame Frances Vane widow 11 Sep. 1662.]

Why does Sir Henry Vane designate himself as Henry Vane, Esq.? Perhaps Garter, or York, or Rouge Dragon will favour us with a line on this subject?

James Hope Scott, Esq., who married the only surviving grandchild of Sir Walter Scott, is adding a Roman Catholic chapel to the poet's romance in stone and lime. We are sorry for this. We regret to see any addition to a building so classic as Abbotsford, or any alteration therein. It should be kept intact. Mr. Hope Scott should look upon it as a kind of public trust. This, however, is, perhaps, asking too much. The alteration is suggestive:—

> What's property, dear Swift? You see it alter
> From you to me, from me to Peter Walter.

"I never," said Lord Grenville to Mr. Rogers, the poet, "look on Lord Verulam without saying to myself, somewhat vindictively, that is the booby who pulled down Lord Bacon's house at Gorhambury."

The new number of the *Quarterly* contains an article on "Table Talk," not without value in its way, but heavy in point of execution. Such a subject should be treated with a learned and yet a light hand. One assertion it contains is amusing a large circle of diners-out. "Conversation," we are told, "is at a low ebb in England at present." Conversation at a low ebb in England! Not it.

> What things have we seen
> Done at the [illegible] heard words that have been
> So numb, and so full of subtle flame,
> As if that every one from whence they came
> Had meant to put his whole wit in a jest.

Yes, and did it. Some one asked, probably alluding to the writer of the article, "Is conversation better in Galloway?" while another added (alluding to the editor), "Does the *Quarterly* test England by Norfolk north of Norwich?"

The executors of Mr. Rogers, the poet, have now definitively arranged that the whole of his effects to be sold shall pass under the hammer of Messrs. Christie and Manson.

There is no truth in the rumour that Mr. E. T. Smith, the lessee of Drury Lane, is about to remove the "Vivat Regina" from the playbills of his theatre, though his refusal to allow some of his company to play at the palace of his Sovereign gives some colour to the talk of the town.

Poor Joseph Haydn—whose miserable pension we were the first to announce to the public—is no more. He died on the 17th inst. His works are useful, but they have at least their full share of reputation. His completion of Beatson, called the "Book of Dignities," is not up to the mark of Beatson; and yet Beatson was in want of a new editor—one who would collate his appointments by letters patent and the *London Gazette*. All who love history for truth's sake must know how much depends at times on the difference of a single day—how an assertion may be refuted by a date, as an accusation by an alibi.

---

A Reformatory School for Essex was decided on at a meeting held on Monday, presided over by the Sheriff, and attended by the most influential gentlemen of the county.

The engineers sent out to survey the Isthmus of Suez have returned to Alexandria, and generally report favourably on the practicability of the canal to join the Mediterranean and Red Sea.

PRIVATE JOHN PENN, 17TH LANCERS, WITH ELEVEN HONOURS, FROM THE CRIMEA.
FROM A PHOTOGRAPH BY MAYALL.

## A CRIMEAN HERO, WITH ELEVEN HONOURS.

IT has been well remarked of this brave soldier, Private John Penn, of the 17th Lancers, that "his honours for military services are equal to any in the British Army"—a distinction which certainly entitles his portrait to a place in our gallery of Crimean heroes

The eventful career of John Penn presents a noteworthy instance of devotion to a noble object

He was born in the 14th Regiment of Light Dragoons, and was left an orphan before he was eight years of age, by the death of his father, Farrier-Major Penn. At fourteen he was taken into the service of Lady John Bethell; but, not content with that situation, and his whole wish being for a dragoon's life, he entered the cavalry as soon as he had attained the standard height.

This excellent soldier has seen eighteen years' service. He was through the Afghanistan campaign, under General Pollock, for which he received the Cabul medal. He was also through the Sutlej campaign, under Lord Gough. He was in the memorable action of Moodkee—was then severely wounded, and received a contusion on the head from the blow of a sponge staff from a Sikh artillery man. In the capturing of the guns he was unhorsed, and was found in the field next morning by a reconnoitring party, the poor fellow having lain there all night in great suffering. His wounds were dressed, and within two days of the battle of Sobraon he rejoined his regiment, and took part in that action, for which he received a clasp. He was with the army at Lahore, and until the close of the war; he was again in the field at Ramnuggur; he was also at the forcing of the passage of the Chenab. He was next at the brilliant attack of Soodoolapore, where the Sikhs were driven from their position on the Chenab. He was also in the action of Chillianwallah, 1849. He fought at Goojerat, when the Sikhs were again defeated, which was the last battle fought with that race of Indians. The 3rd Light Dragoons were then ordered to England, which they reached in July, 1853. Penn had not been many days at home when, hearing that the 17th Lancers were ordered for Turkey, he volunteered into that corps; and on the 23rd of June, 1854, he embarked at Portsmouth with a detachment of the 6th Inniskillings, 18th Light Dragoons, 17th Lancers, and fifty-seven horses, under Captain the Hon. Hercules Rowley, the present Lord Langford. They arrived at Varna in July following. On the 1st September Penn proceeded to the Crimea. He was in the action of the Alma; he was with his troop at Mackenzie's Farm when the Russian baggage and stores were captured; and in the Light Cavalry charge of Balaclava, for which he received the medal for distinguished conduct in the field. He speaks very highly of the lance, a weapon of which the Russians are very much in dread. Unfortunately for many of the brave fellows of his regiment, they had their poles shattered by the enemy's showers of grape-shot. On their coming up to the Russian guns, they were ordered to charge, when he made a point at a gunner, which took effect—the lance going through his body. He could not extricate it, as he was at a gallop. Passing through the enemy's guns, the 13th Light Dragoons and 17th Lancers were obliged to open out, when our hero came in contact with a Russian officer (a Hussar); he made for him, and the officer wheeled his horse about, for the purpose of making a bolt; he, therefore, took a favourable distance on the officer's left (both at the time being at a gallop), when he delivered cut six, which instantly dismounted the officer, whose head was nearly severed from his body. At the same time his horse halted, and on dismounting, to his grief, he found that his horse had received a ball in the near shoulder. He then took a view of the Russian officer. he must have died in an instant, as the body never moved after falling on the ground; he cut his pouch-belt off, and took his sword, and a clasp knife, which he wore in a belt round his waist. This gallant affair was witnessed by several of Penn's comrades. He returned with the second line, composed of the 4th Light Dragoons, 8th Hussars, and 11th Hussars, keeping a sharp look-out on their front, flanks, and rear, until they had forced a passage through the Russians, who had closed upon them. By perseverance they forced a passage, after a few gusrds with the Russians, Penn using his trophy—the Russian officer's sword. The seventh guard he took with a Russian, the point of the sword broke about ten inches off. He luckily returned with the remnant of his regiment. The ball was speedily extracted from his horse, which recovered, and the animal stood the winter, and was doing duty when he left the Crimea. Penn was at the battle of Inkerman, for which he received a clasp. He was never ill during the whole of the season, although much exposed. He was always employed on general duty. On account of the heat of the sun in July, when he was on outpost duty at Baidar, his head became affected, which caused him to be invalided home. This arose from his having his right collar-bone fractured, and the lower jaw broken by a horse falling on him when he was at field-drill in India in 1852.

## PITCAIRN'S ISLAND.

AN interesting communication has just been received from this place. The inhabitants were all well on the 14th September, 1855, the date of the Chaplain's letter to the Rev. T. B. Murray. They had heard of the death of the Czar Nicholas; but, as no newspaper was on board the vessel which conveyed the intelligence, they were still in the dark. Though they had suffered some anxiety from a poor yam harvest, they had a good stock of sweet potatoes to turn to, and the "pinch of the year" was past. They were awaiting the measures of Government for their transfer to Norfolk Island, some having relinquished house-building in expectation of this important change. It appears, by accounts from that Sir W. Denison, Governor of New South Wales, had, in September last, under instructions from home, dispatched a vessel to Pitcairn's Island, with a view of making arrangements. It was intended that, on her return to Sydney, a transport should be fitted out, for the purpose of conveying the islanders to their new and beautiful abode

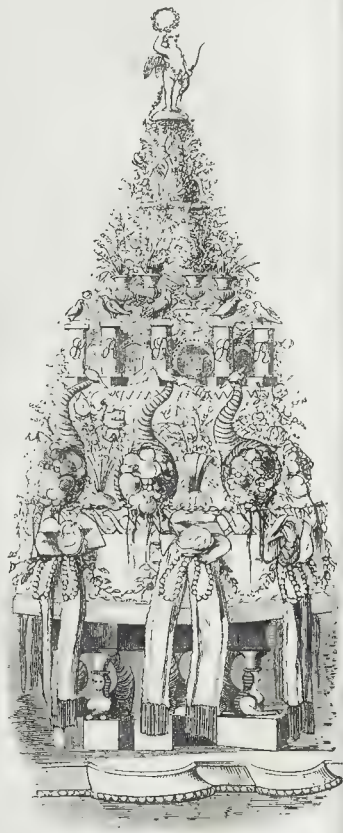
The accompanying view of the Island was sketched from H.M.S. *Amphitrite*, in March last.

"We arrived (says a Correspondent) at Valparaiso, on the 19th March, after a long and tedious cruise from San Francisco, touching at Sandwich and Society Islands, also Pitcairn's Island, on our way down. While we were at the Sandwich Isles, King Kamehameha III. died, at the age of forty-one, of excessive drinking

"We arrived at Pitcairn's Island on the 17th February. The islanders came off in a whale-boat, and seemed glad to see us. The Captain and officers spent the day on shore, and were most kindly treated. In the evening we went to the school-house, where all the people assembled, sung very nicely, and finished with "God Save the Queen." We took a cow and several other useful presents to the islanders. They now number between 180 and 190, and talk about removing to Norfolk Island this year: but I think the greater proportion will remain at Pitcairn's, being much attached to it. It is, however, impossible they can all remain there much longer, it being only five miles in circumference, and a great deal of the island is too mountainous to cultivate. They live principally on yams and sweet potatoes; which they till with great success, theirs being the finest I have seen in the Pacific. Animal food they indulge in only on Sundays. On February 16th we left, and arrived at Valparaiso the 19th March, having gone over upwards of 104,000 miles during the commission."

## MARRIAGE OF SIR ROBERT PEEL AND LADY EMILY HAY.

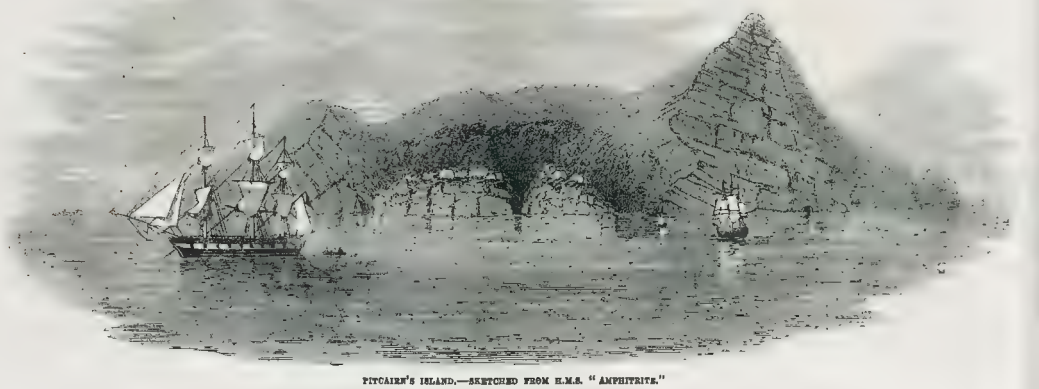
WE this week engrave the superb Wedding Cake prepared for this memorable occasion. It was placed in the centre of the table with the wedding collation, in the Waterloo Gallery, at Apsley House. The cake was six feet in height, and was perhaps the largest piece of confectionery on record. It was formed by three steps; the first supporting vases of bridal flowers, with cornucopiæ of fruit between them; the next gradation supported ornamental pillars; and the third, which was garlanded by wreaths, displayed shields of the Tweeddale and



MARRIAGE OF SIR ROBERT PEEL AND LADY EMILY HAY.—THE BRIDAL CAKE.

Peel arms, with their respective family mottoes. A Corinthian pillar, rising above all, supported a large figure of Cupid, with his bow unbent, and holding a garland of flowers. This cake was a triumph in the Italian art of confectionery. It was modeled, as well as made, in the Duke of Wellington's own establishment, by M. Carlo Brancetti.

Next week we shall engrave the magnificent scene of the Waterloo Gallery during the wedding collation.



PITCAIRN'S ISLAND.—SKETCHED FROM H.M.S. "AMPHITRITE."

NEW MUSIC-HALL, EVANS'S HOTEL, COVENT-GARDEN.

## NEW MUSIC-HALL IN COVENT-GARDEN.

A VOLUME of very pleasant gossip might be written about the notabilities who have lived in Covent-garden within the last two centuries; indeed, it has been a locality of great interest for six centuries past, or when it was the garden of the Abbey of St. Peter, at Westminster—whence Convent, corrupted to *Covent*, Garden, which name occurs in a deed of the ninth year of the reign of Elizabeth. All our London antiquaries and topographers have found this "Garden" full of anecdotic sweets, which they have scarcely known how to leave, more especially as it has been for ages the great focus of town pleasure; and from its contiguity to the Cockpit and Drury-lane Theatre, it became early surrounded with taverns, at which clubs were held, and all the phases of gay life were recklessly indulged in. We must, however, beware of these attractions; for our present purpose is merely to glance at the former fortunes of a small space, at the north-western angle of "the Garden," before we describe the very elegant improvement which forms the subject of our Illustration. In this north-west angle, then, lived Sir Kenelm Digby, who was here much visited by the lovers of philosophy and mathematical learning. Aubrey, in his "Lives," thus distinctly points out the site of Digby's House:—

Since the restoration of Ch. II. he (Sir Kenelm Digby) lived in the last nire house westward in the north portion of Covent Garden, where my Lord Denzil Holles lived since. He had a laboratory there. I think he dyed in that house. Sed qu.

The mansion was subsequently altered, if not rebuilt, for the Earl of Orford, better known by the name of Admiral Russell, who, in 1692, defeated Admiral de Tourville, near La Hogue, and ruined the French fleet. The house is built of fine red brick; and, before recent alterations, the façade was thought to resemble the forecastle of a ship. The grand staircase is formed of part of the Admiral's vessel, which he commanded at La Hogue: it has handsomely-carved anchors, ropes, &c., and the coronet and cipher of Lord Orford. Subsequently lived here Lord Archer, who married the daughter of Mr. West, whose fine library, prints and drawings, coins and medals, occupied Paterson the auctioneer nine weeks to dispose of. After the sale, the house was opened as a family hotel, in 1773, by one David Lowe, this being the first establishment of the kind formed in London; and when Mrs. Hudson succeeded as proprietor, about 1790, she advertised "Stabling for one hundred noble men and horses." The premises were next noted as "Joy's Hotel," when the large dining room was called "the Star," from the number of men of rank who frequented it. The eccentric Duke of Norfolk, and his friend Captain Morris, were among the latest visitors of this class. The upper portion of the mansion was subsequently let in suites of chambers, and the basement was next let to Mr. W. C. EVANS, the comedian, of Covent-garden Theatre, by whom the great dining-room was converted into a "singing-room." Evans next became tenant of the whole of the premises, and continued so until 1844, when he retired in favour of Mr. Green, the present proprietor.

MADAME LOLA MONTEZ.—(SEE NEXT PAGE.)

In the rear of the premises was a garden; and here was formerly a small cottage, in which the Kembles, when in the zenith of their fame at Covent-garden Theatre, occasionally took up their abode; and here, we are informed, was born the highly-gifted Fanny Kemble. It is interesting to recall Sir Kenelm Digby and his grave friends, with their empirical dodges and Digby's "Sympathetic Powder" fame, airing themselves in this identical garden, reduced in our time to a receptacle for a few sooty shrubs.

Meanwhile the great "singing room" answered well its fatal purposes; until the character of the entertainment, by the selection of music of a higher class than hitherto, brought so great an accession of visitors as to induce Mr. Green to extend his premises. He has accordingly built upon the site of the old garden (Digby's garden) an extremely handsome Hall, to which the former "singing-room" forms a sort of vestibule. The latter is hung with a collection of portraits of celebrated actors and actresses, mostly of our own time, which Mr. Green has collected; and a more appropriate gallery he could not have assembled for the gratification of his visitors.

The new Hall has been built from the designs of Mr. William Finch Hill, and is a very meritorious work. The proportions of the room, looking at it in section, is nearly square, being about 33 feet high, and as many wide: it is about 72 feet long from end to end; and with the old room, through which it is approached, the Hall is 118 feet in length.

This apartment is built in a bold, handsome style, having a coved ceiling, divided into compartments; four of the centre—flat, being for ventilation—are filled with an elegant open pattern; the others are to be filled with gilded arabesque ornaments.

Great brilliancy of effect is produced in the room by ten rich cut-glass gaseliers, or lustres for gas, eight of which have ten lights each, and two over the orchestra fifteen lights each; the entire number of gaslights being 120. There is likewise a range of jets all round the top of the cornice, which gives great lightness to the ceiling. The glass gaseliers, which are very superb, were designed and manufactured by Messrs. Defries and Sons, of Houndsditch, in the short space of six weeks, and fixed within two days; they are hung at such a height as to diffuse an abundant flood of light without fatigue to the eye. It is altogether a very successful specimen of gas lighting.

The length of the Hall is divided into four bays by fluted columns supporting a fine bold entablature and cornice. The bays on the left of the entrance lead to a recess, or aisle; those on the right have a private gallery, which is not used at present: beneath this are offices for refreshments, conveniently placed on a level with the Hall. Around the sides of the room, upon the floor, are richly-ornamented open plates for the admission of fresh warm air, the vitiated being driven through the pierced panels in the ceiling, and thence through the louvres in the roof. The columns between the nave and aisles are of Bath stone, fluted with wreathed Ionic caps and Bath-stone entablature. Over each of the eight pilasters there are figures modeled in plaster, representing Poetry, Drama, Music, &c. The columns upon the orchestra (which is

formed at the end of the room), as well as the moulding round the various arched recesses, are executed in scagliola. Colour on the white of the ceiling and walls is to be brought to aid the effect, in connection with which several surfaces are left plain for arabesque ornaments.

Much credit is due to the architect, Mr. Hill, for his beautiful design of the Hall, and to the contractor, Mr. W. Jackson, who raised the building in the short space of four months.

We have already referred to the improved character of the music sung in this Hall; and it is a point not to be lost sight of in introducing the new structure to the notice of the reader. In confirmation of what has been stated we may refer to a printed Selection of Music which is nightly sung here: this includes glees, madrigals—some dating three centuries back, thus escaping many a fine old melody from its antiquarian distance to reform the popular taste. The Selection comprises also several of Sir Henry Bishop's finest compositions, including some of those old English melodies which have, for some time past, been in course of publication in the ILLUSTRATED LONDON NEWS; besides pieces from foreign operas, and songs and ballads by living composers; altogether evincing on the part of the proprietor and director of the establishment a wish to raise the standard to a point of excellence which it is very desirable to keep in view in our public amusements.

## MADAME LOLA MONTES.

A CORRESPONDENT has favoured us with the accompanying Sketch of Madame Lola Montes, as she recently appeared at the Victoria Theatre, in Sydney. By the *Sydney Morning Herald* we learn that the lady left that capital for Melbourne in the *Waratah*, whither she seems to have been pursued, under the following circumstances, which are detailed in a letter from her solicitors at Sydney:

Madame Lola Montes was unwise enough to engage a company of very inferior actors in Sydney at enormous salaries. She made large advances before starting to everyone of them; paid their passage money from California (where they were nearly all in debt) to Australia; and hoped, for her immense outlay, she would have received at least efficient assistance; but this company of choice performers not only loaded her with insult while they remained to live upon her, but refused, one and all, on their arrival in Sydney, to perform their allotted duty; and when she (not unnaturally irritated by such conduct) proposed to them, through us, to cancel their agreements on something like reasonable terms, they mustered on the performance of the very night which they had been the first to break, and made claims amounting to about £12,000. When she refused this *moderate* demand they obtained orders for her arrest in four or five separate actions, for sums amounting to between £3000 and £4000—only one of these (a claim for £100) was lodged in time for a warrant to be issued, and, armed with that, one Mr. Brown came on board Madame Lola Montes tendered £900, which she offered to deposit to meet this claim, but Mr. Brown refused it, unless she would pay the whole of those demands, for which he held no warrants. She then refused to leave the vessel, for which act we are willing to be responsible.

## *NATIONAL SPORTS.*

UNTIL the acceptances are announced it is idle to speculate much on the chances of any of the horses. We may, however, observe that, while Mr Topham considers Ellerman at 2lb. better than Pandango, Admiral Rous calculates the difference between these by "cracks" at 3 lb. In their estimate of Scythian the two are entirely disagreed, as Rifleman is handicapped on equal terms with him at Epsom, and is made to give away his year at the Chester Cup. In fact, Scythian (7 st. 12 lb.) is so unaccountably well in for the Chester Cup, that if he is in form we do not see what is to stop him from repeating his last year's victory, when he had only 8 lb. less to carry. We look on the present position of Coronet, 8 st., as more full, for Scythian is a wonderfully good horse, and has been very carefully dealt with since he left Whitewall for Findon; and, if we are to accept Mr. Topham's notion that 26 lb. can bring him and Coronet together, the latter ought to be almost sure of the Derby. The Chester Cup only 7st. 4lb., as the handicappers consider that he tried hard towards the close of the season. Quince (6st 8lb.) and Mislap (6st.) are both very lightly treated; but Indian Warrior is worthless as a finisher under any weight. Yellow Jack is slightly mentioned for the Two Thousand Guinea Stakes, in which he will probably meet Fly-by-Night, Porto Rico, Milton, &c. It is thought that Bird in Hand may be sent for this race, and if there be any truth in the notion that he cannot stay a distance he will be much better suited than in the Derby. Lycurgus, it is said, still taking gentle exercise in his gallant owner's park, whence he will remove shortly to Thomas Dawson's, at Middleham. Joseph Dawson's string of twenty-nine, at Insley, is again headed by old Rataplan (who now numbers forty-two winners of 87,000*l.* in stakes, nine and twenty-nine defeats), Corobus, who broke down so badly after Goodwood, Capucine, and the Admiral of the White, &c. In the latter we recognise the Lady White colt, who was bought by Mr. Lawley for 14 gs. at the last Rawcliffe paddock sale.

Red Deer is to be sold at Tattersall's on Monday; and Polestar will, we hear, be shortly brought to the hammer there. A newly-made mound of earth, shaded by two yew trees, just as you enter the old churchyard at Ragdale, marks the spot where lies the once famous horse, and reads a sad moral to those who will pervert such a noble amusement as the turf to mere business purposes.

Daniel O'Rourke's foals are beginning to dot the paddocks at Sledmere, where the little chestnut is now completely superseded by Andover. Mr. Sadler has had the first great breeding loss of the season in his foal by Surplice, out of Ferina, whose own brothers, St. Hubert and Hunting Horn (the latter of whom was as big in his yearling days as his brother was at three years old), averaged 360 gs. a piece as yearlings.

The only steeplechase fixture for next week is the Cheltenham Amateurs on Wednesday, a very different style of meeting to those which we were wont to have here, when Jim Mason was in the heyday of his riding fame, and Captain Becher had not quitted the saddle for a place on the railway. Mr. Topham's Liverpool Steeplechase weights are headed by Boxrton, 11 st. 10 lb.; and Seaman, 10 st. 2 lb., is not badly in. Deep sticky ground has been sadly against the hares of late, but the thorough pour-down so completely disheartened the dogs in their turn at a recent meeting that only three out of forty courses resulted in a kill. The public meetings for next week commence with Workington on Monday and Tuesday; followed by Thirsk, South Hinksey, and One Hundred Guineas at Newmarket on Wednesday; "Cound and Longner" on Tuesday and Wednesday; Ardrossan on Wednesday; and Eccles on and Market Drayton on Thursday.

It is rumoured that Mr. Richard Sutton has, in consequence of the cession of a considerable part of his property to him by the present Baronet, repurchased Quorn-hall from its new owner. It is pleasant to think that its time-honoured stables and kennels are not to be degraded into mere farm-buildings, and we trust that their hard-riding and popular owner may continue the master of the Quorn hounds for many a season to come. We do not hear of any particularly fine runs; and the season has, so far, been a bad one for scent. The Braham Moor Hounds can perhaps claim a run of the season, which occurred early in December, when they ran through the heart of both York and Notts country, and killed in Mr. Willoughby's. The Pytchley have, we believe, already had three runs with their old friend, the Harlestone Heath fox, who seems to have as much stamina as the Heythrop one, with whom even Jem Hills confesses that he cannot cope. The Badminton Hunt are about to present a testimonial to their master, Lord Hawke, while the existence of the Southwold Hunt beyond this season is considered rather problematical. There is a great want of covers to hold a wild fox in that otherwise superb piece of country called "East and Middle Marsh," extending from South to Alford; and subscriptions are also said to come very slowly in. Mr. Henley Greaves took this country the season after he left the Cottesmore, but was soon fain to beat a retreat

DOD'S PEERAGE, BARONETAGE, AND KNIGHTAGE FOR 1856.—The new edition of this established work has just appeared, with a great number of particulars respecting many of the Peers who had hitherto been briefly noticed, and all the changes and latest facts are recorded up to the close of the year 1855. The long and unexampled services of naval and military officers against the Russians have led to a considerable augmentation of the Knights of the Bath. The casualties and deaths by disease in the course of the same conflict, together with the constant promotions, have led to an amount of minute changes throughout the whole volume. Civil services and political changes have also led to Knighthoods, Baronetcies, and additions to the Privy Council; and the unceasing influence of births, deaths, and marriages, occurring among seven or eight thousand individuals, has been duly noted in the edition for 1856. By this means Mr. Dod's new volume is recommended to a very large class of persons, and in these merits he has the best assurance of public preference.

Switzerland still continues to be visited by shocks of earthquake. On the afternoon of the 5th sharp shocks were felt at Brigge, in the Upper Valais, at Aarau, and at Interlacken; and in the night of the 7th a shock was felt at Locle.

## *COUNTRY NEWS.*

THE MEMBERS FOR SHEFFIELD. The following resolution was passed at a private meeting held last week in the Council Hall, Sheffield: "That it is the duty of the Members for Sheffield to call a meeting at the present momentous crisis if the representatives of large constituencies would meet the electors and non-electors; and they respectfully invite their members, Samuel Arthur Roebuck, Esq., and George Hadfield, Esq., to attend a public meeting of their constituents before the assembling of Parliament, that their opinions on the present state of the war may be given; and they trust the same will be peculiarly agreeable to Mr. Hadfield, as it will enable him to redeem his pledge of meeting his constituents every year." Mr. Hadfield says in reply —"Your favour has just reached me, after my return from Scotland with a severe cold, and I am under an engagement to leave for London on Monday, so that I have not a day I can command before the commencement of the Session. My Parliamentary duties require me to be in attendance, as most important business is expected. The welcome news has, however, reached us by telegraph that Russia has accepted the terms of the Allies, which I have no doubt you will consider as put an end to all discussion on the war." Mr. Roebuck's reply has not yet been published

SABBATH DEFENCE ASSOCIATION. One of the largest meetings ever held in Liverpool took place at St. George's-hall on Tuesday, at noon, under the auspices of the Sabbath Defence Association. The admission was by tickets and so great was the number issued that a similar meeting had to be held simultaneously and for the same object, in the Concert-hall, Lord Nelson street. T. B. Horsfall, Esq., M.P., presided at St. George's-hall, and A. Hodgson, Esq., at the Concert-hall. The meeting at the latter place was addressed by the Rev. Hope-hall and Dr. M'Neil, chiefly in opposition to the proposed motion of Sir John Shelley for throwing open the National Gallery, British Museum, &c., on Sundays. Resolutions to the effect that the views of the promoters of the meeting were unanimously adopted, and a memorial was agreed upon for presentation to the Queen.

GREAT NORTHERN RAILWAY.—A serious accident had nearly happened on the Great Northern line last week. The first up one of the wheels of a first-class carriage of the express-train broke. In the carriage were General Sir William and Lady Herries, with their son, and two other passengers. The carriage was taken off the line, the flange broken, and the carriage then thrown with great violence on its side, and dragged a considerable distance. Providentially the lives of the passengers were preserved, and the presence of mind on the part of the greatest hazard, scrambling out of the window, and by his exertions the train was stopped. The passengers were then extricated through the upper window, and proceeded by the next train on the line, at the Colonel Smyth, M.P., was slightly bruised: none of the other passengers were hurt.

THE ATTEMPT TO POISON A WIFE.—Thomas Robson, who was remanded on Monday week by the Newcastle magistrates on a charge of having attempted to poison his wife, was brought up again on the 18th inst., when Jane Tempest gave further evidence, showing a motive for his atrocious act. She stated that she was twenty-seven years of age, and resided in the village of Acomb, near Hexham. She knew the prisoner by the name of William Wilson. She became acquainted with him about July, and continued to keep his company until the first week in November. He paid his addresses to her as her sweetheart, and expressed a wish to marry her. He represented himself as an unmarried man. His wife came to Acomb, and the acquaintance then broke off. She had no more interviews with him after his wife came to Acomb. The prisoner committed suicide after the assizes, charged with administering sugar of lead to his wife with a view to poison her.

QUEER DECISION OF A CLERICAL MAGISTRATE.—At Castle Eden the other day, in an assault case, the Rev. Mr. Park, in announcing the decision of the bench, addressed the defendant in the following manner:—"As the assault is proved, we will inflict a penalty; but we have the power to do so, but, if you refuse to do so, then we shall fine you for the assault!" —*Darlington and Stockton Times.*

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

As nothing officially has transpired in reference to peace with Russia, the operations in the Consol-market have not been on an excessive scale. In the absence of any movement from the Government, the public are disinclined to be operative, and unable to cause, we have had a slight improvement in the quotations. There has, however, in numerous parties in the City who feel a deep interest in the forthcoming Budget of Sir Cornewall Lewis, the Exchequer, and more especially in the plan which he may be adopted to meet the expenses of the war. In the event of an immediate peace, large outgoings will have to be met; and in very doubtful whether the Chancellor will build and the supreme wisdom of the Money-market. Several parcels of gold have this week been forwarded to France from the Bank of England; and the whole of the late arrivals from Australia and the United States have been taken for the Paris Mint. Scarcely any change has been reported in the current rates of discount. The lowest value in Lombard-street for sixty days' bills is 6*l.* per cent. On the whole, there has been much less pressure upon the market than for many weeks past.

There was a moderate business doing in national securities on Monday. The Reduced ranged from 92¾ to 92¾; Consols for Money, 92¾ to 92¾; Ditto, for Account, 92¾ to 93; New Three per Cents, 93¾ to 93¾; and the New Two-and-a-Half per Cents, 74. Bank Stock marked 210; Long Annuities, 1860, were 3 5-16; Di to, 1885, 18⅛; India Bonds, par; Exchequer Bills, par to 3*s.* dis.; Exchequer Bonds, 97¾ to 97¾. The business doing on Tuesday was rather extensive, and the quotations were on the advance. Bank Stock, 208½. Three per Cents Reduced, 93¼ to 93⅜; Consols, for Money, 93¼ to 93⅜; New Three per Cents, 93¾ to 93¾; Five per Cents, 113; Consols for Account, 93⅜ to 93; Long Annuities, 1860, 3 1-16; Ditto, 3¼; Ditto, 1885, 18⅜; India Bonds, par; Exchequer Bills, par to 4*s.* dis.; Exchequer Bonds, 97¾. On the following day the markets were very firm. Bank Stock, 209 to 210; Three per Cents Reduced, 93⅜ to 93⅞; Consols, for Money, 93¼ to 93⅜; Ditto, for the Account, 93⅜ to 93⅝; New Three per Cents, 93⅞ to 94; New Two-and-a-Half per Cents, 74; Long Annuities, 1860, 3⅛; Ditto, 1885, 18⅜; Exchequer Bills, 4*s.* dis. to par; Exchequer Bonds, 97¾. The dealings on Thursday were on the increase. Consols for Money ruled from 93⅝ to 93¾; Ditto, for Account, 93¾ to 93⅞; New Three per Cents Reduced, 94 to 94⅛; and the Reduced, 93⅝ to 93½; Bank Stock, 209 to 210½; Exchequer Bills 4*s.* discount to par; India Bonds, 3*s.* discount to par

There has been a fair amount shown to investment in most Foreign Bonds, but more especially in Turkish and Russian. Prices generally have further improved. We have had dealings reported in Danish Five per Cents at 103½; Ditto, Four-and-a-Half per Cents, 93; Dutch Four per Cents, 96¾; Ditto, Four-and-a-Half per Cents, 103; Ditto, Four per Cents, 20; Ditto, Deferred, 6; Mexican Three per Cents, 20½; Peruvian Four-and-a-Half per Cents, 74½; Ditto, 6; Russian Four-and-a-Half per Cents, 91¼; Ditto, Small, 90¾; Ditto, Deferred, 83; Spanish Certificates, 17; Ditto, Passive, 4; Spanish Three per Cents, 40½; Ditto New, Deferred, 22¾; Turkish Six per Cents, 99 to 99½; Ditto, New Scrip, 5 to 14 dis.; French Four-and-a-Half per Cents, 93¾; Four per Cents, 86¾ 87; Dutch Two-and-a-Half per Cents, 64½; Ditto Four per Cents, 95¾; Portuguese Four-and-a-Half per Cents, 38; Venezuela Four-and-a-Half per Cents, 27; Brazilian Five per Cents, 100; Greek, 23; Portuguese Converted Certificates, 45.

The wonderful success of the various Joint-stock Banks, as shown in the half-yearly reports lately presented to the public, has induced numerous purchases of shares in the Australian Investment, Land, and Banking Company, for delivery. Australasian have realised 52¾; Bank of London, 60; City, 67; London Chartered of Australia, 17¾; London and Westminster, 49½; Oriental, 41; Provincial of Ireland, 5¾; South Australia, 39, ex div.; Union of Australia, 73; Union of London, 32¾, ex div.

Although the demand for Miscellaneous Securities has been less active, prices almost generally have ruled firm. Canada Land Company, 94 to 96; Ditto, Bonds, 102¾; Crystal Palace, 13⅝; Ditto, Debentures, 87; Ditto, Government Six per Cents, 107¾; Ditto, Four per Cents, 95; English and Australian Copper-Smelting Company, 14; General Screw Steam Shipping Company, 2¾; Hungarian, 67; Metropolitan Gas, 1¾; Peel River Land and Mineral, 2¾; Peninsular and Oriental Steam, 63; Ditto, New, 13¾; Victoria Dock, 10¾; St. Katharine Dock, 85¾; Scottish Australian Investment, 2¾; Van Diemen's Land, 16¾; Victoria Government Stock Certificates, 102; Kent Waterworks, 78¾; West Middlesex, 89¾ ex div.; Exeter Telegraph, 2*l.*

All Railway Shares have been in good request, and prices generally have improved. The following are the closing official quotations on Thursday.

ORDINARY SHARES AND STOCKS.—Aberdeen, 24¾; Ambergate, Nottingham, and Boston, 4; Bristol and Exeter, 85; Caledonian, 67¾; Chester and Holyhead, 12¾; East Anglian, 1¾; Eastern Counties, 8¾; Edinburgh, Perth, and Dundee, 21; Great Northern, 96; Ditto, A Stock, 85¾; Great Southern and Western (Ireland), 104¾; Great Western, 64¾; Lancashire and Yorkshire, 81¾; London and Blackwall, 6¾; London and Brighton, 98; London and North-Western, 96¾; London and South-Western, 87¾; Manchester, Sheffield, and Lincolnshire, 37¾; Midland, 76¾; Newcastle and Berwick, 47¾; Norfolk, 4¾; North British, 81; North-Eastern—Berwick, 73½; Ditto, Exeter, 99¾; Ditto, York, 40¾; North Staffordshire, 10; South-Eastern, 61¾; Vale of Neath, 14.

LINES LEASED AT FIXED RENTALS.—London and Greenwich, 12¾ ex div.; London, Tilbury, and Southend, 11½ ex int.; Midland Bradford, 91¾; West Valley, 14.

PREFERENCE SHARES.—Bristol and Exeter, 93 ex div.; Caledonian, 94; Eastern Counties, Six per Cents, 11⅝; Edinburgh, Perth, and Dundee, 61½; Great Northern, Five per Cent., 118; Ditto, Four-and-a-Half per Cent, 102½; Great Western, Four-and-a-Half per Cent. 89; Ditto, Birmingham Stock, 90; Ditto, Chester Guaranteed Shares, 91; North-Eastern—Berwick, 90; Ditto, York, 81. S. Purchase, 81 ex div.; Oxford, Worcester, and Wolverhampton, 93; South-Eastern, 22¾; South Wales, 85; Waterford and Kilkenny, 2¾.

FOREIGN.—Antwerp and Rotterdam, 6¾; Bombay, Baroda, and Central India, 5¾ ex int.; Dutch Rhenish, 13 ex all; Eastern of France, 36¾; East India, 21¾ ex int.; Ditto, Extension, 1⅝ ex int.; Grand Trunk of Canada, 12 ex int.; Ditto, 10¾ ex int.; Great Indian Peninsular, 20¾ ex all; Great Luxembourg, 5¾; Great Western of Canada, 28¾; Ditto, New, 9¾; Madras, 10 ex int.; Namur and Liége, 6; Northern of France, 36¾ ex int.; Paris and Lyons, 47¾ ex int.; Royal Danish 20; Royal Swedish, 2¾; Ditto, Obligations, 2¾; Sambre and Meuse, 3¾; West Flanders, 3¾.

MINING SHARES have been in improved request. On Thursday Brazilian Imperial were 5 Ditto, St. John del Rey, 29; Llanrea, 7¾; Santiago de Cuba, 3¾; United Mexican, 4

The amount of business transacted in the Consol Market to-day has been very moderate, and prices have shown a tendency to give way. The Three per Cents for Money are 93¾ ⅞; Ditto for the Account, 94 to 93¾ ⅞ and 93¼; the New Three per Cents, 94¼; the Royal Bonds 97¾; the Reduced, 91¾. In the value of other securities very little change has taken place

## *THE MARKETS.*

CORN EXCHANGE, Friday, [illegible] The supply of wheat [illegible] to-day was moderate, and the demand for it was [illegible] extent up to our market this week [illegible] The show of samples in to-day's market was small and much [illegible] Barley was in a very [illegible] Ditto, Monday's decline in the quotations. [illegible] Of oats, the arrivals coastwise were rather [illegible] and to have found sales, low [illegible] were invariably [illegible] Of foreign corn, but [illegible] Hayley [illegible] prices were supported. Wheat, a very dull inquiry for malt [illegible] Barley, [illegible] quiet at Monday's decline. Oats, with a fair demand, [illegible] and fine were very dear.

*Arrivals this Week.*—English: wheat, 2 qrs; barley, 2730; malt, 3480; oats, 4190; flour, 7610; beans, 1000; and linseed, 11,180. Irish: wheat, 600; oats, 1160; flour, 1600 sacks. Foreign: wheat, 6400 qrs; barley, 2000; oats, 1000; flour, 1600 sacks.

*English.*—Wheat, 6sacks and Kent, red, 56s to 58s; ditto, white, 60s to 64s; Norfolk and Suffolk, red, 57s to 58s; rye, 48s; to 49s; grinding barley, 33s to 34s; distilling ditto, 34s to 36s; malting ditto, 40s to 42s; Lincoln and Norfolk malt, 70s to 80s; brown ditto, 65s to 68s; Kingston and Ware, 70s to 80s; Chevalier, 82s to 86s; Harlow and Hertford, 80s to 84s; Yorkshire feed oats, 20s to 24s; potato ditto 21s to 25s; Lincoln and Cork, 24s to 26s; ditto, white, 24s to 27s; Irish ditto, 23s to 25s; grey peas, 36s to 38s; maple, 38s to 40s; boilers, 40s to 42s; tares, 44s to 46s per quarter. Town-made flour, 70s to 75s; Suffolk, 52s to 54s; Stockton and Yorkshire, 50s to 54s, per 280 lbs. American flour, 30s to 42s per barrel.

*Seeds.*—Most agricultural seeds are to be had at rather [illegible] but the business doing in them is very moderate. Linseed and [illegible] sorts are dull and [illegible]

Linseed, English, crushing, 72s to 83s; Mediterranean, 71s to 78s; hempseed, 36s to 38s per quarter. Coriander, 20s to 21s per cwt. Canary, 60s to 70s per quarter. Red seed, 24s to 28s; white, 10s to 13s; tares, 6s. 6d. to 7s. 6d. per bushel. English red clover, 80s to 90s per quarter. Linseed cakes, English, 21*l.* to 21*l.* 10*s.*; ditto, foreign, 7*l.* 10*s.* to 8*l.* 15*s.*; rapecakes, 7*l.* 5*s.* to 7*l.* 10*s.* per ton. Canary, 60s to [illegible] per quarter.

*Bread.*—The prices of wheaten bread in the metropolis are from 10*d.* to 10½*d.* of household ditto, 8½*d.* to 9*d.*; and 4-lb. loaf

*Imperial Weekly Averages.*—Wheat, 70s 1*d.*; barley, 37s. 3*d.*; oats, 25s 7*d.*; rye, 38s. 6*d.*; beans, 40s.; peas, 41s. 9*d.*

*The Six Weeks' Averages.*—Wheat, 77s 6*d.*; barley, 39s. 4*d.*; oats, 25s. 10*d.*; rye, 41s. 6*d.*; beans, 42s. 7*d.*; peas, 43s. 3*d.*

*English Grain Sold last Week.*—Wheat, 101,406; barley, 118 7-8; oats, 36,939; rye, 61; beans, 1,662; peas, 1,971 quarters.

*Teas.*—The amount of business doing in our market is very moderate. Holders, however, are firm, and the quotations generally have undergone no change. Sugar.—The [illegible] Coffee.—Sales of most kinds have progressed slowly. In prices, however, very little change has taken place.

*Rice.*—Within the last few days more business has been transacted in this article, yet the operations are [illegible]

*Provisions.*—For nearly all kinds of butter we have to report a very inactive demand, and [illegible] rather lower prices must be submitted to. In bacon, very little is doing, and the quotations have given way 1*s.* per cwt. Most other kinds of provisions are a dull inquiry.

*Tallow.*—P.Y.C., on the spot, has changed hands slowly, at 56*s.* to 56*s.* per cwt.

*Oils.*—Linseed oil has declined 1*s.* per cwt., and is now on the spot. In other oils we have little to doing, on lower terms. Turpentine is heavy, at the late fall.

*Spirits.*—We have to report a very limited business in rum, at [illegible] Brandy is in fair request, but prices have downward tendency. In other spirits only a moderate business is doing

*Hops (Pocket).*—There is very little change to notice in the value of any kind of hops. The samples are good, and the demand is steady. Business in this week are 90 bales from Canterbury, Mid and East Kent pockets, 2*l.* 12*s.* to 3*l.* 10*s.*; Weald of Kent, 2*l.* 2*s.* to 2*l.* 5*s.*; Sussex, 2*l.* 0*s.* to 2*l.* 5*s.* per cwt.

*Cattle (Deptford).*—Tuesday, 15th; Goodwin, 4*s.* 8*d.*; Riddell, 16*s.* 8*d.*; Braddell's, 16*s.* 8*d.*; Lambton, 18*s.* 8*d.*; North Hetton, 18*s.*; South Hetton, 18*s.* 8*d.*; Tees, 18*s.* 8*d.* per [illegible]

*Metropolitan Cattle Market (Friday Morning).*—The supply of beasts on sale was limited, but in fair average condition. All breeds were very dull in sale, at Monday's currency. Although the number of sheep was moderate, the trade ruled heavy, at barely stationary prices. The few calves on offer moved off briskly, at an improvement in value of 6*d.* per 8 lbs. Pigs were not worth 6*s.* per 8 lbs. Pigs were very dull, and lower in purchase. Milch cows moved off heavily at from 21*l.* to 24*l.* each, including their small calf

Per 8 lbs. to sink the offal.—Coarse and inferior beasts, 7*s.* 10*d.* to 8*s.* 8*d.*; second quality ditto, 8*s.* 10*d.* to 9*s.* 6*d.*; prime large oxen, 9*s.* 8*d.* to 10*s.*; prime Scots, 8*s.* 4*d.* to 10*s.* 6*d.*; coarse and inferior sheep, 6*s.* 8*d.* to 7*s.* 4*d.*; second quality ditto, 7*s.* 6*d.* to 8*s.* 0*d.*; prime coarse-woolled sheep, 8*s.* 10*d.* to 9*s.* 4*d.*; prime Southdowns, 9*s.* 4*d.* to 9*s.* 8*d.*; large coarse calves, 6*s.* 8*d.* to 7*s.* 0*d.*; prime small ditto, 7*s.* 4*d.* to 8*s.* 0*d.*; large hogs, 5*s.* 8*d.* to 6*s.* 2*d.*; neat small porkers, 6*s.* 4*d.* to 7*s.* 0*d.*; suckling calves, 24*s.* to 28*s.*; and quarter-old store pigs, 20*s.* to 22*s.* each. Total supply: beasts, 6414; sheep, 13,360; calves 160; pigs 500 [illegible]

*Newgate and Leadenhall.*—[illegible] good, and the trade [illegible]

*Whitechapel.*—Inferior beef 3*s.* 6*d.* and fine 4*s.* 2*d.*; mutton 3*s.* 6*d.* to 4*s.* 6*d.*; [illegible] large pork, 3*s.* 4*d.* to 4*s.* 0*d.*; prime ditto, 4*s.* 2*d.* to 4*s.* 4*d.*; veal, 3*s.* 6*d.* to 4*s.* 8*d.*; inferior mutton, 7*s.* 8*d.* to 8*s.* 2*d.*; middling ditto, 8*s.* 4*d.* to 8*s.* 8*d.*; prime ditto, 9*s.* 0*d.* to 9*s.* 4*d.*; veal, 4*s.* 0*d.* to 5*s.*; small pork, 4*s.* 8*d.* to 5*s.* 0*d.* Rotherhithe [illegible]

GREAT NATIONAL STANDARD THEATRE, Shoreditch. Proprietor, Mr. JOHN DOUGLASS. Entries from the stage no music nor private without paying a visit to this Establishment where the best Pantomime of the season is nightly acted by Paul Bedford and the most wonderful Pantomimists in the world. Twenty-five magnificent scenes, tricks, and appointments.

NO. 53, PALL-MALL, next the British Institution.—PANORAMA OF GAZA, the Interior of the 300 FEET. PHOTOGRAPHS taken by Mr. ROGER FENTON in the CRIMEA, from Sebastopol to Six daily.—ADMISSION.

MR. W. S. WOODIN'S OLIO of CURIOSITIES EVERY EVENING at Eight, at the POLYGRAPHIC HALL, 57, Leicester-square. Strand. Box-office open from Eleven to Five.

MOVE, the FIRST DRAMATIC VENTRILOQUIST in the POLYGRAPHIC HALL, 57, Leicester-square, Strand. Every Evening at 8, and Saturday Morning at 3. Admission, 1s. and 2s. The Public are invited to view the Hall, Stage, Scenery, &c., on Monday, Tuesday, and Wednesday, from 11 till 5 o'clock.—EGYPTIAN HALL, Piccadilly.

THE LION-SLAYER at HOME, 232, Piccadilly.—Mr. GORDON CUMMING DESCRIBES every Night (Saturday excepted) his Fight, what he SAW and DID in SOUTH AFRICA. Morning Entertainments every Saturday, at Three o'clock. The Pictures are painted by Messrs. Richard Caton Woodville, West, George Thomas, Wolf, Charles Hughe, and Lieutenant Skinner, embodied by Mr. Charles Whitmore. Admittance, 1s. and 2s. The Cabin on view during the day, from Eleven to Five. Children Half-price to the Reserved Seats and Stalls.

ROYAL GALLERY of ILLUSTRATION, 14, Regent-street, next the Quadrant.—Mr. BEVERLEY'S Gallery of PICTURE ILLUSTRATIONS, commencing on MONDAY, with its 6th Series for a limited number of nights.

ROYAL GALLERY of ILLUSTRATION, 14, Regent-street.—The LAST THREE DAYS.—The Gallery will be OPEN on MONDAY Morning next, at Eleven o'clock, as from Xmas to Christmas, will positively CLOSE on WEDNESDAY Night, the 30th inst., at Eight o'clock. Admission, 1s.; Stalls, 2s.; Stalls at Eleven and Eight o'clock. The Gallery will Reopen on Monday, Feb. 4th with a Series of HORTON'S popular Illustrations.

DR. KAHN'S ANATOMICAL MUSEUM, 5, Leicester-square, consists of 1000 highly interesting Models, representing the Human Body in a State of Health and Disease; also, various Races of Man, &c. Open (for Gentlemen only) from Ten o'clock in the Morning till Ten at Night. Admission, 1s.—Lecture at Half-past Seven every Evening, by DR. BENTON, F.R.S.L., and at Three every Afternoon, by DR. KAHN. Admission, 1s.—4, Coventry-street, Haymarket.

LONDON SACRED HARMONIC SOCIETY, EXETER HALL (under the Patronage of the Clergy).—On MONDAY NEXT, JANUARY 28, Mr. BENEDICT will conduct Mozart's Last Grand Work, the Requiem, and the Choral Symphony of Beethoven. Principal Vocalists—Madame Rudersdorff, Miss Dolby, Mr. Sims Reeves, and Mr. Weiss. Full Band and Chorus. Conductor—Mr. BENEDICT. Commence at Seven o'clock.

SACRED HARMONIC SOCIETY.—EXETER HALL.—FRIDAY, 16th February, will be performed, for the First Time in London, Dr. Osana's Oratorio, ELI, under the direction of the Composer. Principal Vocalists—Madame Rudersdorff, Miss Dolby, Mr. Sims Reeves, and Mr. Weiss. Full Band and Chorus. Conductor—Mr. COSTA. Commence at Seven o'clock. Tickets, Stalls, 10s. 6d.; Unreserved Seats, 5s.; to be had at the Society's Office, No. 6 in Exeter Hall, and at all the usual Places of Musical Business in London.

WESTBOURNE SECOND GRAND BALL MASQUE will take place on THURSDAY, JANUARY 31, on the Premises, Westbourne-terrace, Hyde-park. Private Dining-rooms, and two Bands engaged. Gentlemen's Tickets, including Refreshments, 1l. 1s.; Ladies' Tickets, 5s.; to be had of Mr. C. at the Rooms on Tuesday Evening from 8 till 12. N.B. Private Lessons by Mr. C. every hour, 1l.

ZOOLOGICAL KING'S COLLEGE, London.—The Present LENT TERM will commence on FRIDAY next, the 25th inst., at Eleven o'clock, and will be continued on each succeeding Wednesday and Friday at the same hour. [illegible]

ROYAL POLYTECHNIC.—SPECIAL JUVENILE MORNING ENTERTAINMENT, Wednesday, commencing at 3. A popular Lecture by J. H. Pepper, Esq., and followed at 3 by the Pantomime of the Wars of the Roses, with Dissolving Explosions, Changing Scenes, Tableaux, &c. The Magnificent Fire-Fall of the Palace of Aladdin, and Transformation of Sunbeam into Diamonds, with Songs, by Lenox Horn [illegible]

MISS BESSIE DALTON at the ROYAL PANOPTICON of SCIENCE and ART, Leicester-square. Open Daily from Ten in the Morning till Five in the Afternoon. Admission, 1s. Schools and Children under Ten Years of Age, Half-price. Open Every Evening from Seven till Ten. Admission, One Shilling. Children Half-price.

ROYAL PANOPTICON, LEICESTER-SQUARE.—CHRISTMAS HOLIDAYS.—UNRIVALLED ATTRACTIONS. [illegible]

Life in Pompeii, with the Eruption, illustrated [illegible] natural Phenomena, &c., by Mr. T. [illegible] Chemistry for the Juniors, by Mr. E. [illegible] Chemistry, by Mr. [illegible] Lecturer Buckingham. At intervals [illegible] Performances by Mr. T. [illegible] During the Evening a Christmas Musical Mélange, comprising Selections from the Works of [illegible] Favourite Composers, by Mr. [illegible] Mr. Rosse Dalton (Bess and Pat-Stapes by the "Orphens She [illegible] Below on the Floor by Mr. Benjamin Wells, R.A.M., and [illegible] Experiments by Mr. [illegible] Admission to the Whole, One Shilling. Schools and Children under Ten Years of Age, Half-price.

## THE SOLDIERS' INFANT HOME, ROSSLYN PARK, HAMPSTEAD.

IN addition to the dangers and accidents of war which fall to the share of our Army in the East, many a brave heart has had those troubles greatly increased by thoughts and fears for those who were dear to him left behind. In the labour of the trenches—in the midst of pestilence—in the nipping cold and burning heat, and in the roar of battle — many a British soldier has had his mind occupied by the little prattling children who were left without his care 3000 miles away; and the pangs of wounds have been increased by fears that these children would have no chance of knowledge, and that their lot was but too likely to be beggary and want. This must not, however, be: for the children of those who have fallen in the cause of their country must, as a matter of justice, be provided for.

With reflections of this kind we wended our way with no small pleasure towards Hampstead to visit an institution which has been opened as a Home for the Infant Children of Soldiers—the children of those whose mothers have died, and left them without protection. Some of our artist readers will remember a beautiful avenue of trees, a little to the west of the road, at the foot of the hill which leads to Hampstead. This leads to Rosslyn House, an extensive structure, most delightfully situated amid shrubberies and gardens. The situation is most healthy; and, while peeping amongst the evergreens at the few roses which still bloomed, we thought of certain dingy courts and alleys where, instead of fresh air and the twittering of the birds, is polluted atmosphere and the sound of various kinds of vice.

THE SOLDIERS' INFANT HOME, ROSLYN-PARK, HAMPSTEAD.

We were readily admitted into the spacious hall of Rosslyn House, and found it really a choice and elegant specimen of domestic architecture. Beyond the hall a double row of polished marble Ionic pillars leads to a spacious staircase, of finished workmanship. The windows are in part filled with stained glass; and the whole has an air of great comfort and refinement. This leads to various large apartments, fitted up as nurseries, &c. In a circular room were forty or fifty little girls under the care of the school-mistress. This is a pleasant room, looking into the garden, and having a fine view extending as far as the Epsom Downs. The rosy-faced children looked a wonder of neatness, dressed in their scarlet frocks and lilac pinafores. Most of these little ones have been rescued from great poverty and neglect. Here they will be reared in habits of industry—the greater part of them instructed in the duties of female domestic servants; while the more intelligent it is proposed to instruct as pupil teachers in the educational department of the establishment.

The Committee are also endeavouring to raise funds for the foundation of scholarships of the value of £20 per annum, to be distinguished by the names of famous officers who have fallen in the war. The children who have been instructed as pupil teachers will be eligible as candidates for such scholarships, which they will be allowed to hold for two years whilst being prepared as regimental school-mistresses. The sum £20 has been already subscribed for Raglan memorial scholarship, and a like sum for a Chester scholarship.

The dining-room and play-rooms are very convenient, and of much architectural beauty. Trusting to the goodness of the cause, the Committee hope, by their exertions, to have the means shortly of admitting 100 girls; and, in addition to Rosslyn House, have effected the purchase of Vane House—a building of the time of Charles I. which is situated close by. It is intended to devote this building and Rosslyn House to the reception of girls only. Few persons who have not visited the grounds of Vane House* can form an idea of their picturesque beauty: and we think that the knowledge that such homes are provided for the children of the soldiers who have fallen in our battles must very much add to the success of the resulting sergeant.

* Bishop Butler died in Vane House—a place which has some other interesting associations.

## MANUFACTURE OF BAYONETS.

THE present war having caused an unusual demand for weapons of every description, it was found impossible to obtain the requisite supply from the usual sources.

The Honourable Board of Ordnance therefore gladly availed themselves of the mechanical skill of Manchester and the surrounding towns to make up for the deficiency in the supply of bayonets, ramrods, sights, bands, springs, and other articles of gun-furniture required for the Minié rifle as now used in the British Army.

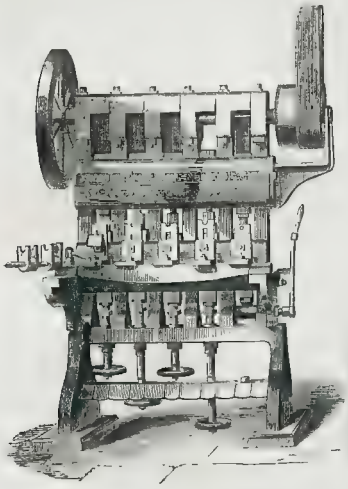

Fig. 1.

We are indebted to the kindness of Mr. Francis Preston of Manchester, who is extensively employed in making the above articles, for allowing us to inspect his machinery and describe the processes employed by him in the manufacture of the new bayonet—which is a far superior weapon to the ones formerly used, being much lighter and more serviceable. The present bayonet is 20½ inches long, fitted with the French locking ring, and weighs twelve ounces; it is fluted on the three sides of the blade.

We will briefly describe the process of manufacture of this formidable weapon. The sockets of bayonets, or the part that fits on the muzzle of the musket, is made of the best wrought iron, and the blade is of steel, the two parts being united by welding. The first operation is performed by a smith, and consists in cutting a round bar of wrought iron to the required lengths for making the sockets; the pieces of steel for the blades are cut from a square bar, and then submitted to the action of the forging machine, represented in Fig. 1. This machine was invented by Mr. Ryder, of Bolton. It is very ingenious in its construction, and has long been used for forging parts of machinery employed in spinning cotton; but the application of it to forging parts of bayonets is due to Mr. Preston. It consists of a series of hammers worked at a great speed by eccentrics on the top shaft. The object of this machine is to reduce one end of the square piece of steel and to make it round: a projection is, however, left at the extremity of the steel, which is bent to fit the round iron forming the socket. The parts thus formed—namely, the pieces for the socket and the blade—are then welded together, the greatest care being required in this operation. The partially formed bayonet is then heated, and laid on the lower die of the stamping machine, shown in Fig. 2. The stamper, or the part that gives the requisite blow for shaping the socket of the bayonet, is made of a block of cast iron, weighing four or five cwt., in the lower surface of which is a recess corresponding to the recess in the die. This stamper is raised by machinery, and when it has attained sufficient altitude it disengages itself from the chains by which it is elevated, and drops on the partially-formed bayonet, thereby imparting to it the exact shape of the recesses in the die and stamper. This stamping machine in itself is similar to those generally used; but it is customary to raise the stamper by manual labour, whereas the steam-engine is in this case made to do all the hard work, the attendant having nothing to do but to supply and remove the pieces to be stamped. The next operation is to bore a hole through the socket, which is done in an ordinary drilling machine. The partially-formed bayonets are then again heated, and the square bar of steel for the blade is drawn out, or lengthened, by a forging machine, similar to that shown in Fig. 1. The hammers of this machine are so constructed that the descent of each is diminished: consequently, the workmen, by first introducing the end of the bar of steel beneath the first hammer, reduces the bar to the thickness required for the point of the bayonet; he then passes it under the second, and then the third and fourth—by which means the requisite taper form is produced. The socket and blade of the bayonet being thus roughed out, or partly formed, the next operation is performed by the rolling-machine, shown in Fig. 3. This machine, which is invented and patented by Mr. Preston, though exceedingly simple in its construction, is of the greatest utility in the manufacture of bayonets, for by its aid, the manual labour hitherto required for making the three flutes, or grooves in the blade is dispensed with.

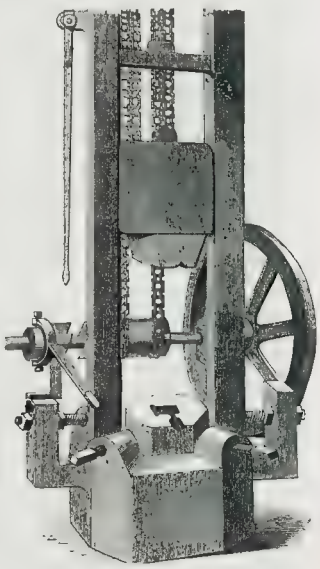

Fig 2.

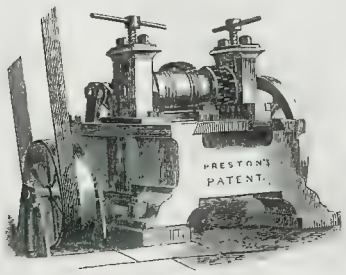
The principal parts of the machine consist of a sliding table, on which is a die for forming the two smaller flutes, and a shaft with an eccentric roller, to form the larger flute. When the machine is in motion the attendant lays one of the partly-formed bayonets, heated to a red heat, in the die of the table; this is then drawn under the eccentric roller, the action of which on the heated bayonet blade forces the metal into the die, thereby completing the flutes in a few seconds.

The subsequent operation of turning the outside of the socket and neck is performed by the ordinary tools for such purposes. The bayonets are then taken to the machine by which the slots or grooves are made in the socket for the stop motion of the locking ring.

The next operation is performed by the machine shown in Fig. 4. The socket of the bayonet is attached to a stud, to which a slow rotary motion is given; and above the stud is a cutting tool, which moves in a horizontal direction. The socket of the bayonet being presented to this cutting tool is shaped to to the proper form. By this beautiful little machine not only much manual labour is saved but the stop of the lock ring is left projecting from the socket of the bayonet; whereas in all bayonets of



Fig

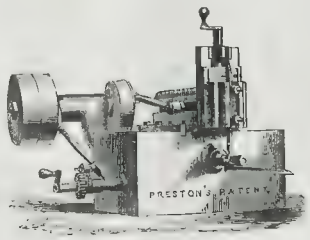


Fig 4

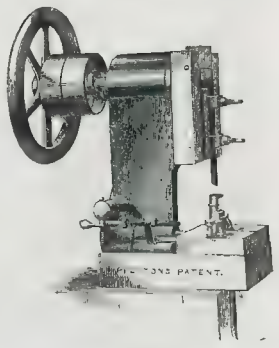

Fig 5

the ordinary construction the stop is secured into the socket. This is also a patented invention of Mr. Preston, and is of great importance; for every time the bayonet is put on the barrel of the musket the look-ring is pressed against the stop: consequently, when the stop is screwed in the socket, this constant action is very liable to loosen and eventually to displace it, thereby rendering the bayonet useless; whereas by making the stop solid with the socket it cannot be displaced.

The bayonet is then brought to the machine shown in Fig. 8, and placed upon a vertical stud. The cutting tool of this machine is moved up and down, and in so doing cuts a slot (or groove) in the bridge of the socket; the bayonet being gradually brought towards the cutting instrument until the slot (or groove) is of the required depth, at which time the machine is stopped by a patented self acting apparatus. The attendants have only to put the bayonets on the stud and set the machinery in motion, all the rest of the work being self acting. After this operation has been performed the bayonets are filed up by hand in those parts that cannot be done by machinery. Then the flutes are finished to the required size, hardened and tempered so as to give the required elasticity, and finally polished by machinery. The locking ring is then adjusted, which completes the operation. The muskets are now ready for the severe test and examination of the Government inspectors, which they have to undergo before they are put into the hands of the soldiers.

## THE WAR IN THE CRIMEA.

*(From our Artist and Special Correspondent.)*

CAMP, SEBASTOPOL, Jan. 2, 1856.

WITH the exception of renewed explosions in the docks at Sebastopol, there has been a lack of incident in the Camps this week. The cold has not relented, except on those rare occasions when a gleam of sunshine appeared to thaw the surface of the frozen ground. The general character of our days has been grey. On the night before last the weather changed, and the avocations of soldiers are carried on in two feet of snow.

On Monday I succeeded in obtaining a view of one of the dock explosions—no easy matter considering the secrecy which very properly attends these operations. I had not previously visited Sebastopol for some time, and was struck with the changes in its external aspect, worked by the destroying agency of an army of 100,000 men. It is not the mere demolition that had taken place, for remains would be visible—it is the total disappearance of entire tenements that creates astonishment. I should not wonder if we can say of Sebastopol as old Philip of Burgundy did of a town he had sacked—"This is the spot where once stood Dinant." "Here once stood Sebastopol," may yet be the exclamation of a future Layard.

Cresting the hill over which the Woronzoff road passes towards the town, I looked in vain for the well-known features of the old Picket-house, long celebrated amongst us under that name, and called by the French "La ruine des Anglais." I thought of old Frank Matthews in the play of "Aladdin," looking into the air for the palace, and bursting out into—"Bricks and mortar have flown away!" Every vestige of the place had been removed; and the ground was as clear of remains as if no house had ever been there. What reminiscences have been destroyed by this removal! At the outbreak of the siege the Picket-house was a place which could scarcely be approached too cautiously. The Generals crept up there to reconnoitre, and a sergeant's guard was stationed on it to keep off idlers or imprudent spectators. The no-great Russian guns were two miles off, yet a red coat or a glistening hand were instant signals for firing. I don't believe they ever killed anybody, notwithstanding their endeavours. Then the *Twelve Apostles* in the Arsenal Creek, used, in the words of the sergeant, to "blaze away like mad," and we committed a waste of building at Lancaster battery for the purpose of dislodging the obnoxious ship, which moved out of the way with the utmost ease before a shot was fired, leaving the gun nothing to do. The first damage to the Picket-house was by the Sappers, who took the rafters away for platforms; then the walls began to crumble, at last nothing but ruins remained. The Russians finally grew more careless of parties standing on the spot, and the only precaution taken up to the latest moment was posting a line of sentries to keep back the crowd; the place having at last become a familiar lounge, where French and English officers men mixed with Turks and Sardinians, and told each other their mutual experiences in the trenches. During the summer a strange erection of beams and triangular-shaped signals was added to the attractions of the spot, and a burly boatswain was on the look out day and night to telegraph with the fleet. This telegraph also disappeared after the departure of the shipping, and everything now is bare. Our look-out place is thrown forward, and when we want to stare at the Russians we go into the Redan, or even peep from the ruins of Fort Paul; this last, by-the-by, a dangerous pastime.

Turning Gordon's, on my way to the docks, I passed and noticed with astonishment the vast numbers of cannon-balls covering the spot. The autumn vegetation had concealed a great number of these interesting memorials, which now stood out upon the bare ground with unusual relief. Old worn-out guns still lay on the earth in the ruins of the batteries, like spectres haunting the scene of their living exploits. Some had been newly vented; others deprived of their trunnions; and many tenified, by more than one deep dent in the side or muzzle, to the hard service they had gone through. Further on, below Gordon's, still stood its yellow relief the old zigzags and parallels leading over defences in the ground towards the hostile works of Todleben. The bloody field of the Redan, with its crowds of guns, mantelets, wooden beams, and scraps of clothing, infested by legions of rats, seemed unchanged since October, whilst the buildings below it had fallen to ruin, as the soldiers removed the beams which supported the roofs of them. Even the trees had disappeared, though their stumps might still be seen above ground, worn and gnawed by mules which impatiently wait for the masters, seeking fuel in the ruins of the Karabelnaia.

At last past one the mines in the docks exploded with considerable effect, ripping up the stonework and flinging even piles from the foundation high into the air. It was impossible to gain a near view of the affair, and much of the sight was lost on account of the depth of the docks and the interposition of a heavy wall between them and the spectator. After a lapse of more than twenty minutes the engineers were rushing back to witness the effect of the explosion, when four chambers which had missed fire burst out with great noise and completed the intended destruction. Nobody was hurt, although the Russians opened fire with mortars from Fort Constantine on their right, and a sunken battery on their left. Of the shells fired from Constantine three burst in the air and one in a spot where not a soul was near. The battery on the left was equally unsuccessful, and finally vented its impotent rage on the bare mounds of the Redan, where it was supposed that some of our Generals were looking on at the work of destruction. Half an hour afterwards, working parties were labouring as usual, getting wood from the ruins of the Karabelnaia. The Russians of late have been firing less than usual, and forty shots are the average number per diem. Hardly a day passes without some interchange of communication by flags of truce, the Russians hoisting a white ensign on a large staff near the water side. It has been remarked that latterly the Russian officers communicating with our truce parties have not known the English or French languages. Major Dewar having remarked, on a recent occasion, to a Russian officer, "Il fait mauvais temps, très froid," the Russian replied with a bow, and said "Magnifique."

*Le jour de l'an* amongst the French camps was marked by less feasting than amongst us. Huts were wanting for jovial celebrations, and tents such as our allies have are not warm enough for jollity. Still there was a considerable sprinkling of soldiers in the booths of Little Kamiesch—a village which more than ever deserves the name of "Coquinville," so extortionate are its inhabitants. A leg of mutton weighing nothing for a sovereign "is not a thing to be desired." Great Kamiesch is nicknamed Friponville, whilst we have found no better name for our village close by than Donnybrook. Dirt and mud are not excluded from this place of ours, though high prices are there, as elsewhere, the rule. The men who keep some of our shops and canteens are indeed the most unpleasant fellows to have in one's neighbourhood. Dishonest servants find a ready sale for one's barley and oats there, and commissariat legs of mutton disappear from our kitchen, to be sold afterwards at the fabulous price I have mentioned. A groom in your Correspondent's service was in the habit of playing such pranks as these, and he crowned his misdeeds by decamping one night with innumerable candles, soap, sugar, and pounds of flesh, stealing at the same time the coverings off the backs of the horses in the coldest night of the present winter, when thermometers were at zero Fahrenheit. Fortunately, by the exercise of considerable activity, the fellow was caught, and received four dozen; but the lost property was irrecoverable. A few days later a canteen man in the 20th Regiment was convicted of receiving stolen goods, and had his place confiscated, receiving at the same time four dozen for the satisfaction of justice. These Christmas times have made the office of Provost-Marshal no sinecure. The calendar of crimes has been heavy, and the numbers found guilty of drunkenness large. The utmost endeavours have been used to close Coquinvilla against our men. A provost guard on the Woronzoff prevents sold ers from passing in after twelve in the day, but a few men crawl in now and then, whom it is amusing to see ferreted out by a mounted sergeant, wh whips them away amidst the laughter of some and commiseration of others, who, though Frenchmen, are not averse to good cheer. Amongst the latter especially are noticeable the Zouaves, who go familiarly by the name of "chacal," anglicé "jackall," a misnomer in my opinion; for braver men don't exist than the Zouaves, and a more cowardly brute than the jackall is not known. In carrying out the sentence against a drunken artilleryman at Balaclava, I regret to say that the latter died. He was sentenced to forty-eight lashes, and having undergone the sentence he was removed to hospital, where, at the end of two hours, he expired. It is said that no doctor was present at the execution of the sentence; and if it appears that this is true, the authorities have much to answer for. As regards flogging, it would tend to prove that the maximum allowed by law has not been sufficiently reduced; for although numbers may be cast off unharmed after such a punishment, the death of one man is a subject of serious consideration. Flogging, as administered now, is not supposed to harm the recipient, who goes to hospital for a couple of days only, after which he is put to the forced labour awarded by the sentence. It is therefore believed that the man who has thus died was labouring under some disease. In that case a medical officer should have been there.

Some time ago, a provost-sergeant of the 11th Hussars traced a deserter from the *Royal Albert* to the Café des Colonies, at Kamiesch, and summoned him to surrender. The sailor swore some oaths, defied the sergeant, and refused to come at his bidding. "Will this make you come?" said the provost, pulling out a pistol. The sailor jeeringly answered in the negative. The sergeant fired, and after a short time the sailor died of the wound. Having been arraigned on a charge of murder, he was sentenced to fifteen years' transportation, the court-martial no doubt considering that there had been provocation. General Codrington has confirmed the sentence, although he considers it too lenient.

A fire at Balaclava in the Ordnance Commissariat stores illustrates once more the excessive danger of leaning wooden beams across chimney-flues. Fortunately there was no wind; the police were watchful, and although a powder-and-shell ship was towed out to the mouth of the harbour, no other inconvenience resulted, as the fire was speedily got under.

Yesterday the wind, which had been blowing for several weeks from north and east, turned to the south-west and westward, covering us with snow. A heavy gale blew along the coast and drove three or four merchant ships in dangerous proximity to the Russians on the north side of Sebastopol. Quick discharges of ordnance from the heights that overlook the sea first apprised these vessels of their danger; they held on their course on the boisterous waves, however, unharmed, and after Fort Constantine had fired at them without doing injury, they were safe.

We hear from Kertch of a cavalry disaster—40 men of the 10th Hussars having been cut off in a farm-house by the Cossacks.

There is nothing new to record of the enemy's movements, except the opening of a new mortar or sunken gun battery, in the vicinity of Gringalet, which fires on the bridge of Traktir, and sends shells inconveniently enough into the Camp of the 2nd Zouaves.

The weather having been very bad and prevented the arrival of supplies of fresh meat, the rations have been reduced by our Commissariat to three per week. The French Commissariat have had no meat to distribute for a week past.

Our Divisions are in capital health, although there is an increase under the head of catarrh in the hospital returns. This is but natural, considering the nature of the weather.

## CIVIL SERVANTS OF THE CROWN.

IN reply to those correspondents who consider that the remarks we made on the 5th of this month were inexact, we have to refer them to a "Return to an Order of the House of Commons dated 24th May, 1855," which was ordered to be printed 5th June, 1855. The return was for "a copy of a letter to the late Chancellor of the Exchequer, dated the 7th day of December, 1853, from the members of a general committee of Civil Servants of the Crown, relative to the establishment of a Civil Service Provident Fund." It was on that official document and the appendix annexed to it that our remarks were founded. The letter contains the following paragraph:—

In December, 1852, a petition was presented to the House of Commons by Mr. Fitzroy, a copy of which we have the honour to annex. The prayer of that petition is that Parliament will be pleased to take into consideration the 27th section of Act 4 and 5 William IV., c. 24, and sanction the assessments therein directed to be made being applied to the purpose of forming a "Civil Service Provident Fund" for the relief of our widows, orphans, and other relatives, upon the principle of life assurance, without detriment to our own superannuation allowances when worn out and no longer able to perform our public official duties.

It then states that out of the twenty-three principal departments in London, and of the same number in Dublin, returns have been received from forty-two, thus only leaving four out of forty-six who have declined to affix their signatures, or omitted to make returns. The number of persons who contribute to the superannuation fund in those four offices are 116; the number of signatures obtained in the other forty-two offices amount to 3186. This is our justification for stating that a vast majority of the civil servants approved of the petition. But we may quote one more paragraph:—

The feeling in favour of a provident fund upon the principle of Life Assurance, is, therefore, we submit, all but universal throughout the departments in London, and in Dublin the feeling is even still more decided, there not being a single dissent.ent.

If a public writer cannot depend on Parliamentary documents, to what can he trust?

The correspondents who complain of what we have written, evidently belong to another section of the civil servants, for one of them, who has sent his card to us, says, "What they do ask is that they may be entitled to a scale of pension equal in amount to that allowed to their predecessors who were appointed previously to August, 1829, and who have never been subject to any abatement for the purpose, and that henceforward they may also receive their salaries in full." This correspondent assures us that 9000 out of 11,000 contributors have already signed a petition to this effect, which is dated January, 1856; and the date shows that it was printed after our remarks were written. We can have no other desire than to do justice to all parties; and, as we have now given both statements, we may take leave of the subject, simply observing that, from our own knowledge, other documents will very shortly appear, reviewing the whole of this movement from its origin in 1846.

LIVERPOOL POULTRY SHOW.—There was a severe contest for the principal prizes at this Show, particularly in the class for Black Spanish fowls. The first premium in this class, a beautiful silver cup, value £10 10s., was awarded to a cock and two hens belonging to Mr. H. D Davies of Sprug Grove House, Hounslow; and in proof of the large prices commanded by all kinds of poultry of the first class, we may state that these birds were claimed by Captain Hornby at the reserved price of £100. He was also an exhibitor. The shakeens exhibited by Mr Davies promise, however, when at maturity, to surpass even the two sets of beautiful adult birds shown by that gentleman, one of which has now passed into the hands of Captain Hornby.

## THE "ILLUSTRATED LONDON NEWS" AND THE WAR.

THE Peace Society, in its howls against the ILLUSTRATED LONDON NEWS to which we adverted in our No. for Jan. 12, accuses us of fomenting the war spirit for purely commercial reasons. To show it that our commercial sense—if such it be—must have been tolerably keen (and among members of the Society of Friends commercial keenness is generally considered praiseworthy), we extract the following passages from the back numbers of our journal during the last six years. They will prove at all events that we foresaw the necessity of the war, and explained its justice, long before a similar light broke in upon some of the wise men who govern us:—

*August* 11, 1849.

To Turkey the Hungarian contest is the most important event that has occurred in her history since the days of the Empress Catherine. Her security and the aggrandisement of Russia are incompatible. Her strength lies in Russian weakness; and her best victories are the defeats and humiliations of the Czar. Russia is her ancient, her politic, her insatiable foe, and has patiently awaited for three generations the opportunity of securely establishing her seat of empire among the minarets of Constantinople, and of driving the Moslemans from Europe. Turkey has been crippled and weakened by many untoward occurrences, and her best friends in theory have not always proved themselves so in practice. Her obvious interest is the independence of Hungary and Poland. In their abasement she has found her strongest barriers against the encroachments of her foe; and in their freedom those barriers will be strengthened. For all those reasons we are inclined to believe that the other revolutions of Europe are far less important in every point of view than the revolution of Hungary. Its success or failure is equally pregnant with great results. In the mean time this country can but look on with solicitude and sympathy.

*October* 6, 1849.

The gravity of the position is apparent. A Cabinet Council was summoned by Lord Palmerston on Tuesday, and sat for three hours, when we may suppose that this important question was anxiously debated. The duty and true interest of Great Britain and France are to throw the whole weight of their joint influence in favour of the Porte. To forsake that Power in an emergency like this would be a suicidal policy for each of them. They would fall at once into the rank of second-rate Powers, and leave Russia the virtual mistress of the destinies of Europe. It will depend upon the attitude they assume whether Russia will attempt to parallel the audacity of her language by the audacity of her deeds, and involve Europe in a war for the possession of Constantinople.

A war made by Russia on such a pretext would be so wholly without justification, so utterly destitute of that moral force which neither great nations nor small can withstand when actually despise, that, however much Russia may covet the possession of Turkey, or any part of it, we cannot believe that she will run the risk of a general war, especially at such a period as the present. *To the Government of France such a war would be a golden opportunity; and to the people of France it would be the most popular war upon record. Even in England—overburdened as we are with debt, and indisposed for war as all our great trading and commercial interests must be considered*—AN ARMED INTERVENTION WITH FRANCE IN FAVOUR OF THE PORTE WOULD ENLIST THE SYMPATHY AND GOOD WISHES OF MOST CLASSES OF POLITICIANS. If we are to retain India to say nothing of our influence in Egypt and the Mediterranean—Russia cannot be allowed to conquer Turkey. We cannot afford it. The question is, in point of fact, as vital to us as to Turkey; and France, on this occasion, has interests, if not identical with, most certainly as strong as, our own.

*October* 13, 1849

A note has been addressed by the British Government to our Ambassador at St. Petersburg, of which copies have been forwarded to our Ambassadors in Vienna, Constantinople, and Paris, in which the determination of the British Government to support the Sultan in all exigencies that might compromise his dignity as an independent Sovereign is temperately but decidedly avowed. Lord Palmerston has likewise forwarded instructions to Sir Stratford Canning, and placed at his Excellency's disposal the British fleet in the Mediterranean. The Turkish Government has also received positive assurances of the support of the French Government in case Russia should go back to made upon its independence; and, on its own part, has taken all proper precautions to place its excellent army and fine fleet in immediate working order, as if prepared for the worst.

*July* 6, 1850.

We are still as ever determined to maintain our position as a preponderating power, upon whose subjects no injury can be inflicted without redress, and without whose consent no step can be taken to change the political status of any other nation of the great European commonwealth. No one will deny that it is necessary, not merely to our national honour, but to our very safety as a State, that we should hold rank in Europe among the greatest Powers. We are, in fact, among the Peers of the world, and cannot descend to be the commoners. Our dignity and rank are essential to our well-being, and to our very existence. *If the opinion of England on a matter of European importance can be scorned, defied, and set at nought by any State whatever, we are no longer what we were. If any nation feels that it can trample with impunity, we are no longer a first class second-rate Power. We hold our rank not by the extent of our territories, the strength of our armies, or even of our fleets, but in a great degree by the moral influence of our past history. In holding and asserting this rank we preserve the peace of the world.* Had England no more weight in Europe than Holland or Sweden, how long would war be prevented?—how long would Russia keep her impatient claws from the Turkish Empire?—and how long would other States refrain from forming themselves into new combinations, and endeavouring to round and consolidate their territories at the expense of their neighbours?

*November* 22, 1851.

The history of Russia is one unbroken series of attempts to extend and consolidate her power in Europe, and to vault into the seat of universal empire. The policy of Catherine is the policy of Nicholas. To be not simply the largest, but the most powerful, State in Europe—to rule the East by overriding the West—to take by brute force that high place among the nations which Great Britain, with a territory not a twentieth part so large, holds, by the industry, the intelligence, and the indomitable spirit and perseverance of her sons, is the object, more or less openly avowed, but always sedulously acted upon, by successive Emperors of Russia. It was that policy which induced the partition of Poland, which prompts the humiliation of Turkey, which extended Russian influence over the Danubian provinces of the Sultan, which tries either to monopolise the trade or to shut up its mouth, in order that no other State may turn it to the advantageous purposes of commerce, and which dictates the law by land as well as by sea in the south and east of Europe.

At present the balance of power in Europe, upon which so much stress is laid, is but a delusion and a mockery, and at some day not very far distant it may prove to be a snare.

*April* 22, 1853.

In the commotions that are preparing in Europe, and of which we see all around us the signs and the portents, the true place of France is on the side of freedom. Between Cossackism and Constitutionalism the instincts of France will lead her right, however much her temporary rulers may strive to lead her wrong; and in that struggle, should it ever come, the place of England will be in the vanguard of Civilisation; and, if States and dynasties oppose her, the populations, the races, and the nationalities of Europe will work with her, and bid her God speed. The star of her glory has not yet culminated. Like Toussaint l'Ouverture, she has "great allies," and "powers that work for her."

*June* 4, 1853.

It is an old and trite proverb that it is much easier to begin a quarrel than to end one. It is probable that the Emperor of Russia will discover the truth of this saying to his cost, whether the result of his intemperance towards Turkey be peace or war. If his object be war, the chances of the issue are so terribly against him, notwithstanding the apparent weakness of the Turkish empire, that the world would be more justified in questioning his sanity than his prudence,—if he finally determined to risk a European convulsion at such a time, for such a cause, and under so unjustifiable and outrageous a pretext.

*June* 11, 1853.

The Czar was not prepared for Turkish resistance, although he might have laughed at the unavailing sympathy of the English people. It will be difficult to avert the collision so wantonly provoked; and to maintain peace will require all the patience, prudence, and wisdom that the great Powers of Europe can command. Great Britain is prepared, single-handed, to support the independence of Turkey. But she will not be left to fight the battle alone. France *must* become her ally in such a cause.

# Memorabilia,

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*A little chink may let in much light.*—OLD PROVERB.

### INEDITED LETTER FROM WARREN HASTINGS TO SIR ISAAC HEARD, GARTER KING OF ARMS, COLLEGE OF ARMS, LONDON.

Daylesford House,* 21st December, 1795.

My dear Sir,—In the names of all the little community of Daylesford-house, return you and dear Lady Heard our grateful acknowledgments for your kind remembrance of us, and for the pledge which you have afforded us of it in the present which you have had the goodness to send us, and which in that character comes with a value greatly exceeding that at which we should have estimated it, had it come earlier. By a mistake of the coach, we have but this moment received it, so that I can say nothing yet of its intrinsic merits; but from the implied confidence in your taste, and from the knowledge we already have of the superior talent of your friend, Mr. Webb, whom you announce as the author of the poems (I don't know whether he is of both) we are sure of deriving great entertainment from it. We want it, and the subject of "Griselda" is not ill-suited to the gloom which the weather casts over our evenings. So great was our deference to your judgment that the first thing we read for our common amusement after your departure, and my return from town, was Chaucer's original tale of "Griselda," and was pleased with her, glad as she was in a old and faded garments.

We grieve to hear that Lady Heard has been so much indisposed, and pray that the next year may be more propitious to you both. That we may contribute all that we can towards it, we will drink your health most devoutly on both the Thursdays next ensuing. We, too, have had our portion of sickness; but are thankful that we have suffered much less in this autumn than the last, notwithstanding the inclemency of the season. We all desire to be affectionately remembered to Sir Isaac and Lady Heard, and I beg that he will allow me to call myself, what I truly feel myself, his affectionate friend,

WARREN HASTINGS.

P.S.—I am tired of myself, as a subject of either conversation or writing! but you will read all that concerns my claims on the public, and their present state, in two of the newspapers of this day; which I take the liberty to mention, lest you should not take in either of them. I cannot tell which they are.

* The date of this letter shows it to have been written in the very year when Hastings, after a trial which had exceeded over eight years, was called to the bar of the House of Lords, and informed that he was acquitted. And the name of Daylesford will remind every one of that charming passage of Macaulay's in which he describes the distressed and dependent condition of the orphan child brought up in the neighbourhood where his progenitors had lived in opulence and grandeur. And how, "on one bright summer day, the boy, then just seven years old, lay on the bank of the rivulet which flows through the old demesne of his house to join the Isis. There, as three-score and ten years later he told the tale, rose in his mind a scheme which through all the turns of his eventful career was never abandoned. He would recover the estate which belonged to his fathers—he would be Hastings of Daylesford. This purpose, formed in infancy and poverty, grew stronger as his intellect expanded and as his fortune rose. He pursued the plan with that calm but indomitable force of will which was the most striking peculiarity of his character. When, under a tropical sun, he ruled fifty millions of Asiatics, his hopes—amidst all the cares of war, finance, and legislation—still pointed to Daylesford; and when his long life, so singularly chequered with good and evil, with glory and obloquy, had at length closed for ever, it was at Daylesford that he retired to die."

### NOTES.

TRAVELLING IN 1787.—The following diary of the time and expenses involved in a journey to Dublin some seventy years since is interesting and suggestive:—

JOURNEY TO IRELAND FROM GROSVENOR-SQUARE.

The 12th June, 1787.—Coach and 4 Horses; Post Chaise, 2; Out-riders for 10 Miles, 6: afterwards only 5: 11 Post Horses.

CANNIBAL EPICURES.—"Cannibals, who have tried both, assure us that white men are finer flavoured than negroes, and Englishmen than Frenchmen."—"Langedorf," Vol. I., p. 141, quoted in Southey's "Commonplace Book."

SILHOUETTE.—Silhouette is well understood as a *black profile*; but it is more extraordinary that a term so universally adopted should not be found in any dictionary, either in that of "L'Academie" or in "Todd's," and has not even been preserved, where it is quite indispensable, in Mullins's "Dictionnaire des Beaux Arts." It is little suspected that this innocent term originated in a political nickname! Silhouette was Minister of State in France in 1759! That period was a critical one: the treasury was in an exhausted condition; and Silhouette, a very honest man, who would hold no sinecures with financiers or loan-mongers, could contrive no other expedient to prevent a national bankruptcy than excessive economy and interminable reform. Paris was not that metropolis, no more than London, where a Plato or a Xeno could long be Minister of State without incurring all the ridicule of the ready-made wits. At first they pretended to take his advice, merely to laugh at him: they cut their coats shorter, and wore them without sleeves; they turned their gold snuff-boxes into rough wooden ones; and the new-fashioned portraits were now only profiles of a face, traced by a black pencil on the shadow cast by a candle on white paper. All the fashions assumed an air of niggardly economy, till poor Silhouette was driven into retirement, with all his projects of saving and reforms, but has left his name to designate the most economical sort of portrait, and melancholy as his own fate.—D'ISRAELI, *Second Series of "Curiosities of Literature."*

RELICS OF CHARLES I.—I have long had in my possession a snuff-box, which is said to have belonged to King Charles I., and which bears some proof of the tradition. It is three-quarters of an inch deep, and two-tenths deep. The lid and bottom are formed of tortoiseshell, the sides of silver. On the lid the star and motto of the Order of the Garter are inlaid with silver, the bearings have been cut out, and a silver medallion inserted, having on the obverse a likeness of the King, expressive of confirmed sadness, with the superscription, CAROL. D. G. M. B. F. ET. H. REX & GLOR. MEM. The reverse has the inscription:—VIRTUTEM EX ME FORTUNAM EX ALIIS, and shows a pastoral scene with sheep, but no shepherd; a hand stretched from a cloud holds an irradiated crown. On the bottom is inlaid with silver a monogram of the letters CARLO REX, surmounted with a crown. The Rev. A. Terrence, Minister at Glenerose, near Edinburgh, has a watch and solitaire which belonged to the grandmother of King Charles, the unfortunate Queen Mary; and documents which show that the solitaire had been worn at the Court of France by a Scottish Countess. The ring which Queen Mary gave to her faithful servant, Melville, has been carefully preserved by his descendants. I remember it being shown to me many years ago by a Mrs. Melville, in Edinburgh, whose husband has been minister at Duncon.—W. MUIR, Manse, Dysart.

### QUERIES.

BEWICK'S ENGRAVINGS.—Can you or any of your readers inform me (through the medium of your excellent columns of "Memorabilia") how or where I can obtain a perfect copy of Bewick's Works or Engravings, having for a length of time made some fruitless inquiries for the same, and been asked incredible prices for imperfect parts? Could I discover the most likely means of obtaining the whole I should greatly value the information.—JAS. A.

STOCKS, BARNACLES, AND BILBOES.—What, if any, was the difference in these instruments of punishment?

[The common stocks are well known, many being still extant in country places. The "barnacles" differed from them in the holes to inclose the legs being separated to distances varying according to the degree of the prisoner's offence, and thus, in extreme cases, being capable of inflicting excessive torture. The "bilboes" were a sort of stocks, consisting of long bars of iron with shackles to confine the offender's feet, used on board ship.]

"I DOUBT IT, QUOTH DOLBEN."—The Hon. Roger North, sixth and youngest son of Dudley, Lord North, was born in 1650. He was brought up to the law, and became Attorney-General, and also Steward of the Courts to Archbishop Sancroft. He resided chiefly with his brother, Francis North, who was successively Solicitor-General, Lord Chief Justice of the Court of Common Pleas, and Keeper of the Great Seal, under the title of Lord Guilford. Roger North seems generally to have gone the Circuits with his brother, when he was Chief Justice. After the death of Roger, which took place in 1738, an autobiographical manuscript, written by him, was discovered by Baker the antiquarian, who copied it into his own collection. It is merely headed "Notes of me"—viz., R. North. The following is an extract from it.—"I DOUBT IT," QUOTH DOLBEN. "My immediate predecessor was Dolben, brother of the Archbishop of York, Recorder of London, and afterwards Judge of the King's Bench. He was a man of good parts, bred under a Clerk of Assize, and executed the office of Associate of the Crowne side, which gave him the habit of a loud voice, though he was but of a small person. He was of an Honour retired, generous, and very insolent. His servants and nephews who depended on him, had much ado to comport with his expectations, or rather exactions, from them; and being a Judg, proved an arrant, peevish, old oracle: and though he looked up to the Court as to a fault-bee, expecting to be told with reference, to fall from it, yet would he secretly buzz to undermine it. He used to declare for the Populace, of late called Mob, from Horace—"*Mobile Vulgus*," and that they could not err. This is the ordinary Republican principle, but utterly fals, for the people, left to themselves, never did right, and never failed to destroy each other. Nor is it any sort of reason takes place with them, but they are a meer mechanical engine, wrought by pestilent knaves within, who actuate it though not seen. When the judgment was given in the King's Bench against the Charter of London, Dolben declined giving any opinion, pretending not to be satisfyed, which passge came into a song, and from thence into a proverb—"I doubt it, quoth Dolben." Can any of your readers inform me whether a copy of the above-mentioned song about Dolben is still extant?—RANDOLPH.

TOBACCO.—Speaking of the introduction of tobacco into England Fothergill, in his "Encyclopedia of Antiquities" p. 751, tells us:—"Winman, as well as men, used to smoke after supper, and when the children went to school, they carried in their satchels with their books a pipe of tobacco. This their mothers took care to fill early in the morning to serve them instead of a breakfast. At an accustomed hour every one had aside his book and let his pipe, the master smoking with them and teaching them how to hold their pipes." What authorities of the seventeenth century are there for this somewhat startling statement?—P. T. M.

ROMAN LEGIONS AT CHESTER.—I should be glad if you or any of your correspondents could give me information on the following point:—We have evidence both from coins and from the testimony of history that among the legions of the Roman army quartered at the city of Chester, the Twentieth (which is known on coins as V. V. V., or Valeria Victrix) had a very long stay there. Now I should wish to ask whether there exist at the present day in Chester any inscriptions tending to throw light upon the stay of the Twentieth Legion there, and which may be viewed by a stranger?—L. S.

PAWNBROKERS.—The pawnbroking trade is generally understood to have been practised by the Romans, and to have been followed in the middle ages by the Lombards. Can you or any of your readers inform me when it was first introduced into this country?

[It is said to have been established here by Mich. de Northburg, Bishop of London, in the reign of Edward III.; and, according to Dugdale and other authorities, if any sum so borrowed was not paid at the expiration of a year, the preacher at St. Paul's-cross was to announce that the pledge would be sold in fourteen days unless previously redeemed.]

NAMES OF PLACES ENDING IN "HURST" AND "STEAD."—The observation of your correspondent "Berm" as to names of places ending in "by" is a very true one, and the reason he gives for it is at least a very ingenious one. Will he kindly inform me, through your medium, why the terminations "stead," or "sted," and "hurst" are almost as peculiar to the south-east of our island as "by" is to the north-east and extreme north? The range of the former, namely, I think, extends beyond Suffolk to the northwards and Berkshire towards the west; that of the latter is still more limited, it being seldom found out of Berkshire, Surrey, Hants, Sussex, and Kent. Solitary instances of the occurrence of both are to be found, I am well aware, in several counties outside these limits. Thus there is a Stenghurst in Leicestershire, a Brockhurst in Warwickshire, and a Collyhurst in Lancashire; and a Hampsted in Devonshire, a Tunstead in Lancashire. But in like manner we have a Horton Kirby in Kent, and another Kirby in Essex. In such cases, however, the rarity of the exception surely only goes to prove the generality of the rule.—B. N. C., Faversham, Kent.

### ANSWERS TO QUERIES.

YANKEE DOODLE.—The words of this song were written by Dr. Shackburg, an English army surgeon, under Abercrombie, near the city of Albany, on the banks of the Hudson in 1775. The purpose of it was to ridicule the raw levies, which poured into the camp, company after company, so oddly equipped as to highly divert the British officers. During an excursion in the United States, I picked up the song, which, as the words are little known here, you may think worth recording:—

YANKEE DOODLE.

Father and I went down to Camp,
Along with Captain Goodwin,
Where we see the men and boys
As thick as hasty-pudding.

There was Captain Washington
Upon a slapping stallion,
A giving orders to his men—
I guess there was a million.

And then, the feathers on his hat,
They looked so tarnal fine a',
I wanted peskily to get
To give to my Jemima.

And there they had a swampin' gun,
As large as a log of maple,
On a deuced little cart,
A load for father's cattle.

And every time they fired it off
It took a horn of powder;
It made a noise like father's gun,
Only a nation louder.

I went as near to it myself
As Jacob's underpinnin',
Bayswater.

And father went as near again—
I thought the deuce was in him.

And there I saw a little keg,
Its head was made of leather;
They knock'd upon't with little sticks,
To call the folks together.

And then they'd fife away like fun,
And play on corn-stalk fiddles;
And some had ribbons red as blood
All wound about their middles.

The troopers, too, would gallop up
And fire right in our faces;
It scared me almost half to death
To see them run such races.

Old Uncle Sam came there to change
Some pancakes and some onions,
For lasses' cakes, to carry home
To give his wife and young ones.

But I can't tell you half I see,
They kept up such a smother;
So I took off my hat, made a bow
And scamper'd home to mother.

HENRY LIGGINS

I SUSPECT the song of "Yankee Doodle" was written to the tune of a nursery song in vogue forty or fifty years ago, which ran in this wise:—

A STAKE-MAN

Lucy Lockit lost her pocket,
Kitty Fisher found it,
But the deuce a penny was there in it,
Except the border round it.

And that this is borrowed from an old English carol of the fourteenth century.—

INSCRIPTION BY BEN JONSON.—SEJANUS HIS FALL, Large Paper, First Edition, *original Vellum Binding*. Att London, printed by G Eld, for Thomas Thorpe, 1605.—This copy was lent by the celebrated Dr. (Tom, as he was familiarly called) Rawlinson, the antiquary to Mr. Whalley, and is mentioned by him in his edition of the Author's Works. A fine portrait, Vol. I., page 37:—"This last was a very fine copy, and had been a Presentation Book from the Poet to his friend. In a blank leaf at the beginning was the following inscription written in Jonson's own hand." And then follows the Inscription, which Dr. Rimbault copies in his contribution to "Memorabilia." This interesting and valuable tome was bought for me by the late Mr. Thomas Thorpe, the eminent bookseller, at the sale of Mr. Field's Library on the 22nd of January, 1827, and from that day to the present it has never for a moment passed from my possession. The volume also contains the autograph of Francis Mundy, brother of the dramatist Anthony Mundy, to whom it once belonged. The late Mr. Bockford, of Ponthil, offered me a very, very large sum for it, but in vain.—GEORGE DARELL, Canonbury.

A "GARCIL," "BOW-RAKE," AND "PALE DYKE."—*Garcil*, in northern dialect, means Underwood. It is probably derived from *Gorse*, i. e. Gorse-hill, Gorse-field, or Gorse-wold, abbreviated by usage. A *bow-rake* might mean a crooked road or byway, from *bow*, crooked (as bowlegged); and *rake*, synonymous used for road, perhaps from the same as the *reach* of a river. A *pale dyke* is no doubt a boundary ditch, from *pale*, a boundary (Latin *palus*, a fence), and *dyke*, a ditch. The writer should have stated the meaning of the terms he wishes explained, as his hap-hazard etymology is extremely deceptive. What he terms "*gar sel*," for instance, is one word.—(*See Halliwell's Dictionary of Archaic and Provincial Words*) *Rake* was also a term applied to a hawk which flew wide of the mark; and young hawks were called *towers* when they first left the nest, in contradistinction to *branchers*, which were more mature birds. A *bow-rake* might mean a wild young hawk, but the sense of the expression should be given as it is used.—BERM.

### TO CORRESPONDENTS.

G. I. H.—Individual opinions are of little value. The question put by Berm is this:—Can any proper evidence be given in support of what Lestrange plainly implies, namely, that statesmen are clever fellows? is there any scientific authority, or any recorded experience that can be adduced?

*Isotopus.*—The observations are not sufficiently definite. Try your hand at the elucidation of some obscure question connected with either a place, family, occurrence, or book. The Ancanges, of Surrey, derived their name from the beaux word *Ancre*, an anchor. Since Jason were made from the word the term itself came to signify a mariner, and the son of Hengist was so named; hence the tribe Ancanges. The syllable *ing* signifies progeny, race, or tribe—our word young, and the German *sung*. See a Paper on the word *Birmingham* in the *Athenæum* of September last.

JOAN H.—Readers of plans compounded of *herbs* are very numerous, especially in Kent and Sussex (See the map of these counties). Hurst means a knoll of trees, "wooded bank, or plantation." With this explanation the compounds are easily analysed. Kenrick has a theory that such names indicate the localities of the ancient marks, because they imply a woody district. In Drayton's "Polyolb.," s. 2, is the following passage:—

"To her neighbouring sisters the countries first showed
So just conceived joy, that from each rising Anvet,
Where many a goodly oak had carefully been nurst,
The sylvans in their songs their mirthful meeting tell.

KEEP ME FROM NO DIE.—The passages which we cited are manifestly as instances of the Greek construction in Reyd's Illustrations of the tragedies of Æschylus and Sophocles.

CHARTERLESS.—R. B. M., Bedford.—The subjoined extracts from D'Israeli's "Curiosities of Literature" (Second Series) will answer both your Queries. "The Greeks called a barrying-ground by the soothing term of *Coemeteria*, or the "Sleeping-place." The Jews, who had no horrors of the grave, by Bath-haim, or "the house of the living!" The Germans, with religious simplicity, "God's-field."

H. M., York.—See Webster's Dictionary.

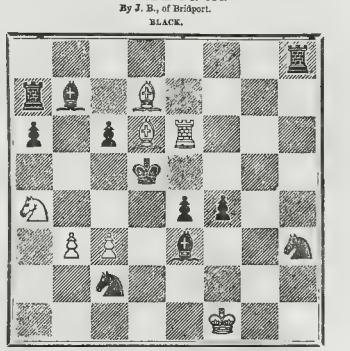
LONDON STONE.—For an account of this relic, "Thomas" may consult Timbs' "Curiosities of London," p. 471.

### CHESS.

Our usual Answers to Chess Correspondents are postponed until next week.

PROBLEM No. 623.
*By* J. B., of Bridport.

BLACK.



WHITE.

White to play, and mate in three moves.

### CHESS IN THE METROPOLIS.

A very slight skirmish, played by letter between the accomplished "STELLA," of problem-composing celebrity, and Mr. STAUNTON.

(*Irregular Opening*)

| WHITE ("Stella.") | BLACK (Mr. S.) | WHITE ("Stella") | BLACK (Mr. S.) |
|---|---|---|---|
| 1. P to K B 4th | P to Q 4th | 11. Castles | K Kt to K 2nd |
| 2. P to K 3rd | P to Q B 4th | 12. B to K 4th | P to K B 4th |
| 3. P to Q B 4th | P to Q 5th | 13. Q to K sq (a) | Castles (b) |
| 4. K B to Q 3rd | Q Kt to Q B 3rd | 14. B takes B | Q to her 3rd (c) |
| 5. P to Q Kt 3rd | P to K 4th | 15. B to Q 3rd | P to K Kt 3rd |
| 6. K Kt to K B 3rd | P takes K B P | 16. Q to K R 4th | Kt to Q 6th |

| 8. K Kt to K Kt 5th | B takes P | 18. P to Q R 4th (d) | P to K Kt 4th |
| 9. Q to K 2nd (ch) | Q Kt to K 4th | 19. Q to K R 6th | K R to K B 3rd |
| 10. K Kt to K B 3rd | Q B to K Kt 5th | 20. K takes B | Kt takes R and wins. |

(a) Original and ingenious.
(b) Had he taken the Bishop with Pawn, Stella would have obtained a fine attacking position. *Ex gr.*—

| | | |
|---|---|---|
| 13. | P takes B | 15. Q takes K P, &c. |
| 14. | Kt takes Kt | B takes Kt |

(c) Threatening.

(d) To release the poor imprisoned Knight.

Another slight affair between Mr. STAUNTON and an AMATEUR.
(*French Game.*)

| BLACK (Mr. S.) | WHITE (Amateur) | BLACK (Mr. S.) | WHITE (Amateur.) |
|---|---|---|---|
| 1. P to K 4th | P to K 3rd. | 11. P takes Q B P | Castles |
| 2. K Kt to K B 3rd | Q Kt to Q B 3rd | 12. Q Kt to Q B 3rd | P takes P |
| 3. P to Q 4th | P to Q 4th | 13. Q takes P | P to Q Kt 4th |
| 4. P to K 5th | P to Q B 3rd | 14. Q to K 2nd | B takes P |
| 5. K B to Q 3rd | Kt to Q Kt 5th | 15. B takes Kt | P takes B |
| 6. Castles | P to Q B 4th | 16. Q Kt to K 4th | K B to K 2nd |
| 7. Q B to K Kt 5th | P to K B 3rd | 17. K R to Q sq | Q to Q Kt 3rd |
| 8. P takes P | K Kt takes P | 18. Q B to Q B sq | Q B to Q Kt 2nd |
| 9. P to Q B 4th | Q Kt takes B | 19. Kt to Q 6th | P to K 4th (*a*) |
| 10. Q takes Kt | K B to K 2nd | 20. Kt to K 5 5th | And White surrendered. |

(*a*) The youngest pranklSquat will perceive that if White had taken the Kt he must have lost his Bishop and a Pawn in return.

### CHESS ENIGMAS.

No. 970.—By C. W., of Sunbury.

*White*: K at K B 6th, Q at Q Kt 6th, B at K 7th, Kts at K Kt 3rd and K 3rd, Ps at K Kt 2nd and K B 3rd.
*Black*: K at K B 8th, Q at K Kt 8th, R at Q R 7th, Bs at Q B 4th and Q R 3rd; Ps at K Kt 3rd, K B 2nd, Q 3rd and 7th.
White to play, and mate in five moves.

No. 971.—By the Same.

*White*: K at Q 3rd, Bs at K Kt sq and Q 7th, Kt at Q B 4th, P at Q B 4th.
*Black*: K at Q 4th, Ps at K 3rd and Q B 4th.
White to play and mate in four moves.

No. 972.—By an Amateur.

*White*: K at K sq, Rs at K Kt sq and K B 7th, Bs at K 7th and Q Kt 7th, Ps at K B 2nd and Q R 2nd.
*Black*: K at K 4th; Ps at K R 2nd and 4th, K 3rd and 5th, Q 2nd, Q Kt 3rd, and Q B 5th.
White to play and mate in five moves.

### THE CHASSEURS D'AFRIQUE.

THESE mounted Zouaves, who rendered such timely aid to our heroic countrymen in the deadly struggle at Inkerman, were the Russians outnumbered our troops in the proportion of six to one, rank foremost among the various divisions of the French army for all true soldierlike qualities. Truly has it been said of them, by a recent historian of their brave deeds, that they are "indomitable in fight, patient under difficulties, fierce as panthers, yet joyous and tender as children."

The following instance of the excellent spirit by which French soldiers generally are animated is given in a letter from the Camp of Baidar, January 7. The writer, who has been describing a small affair in which the enemy were surprised, says:—

The Russians little expected our visit, and did not even attempt to defend themselves. Assailed in the dark, they took to their heels, abandoning their arms. We killed a few men and made some prisoners, without losing a single man. One of the intrepid soldiers who formed part of that nightly expedition picked up in the Russian post a beautiful miniature portrait of a lady, which was painted in Paris, for it bears the name of one of our best artists. This portrait was evidently lost by the officer in command of the post. If he applies for it, it will be returned to him, for we are in the habit of restoring every valuable article when the legitimate owners are known. We do not only return the objects on which those who lost them set a value as *souvenirs*, but also the money found on the dead, when the sum is any way considerable. To give you an idea of that military probity I need only mention the instance of a soldier of the 46th Regiment of the Line, who, having found on the body of a Russian officer killed a sum of 10,000 francs in gold, hastened to bring it to Marshal Pelissier, in order that it might be returned to the family of the deceased. Those deeds are not rare in our army, and although they are mere acts of honesty we nevertheless feel delight in relating them.

THE CHASSEURS D'AFRIQUE.—(SEE PRECEDING PAGE.)

CAREENING BAY, SEBASTOPOL.—SKETCHED BY J. A. CROWE.

## CAREENING BAY

How it must puzzle the simple-minded Tartars as they gaze upon the wreck and devastation produced by the Allies, to account for the signal defeat of their haughty oppressors! Little more than twelve months ago the docks and harbours of Sebastopol Bay, as they glittered in the bright sunshine, were crowded with that powerful Russian fleet which was destined to take possession of Constantinople on the first favourable opportunity. And now when the old inhabitants of Traktir—as the place was formerly called—look out upon Careening Bay, the only vestige of the Russian vessels they can discover is the fragment of a dredging machine. The proud fleet which Admiral Nachimoff commanded, whose only exploit was the massacre of Sinope, lies at the bottom of the bay, while the chief portion of the sailors who manned it have been killed or disabled in their vain attempt to hold possession of Sebastopol. Should the Allies shift the campaign from the neighbourhood of the ruined city to some point further north, as is highly probable, Careening Bay may once more become as lonely a spot as it was before the Russian invasion of the Crimea.

AN INCIDENT IN THE PRESENT WAR.—PAINTED BY SOYRIEUL.—IN THE EXHIBITION OF PICTURES OF THE FRENCH SCHOOL.—(SEE NEXT PAGE)

## AN INCIDENT IN THE PRESENT WAR.

PAINTED BY M. SOVRIEUL.

"AN INCIDENT IN THE PRESENT WAR" (may we not say the *late* war?) is one of the earliest in point of time of a series of pictures which the War of Alliance between France and England is sure to produce. Incidents peculiarly adapted to pictures may be found in every fifth page of the stirring letters from the seat of war contributed to the *Times* and *Morning Herald* by Mr. Russell and Mr. Woods. Nor have the special communications of our own Correspondents been wanting in incidents to attract an artist.

In the picture which we engrave this week from the facile and pictorial pencil of Sovrieul, we see how ably a French artist has availed himself of an incident in the war. A fierce and fiery Cossack has dismounted to plunder a wounded Zouave. A female camp follower pushes the Cossack away from the body of her companion, while one of the 42nd Highlanders sends a ball into the heart of the mercenary ruffian. There is great animation in the scene. The costumes are picturesque: the subject has a female interest; and we see England and France united in the field of battle.

This picture is known to many of our countrymen by "the Exhibitions of the French School" at Dublin and Leeds. We are glad, by permission of the proprietor, to make it still more widely known by the skill of the engraver and our own columns.

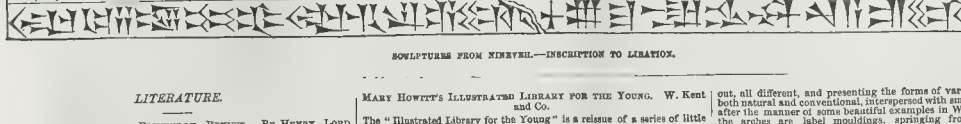
## INSCRIPTION FROM NINEVEH.

In order to appreciate the interest of this inscription, it will be requisite to turn to the engraving of the Slab from Nineveh, in our Journal of last week.

There are many in England who still question whether the cuneiform writing has been truly deciphered. We hope the following fact will convince them. When the slab now under notice was discovered, Mr. Loftus sent a simple copy of the inscription to Colonel Rawlinson, then resident at Bagdad, 500 miles distant. He never saw the subject, as he never visited the excavations during the whole time the last expedition was settled there, and, therefore, could know nothing of it; yet by return by post he wrote, describing the subject, and requested a sketch to enable him to determine the instruments which the King employed. By now engraving the inscription supplementary to the slab, we afford an opportunity for Dr. Hincks and other cuneiform scholars which England has produced to extend their knowledge of the several minor points in this long-lost language.

We append the translation of the Libation Inscription, by Colonel Rawlinson:—"I am Assur-bani pal, the Supreme Monarch, the King of Assyria, who, having been excited by the inscrutable divinities Assur and Beltis, have slain four lions. I have erected over them an altar sacred to Ishtar (Ashtareth), the goddess of war. I have offered a holocaust over them. I sacrificed a kid (?) over them."

(Signed) H. RAWLINSON.



SCULPTURES FROM NINEVEH.—INSCRIPTION TO LIBATION.

## *LITERATURE.*

CONTRIBUTIONS TO THE EDINBURGH REVIEW. By HENRY LORD BROUGHAM. Three volumes. Griffin and Co.

We are glad to see the appearance of the volumes before us, worthy to range with the select papers of Jeffrey and Macaulay — so long illustrious co-labourers in the same fertile vineyard. The *Edinburgh Review* was, in fact, the great educator of society for the first thirty years of the present century, and fought the battle of the people, and of humanity at large, with consummate skill and invincible perseverance. It began at its very outset, in the dismal days of triumphant and undiluted Toryism, to teach with an authority never before assumed in periodic literature the great truths of economic and political science, and those it has lived to see established in the high places of society, and almost universally received and acted upon, even by many who were originally the most hostile to their adoption. Amongst the illustrious band of *nobles fratres*, who led the van in the grand enterprise of enlightening and enfranchising the British people, no name is more eminent than that of Henry Brougham. To consummate talents and penetrating genius, courage the most undaunted, and indefatigable industry and perseverance, were united inexhaustible stores of general information, continually augmenting, and a matchless felicity of exposition and application, both as a public writer, and a forensic and political orator. The edition of his works, at present in course of publication by Messrs. Griffin and Co., and revised by the noble author himself, is a valuable present to society, containing the rich deposits of one of the most fertile and encyclopedic minds of modern times. And the wonderful thing is, that these contributions on so many various subjects—political, economical, scientific, and literary—were in fact, the mere recreations of this powerful intellect, an unbending from the sterner duties of the politician, the statesman, and the lawyer.

In the first volume is a series of papers on the orators of Greece and Rome, and on English oratory and pulpit eloquence. These admirable articles should be studied, not merely read, by all who would desire to appreciate criticism, the most delicate and refined, expressed in nervous and pungent diction. They have recently called forth the high approbation of M. Villemain, the eminent French critic and philosopher. Several papers succeed next, on Walpole and his contemporaries, and on the eminent political characters of the reigns of the two last of the Georges. The last of these articles is a terrible exposé of the brutal, vindictive, and low-minded conduct of George IV. in his unhappy Queen, and is one of the most scathing and fearful revenges which the historic biographer has ever taken on royal baseness and villany. In the papers on foreign policy a chief characteristic is the broad and comprehensive view taken by the writer, and the success with which he anticipates the now received doctrines on these, at that period, ill-understood questions.

In one of these papers, written twenty years ago, the sagacity of the writer points out the insidious progress of Russia, and the necessity which would soon arise of arresting her career of conquest and aggression. The articles which succeed treat of great constitutional questions; and of political economy and criminal law, and remind us how much we are indebted to the noble author for first laying the foundations of sound knowledge on those recondite subjects, and afterwards, as a statesman, carrying various of them into successful execution.

The remaining papers are chiefly occupied with the researches of Lord Brougham in the fields of antiquarian and physical science, evincing the remarkable versatility of his mind, with the vast range of his inquiries. To these succeed essays on a number of miscellaneous literary topics, embracing lively biographies, entertaining sketches, and rich anecdotal matter—mingling the wisdom of the wise with the agreeable *abandon* of the graceful *litterateur*. The noble author, for three score years the recognised advocate of all that aims at ennobling and enriching society, in sending forth this revised and completed edition of his literary labours, to delight and instruct new generations of his countrymen, retires from the stage of public authorship, with equal dignity and propriety, secure that this, his *magnum opus*, will be cherished as the lofty legacy of a great mind to a great people.

TREASURES IN NEEDLEWORK. By MRS. WARREN and MRS PULLAN (THE PRACTICAL HOUSEWIFE. By the Editors of "The Family Friend." Ward and Lock.

Few occupations of the happy English home take so wide and varied a range of taste and utility as Needlework, and probably at no period of the history of the arts has it been more usefully cultivated than at the present moment. It is not too much to assume that the love of revivalism has reached this art of the needle as well as other studies of ornament; and, whether in personal adornment or household decoration, rarely has been displayed such richness of fancy since the days when Queen Matilda worked in worsted the very interesting memorial of her husband's greatest victory, which is preserved to this day at Bayeux. The volume before us is, therefore, a series of "Treasures;" for, in this delicate art, as in the more substantial provisions for social life, demand begets supply, and the fair *artistes* of the present work have here embodied a rare collection of designs and patterns, in illustration of their instructions in knitting, netting, crochet, point-lace, braiding, and embroidery. These designs are in excellent taste; and though, perchance, higher branches of art may not have been left unconveiled, and we may occasionally trace a fanciful resemblance in the crown of an infant's cap to the tracery of a marigold window, or in the delightful branches of needlework which, in inventive skill. Too much use is not, however, made of the geometrical forms of Art—for Nature, in her luxuriant flower-garden, as well as the walks of the field naturalist, has supplied many of the originals for the patterns before us—in the border of a costly table-cover, the embroidery of a note-case or a cap, the bouquets of a tamboured purse, or many a graceful bunch of crochet flowers. Scattered through nearly 500 pages of instructions, there are really practical illustrations of all those delightful branches of needlework which, in their tasteful results, bespeak the well-directed fancy of the worker, and have more than once gently reminded us of "the art of angling." With such high characteristics, we need scarcely add that "The Treasures in Needlework" will be welcomed at thousands of homes and hearths; and that it holds, in its beautiful forms of teseling, must elevate the taste of the learner.

*The Practical Housewife* is more homely in its aim than is its gay "Needlework;" and, as a "Lady Bountiful" of a book, commending seriously with Thoughts on Housekeeping, then passing to the Medicine Chest and Invalids' Food, Cookery for all ages, and Food for all Seasons, with Receipts by the thousand. To show how minutely matters are treated, we may refer to a very closely-printed page devoted to "How to Toast Well;" the rare virtue of well-made "melted butter" equally cared for; and a page of illustrations of folding up the table-napkin. There are many scores of other engravings, and, what is very essential to that frequent requirement—to "find anything in a hurry"—the book is provided with an index of full and convenient reference.

MARY HOWITT'S ILLUSTRATED LIBRARY FOR THE YOUNG. W. Kent and Co.

The "Illustrated Library for the Young" is a reissue of a series of little books on different subjects now for the first time published in a unique form. It is edited by Mrs. Mary Howitt—a lady who, as a poet and a novelist, is well known in all family circles. It is written in a simple and amusing style, well calculated to dispose young people to the study of natural history, geography, entomology, botany, and other useful though somewhat abstruse sciences. These subjects are all treated in a manner that cannot fail to bring them within the comprehension of the youthful portion of the community. Several of the illustrations are by Mr. Harrison Weir, and all of them are well executed. We can cordially recommend the little book to the attention of parents.

## THE BATTLE OF THE TCHERNAYA.

*(To the Editor of the* ILLUSTRATED LONDON NEWS.*)*

IT is with extreme reluctance I venture to again occupy your valuable columns, with a rejoinder to Mr. Coope's elaborate production on the subject of the wounded Russians at the battle of the Tchernaya in your issue of the 15th ult., in which he labours to prove the existence of that which did not exist. I shall not attempt to imitate the rev. gentleman's clerical style of abuse, nor condescend to notice his insolence, but leave it to your readers to judge between us as to the facts, without quibbling as to whether the medical officers, were sent or went. He says they were not there by authority. I have proved they were there, have given some of their names, and can furnish you with a dozen more who rendered assistance to the wounded on that day. The whole of the medical staff of the cavalry and horse artillery were there by order; and as the cavalry were not engaged, their services were available for attendance on the wounded Russians; therefore it was not necessary to issue a special order to them to do that which it was their duty to do, and which they did. Others who could be spared went there voluntarily, but some of them retured when they found they were fired upon by the enemy The ambulances were likewise there by order; and therefore it may be information to him to know they were sent by authority as soon as the firing was heard. I have seen the written order myself in the Adjutant-General's office. Now with regard to the "knapsacks" the rev. gentleman "with assistance" placed under the heads of the wounded without dismounting, but which, unfortunately for his statement, were not there, although he has since discovered "more than one," I will make him a present of that one, and ask him where were the remainder!

It is not, therefore, to be wondered at that your rev. correspondent was unable to find a single medical officer when so many were there, when it is considered that, while unable to discover what was there, he was able to see of what was not—"the knapsacks;" and, after having performed feats worthy of a Crimean wizard, modestly modified them into the "knapsacks" or "haversacks or pouches" is too absurd to those who know what a pouch or havresack is, as they could not possibly answer the purpose; nor does the discovery of a sternal error or a misprint relieve him from the horns of the dilemma in which he has placed himself.

I may have written rather strongly under feelings of indignation at a charge of inhumanity, either expressed or implied, as this is not the first time "individuals" of the rev. gentleman's cloth have endeavoured to cast unmerited obloquy on the medical department of this army, and make philanthropic capital out of us, with just as much show of justice as in the present instance; and if my sentiments or my acts are not agreeable to him, he has only to thank himself—he must remember he commenced the attack, which was gratuitous, unsalled for, and calculated to mislead the public. His letter and statements were condemned by every chaplain in the Crimea, as well as by Mr. Weight, the Chaplain-General

Before he ventures to give me gratuitous advice he should be more ingenuous and look at home. The silly threat contained in the last paragraph of his letter is quite consistent with his character of a Christian minister; and in return for his friendly advice to me, I have only to remind him of the homely adage, "mind your own business."

J. MOUAT, Staff-Surgeon First Class.

Jan. 17, 1856.

DISCOVERY OF A NEW ISLAND.—On the outer voyage to Australia of the *Ben Nevis*, in latitude 44.41 south, and in the same longitude as the Crozets, came unexpectedly upon land. Supposing it was the Crozets, he steered 120 miles south, and was astonished to find himself at the Crozets. He describes the new island as the highest he had ever seen, for the mountain ridge on it seemed to be as high as the Andes. The Crozets are in a line with Prince Edward's Island, Marion, and Kerguelen's Island

THE EMPEROR AND THE CHILD.—The following incident marked the review of Tuesday:—At the moment when the Emperor was passing in front of the Zouaves of the Guard, the son of the caoutchouc of the regiment, a boy of about seven years of age, dressed in miniature wearing the Zouave uniform, drew near the Emperor, and presented to him a fine bouquet of violets. His Majesty bent down from his horse, and, touching the child with his hand on the cheek, he said—"Thank you, my little friend; go and take your bouquet to the Empress," pointing to the balcony where her Majesty was seated with her ladies, and then proceeded with his inspection. "But how am I to get to the Empress?" said the little messenger, in great embarrassment. "I will show you the way, my little man," said a deep voice near him; and the boy, looking up, perceived that it was the tall drum-major of the Zouaves who had volunteered to serve him as guide. Thanks to the imperturbable repetition of "By order of the Emperor, a bouquet for the Empress," they soon arrived near her Majesty. Emperor, a bouquet for the Empress," they soon arrived near her Majesty. The Empress accepted the flowers, embraced the little boy on each cheek, and asked him his name and those of his parents, and appeared delighted with his present. At last the child, after having been caressed and kissed by the ladies, returned with his tall comrade to the court below. It may be imagined that he was asked a thousand questions when he came down, but all his faculties seemed to be concentrated in the one fact of his interview, as his constant reply was: "The Empress embraced me."—*Galignani*.

## THE REDMINSTER REREDOS.

FEW churches in modern times have absorbed so much of public attention as the recently-consecrated church of St. John, Redminster—an extensive parish in the city of Bristol, comprising about 19,000 of its population.

The consecration of the church has been so fully detailed in the pages of the leading daily journals, that we need not repeat it here; our immediate object being to direct attention to the sculptured decorations which have given rise to so much controversy and diversity of opinion.

This church replaces another of very ancient date, consisting of chancel, nave, north aisle, with porch, and western tower. Of these it has been satisfactorily proved by features which have been brought to light during the work of demolition, that the walls of the chancel, north aisle, and tower, date as far back as the thirteenth century.

In designing the present structure, the architect, Mr. John Norton, of London, has adopted the late First Pointed style, not only for its intrinsic beauty, but also with a view of perpetuating the memory of the church as left by its first founders. The new church is dedicated, like its predecessor, to St. John Baptist, and consists of a chancel, nave, aisles, western engaged tower, north porch, two chancel chapels, and sacristy, arranged in the form of a cross. The nave is divided from the aisles by an arcading of acutely-pointed arches, with bold and effective mouldings; the supporting columns being circular, with four small detached shafts grouped round each of them. The capitals are extremely rich throughout, all different, and presenting the forms of various kinds of foliage, both natural and conventional, interspersed with small figures of animals, after the manner of some beautiful examples in Wells Cathedral. Over the arches are label mouldings springing from corbels of large size and elaborate ornamentation, which serve also as bases for the shafts upon which the principals of the nave roof are supported. The clerestory is composed of traceried windows, arranged in couplets, between each of which stands an angel—the effect of which is extremely novel and effective, giving, as it does, life and character to this usually uninteresting portion of a church. The principal entrance is by a western doorway, over which is a sculptured representation of the preaching of St. John the Baptist in the wilderness. The chancel is divided from the nave by a lofty and elaborately-moulded arch, above which is frescoed an Agnus Dei on blue ground within a vesica of gold and crimson rays, on each side of this descend the Commandments, in legible characters, with illuminated capitals, this being the position in which, by the canons, they are directed to be placed—a direction which it could be wished were more attended to in the present day, as they might be thus made highly conducive to the beauty of a church, instead of being, as they generally are, a mere useless disfigurement. Beneath the chancel arch is a low stone arcaded screen, supported by a double row of Purbeck-marble shafts, the spandrils of which are carved into delicate foliage Three compartments on the north side, projected into the nave, and elevated by two steps, form the pulpit, which is thus made a very remarkable feature in the church. In the central compartment, which is paneled, and not pierced like the screen, is a mezzo-relievo representation of the Sermon on the Mount, and in the side panels the preachings of SS. Peter and Paul respectively.

The east wall of the chancel is pierced with a lofty triplet, the internal arcading of which is richly foliated, and rests upon detached Purbeck-marble columns. Beneath this is the Reredos, of Caen stone, and occupying the entire width of the chancel. Of this, the most striking feature of the church, we engrave a View from a photograph by Mr. J. B. Hazard, of Bristol. The lower stage is a simple arcading, surmounted by a band of quatrefoils. Above are three large panels, surmounted by crocketed canopies, and sculptured with alto-relievo representations of the Nativity, Crucifixion, and Ascension of our Lord. The first of these subjects, which is on the north side, represents the Virgin Mother kneeling in the lowly stable in Bethlehem over her newly-born son and Lord, and Joseph by her side, and three shepherds coming in to pay their homage. Above the stable, which is conventionally treated, are angels playing on instruments of music; and in the background appear the heads of some cattle.

In the central panel is the Crucifixion. On the north side of the cross stands St. Mary, with the Blessed Mother weeping over her mother; on the south, the "other Mary" and St. John. Above is an angel with crossed stole and uplifted arms; and in the background, the city of Jerusalem, and "many bodies of the saints which slept arising. The sun and moon are also conventionally introduced. At the foot of the cross appear the usual emblems of mortality, together with a palm-branch, indicative of Christ's victory over death. On the south panel representation of the Ascension of our Lord, who is surrounded by rays, and attended by angels bearing the crown of glory. Between and at the side of the panels are niches containing statues of the four Evangelists, who stand upon pedestals adorned with their appropriate symbols. The jamb columns of the panels and niches are of rouge-royal marble from the Pyrenees, which serves admirably to relieve the statues within. In the spandrils formed by the canopies over the Evangelists are trefoils, in which are sculptured the instruments of the Passion. Above those of the Nativity, Crucifixion, and Ascension, over each of the other four stand winged angels, in the act of prayer. The wall behind is carved with a rich diaper pattern. On the north side of the altar, which is eight feet in length, raised on a footpace and divided by Purbeck marble shafts with the usual English form; and on the south the sedilia, three simple niches, upon the same level, and divided by Purbeck marble columns. The stalls are of oak, and sides are seated with low movable benches, resting on the tile pavement, and provided with sloping backs and book boards. The chief glory of this part of the church is the font, which stands at the intersection of the nave, and of the aisles leading to the north porch, so as to be the first object that meets the eye on coming in by either of those entrances. It is sculptured in Caen stone; the octagonal basin supported by angels, alternately bearing scrolls and having their surrounded by angels, alternately bearing scrolls and having their wands uplifted in prayer; and is supported upon eight small Purbeck columns, grouped round a centre shaft. Of the two high steps upon which it stands the upper is crushed Devonshire lower-ground

The eastern and western windows are by O'Connor, of London; the former having been erected to the memory of the late Mr. G. Whitchurch, by his widow. It is of three lights, and contains the Crucifixion in the central light, and Saint John the Baptist and St. Stephen in the two side ones. An exceedingly striking and beautiful effect is obtained by Our Lord's body being surrounded with each passion flowers in the shape of a vesica, while around are adoring angels. The western window is a couplet, and represents—in one light the "Baptism of Our Lord in the Jordan," and in the other "St. John the Baptist Preaching." The glass and colouring are painted in grisaile, and are the work of Mr. John L. Eland (the brother of the Vicar), and the Rev. C. Plenderleath. The church is lighted by gas standards of brass and bronze, which have been executed by Messrs. Skidmore, of Coventry: they are divided into three branches, each of which bears four leaf-shaped burners.

The present structure has been raised mainly through the untiring zeal and energy of the highly-esteemed Vicar, the Rev. H. G. Eland.

## ST. STEPHEN'S CHURCH, WESTBOURNE-PARK, PADDINGTON.

THE want of church accommodation in the extensive and rapidly-increasing parish of Paddington has long been felt, and strenuous efforts have lately been made to remedy the evil. The church of which we give a View this week is intended to supply the large newly-built district of Westbourne-park: it is situated at the junction of the Talbot and Westbourne-park roads, and will be a mile from the 57 feet 8 inches. The nave is 56 feet 9 inches long and 20 feet 3 inches wide in the clear. The chancel is 24 feet 3 inches in depth and 21 feet 4 inches in width, with aisles on each side 18 feet long and 13 feet wide—one appropriated to adult free sittings, and the other to children: a wooden parclose with open arches will separate these aisles from the chancel. The vestry is on the north side, external to the north chancel aisle. The tower is square, about 23 feet external dimensions, and is supported by massive buttresses: it is appropriated on the ground-floor as the principal entrance to the church; and above it will contain the organ. It is surmounted by a broached spire, with two tiers of dormers: the total height to the summit being about 130 feet.

CAMP AND FIELD.—BOOTS, SPURS, &c., of the most suitable kinds, of first class, as supplied to many of the most distinguished officers of the Army of the East: also PAIGN BOOTS, the height of leg, with the outline of the Wellington of Leg, lined, 30s.; ditto, in leather, with additional Spring Gussets, Leave Long Stockings, 8s. 6d. per pair. Waterproof Pegasus Cloth across the Indian Line.—GOWLETT and Co., 33, Charing-cross.

CABINET, UPHOLSTERY, EASY-CHAIR, and CARPET MANUFACTORY, 88, 89, 34, Berners-street, Middlesex Hospital.—T. B. FILMER solicits a visit to the large range of Warerooms, replete completely at present with the most modern and elegant Furniture, adapted for every description of house and market, at prices much below the usual charges for inferior articles. Estimates and designs sent to any part of the kingdom free of charge. Carpets at cost price. 88, 89, and 34, Berners-street, Middlesex Hospital. Established 1826.

WATCH MANUFACTORY, 33, Ludgate-hill, London. Established 1749.—J. W. BENSON, Manufacturer of Gold and Silver Watches of every description for economise, and pattern Two to Sixty Guineas each. Drawings or pamphlets of Sketches and Prices sent free on application. Every Watch carefully packed and sent every Watch sent carriage-free to Scotland, Ireland, Wales, or any part of the Kingdom. Receipt of a Post-office Order. Gold and Silver Watches taken in Exchange

GOLD WATCHES, £3 10s., £5 5s., to £10 10s. each, highly finished, horizontal movements, jewelled in four holes, with all the recent improvements. Engraved or engine-turned cases Warranted to keep accurate time.—J. W. BENSON, 33, Ludgate-hill

GOLD WATCHES, £6 6s., £8 8s., to £9 10s. each, highly finished, patent detached Lever movements, jewelled in six holes. Engraved or engine-turned cases J. W. BENSON, 33, Ludgate-hill

GOLD WATCHES, patent detached Lever movements, London made, first-class watches, 10, 10 guineas each. J. W. BENSON, 33, Ludgate-hill.

SILVER WATCHES, £2, £2 15s., to £4 each, highly finished, Horizontal movements, jewelled in four holes, with all the recent improvements. Engraved or engine-turned cases.—J. W. BENSON, 33, Ludgate-hill

SILVER WATCHES, £3 10s., £4 4s., to £10 10s. each, patent detached English Lever movements, strong double-backed cases.—J. W. BENSON, 33, Ludgate-hill

ELECTRO-PLATED SPOONS and FORKS of the Patterns used in the Royal Family, and the Public Dinners, NEW SILVER PATTERNS of the most elegant description, and of the Strongest and Best Quality, introduced by RICHARD and JOHN SLACK, Silversmiths and Electro-Platers to the Queen and Royal Family, 336, Strand, and 17, Albemarle-street, Piccadilly. Fiddle Pattern, Thread Pattern, Brunswick Pattern, &c.; also, a large assortment of the best London and Sheffield-made Table Knives.—112, Regent-street, London.

STAINED WINDOWS, PAINTED TRANSPARENCIES, &c., may be successfully imitated by the new and beautiful process known as HAPLIN'S, IN WHITE LEAD. Gentlemen will find interesting and profitable entertainment in the new and invigorating Art. Instructions may be had, at low prices, of JAMES BARNARD, 339, Oxford-street, London, by whom is published (1848) Instructions in Diaphanie process 6d., postage-free, seven stamps

ROUSSILLON, 30s. per dozen (free on rail at Perpignan Orientale). The Importations of this wine for 1854 were as follows, viz. 6,000 dozen Rousillon, 1,000 dozen Clairette, 1854, 900 dozen Picpoul. The progressive increase of reputation which this wine has obtained in the strongest possible proof of its genuine excellence and fitness for the table, also of the great discrimination and taste displayed by the importers in selecting from the best cellars of its respective growth. Of particulars see ILLUSTRATED LONDON NEWS, February 9, 1856. Sherries, 20s.; Stanfield, 24s.; Old Ruby Becswing Port, 42s., 48s.; Moselle (character) 18s.; Hock (Johannisberg), 36s.; Red Hermitage, 36s.; Hermitage, White; Sparkling Champagne, 48s. each
Terms, cash. Cases and bottles included. Sample case may be had, at low prices, of JAMES BARNARD, 339, Oxford-street, London, by whom is published (1848) Instructions in Diaphanie process 6d., postage-free, seven stamps

DR. DE JONGH'S
LIGHT BROWN COD-LIVER OIL,
Is entirely free from nauseous taste and smell, and is unrivalled for purity, efficacy, and mild operation. It

(Continued from page 102.)

The church is faced externally with Kentish rag stone, laid in even courses, with Bath-stone dressings, windows, doors, columns, arches, and other details. The roofs are of Memel timber, and are of lofty pitch; the timbers will be stained and varnished, and the spaces between the rafters coloured. The sittings throughout will be of deal, stained and varnished. The church will accommodate 1500 persons, including children, and will be ready for consecration by the end of May, 1856. The belfry stage of the tower and the spire are not included in the present contract, but are reserved for future erection. The total cost, exclusive of the works reserved, will be about £9000. The architects are Messrs F. and H. Francis, who have also just completed the adjoining church called Christ Church, Craven-hill ,in the same parish.

## THE NEW CHURCH SCHOOLS AND RESIDENCES, HEMEL HEMPSTEAD, HERTS.

THESE New National Schools have been erected during the past year, and were formally opened on the 13th November.

The old school room having been found to be totally inadequate for the requirements of this populous town, the Vicar of the parish and the Rev. R. West directed the attention of the inhabitants and the gentry resident in the neighbourhood to the circumstance; and by their assistance, and the aid of Government, the new buildings have been erected, in an eligible and salubrious situation, near the church and the High-street. They consist of Boys' and Infants' Schools, each 46 feet long and 18 feet wide;

NEW NATIONAL SCHOOLS HEMEL-HEMPSTEAD, HERTS.

with class-rooms attached, 18 feet long and 15 feet wide. There are also residences for the master and mistress, conveniently placed at the eastern and western extremities of the buildings, and adjacent to the schools to which they respectively belong.

Sir Astley F. Cooper, Bart., of, Gadebridge has taken a great interest in the undertaking, and has contributed largely to the funds.

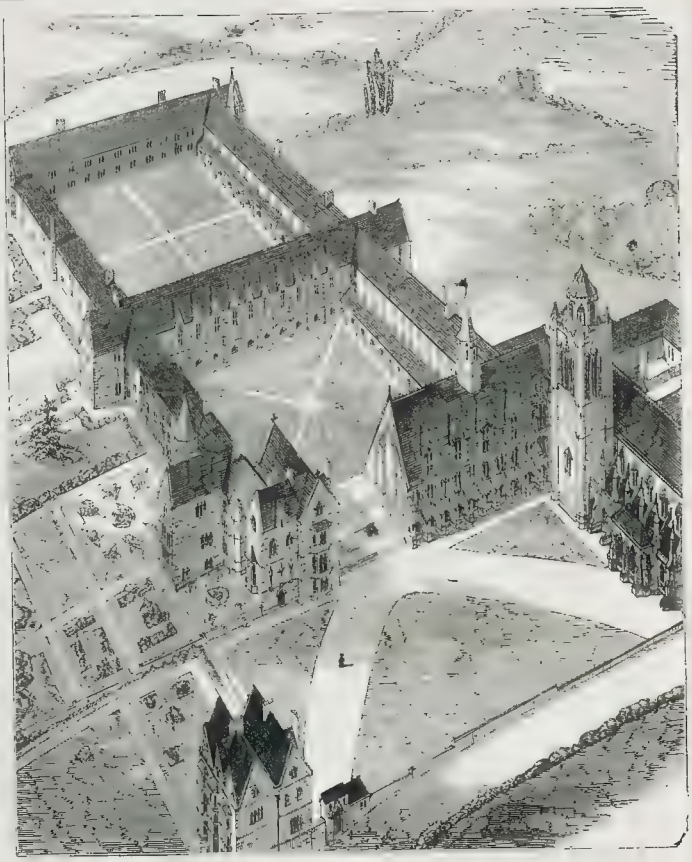
The buildings have been erected in the decorated style of Gothic, from the designs, and under the superintendence, of Mr. George Low, architect, of Clement's lane, London, by Mr. Groom, builder, of Hemel Hempstead. The materials used in their construction are red bricks, ornamented with diapers and Caen-stone dressings throughout. The roofs, which are open to the ridge, are of fir varnished; and have a light spire, serving the two-fold purpose of a bell turret and a ventilating shaft, erected thereon. The playground and gardens are inclosed with a dwarf wall and ornamental railing thereon similar in character to the buildings.

The cost, exclusive of the ground, has been upwards of £2000.

## SS. MARY AND NICOLAS COLLEGE, LANCING.

DURING the last years of the long peace with which our country has been blessed (now exchanged for the excitements and trials of a state of war) of the many topics of internal affairs which occupied the attention of the public, none obtained a larger share of notice than the important one of the education of the people. It is much to be regretted that where so much has been said, the proportion of the work accomplished has been so small. What has been done is the work of individuals rather than of any system or authority; and it is gratifying to find that the subject which now so powerfully fills the public mind, though for a time effacing the public question, has not suppressed individual action. The society of SS. Mary and Nicolas College is an instance of this. It was originally founded in

ST. STEPHEN'S CHURCH, WESTBOURNE-PARK, PADDINGTON.



ST. MARY AND ST. NICHOLAS COLLEGE, LANCING, SUSSEX.

1847, by the exertions of a clergyman—the Rev. N. Woodard, now Provost of the College—with a view to extend to the middle and lower classes of society the benefits of education by the clergy of the Church of England. New Shoreham, on the coast of Sussex, was the scene of his labours, and here was formed the nucleus of the society, consisting of the Provost and Fellows (clergymen) superintending a school; which rapidly increased in numbers, and led in the year 1851 to the erection of a magnificent building at Hurstpierpoint, Sussex, at a cost of £20,000, for the accommodation of 300 boys. This is known as St. John's College, and is specially intended for the sons of farmers and tradesmen—"the middle classes"—who are here educated under the immediate superintendence of clergymen in a manner most suitable to their position and prospects, at an extremely moderate cost. The establishment at Shoreham was still maintained, for boys who were to receive a more expensive education; and for this portion of the great work undertaken by the society, the buildings now erecting at Lancing, the immediate subject of this notice, are intended, the location at Shoreham being entirely temporary. Another branch of the society's work is also in hand under the auspices of Lord Robert Cecil and a committee, who are taking measures for the erection of a building to accommodate 1000 boys of the lower middle class, at a cost of about twelve guineas per annum each. In these enterprises the Bishop of the diocese entertains a lively interest; and is, in fact, as visitor of the colleges, connected with their prosperity. Undeterred by war prospects, the society proceeded on the 4th of June last to lay the foundation-stone of the buildings which are to form the College of SS. Mary and Nicolas, Lancing. They will necessarily be extensive and magnificent, as their object requires, while it equally demands that unnecessary expense shall not be incurred. The ceremony was performed by Sir John Patteson; accompanied by Lord Delaware, Baron Alderson, Mr. Beresford Hope, Mr. Tritton, Mr. Hubbard, and other persons of eminence, and in the presence of a large assemblage of the clergy and gentry of the neighbourhood. The site is well chosen, at a considerable elevation, about two miles from the sea, of which it commands a full view to the south; and across the valley of the Adur are seen to the east the range of chalk downs terminating at Brighton, distant about six miles. The plan consists of an east and west quadrangle, at the sides of which are arranged the dormitories of the boys and rooms of the masters. Between the quadrangles, and dividing them, are the school-rooms and library; and on the east is the dining-hall, 100 feet long by 38 wide, with a break-fast-room on the ground floor. At the south end of the east front is the Head Master's house. The principal entrance to the buildings is by a flight of steps, fifty feet wide, between the Head Master's house, and the dining-hall, leading at once into the east quadrangle, the ground of which is about ten feet above that of the fore court. By this arrangement the difficulty of the sloping hill-side has been turned to good account. The designs are by the late eminent architect, Mr. R. C. Carpenter, and are characterised by his purity of taste and happy adaptation of the Mediæval English style to the wants of the present generation. The buildings are proceeding under the direction of Mr. W. Slater, his friend and former pupil, who has added to the design a chapel—which, although contemplated, had not been designed at the death of the late architect.

The buildings are constructed of flint, with Caen-stone dressings. The contractors for the works are Messrs. Cheeseman, of Brighton.

REREDOS IN THE RESTORED CHURCH OF BEDMINSTER.—(SEE PAGE 102.)

## THE APPROACHING CONFERENCES.

SHOULD no unforeseen difficulties arise, the Conferences for the re-establishment of the peace of Europe will be held in Paris towards the end of the present month or the commencement of March. All the great Powers of Europe will be represented except Prussia. Whatever may be the opinion of King Frederick William on this exclusion of his country from the world's councils at a period of the most solemn importance, when the mightiest interests of civilisation are to be discussed, and when the future relations of the States of the European Commonwealth are to be considered and adjusted, there are but few persons in or out of his dominions who will not acknowledge that Prussia has been rightly served. The King held aloof when his neutrality was mischievous and when his aid might have been of service. The Allies owed it to their own dignity to insist upon his isolation from their councils at that great settlement which he did so little to forward and so much to retard. The Prussians themselves will confess that the exclusion is well merited; and if hereafter they have to settle an account with the pusillanimous Monarch who, contrary to their wishes and to their interests, placed their country in such humiliation, there is not an honest politician in Europe—not excepting Russia—who will have any sympathy for him in the hour of his peril and perplexity. Even should his contemporaries bear lightly upon his fault, impartial history will know how to designate the Sovereign who might have made his country great, but who chose to make it little.

The names are not yet known of all the diplomatists and statesmen who are to represent the Allies on this occasion; but, as far as they have been divulged, they are satisfactory. The honour of England and the rights of Europe will be safe in the hands of the Earl of Clarendon; and there can be no objection in any quarter to such men as Count Buol for Austria, M. D'Azeglio for Sardinia, or Baron Brunnow for Russia. The representative of Turkey has not yet been named; neither are we aware on whom the choice of the Emperor of the French has fallen to participate in the Conferences on his behalf. But, as the Emperor will virtually be his own diplomatist on the occasion, Europe will have the strongest possible guarantee that the rights and the independence of all the nations that are, or have been, endangered by the ambition of the Czars will be zealously and ably defended, and that neither courage nor sagacity will be absent from the Council Board.

The disclosures of the last few days tend to strengthen the belief that Russia is sincere in her acceptance of the Austrian propositions. Everything at the same time tends to prove that the Allies, in the consciousness of their physical no less than of their moral strength, are resolved to be just before they become generous; that they do

GENERAL WILLIAMS, "THE HERO OF KARS."—FROM A FAMILY PORTRAIT.—(SEE NEXT PAGE.)

BALACLAVA HEIGHTS.—(SEE NEXT PAGE.)

not grasp at the opportunity of ending the war because they are weary of it, because they despair of success in it, because they waver in their opinion of its necessity, or because they begrudge the expenditure of their blood and treasure to bring it to a triumphant issue. We may, therefore, without being over-sanguine, believe that peace will be the result of the Conferences. Whether that peace is to be stable, and honourable to all parties, will mainly depend on the firmness of the representatives of Great Britain and France. It will be for them to insist upon so comprehensive a review of all doubtful points, as shall clear away all grounds of future quarrel. It is not for them to be generous to a defeated foe at the expense of the nations who have been aggrieved and robbed. It is not for them to be chivalrous to their enemy, because he is powerful and might resist, and unmindful of the rights of other nations, because they are weak and cannot help themselves. Properly conducted, the Conferences may give peace to Europe for a whole generation. Improperly conducted, they may yield nothing better than a truce of three or four years duration, of which the end may be—bloodier and fiercer war than that from which we have just escaped, and complications throughout Europe, exasperated perhaps by appeals to those principles of government of which England is the representative, and of which she might then be found to become the Apostle.

Though the war was originally commenced for the defence of Turkey, it must not be forgotten that it has already assumed much larger dimensions, and embraced much wider interests. The attack on Turkey was but part of a gigantic project, or the Balkans would not have been crossed in 1828-9, Sebastopol would not have been built, and the Emperor Nicholas would not have offered to Great Britain, through Sir Hamilton Seymour, the bribe of Candia and Egypt. Great Britain and France took up arms ostensibly for the independence of Turkey, but in reality for the independence of Europe. It was not for the sake of Turkey merely that the gallant King of Sardinia joined our alliance, and sent his admirable soldiers to the Crimea. It was not for the sake of Turkey that Sweden contracted her recent engagements toward the Western Powers, and that they on their parts contracted the solemn engagement toward Sweden not to suffer any aggression upon her territory. It was not for the sake of Turkey that Austria became the mediator in a strife which she detested, and of which she looked upon the growth and progress with disquietude and dismay. It was for the sake of the great principle that the boundaries of all the States of Europe are fixed—and that no one Power shall be allowed to appropriate any portion of the territories of another, without by the very act drawing upon itself the armed opposition of all the rest. Viewed in this light, the question of Bomarsund is as important as that of Sebastopol, or any other fort and arsenal in the Black Sea, and must be so considered. If not, gross injustice will be done to Sweden, and a loophole will be left, through which at a future day the whole deluge of War may again break forth to overflow the world.

So many and so difficult are the questions to be decided so delicate are they in their application that if the Allies do not carry them with a firm and high hand, so as to make it apparent to the Russians that their Czar yielded to invincible necessity, and not to the merely humane and sentimental consideration that peace is a great blessing and war a great curse, there will be the danger that another Czar will some day arise who will look upon the Treaty of Paris as waste paper, and strive by a new war to efface the humiliation of his empire. The strength wielded by the Allies is the best guarantee for peace. To yield to a force which it is hopeless to resist is no disgrace to man or empire. If the peace is to be durable, the Allies owe it to themselves, no less than to Alexander II., to forego no preparation, to relax in no effort necessary to enforce compliance with their just demands, in case any hitch should occur in the negotiations. It was physical strength that placed them on this vantage-ground. It is physical strength that must hold them there until peace be definitively settled. They have physical and moral strength on their side at present. If they retain both, the war will come to a speedy and an honourable end. Most devoutly do we pray that it may be so.

## MAJOR-GENERAL WILLIAMS, C.B.

The gallant subject of this memoir was born in Annapolis, Nova Scotia, in the latter part of the year 1800, and entered the Royal Artillery (in which service his father before him had attained the rank of Lieutenant-Colonel) at the age of twenty-five.

For some fifteen years past he was employed principally, if not entirely, in the diplomatic duties, and had just successfully concluded the settlement of the Turco-Persian boundary question, when the war with Russia afforded to Lord Clarendon the opportunity to test his talents in a new sphere, by nominating him her Britannic Majesty's Military Commissioner to the Turkish Forces at Kars, with the rank and retinue of Brigadier-General.

How well General Williams acquitted himself of the trust reposed in him, and justified the sagacity evidenced by Lord Clarendon in his choice, let not England only, but the united voice of the Cabinets and armies of Europe, declare. In this instance, at any rate, "the right man was put into the right place," and rarely has history presented to our notice the parallel fact of a General more honoured in the circumstances attending his defeat than it falls to the lot of most men to be in the achievement of the most complete success.

Whatever human skill and foresight, left to its own resources, could plan—whatever the highest order of moral courage and of physical endurance could achieve—it will be readily granted to General Williams and the heroic garrison of Kars (Turkish, Polish, and Hungarian, as well as British) that in each and all of these qualities they were severally and pre-eminently distinguished.

How is it, then, that the honours of the Bath, so lavishly dispensed in the Crimea, should in the case of General Williams, up to the present time at least, have been withheld—he being notoriously (without disparagement of others) the only British General engaged in the present war upon whose judgment, tactics, and bearing, and "sufficiency for the position in which he was placed," beset as that position was by famine as well as by foes, the national verdict of approval has been pronounced, without the slightest admixture of censure, from first to last?

General Williams has four sisters living—three in British North America and one in the United States. He has also a niece at Winchester, married to Brevet Lieut.-Colonel O'Halloran, of the Winchester Dépôt Battalion, to whom we are indebted for the Portrait which illustrates this brief Sketch.

It represents the gallant officer in his then rank as Captain and Brevet Lieut.-Colonel of Artillery. His features have since become much thinner, through the intense anxiety, and toil, and privation, inseparable from the nature of the services in which he has been continuously engaged since the date of this portrait, 1848—including, especially, the defence of Kars. Those persons, however, who have seen General Williams within the last ten years, will not fail to recognise him as here presented to their notice.

It only remains for the writer to add that his public qualities as a diplomatist and soldier, severely tested as they have been, prior to receiving the impress of a nation's gratitude and admiration, are at least equalled, if not surpassed, by the upright and benignant character of the man.

Letters from General Williams, dated Tiflis, Dec. 14, have been received at Erzeroum. The journey from the Caucasus was accomplished in five days. On the second and third day the country, mountainous and grand, was well wooded and covered with vegetation; on the fourth and last they travelled over a plain, the mud retarding considerably their progress. The General is enchanted with the climate of Tiflis, which he says is quite equal to that of Italy. He and his staff enjoy the most robust health, and continue to receive from the Russian authorities every mark of attention and courtesy. Orders were expected from St. Petersburg relative to their ulterior destination.

By the last steamer from Constantinople we learn that General Williams has been sent off to Moscow, where he will remain a prisoner, most probably, till the preliminaries of peace are signed.

## BALACLAVA HEIGHTS.

For the details of the effective Sketch engraved upon the preceding page we have to thank a Correspondent on board H.M.S. *Leander*, at Balaclava:—

The Castle seems of very great extent, covering the whole side of the hill facing the harbour, and a great part of the slope facing down towards the sea. From some remains of Genoese coats of arms in the main tower on the summit of the hill, I am led to believe that it must have been built by the Genoese about 1370, when they also occupied several other parts of the Crimea. Before the invention of gunpowder, it must have been immensely strong; in fact, impregnable. The walls are for the most part in ruins, except the main connecting wall running down from the top of the hill to the sea-shore, which is built of granite rock. The round tower (on which Admiral Boxer planted the harbour signal-staff) is 480 feet above the level of the sea.

The turret is about fifty feet high, and twenty broad at the base, gradually tapering to the summit, where it is covered in. The walls are about four feet thick, and not in the least damaged by time. Under the tower is a deep dungeon, which has strong ringbolts at the bottom, evidently for the imprisonment of captives. It is now used as an hospital icehouse, and, from its proximity to the Castle Sanatorium, it is very useful. I am sorry to say that many of the old walls close down to the water on the harbour side have been of necessity used for ballast, when the weather was too rough for boats to go outside.

## *FOREIGN AND COLONIAL NEWS.*

### FRANCE.

*(From our own Correspondent.)*

PARIS, Thursday.

The earnest desire of the Empress to pass some time at St. Cloud before the event so anxiously looked forward to for the end of February or beginning of March is about to be carried into effect, and various preparations are being made at the Palace there for the reception of her Majesty, whose health, though extremely good for her position, is expected to be still further benefited by the change. It is, however, irrevocably decided that the Empress's confinement is to take place at the Tuileries, attended with all the ceremonies and the publicity that accompanied such events in the time of the ancient Monarchy. There are various conjectures, ambitions, and jealousies brought into play on the occasion of the arrangements projected for the selection of the *gouvernante*, the physician, and other attendants and functionaries about the person of the Imperial infant. The long-agitated question of the reorganisation of the pages is, it is said, to be settled by their establishment on this occasion. The offering we last week mentioned of a scarf blessed in the church of a saint possessing a *spécialité* in such cases as that of her Majesty is but one out of many of a similar nature sent in from all parts of the kingdom. The *secrétaire* of the Empress is unceasingly occupied in replying to the numerous addresses, and in acknowledging the receipt of the offerings presented to ensure a happy result to the wishes of the Imperial couple. Relics of greater or less rarity and authenticity, objects blessed by numerous saints, objects of wondrous sanctity, &c., are dispatched to her Majesty; and many persons, having nothing claiming such high titles to her notice, present gifts quite as indicative of good will, and certainly quite as likely to prove efficacious. Among these a *soldigue* has sent a pigeon, taken in its cage at the Malakoff Tower, immediately after the successful attack on the place.

Fresh reports relative to the manifestation of the dissatisfaction of the students on the occasion of M. Nisard's last lectures represent the event as somewhat more serious than it was at first supposed to be. As many as a dozen arrests were made, but it is supposed that the persons will not be long detained in custody. A variety of persons implicated in the celebrated secret society La Marianne have also been recently taken into custody, and dispatched for trial to Paris, from the two Charentes, the Dordogne, and other neighbouring departments.

M. de Lesrochejaquelin is producing a new pamphlet, entitled "La Question du Jour," relating to the subject of the peace.

The last report of the many contradictory ones circulating on the matter of Clesinger's "Françoise" in the Court of the Louvre is, that it has been definitively refused by the Minister of State, and that the sculptor has started for England, with the intention of following the example of Marochetti, and establishing himself there. Whatever may be the merits or demerits of the work in question, a subject on which we abstain from entering, M. Clesinger's name is undoubtedly among the first on the list of contemporary sculptors, and Françoise may esteem herself gratified in obtaining such an acquisition. M. Clesinger married, some years since, the only daughter of Madame George Sand, but incompatibility of temper has led to a separation.

Madame George Sand has lately completed for the French stage an adaptation or imitation of "As You Like It." The piece, of which the name is a literal translation—*comme il vous plaira*—was read by Mdme. Plessy-Arnoult at a select soirée, composed chiefly of some of the élite of the literary and artistic society of Paris, assembled at the house of M. Emile de Girardin, on Wednesday evening, and met with high approbation.

The ball at the Hôtel de Ville took place on Wednesday. May we, without indiscretion, be permitted to offer a hint on this subject to such of our readers as it may concern? Several English persons, through ignorance of the nature of these municipal fêtes, have sent to the Préfet of the Seine demands for invitations to them. As they are private—that is to say, only entered by special invitation from that functionary—this is, of course, a solecism in manners which no well-bred person would willingly commit, and which exposes him to the risk of a refusal, always politely conveyed, but often rendered necessary to prevent the custom becoming generally adopted, and also to intimate the impropriety of the method adopted.

On Saturday last took place the grand ball of the Prince Jérôme at the Palais Royal. The honours of the fête were performed by the Princess Mathilde. The Emperor and Empress were present—the latter in a costume of white tulle, trimmed with blue. Queen Christina, with the youngest of her daughters; the Duc de Rianzarès, the Prince Napoléon, the Princes Camorata, de Canino, and Czartoryski; the Duke of Brunswick; nearly all the Ministers, Marshals, the corps diplomatique, &c., &c. were present on the occasion. The quadrille of etiquette was reduced to only four couples—the Emperor dancing with the Princess Mathilde, the Prince Napoleon with Lady Cowley. The ball at the Tuileries on Tuesday was very brilliant.

The reports relative to the alterations contemplated in the organisation of the Ecole Polytechnique now assume the seriousness of a question of the dissolution of the institution. It is hardly likely, however, that so grave a measure, if it be really projected, should be so soon carried into effect.

The death of the Vicomte d'Arlincourt is one of the events of the moment. It is difficult to have a stronger proof of the march of intellect and the progress of intelligence within the last half-century than that afforded by the reception of this author's first works, and the esteem in which they are held at present. M. d'Arlincourt, of an old family, possessed a handsome fortune, the larger portion of which he sacrificed in order to save from ruin a near relative overpowered by unmerited misfortunes. He was generous, amiable, elegant in appearance, tastes, and manners, gifted with much *finesse*, and possessed a graceful talent for conversation and anecdote. Thus endowed, he began his literary career with a novel entitled "Le Solitaire." The book was received as a miracle of style, of interest, of imagination, of description—of every quality, in short, requisite to the perfection of fiction. It was read, lauded, translated; it gave the name to every new fancy of fashion, and M. d'Arlincourt, whose greatest foible was a vanity greedy for, and capable of swallowing, praise in any quantity, firmly believed himself the first romance-writer of the world. As time went on the taste of the age strengthened, and the "Solitaire" and its successors (none of which, however, had quite the vogue of the first production, though nearly about on a par of mediocrity with it) were gradually found not to be such chefs-d'œuvre as had at first been imagined, till, arrived at the present day, they were pronounced to be unreadable; weak, bombastic, affected, false; trash, in short. To the last hour of his life, however, their author never had an inkling of the fact, and, to an advanced age, continued to indulge in a childish complacency on the subject that was more amusing than offensive to witness. After the death of his first wife M d'Arlincourt married a rich widow, whose fortune enabled him, in the latter years of his life, to resume the habits of splendour and elegance that were so in accordance with his tastes, and his hotel was the constant resort of some of the *élite* of the society of the day.

The Théâtre Français is about shortly to produce the great piece of Madame George Sand and the "Compère Guillery" of M. Edmond About. The Gymnase is preparing "La Question d'Argent" of A. Dumas *fils*. Nothing very remarkable is at present before the public.

## THE PEACE CONFERENCE.

The Diplomatic Conference, it is now settled, is to meet in Paris—not Frankfort, as was once intended. Great Britain is to be represented by Lord Clarendon, the Foreign Secretary, accompanied by Lord Cowley, our Ambassador at Paris. The chief representative of Russia will be Baron Brunnow, formerly Ambassador at London, assisted by Count Orloff. M. de Buol will be charged with the interests of Austria, aided by M. Hubner. M. d'Azeglio and the Marquis de Villamarina will be present for Sardinia. M. Walewski and M. de Bourqueney will most probably represent France.

The question as to whether Prussia ought to be represented in the Congress has been decided in the negative, as will be seen from the following article which appeared in the *Morning Post* of Wednesday:—

We published yesterday a telegraph from Berlin which stated that in that capital the participation of Prussia in the Conferences was looked upon as almost certain, as it was believed there that France had renounced her opposition, and that England alone still raised some difficulties.

We believe that we shall be completely borne out by the result when, emphatically, we declare that Prussia will not be admitted to the Conferences; and, whatever may be the impression at Berlin on the subject, it is not true that France has withdrawn her opposition, for that the British Cabinet alone raise obstacles.

The belligerents only, with Austria as the mediating Power, can take part in the Conferences which are about to open at Paris. Prussia, having chosen to take no part in the war, and having no recognised *status* as a mediator, must be content to see the other Powers of Europe ignore an influence which she has allowed to lie dormant, good offices which she has never exercised, and a position in Europe as a first-rate Power which Prussia herself has voluntarily abandoned.

It is not unlikely, if a treaty of peace be concluded, that then Prussia may be invited to give her signature to a document of such European importance; but in its framing she can have no part.

The protocol of Vienna, which records the acceptance of the Austrian proposals by Russia, and provides for the opening of the Conferences, stipulates that they shall meet within three weeks at latest from the signature of the protocol. The only delay which is likely to arise may be in the choice of the plenipotentiary of the time thus allowed to the special Turkish Envoy, who will have to travel the long journey from Constantinople to Paris.

## THE RUSSIAN ACCEPTANCE.—OFFICIAL NOTIFICATION.

The following is a translation of the article by which the Russian acceptance of the Austrian propositions was notified to the public of St. Petersburg, in the *Journal de St. Petersbourg* of the 20th ult. The article has often been referred to of late as if it were a circular addressed to the diplomatic agents of Russia. It is, however, no document of diplomacy, but simply a communication to the newspaper before mentioned:—

Public opinion in Europe has been strongly excited by the intelligence that propositions of peace concerted between the Allied Powers and Austria had been transmitted to St. Petersburg through the intervention of the Cabinet of Vienna.

Already the Imperial Cabinet, upon its side, had made a step in the path of conciliation, by pointing out, in a despatch bearing date the 11th (23rd) of December, published in all the foreign journals, the sacrifices which it was prepared to make with a view to the restoration of peace.

This twofold proceeding proved the existence on either side of a desire to profit by the exigency of the situation imposed by the rigour of the season on the military operations, in order to respond to the unanimous wishes which were everywhere manifested in favour of a speedy peace.

In the despatch cited above the Imperial Government had taken for basis the Four Points of Guarantee admitted by the Conferences at Vienna, and had proposed with regard to the Third Point—which had alone led to the rupture of the Conferences—a solution which differed rather in form than in substance from the one put forward at that epoch by the Allied Powers.

The propositions transmitted to-day by the Austrian Government speak of the same fundamental proposition that is to say, the neutralization of the Black Sea, by a direct treaty between Russia and the Porte, to regulate by common agreement the number of ships of war which each of the adjacent Powers reserves the right of maintaining for the security of its coasts. They only differ appreciably from those contained in the despatch of the 11th (23rd) of December by the proposal for rectifying the frontier between Moldavia and Bessarabia, in exchange for the places on the Russian territory in the actual occupation of the enemy.

This is not the place to inquire if these propositions unite the conditions necessary for ensuring the repose of the East and the security of Europe, rather than those of the Russian Government. It is sufficient here to establish the point, that at last an agreement has been actually arrived at on many of the fundamental bases for peace.

The regard being had to this agreement, to the wishes manifested by the whole of Europe, and to the existence of a coalition the tendency of which was every day to assume larger proportions, and considering the sacrifices which a protraction of the war imposes upon Russia, the Imperial Government has decided that in the same time a new proof of its sincere desire to arrest the effusion of blood, to conclude a struggle so grievous to civilisation and humanity, and to restore to Russia and to Europe the blessings of peace.

It has a right to expect that the opinion of all civilised nations will appreciate the act.

ROUGH TREATMENT OF A LADY.—The following curious circumstance happened at Berkeswell on Monday last:—A lady was on a visit from Gloucestershire to a gentleman at Berkeswell. She came by the morning mid-day train. The door of the carriage had been locked at Leamington, and on arriving at Berkeswell the guard had no key to unlock it; he therefore wished the lady to proceed to Hampton Station, and in a brusque manner said she must go on. To this she was not agreeable, being so near the end of her journey; besides, a gentleman was waiting for her. After some consultation it was agreed that they would, try to take her through the window. This was no easy matter; however, by the exertions of the inside passengers and the assistance of her friends she was extricated from the carriage.—*Coventry Herald.*

## THE WAR IN THE CRIMEA.

By the steamer *Borysthene*, which left Constantinople on the 21st ult., we have news from the Crimea to the 15th, but it does not contain any thing of importance. Letters from Kertch state that on the 9th the Russians advanced on the ice to attack that place, but their plans were defeated by the vigilance of General Vivian. The bays of Odessa and Kinburn were frozen over, but in the Crimea the weather had become milder.

The news of the acceptance by Russia of the propositions made by Austria was known at Constantinople on the 19th, and produced a great sensation. The Turks seemed pleased, but the Greeks were incredulous as to the fact. A courier had immediately been sent to the Crimea. The cessation of hostilities was soon expected.

## AMERICA.

The steam-ship *Atlantic*, which left New York on the 16th ult., arrived at Liverpool on Thursday

Up to the 17th ult. there had been no election of Speaker.

The *New York Herald* says that nothing short of the immediate removal of Mr Crampton by the British Government can prevent the affairs of the United States and England from assuming a more important and threatening aspect.

The Washington correspondent of the *Herald* says it is rumoured there, with an air of truth, that England, rather than engage in a war with the United States on the Central American question, will recede from the assumed protectorate over the Bay of Islands and the Mosquito Kingdom.

The following notice of a terrible catastrophe on the River Hudson Railway is given by the *New York Herald*:—

We recently published accounts of six fatal railroad accidents, which have occurred in various parts of the country since the advent of the new year, and we to-day give the harrowing particulars of a catastrophe the like of which has not been known since the wholesale slaughter at Burlington, on the Camden and Amboy Railroad. It appears that, owing to some defect in the track, the Albany morning express down-train for this city yesterday afternoon came to grief at the crossing at Montgomery Cove, a few miles below Poughkeepsie, and, while standing motionless upon the track, the Poughkeepsie up-train came along at full speed, and dashed headlong into the Albany train, smashing to fragments one car, and nearly demolishing another. A brief warning of the impending danger had been given the occupants of the cars, and several of them succeeded in making their escape in safety; but the majority of them remained to receive the full force of the terrific shock, and to be buried amid the rubbish of cars and the fire and scalding water of the locomotive. Three persons were killed outright, and twenty-two were frightfully scalded or otherwise wounded, many of whom cannot recover.

A snowstorm of great severity visited the whole of the Atlantic coast from Maryland to Halifax on the 5th and 6th ult., and continued to rage for eighteen hours. Intense cold has succeeded, as will be seen by the following report:—

Succeeding the snowstorm of Saturday night—the effects of which are still felt throughout the country, in the almost total interruption of travel—we have been visited by weather resembling that of the meridian of Greenland. Yesterday morning, at six o'clock, the thermometer ranged five degrees below zero. The morning, at one o'clock, the mercury was at zero—a slight improvement. But we have it mid compared with other sections. At Marietta, Ohio, they have it at 11 degrees below zero; at Springfield, Mass., 14 below; at Cleveland, Ohio, 14 below; while at Hartford, Conn., the thermometer touched 21 below. The North and East rivers are filled with floating ice, and the ferry-boats have great difficulty in crossing. The Delaware river is closed The railroads south are in a dreadful condition, and immense quantities of manufactures have accumulated at various points

New Orleans accounts report the rapid progress of filibustering in that city.

## INDIA.

Files of papers by the Overland Mail, viâ Trieste, have arrived. The following brief summary of political intelligence is extracted from the *Bombay Times* of January 2:—

The Santhal insurrection may be said to be suppressed Tranquility prevails throughout our dominions, and we have not for some months had a single disturbance even on the Punjab frontier. The kingdom of Oude is about to be resuscitated—the King to be allowed £100,000 a year, the army to be reduced from 80,000 to 15,000, and the entire administration of affairs to be intrusted to the Resident, General Outram. The settlement of the Oudeypore differences, which renders the Political Agent supreme, has dissatisfied the Rajpoots." The native Princes, whose administration is submitted to be blameless, are endeavouring to obtain some better security than they have hitherto enjoyed for the retention of their dominions

The charges of the Indian navy are about to be increased from half to close on a million sterling annually, one-fourth the revenue of the Presidency, two-thirds the charges of our army of 60,000 men.

Lord Canning is expected at the Presidency on his way to Calcutta a fortnightbence; the present Governor-General retires on the 1st of March, after an administration of eight years' duration.

## *METROPOLITAN NEWS.*

STATIONERS' MUTUAL BENEFIT SOCIETY.—The annual general meeting of this society was held at Exeter hall on Monday evening. The report, which was unanimously adopted, stated that, notwithstanding the disbursements to members during sickness were considerably larger than in former years, the funds of the society had been augmented to the sum of £1590.

EASTERN COUNTIES RAILWAY.—At an adjourned general meeting of the proprietors of the Eastern Counties Railway Company, the result of the poll, upon the resolution of the Committee of Investigation to continue their inquiries, and upon the amendment that Mr. Waddington continue his duties as Chairman of the Board of Directors was announced as follows, and the result is, that Mr. Waddington retains his seat:—

THE PROPOSED TERMS OF PEACE.—PUBLIC MEETING.—A public meeting of the inhabitants of Westminster was held at St. Martin's Hall, Long Acre, on Wednesday last, for the purpose, as stated in the advertisement, "of protesting against the conclusion of any peace on terms inconsistent with the honour and dignity of the country." The meeting, which was most numerously attended, was addressed by Mr. C. Westerton, who presided, the Hon. C. Smythe Vereker, Mr. A. B. Richards, Major Lyon, Mr. Stewart Rolland, and other gentlemen. A resolution having been moved to the effect "That no treaty will be satisfactory which does not secure to the Allies an indemnity for the expenses of the war, and which does not guarantee the integrity and independence of the Turkish Empire," an amendment in favour of the impeachment of the Ministers was proposed and carried by a large majority.

THE FRANKLIN EXPEDITION. On Monday evening, at a very full meeting of the Royal Geographical Society, in a discussion which followed the reading of a paper on the Probable Course of Sir John Franklin's Expedition by Mr. A. Findlay, it was strongly contended that further search was necessary, the more so as the clue obtained by Dr. Rae had been confirmed by Mr. Anderson's paper, already published. It was also stated that Lady Franklin had already given instructions to fit out the *Isabel* screw steam-schooner for the search.

ENTERTAINMENT TO WORKMEN.—On Tuesday week the Messrs. Doulton, of Lambeth Potteries, inaugurated the opening of a new building they have just erected, by giving an entertainment to the men employed at their London works. The rooms were tastefully decorated with evergreens, flags, and mottoes, contrived by their workmen and their wives, who were permitted to join in the festivities. About 400 sat down to supper, after which dessert was placed upon the tables, and several toasts and sentiments introduced, which gave opportunity for interchange of kindly speech and feeling between masters and workmen. Messrs. Doulton, among their endeavours to promote the moral and intellectual improvement of their workpeople, a short time since encouraged the formation of a brass band among the apprentice lads, who have attained such proficiency as enabled them materially to contribute to the enjoyment of the evening. That the workpeople appreciate the good wishes and efforts of their employers was spontaneously and unexpectedly shown by the presentation on that occasion of a handsomely-bound quarto Bible to Mr. J. Doulton, as head of the firm, and also a similar volume, with an illustrated copy of Scott's Poetical Works, to Mr. H. Doulton, as the representative and manager of the pipeworks. Sobriety prevailed during the festivities, which were kept up till a late hour, and concluded with singing the National Anthem.

## THE RUGELEY POISONING CASE.

MR. SERJEANT WILKINS made an application in the Court of Queen's Bench, on Tuesday last, for a *certiorari* to bring up the inquisition and depositions in the case of the Queen *v.* William Palmer, with a view to move for a trial at bar, and that the venue may be awarded to another county than Staffordshire. In support of the application he read the following affidavit of William Palmer:—

I, William Palmer, late of Rugeley, in the county of Stafford, but now a prisoner confined in her Majesty's gaol at Stafford, charged upon the coroner's inquisition with the wilful murder of the late John Parsons Cook, make oath and say—

1. That for ten years I have been residing at Rugeley aforesaid, occasionally practising as a surgeon.

2. The paper writing hereunto annexed, marked "A," is a copy of the warrant upon which I was arrested and am now detained in the said gaol.

3. I am informed and believe that I cannot have a fair and impartial trial in the county of Stafford—or, in fact, elsewhere in the midland counties—inasmuch as the prejudice against me is so great that I do not believe amongst an ordinary panel of jurymen any twelve men could be found unbiassed and unprejudiced.

4. I say that, in addition to the charge of murder of the late John Parsons Cook, I am also charged on coroner's inquisitions with the murder of my late wife, Ann Palmer, and my late brother, Walter Palmer; all the said murders being alleged to have been committed by means of poison.

5. I am informed, and verily believe, that in and about the neighbourhood of Stafford (Rugeley being only nine miles distant from Stafford) I am also accused of having murdered several other persons, which rumour is generally believed to be true.

6. In each of these cases with which I am now charged, and upon which I am now in gaol, the same being charges of murder by poisoning, Alfred Swaine Taylor, of Guy's Hospital, Doctor of Medicine, is the principal witness; and, in order to rebut the evidence given by him, it will be necessary that I should have a sufficient number of scientific persons to give evidence upon my trial, most of whom are resident in London.

7. I say the expense of such witnesses will, as I am informed, and believe, be £1000, or thereabouts, if I am tried at Stafford.

8. I say, of myself, that I have no funds wherewith to meet such expense, and am, consequently, entirely dependent on my friends and relations; and, owing to my dependent position, I fear I shall not be so well or properly defended, unless I can be tried where the expense of such witnesses will be much less

9. I am informed, and truly believe, that the solicitor who is acting against me in the prosecution upon the charge of wilful murder of my said late wife and said late brother has already published that he does not believe it will be possible for me to have an impartial trial in the county of Stafford or its neighbourhood.

10. I say that I am innocent of having committed the said alleged murders, or any or either of them.

He also read an affidavit of Mr. John Smith, Mr. Palmer's attorney, which stated that in the counties of Stafford, Warwick, and neighbouring counties, the people generally were kept in a state of excitement and prejudice against William Palmer by the various articles which have from time to time appeared in the newspapers; and that, in consequence, he could not have a fair and impartial trial at Stafford, Warwick, or in any of the midland counties, owing to the prejudice which exists.

After a short conversation the Judges granted a rule *nisi* to show cause.

## MR. PALMER'S BANKRUPTCY.

On Monday last the appeal in the matter of the adjudication of a flat of bankruptcy against William Palmer, the surgeon, of Rugeley, came on for hearing, in the Birmingham District Court of Bankruptcy.

On the 9th of January last Mr. John Spittle, ironmaster, Westbromwich, presented a petition for a flat against William Palmer, surgeon, apothecary, dealer, and chapman. On the same day Mr. Spittle proved his debt, to the amount of £1000 upon a bill of exchange, dated 19th Sept., 1855, drawn by William Palmer upon and accepted by Sarah Palmer, payable to the order of William Palmer, three months after date, and by W. Palmer indorsed to J. Spittle. The act of bankruptcy relied upon was proved by Mr. Henry Gillard, sheriff's officer, Stafford, who stated that he arrested Palmer under a *capias ad satisfaciendum*, at the suit of Henry Padwick, on the 13th day of December, and on the 17th of the same month Palmer was removed under the same writ, and also on a coroner's warrant, under a charge of murder, to the county gaol of Stafford. Upon these facts Mr. Waterfield, the registrar of the Court of Bankruptcy, acting for Mr. Commissioner Balguy, adjudicated Palmer a bankrupt. The notice of adjudication was duly served, when Mr. Smith gave notice that he should dispute its validity. Palmer, on the 5th May, 1855, executed a bill of sale to Mr. E. Wright, solicitor, Birmingham, for £3000 and upwards, and by virtue of this instrument the whole of his property had been sold and swept off in satisfaction of that debt. It appears that the date of Wright's bill was anterior to the date of Spittle's bill. The object of the bankruptcy was, if possible, to set aside the bill of sale, and to obtain possession of its proceeds for the benefit of the general body of creditors.

Mr. James, for the petitioning creditor, observed that he had another petition to present, founded upon the facts mentioned above. It was the joint petition of the above-named John Spittle, Frederick Crabbe, of Rugeley, gentleman, and Thomas Simpson, of Rugeley, tax-collector. It prayed that the former adjudication might be annulled, and gave an undertaking that they would prosecute a new flat.

Mr. Smith contended that the Court had no power to receive the petition on the morning when the matter of the first petition was to be discussed; besides which, if the prayer of the petition was assented to, the right of the bankrupt, under the 104th section of the statute, would be taken away; and, as there was no such power in the Court to deprive the bankrupt of his statutable right, he (Mr. Smith) insisted at this time upon being heard against the validity of the adjudication.

Mr. Commissioner Balguy: I am clearly of opinion that I am bound to hear the bankrupt against the validity of the adjudication. The 104th section gives to the bankrupt the right to dispute. He has brought himself within the terms of the Act, and I do not consider that the 12th section enables me to exercise any jurisdiction where there is provision in the statute declaring what shall be done. I am, therefore, of opinion that the bankrupt is entitled to dispute the adjudication, notwithstanding the second petition which Mr. James has presented.

Mr. Smith then stated that he was prepared to dispute the trading and the act of bankruptcy itself the trading, on the ground that Palmer had not been in business for more than two years; the act of bankruptcy, on the authority, *ex parte*, of "Bowes" (4 Vesey) and "Regina *v.* Page" (1 Broderick and Bingham), where it had been clearly held that a person must be in custody on civil process only.

The first adjudication of bankruptcy, of which notice had been given to dispute, was then annulled.

Mr. James left the room for the purpose of preparing another petition, and in the interim Mr. Smith intimated that he should not enter upon its merits that day, but suggested that the case should be taken next Thursday.

At a later period of the day Mr. James presented another petition from creditors, which the Court refused to open.

The following notices were posted in the Subscription-room at Tattersall's on Monday:—

Any gentleman who saw William Palmer in London on Saturday, the 24th of December last, is earnestly requested to communicate with J. H. Hatton, Esq., chief of the county constabulary, Stafford; or with Mr. W. V. Stephens, No. 11, Camden-grove, Kensington, executor to Mr. J. P. Cook, deceased.

Any person who saw William Palmer, of Rugeley, in London, on Saturday, the 1st of December last, is earnestly requested to communicate with J. H. Hatton, Esq., chief of the county constabulary, Stafford; or with Mr. W. V. Stephens, No. 11, Camden-grove, Kensington, executor to Mr. J. P. Cook, deceased.

DETECTION OF POISON.—At the close of a lecture delivered last Monday evening at the Bristol Philosophical Institution, Mr. William Herapath, the eminent analytical chemist and professor of toxicology, took the opportunity of adverting to the state of alarm which had been produced in the public mind by the recent alleged secret poisonings at Rugeley, Manchester, and elsewhere. The apprehensions which the cases to which he had referred had given rise had, he said, been much increased by certain statements which had been put forth, and which, as he understood them, were these—That prussic acid could not be discovered in the system at more than fourteen days, that strychnia could only be detected a few hours after death, and that conia or conium could not be detected at all. Now he had himself detected the presence of prussic acid in a human body after an interment of two months; he had found coccolus Indicus in dead fishes and in a human body after it had been buried for ten months. The difficulties in the way of detecting poisons of this class were not, therefore, so insurmountable as some supposed; and he hoped that the knowledge of the fact would have the effect of reassuring the public mind.

THE Administrative Reform Association held a meeting at the London Tavern—S. Morley, Esq., in the chair—on Saturday last; at which a resolution was unanimously passed that a memorial be presented to her Majesty praying for a full inquiry into the causes that led to the fall of Kars.

## THE PALMER FAMILY.

IN the ILLUSTRATED LONDON NEWS of the 19th January there appeared a letter from the Special Correspondent of this Journal at Rugeley, containing an account of the inquest on the body of Mrs. Palmer, and other circumstances connected with the events which have recently given that town a notoriety so unhappy. On the 23rd—four days after the publication of that report—we received the following letter from Mr. George Palmer, the brother of the accused William Palmer:—

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

Rugeley, Jan. 23, 1856.

SIR,—I have to request you will supply me with the name of your Special Correspondent who wrote that libellous article as to my mother and family, in order that I may take such steps in the matter as I may be advised.

Yours obedently, GEORGE PALMER.

To that communication we replied by return of post, assuring Mr. George Palmer of our regret if any error or inaccuracies should have found their way into our columns which could afford him ground of complaint, and requesting him to specify the errors or inaccuracies to which he referred, in order that we might contradict them upon his authority in our next publication.

We expected, as the necessary result of this note, that Mr. George Palmer would have communicated to us in time for our publication of this day a statement denying the imputations or libels, if any, of our Special Correspondent—a communication to which we should have felt it to be our bounden duty to have given all the publicity in our power. Until we knew in what respect our Correspondent had transgressed the bounds of fair comment upon events so dreadfully notorious as those of which Rugeley has been the scene, or in what particular he had consciously or unconsciously libelled the family of the supposed culprit, we could not with any propriety divulge his name. But Mr. George Palmer, instead of writing to us any contradiction of the statements in question, or affording us any opportunity of placing the matter before the public, in a way to remove any erroneous impression which the statements of our Correspondent may have produced, caused our publisher to be served with three notices of action—one on his own part, another on that of Mrs. Sarah Palmer, and the third on that of the Rev. Thomas Palmer. This circumstance, however, has not changed our position either towards Mr. George Palmer or towards the public. Before service of these notices we were willing to afford to Mr. George Palmer and his family the fullest opportunity for the vindication of their characters—not simply with reference to any particular statements made by our Correspondent—but with reference to any other points which they might have deemed it advisable to bring before the public. We opened our columns to them immediately we heard that they considered themselves aggrieved. Our columns are still open to them for any statement which they may please to make with regard to the allegations of our Correspondent; and in the mean time, although Mr. George Palmer has declined to supply us with the means of contradicting the statements which he has so vaguely impugned, and of offering such explanation by way of apology, or otherwise, as the merits of the case might call for, we feel bound—in justice to the parties, to our readers, and to ourselves—thus publicly to repeat the expression of our sincere regret that any matter of a nature calculated to disparage the characters, or to add to the already pained feelings, of any of the members of Mr. William Palmer's family, and our readiness to redress, by any means in our power, the injury and annoyance so occasioned. We have further to state, in our own justification, and which we are sure our numerous readers will be disposed to give us credit for, that if any such matter have unfortunately appeared in our columns it has not been with any malicious intent, or through culpable negligence, but in consequence of extraordinary popular excitement, connected with occurrences already but too painfully notorious, and the hurry of business inseparable from the production of a journal of extensive sale.

## RUGELEY AND STAFFORDSHIRE.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

APPRECIATING as I do the very high character of your Paper, both for literature and talent, I cannot but say that I felt surprised upon reading the *sweeping* attack by your Special Correspondent upon Staffordshire, its towns, its villages, its lawyers, its jury.

The Palmers (although I think we should have some of them tried ere we condemn them) you must deal with as you deem just; but, having been born and brought up in the county which has, unfortunately, been the scene of this horrible tragedy, I hope you will permit a few remarks in vindication of its "mulled-lake scenery."

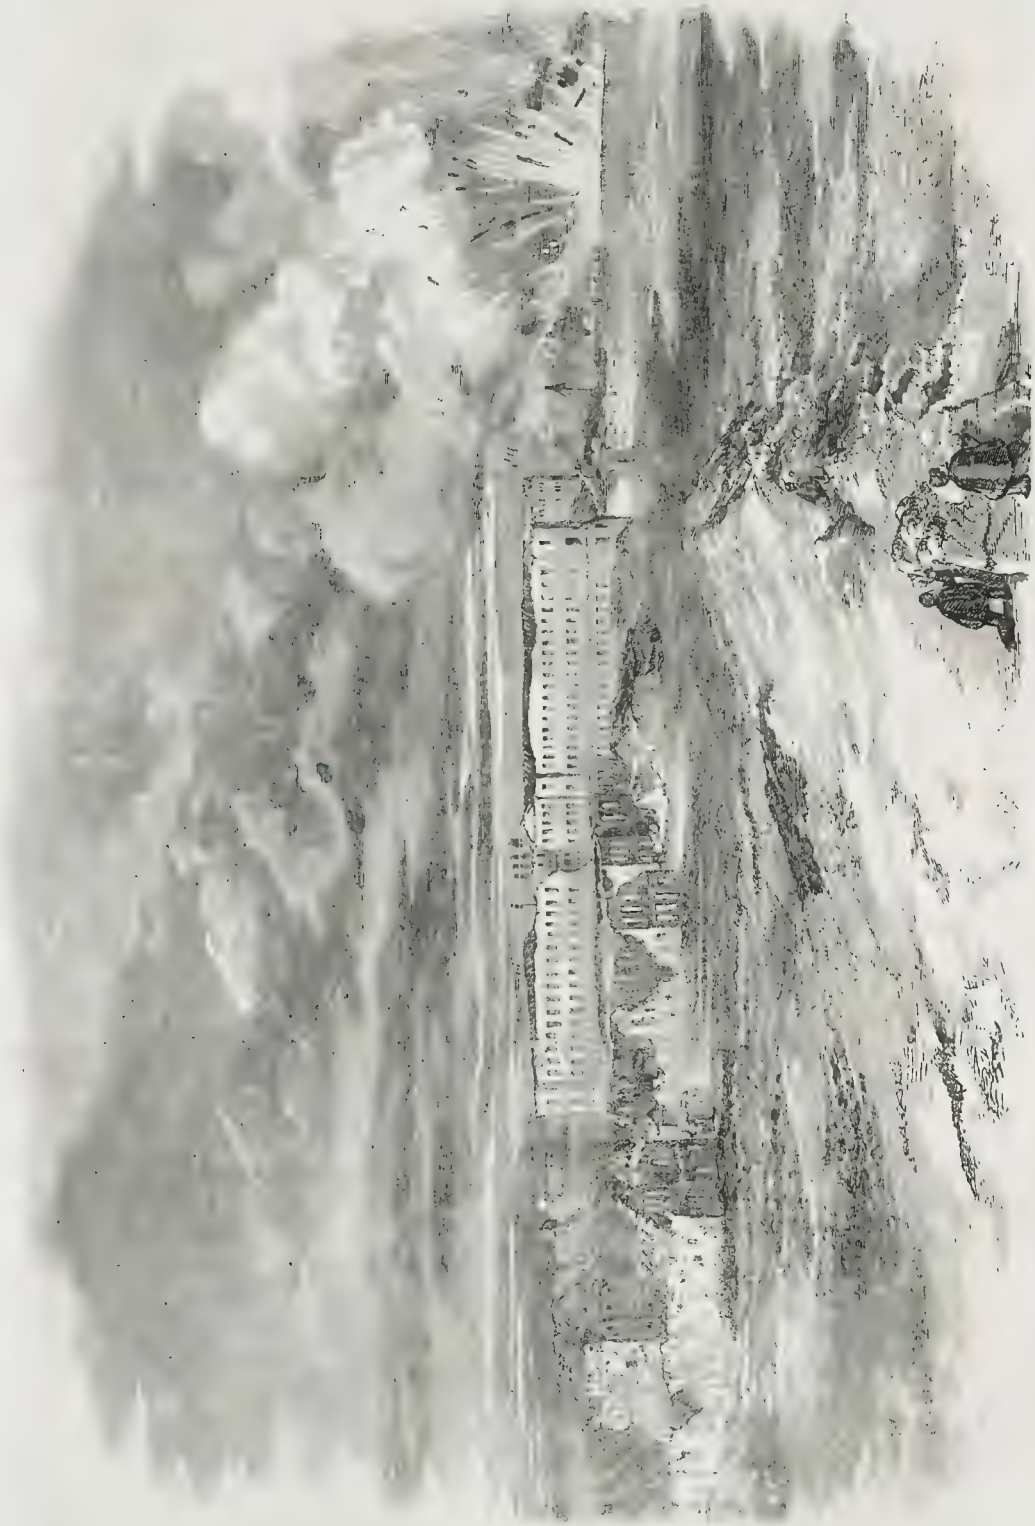
Does your Correspondent know Staffordshire? Has he visited the haunts of Cotton and Izaak Walton on the banks of the pretty river Dove? or read Byron's observation to Moore upon the scenery of Dovedale between Staffordshire and Derbyshire? Or has he heard of Bamondsdale, or, more properly, Demon's-dale? These are nature's subdimest gifts to my county.

Your Correspondent states that Staffordshire has *only two towns*, and those of merely second-class importance. Has he forgotten the immense population of the Staffordshire Potteries—comprising several towns, certainly, but these so nearly amalgamated as now to form one great whole—and have these no importance? Has he never heard of its coal and iron districts and their numerous populations, and are these also unimportant or inutile? What of Burton-on-Trent and its world-renowned breweries, Lesi and its silk factories, Lichfield and its fine old cathedral, containing one of Chantrey's *chefs-d'œuvre*, and its remembrances of Doctor Samuel Johnson, who was born there; Uttoxeter, the "Wood Leighton" of Mary Howitt, and where she spent her happy girlhood and was married? Rugeley itself, too, once was not, nor is now, the unimportant place described by your Correspondent; if he will consult "Plots" or "Pigott" he will discover that, ere we became indebted to our Continental neighbours for the present material of which our hats are chiefly made, this place was famous for the manufacture of hats, and that trade has been extensively carried on there even in our own day; and he will see that the *town* is not the village of sixteen years' *growth* which he has represented it to be, although the rich pastures in its vicinity afford the inhabitants a bountiful supply of that savoury caculent in the proper season. By the way, I hope your Correspondent's strictures upon the Talbot Arms inn were not provoked by his having been served with a bottle of *mahrown catsup* in mistake for Masters' old beeswing port, as happened once upon a time to two unsophisticated farmers at that respectable hostelry, to their great marvel and the greater chagrin of the then worthy host (Masters the first), who prized his old catsup quite as much as his wines; at least so saith tradition.

And the neighbourhood of Rugeley, Mr. Editor—the noble Ansons, the Bagots, the Talbots, the Wolseleys, and the famous old Marquis of Anglesey, and their ancient baronial residences; princely Trentham, with its generous-hearted Duke and Duchess: and the fairy land of Alton Towers, the residence of the Earl of Shrewsbury all these, and many others, belong to my calumniated county; and I think and hope that, though it may furnish now and then a criminal, and now and then an official who may have incurred the suspicion of corruption, yet that the whole of its towns, coroners, lawyers, and denizens at large may be deemed of a little more worth than the hasty conclusion of your Special Correspondent attaches to them. Will he, however, point out a county in England more deserving of fame? Apologising for having trespassed so long on your valuable time, I must beg leave to subscribe myself, Sir, very faithfully yours,

ONE WHO LOVES OLD STAFFORDSHIRE.

[NOTE OF THE EDITOR.—In inserting the communications of our Special Correspondent at Rugeley we did not intend to back all the opinions those letters express. His appreciation of Staffordshire, and of the town of Rugeley, was a matter of individual taste; and, if we did not draw the pen through those and other expressions not altogether in accordance with our own notions, it was that we might not interfere with the judgment of a competent person in whom we had confided, and from the belief that our readers in Staffordshire and elsewhere would understand such opinions to be those of the individual who penned them, and not of the Editor who employed him. We hope that our Staffordshire readers will take the matter with as much good humour as the writer of the above letter, which we are happy to have an opportunity of inserting in the ILLUSTRATED LONDON NEWS.]



DESTRUCTION OF THE DOCKS, SEBASTOPOL.—FROM A SKETCH BY J. A. CROWE.—(SEE NEXT PAGE.)

READING THE NEWS OF THE FALL OF SEBASTOPOL AT CEYLON.—(SEE PAGE 123.)

## THE NIGHTINGALE JEWEL.

The deep interest which is so justly felt by all classes respecting that noble-minded lady who, quitting the enjoyment of social comfort, at the risk of health and life, devoted herself, by tender attention and unwearied care, to alleviate the sufferings of the brave defenders of our rights, cannot but be increased by the knowledge that this sympathy is also that of the highest person of this realm.

The Jewel engraved in the accompanying illustration was lately presented by her Majesty to Miss Nightingale. The design is said to be from the pencil of the Prince Consort, by whom it was intrusted to the hands of Mr. Garrard, the Crown jeweller, for execution.

The form of the Jewel is oval. The ground or field is of pure white enamel, bearing a crimson cross, on which, in diamonds, are the letters "V. R." and the Royal crown; from the centre issue gold rays, implying Heavenly sympathy: this is inclosed by an oval band of black enamel—black being an emblem of good council—on which, in gold, are the feeling words, "Blessed are the merciful." On each side spring branches of palm in gold and green enamel—denoting the peaceful occupation and triumphant result of her gentle though firm labours: the colour green may also be considered to imply eternal friendship. The label bearing the word "Crimea" is in azure blue, similar to that of the riband of the Crimean medal. The whole is surmounted by three brilliant diamond stars, the celestial signification of which is obvious. Notwithstanding the beauty and good taste displayed in the arrangement of this Jewel, the whole is eclipsed by the noble expression of the Royal feeling in the inscription borne on the reverse:—

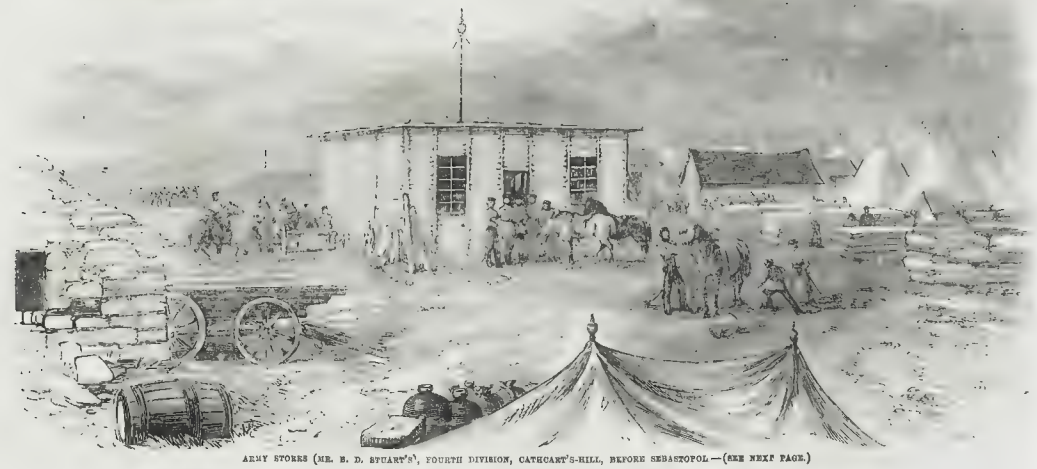
To Miss Florence Nightingale, as a mark of esteem and gratitude on her devotion towards the Queen's brave soldiers.—From Victoria R., 1855.

THE NIGHTINGALE JEWEL.

## DESTRUCTION OF THE DOCKS AT SEBASTOPOL.

It was the intention of our engineers to blow in a portion of the English half of the docks on Saturday, the 29th of December; but, owing to the prevalence of water, all could not be got ready for that purpose before the afternoon of January 1. At six minutes to one the drum was beaten by the French sapper for the thirty-nine French and four English engineers to light their portfires. At 5½ minutes the drum beat two taps for all to be ready, and at 4½ minutes to one the drum beat one more tap to fire; in 6½ minutes afterwards the charges in the side and bottom of the French east dock exploded almost simultaneously. Shortly afterwards the large charges in the piers of the entrance and behind the steps leading down to the dock blew up. These three charges shook the ground all round terribly, and propelled large stones perpendicularly up in the air to the height of at least 900 feet. In 9½ minutes the English charges exploded, causing a very neat demolition of half the side wall of the basin. After the smoke had cleared away, it was evident that four of the French charges and one of the English had not gone off. The demolition of the French east dock, or "steamer Dock," as it is called—for it contains the remains of the paddle-steamer which was brought from Sinope and set fire to by the Russians on the 8th of September—was complete. The quantity of powder expended in blowing up this dock alone was 10,000 lb., with 23 charges in all. The twelve side charges were each 500 lb. Behind the steps leading down to the bottom of the dock there were one charge of 1000 lb. two of 500 lb. of powder each.

After the Russians had fired a few badly-aimed shells, and the French and English engineer had examined the *débris*, the former again fired the four charges that had not gone off. After the lapse of a few minutes these exploded, and thus the west and east docks of the French half, together with the left side of the large basin, even to the gates, were completely destroyed. Several hours elapsed before the English



ARMY STORES (MR. E. D. STUART'S), FOURTH DIVISION, CATHCART'S-HILL, BEFORE SEBASTOPOL.—(SEE NEXT PAGE.)

engineers were ready to blow up the east dock. At twenty minutes past five o'clock, just before dark, Private Sulley, of the 10th company of Sappers, was ordered by Major Nicholson to connect the ten wires to the two cables. In another two minutes all had cleared away. The moment the word "All right" was passed up to Mr. Dean, eight of the ten charges blew up, which were quite sufficient completely to destroy the bottom of this dock. The latter was 191 feet long on the stone skids at bottom, 40 feet wide, and 79 feet deep. At top it is 238 feet long, and 95 feet 4 inches wide. The revetment at top was 6 feet 8 inches broad.

### CALENDAR FOR THE WEEK.

Sunday, Feb. 3.—Quinquagesima or Shrove Sunday.
Monday, 4.—Stoppage of the United States' Bank, 1840.
Tuesday, 5.—Shrove Tuesday. The late Sir R. Peel born, 1788.
Wednesday, 6.—Ash Wednesday. Dr. Priestley died, 1804.
Thursday, 7.—Mary, Queen of Scots, beheaded, 1587.
Friday, 8.—Half-Quarter Day.
Saturday, 9.—Canada ceded to Britain, 1763.

### TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING FEBRUARY 9, 1856.

### THE LARGE ENGRAVING
OF THE
### ALLIED COMMANDERS IN THE CRIMEA,
AND MAP OF THE SEAT OF WAR.

(*To form the Frontispiece to the present Volume of the* ILLUSTRATED LONDON NEWS.)

IN the characteristic Illustration of the War the Artist has grouped its brave leaders and representatives of their respective troops and their insignia; the upper *bordure* of the picture being comprised of an artistic arrangement of arms, and the laurel and the oak, emblematic of victory and strength, intertwined with a ribbon inscribed with the names of the scenes of the great achievements—"Alma, Balaclava, Sebastopol, Inkerman, and Tchernaya."

The four mounted figures forming the centre of the picture, commencing from the left, are—General Della Marmora, appointed to the command of the army of fifteen thousand men sent to the Crimea from Sardinia; next, to the right, is General Sir W. J. Codrington, K.C.B., the successor of General Simpson as Commander-in-Chief of the British Army in the Crimea (and of whom a Memoir appeared in the ILLUSTRATED LONDON NEWS for Nov 3, 1855); next is Marshal Pelissier, the Commander-in-Chief of the French Army (of who h distinguished soldier a Memoir appeared in the ILLUSTRATED LONDON News for June 16, and some well-timed remarks upon his career in our Journal of Oct. 6); the fourth portrait on the left is Omer Pacha, now Commander-in-Chief of the Turkish Army in Asia—of whose life and services a Memoir appeared in the ILLUSTRATED LONDON NEWS, vol. xxiii., p. 34.

In the rear is the Staff of each Commander. The flanking figures in the foreground, leftward, are a Highlander, an English foot soldier, and an English sailor; and one of the Bersaglieri, or Sardinian Riflemen. On the right hand are Turkish, French, and Egyptian soldiers.

THE LARGE MAP OF THE CRIMEA AND ADJACENT COASTS, is illustrated with views of the principal places which have become memorable as sites of the Great Struggle; and the Nationalities, forming the *bordure* of the Map, are heralded as a picturesque in the "compass circumstance" of War.

FOREIGN POSTAGE.—As newspapers sent to most parts of Europe are subject to a heavy postage, and charged by weight, copies of the ILLUSTRATED LONDON NEWS, printed on *thin paper*, may now be had, if specially ordered, for transmission abroad.

# THE ILLUSTRATED LONDON NEWS.

*LONDON, SATURDAY, FEBRUARY 2, 1856.*

THE Session of Parliament was opened on Thursday by the Queen in person. The following Speech from the throne was read by her Majesty in that clear, emphatic, and musical tone of voice for which she is remarkable. It is not too much to say that it was worthy alike of the great occasion on which it was delivered, and of the august Legislature whose privilege it was to hear it.

### HER MAJESTY'S SPEECH.

My Lords and Gentlemen,

Since the close of the last Session of Parliament the arms of the Allies have achieved a signal and important success. Sebastopol, the great stronghold of Russia in the Black Sea, has yielded to the persevering constancy and to the daring bravery of the Allied forces. The naval and military preparations for the ensuing year have necessarily occupied my serious attention; but, while determined to omit no effort which could give vigour to the operations of the war, I have deemed it my duty not to decline any overtures which might reasonably afford a prospect of a safe and honourable peace. Accordingly, when the Emperor of Austria lately offered to myself and to my august ally, the Emperor of the French, to employ his good offices with the Emperor of Russia, with a view to endeavour to bring about an amicable adjustment of the matters at issue between the contending Powers, I consented, in concert with my allies, to accept the offer thus made; and I have the satisfaction to inform you that certain conditions have been agreed upon which I hope may prove the foundation of a general treaty of peace.

Negotiations for such a treaty will shortly be opened at Paris.

In conducting these negotiations I shall be careful not to lose sight of the objects for which the war was undertaken; and I shall deem it right to no degree to relax my naval and military preparations until a satisfactory treaty of peace shall have been concluded.

Although the war in which I am engaged was brought on by events in the south of Europe, my attention has not been withdrawn from the state of things in the north; and, in conjunction with the Emperor of the French, I have concluded with the King of Sweden and Norway a treaty containing defensive engagements applicable to his dominions, and tending to the preservation of the balance of power in that part of Europe.

I have also concluded a treaty of friendship, commerce, and navigation with the Republic of Chili. I have given directions that these treaties shall be laid before you.

Gentlemen of the House of Commons,

The estimates for the ensuing year will be laid before you. You will find them framed in such a manner as to provide for the exigencies of war, if peace should unfortunately not be concluded.

My Lords and Gentlemen,

It is gratifying to me to observe that, notwithstanding the pressure of the war, and the burdens and sacrifices which it has unavoidably imposed upon my people, the resources of my empire remain unimpaired. I rely with confidence on the manly spirit and enlightened patriotism of my loyal subjects for a continuance of that support which they have so nobly afforded me; and they may be assured that I shall not call upon them for exertions beyond what may be required by a due regard for the great interests, the honour, and the dignity of the empire.

There are many subjects connected with internal improvement which I recommend to your attentive consideration.

The difference which exists in several important particulars between the Commercial Laws of Scotland and those of the other parts of the United Kingdom has occasioned inconvenience to a large portion of my subjects engaged in trade. Measures will be proposed to you for remedying this evil.

Measures will also be proposed to you for improving the Laws relating to Partnership by simplifying those Laws, and thus rendering more easy the employment of capital in commerce.

The system under which merchant shipping is liable to pay local dues and passing tolls has been the subject of much complaint. Measures will be proposed to you for affording relief in regard to those matters.

Other important measures for improving the law in Great Britain and in Ireland will be proposed to you, which will, I doubt not, receive your attentive consideration.

Upon these and all other matters upon which you may deliberate I fervently pray that the blessing of Divine Providence may favour your councils, and guide them to the promotion of the great object of my unvarying solicitude, the welfare and the happiness of my people.

It cannot be denied that fears were prevalent in the public mind that a disposition had been shown by men in high places, not only in Great Britain but in France, to accede with undue alacrity to the propositions made by Austria for the pacification of Europe; and that many sincere friends of peace were apprehensive that a truce, rather than a peace, would be the results of negotiations entered upon in such a spirit. Her Majesty's Speech will tend to remove such fears, and to inspire the fullest confidence that the destinies of Great Britain are, at this momentous period of its history, in bold, safe, and honourable hands. The Speech does not represent the negotiations for peace to be in so advanced a State as the gentlemen of the Stock Exchange and the Paris Bourse have so fondly—we might say so greedily—stated them to be. "Certain conditions" have been agreed to which her Majesty hopes "may prove the foundation of a general treaty of peace." In these hopes all classes will participate. The British people have no love of war; they have no animosity either against the Emperor of Russia or against his subjects; their sole desire is, as it ever has been, to vindicate and uphold the public law of Europe; and to win by their MIGHT, and that of their gallant allies, the peace which Russia refused to yield to considerations of RIGHT; and which, in all probability, she would have continued to refuse to this day if the Allies had not proved themselves to be able to enforce their demands at the point of the sword. The emphatic mention by her Majesty of the treaty recently concluded with Sweden affords another strong proof that Lord Palmerston is determined that the pacification which may be expected to result from the Conferences of Paris shall be a real pacification, and include the interests of the European Commonwealth in the north no less than in the south of Europe. Bomarsund is as clearly unnecessary for mere purposes of Russian defence in the Baltic as Sebastopol is for the same purposes in the Euxine. Bomarsund and Sebastopol were both fortresses of offence and aggression on neighbouring States; and, if the permanent settlement of the balance of power in Europe is to be the result of the present negotiations, both places must be dealt with in a spirit to test the *bona fides* of Russia. To her good faith much will be conceded that might wound her susceptibilities; but there are precautions against the renewal of aggression on her part that the Allies would be self-unsatisfied if they did not take while they have the opportunity; and which must be insisted upon at whatever risk to the tender feelings of a Power that never showed itself tender to the feelings of others until it was reduced to the painful extremity of surrender or defeat. In yielding as he has done the Emperor of Russia has shown himself to be a man of a sound head as well as of a kindly heart; and we trust, for the sake of all Europe, that the negotiations will neither be impeded on the side of the Allies by the arrogance of Victory, nor on that of Russia by the susceptibilities of defeat; but that a peace not to be again broken with in the lifetime of any person now existing in Europe will result from the Conferences. There is no necessary antagonism between any of the States of Europe; there is certainly none between Great Britain and Russia—two empires that might thrive upon the happiness and the prosperity of each other if peace were firmly established between them.

The other portions of her Majesty's Speech do not call for particular comment; but there is an omission in it which is as remarkable as it is gratifying. Not a word is said about our differences with the United States. Let us hope that there never will be any occasion for a Sovereign to refer to or for a Parliament to deliberate upon them, and that they may be immediately settled by the good sense and good feeling of both Governments.

Now that some hope exists of a pacific solution of our great quarrel with Russia, we are threatened with a war of railways.

A MOVE IN THE RIGHT DIRECTION.—At a meeting of the members of the Lancaster Mechanics' Institute, last week, a committee of workmen was appointed to canvass the town for subscriptions towards the payment for a building recently entered upon by the institution. A proposal was also made to have lectures delivered by working men—it being suggested that each mechanic was possessed of some amount of knowledge of art and science, and, if he were to prepare a lecture upon that given subject, not only would it be attended with benefit to others, but also to himself.

Some years ago these companies fell out—the reason being that the London and North-Western and Midland Companies were interfered with in their "vested interests" by the newly-opened lines of the Great Northern. The quarrel, however, soon ceased, the parties agreeing to leave to Mr. Gladstone to decide in what proportions the traffic of the principal places should be amicably and regularly divided. Mr. Gladstone made his award, and what is called the "Ten Towns Agreement" hereby had its existence. Under this agreement the Companies have worked for five years; but, as all things must have an end, so had the agreement, and discussion commenced some time back as to its renewal.

Now, six months ago a monster negotiation was set on foot in reference to another agreement for division of traffic, called the "Octuple," because eight separate Companies were parties to it; and nicknamed the "Octagonal," from the suspicion that, though eight-sided, the side of the public had little to do with it. This negotiation ended successfully; and the eight Companies divide under it, in peace, the traffic from the whole of Scotland and of places north of York and London.

The Ten Towns negotiation, following at the heels of this one, might have been expected to succeed; and, as far as the managers—who, it is stated, had eight separate meetings—were concerned, it seems to have been successful. These gentlemen—Captain Huish, Mr. Allport, Mr. Clarke, and Mr. Watkin—agreed, like sensible men, to a basis involving a general peace—not of the day only, but for fourteen years to come. No more competition, no more extensions, no more useless trains—all was to be peace.

Unfortunately, however, for the shareholders, the directors of one of the Companies took a different view. They would have peace on their own terms only, and quietly repudiated their manager—taking the question into their own hands.

It appears that, during the Gladstone award, the London and North-Western and Midland, in pursuance of what now turns out to have been a short-sighted policy, practically abandoned competition for the traffic of the Ten Towns; and the Great Northern, using every exertion, and doing their work well, soon got possession of the great bulk of the traffic, handing over an excess of £25,000 a year to the other two companies, who were content to save running expenses while receiving their share of the money earned by both routes.

Now, however, the Great Northern are naturally averse to giving up what they have got; and the two other great Companies are about to restore the normal state of traffic relations by putting on fast trains, canvassing for the traffic, and by an extreme reduction of fares. People, unless peace be concluded between the high and mighty belligerents, are to go north, up to York from Euston-square, in the same time as from King's-cross, or less; better carriages are to be used; more civil guards put on; and the engines placed under charge of picked men. But the fares are to be cut down almost to nothing. London to York is to be 15s. first class and 10s. second, as against 50s. and 26s. 6d.; London and Leeds is to be the same. London and Doncaster, by a special exertion of philanthropy, is to be 5s. and 3s., instead of 41s. 6d. express and 21s. ordinary second class; and, as a blow below the belt, the London and Peterborough fares are to be reduced from 20s. and 12s. to 5s. and 3s.

The whole passenger traffic that would thus be affected is about £250,000 a year—York alone being above £40,000; and the average reduction of fares would be eighty per cent. Thus this £250,000 would be reduced at one blow to £50,000, and that £50,000 would be contended for vigorously between the parties.

It is stated that, of the Ten Towns passenger traffic, the Great Northern are carrying at least £180,000, and the London and North-Western and Midland only £23,000. Thus this game of "beggar my neighbour" will tell very seriously upon the former Company, if persisted in. Were the shareholders' dividends ample and increasing, such a competition might be rather salutary than otherwise; for undoubtedly very low fares and a keen competition for traffic have a tendency to create travelling; in fact, to give a taste for travelling, through the attraction of cheapness, to some, and to encourage the disposition to travel, through the additional publicity afforded, to others. But the railway shareholder of to-day ought not to be impoverished by reckless competition, or to have his scanty resources wasted in disputes which are carried on on both sides, perhaps in the vain hope of some better settlement.

### ARMY STORES, CATHCART'S HILL.

OUR Correspondent's Sketch upon the preceding page shows that portion of Cathcart's Hill, before Sebastopol, which is occupied by the Army Stores of the Fourth Division—Mr D. Stuart's store—and affords an idea of the disposition of the stores of the Camp. The hill is named from its being the scene of the lamented death of Sir George Cathcart.

A Correspondent writes: "I observe that in your paper of Saturday, Jan. 12, you have a very correct representation of a house in Sebastopol long known by the name of "La Maison Verte"—a name given to it by the French (prior to our possession of the town) in consequence of the greenness of its roof. Your description of the house represents it as having been used by the Russians for a 'girls' school.' This statement was invented by the French, and was generally reported and believed in the Crimea; but it is an erroneous one. Your account was correct in all other particulars.

"I went over the city in September last with a Russian officer who had lived in the town for years, and who knew every house and street in it. He was amused when I repeated to him the imaginary service which had been assigned to the house. The building was really the 'Château Wolkow' (pronounced Volk—) built by a Russian nobleman of that name, and in which its owner ... resided for many years."

LONDON AND MIDDLESEX ARCHÆOLOGICAL SOCIETY.—The first general meeting of this society was held on Monday evening, under the presidency of Lord Londesborough, in the very appropriate locality, old Crosby-hall, Bishopsgate-street. It was very numerously attended, and, moreover, graced by the presence of many ladies. The papers read were:—A general introduction to the Antiquities of London and Middlesex, and to the Objects of the Society," by the Rev. T. Hugo; "Roads on London," by Mr. Charles Roach Smith, in which the writer suggested many new features of interest; among the most important was the conjecture that a Roman amphitheatre had existed on the site of Seacoal-lane, Farringdon-street; "Facts and Documents connected with the Church of St. Helen's, Bishopsgate," by Mr. Thomas Lott; "The History and Architectural Remains of Crosby-hall," by the Rev. Thomas Hugo; and on a "Monumental Brass in Enfield Church," by the Rev. C. Boutell.

## OPENING OF PARLIAMENT.

THE fourth Session of the sixteenth Imperial Parliament and fourth of Queen Victoria, was opened in state, on Thursday, by her Majesty in person.

Even under ordinary circumstances the inauguration of a Parliamentary Session is an event which never fails to arouse the eager attention of the nation, and to infuse activity and a feeling of interest into the most torpid portion of the community. Deep, and settled almost as an instinct, is the conviction in England that the Legislature—the Queen, Lords, and Commons—constitutes the very essence and necessary organ of our existence as a people: it is the authority which the country always anxiously turns to amidst the conflicts of public opinion; the guide to whom it still willingly surrenders itself—the trusted protector of its highest and dearest interests. As the opening of Parliament draws near the voice of contending parties is hushed, and the clamours of ignorance, passion, and interest are stilled. The reverence felt for the Imperial Parliament, and the consequent undisputed sway of its authority, are unique in the history of political institutions.

On the present occasion, however, Parliament has been opened under no ordinary circumstances. We are approaching the termination of a war which was expected to last much longer than two years; and the minds of people generally are still in a state of some doubt and bewilderment on this great question. They look to Parliament to resolve their doubts and clear away all obscurity. The acceptance by Russia of the peace propositions, contrary to all presumption of probability, is feared by many to conceal a purpose the reverse of what is peaceful or honest; and the remembrance of the past wiles and frauds of Russian diplomacy fortifies that fear in the breasts of those who entertain it. Others profess to see no reason for doubting the faith of the Emperor Alexander, and express deep satisfaction that peace has now become all but an accomplished fact. The nation itself, while ready to rejoice in the restoration of peace—of such a peace as it gallantly and generously went to war to procure—is by no means so tired of its sacrifices in blood and treasure as to long for a mere cessation of hostilities. What, then, is the nature of the settlement proposed of the Eastern question? In what sense are the "peace propositions" to be defined at the forthcoming Congress of Paris? How far will any treaty based on that definition prove an effectual curb on the aggressive policy and power of the great northern empire? What are those rumours of a divergence of French and British interests at the point now reached, and of a certain relaxation of the hitherto strict bond of alliance between the two Western Powers? Is England sacrificing anything which it would become her honour or her interest to maintain in order to concur in a peace which she disapproves? What are the precise situation and intention of the Allies respectively and jointly; what is the nature of the proposed peace; what the securities to be exacted; what, in short, the net results of the two years' Russian War, as it affects the position, reputation, and interest of this country?

These are the important questions now agitating the minds of Englishmen, and they confidently look to Parliament for their solution. Immense interests for this nation it is felt are at the present moment at stake, and it cannot be surprising, therefore, that the opening of the Session has been looked to with a degree of anxiety deeper than on any similar occasion since the cessation of the great party struggles ten years since; and to the operation of that feeling must be attributed the extraordinarily lively interest and animation which prevailed on Thursday in the City and new Palace of Westminster.

The weather, which for the few days preceding had been clear, frosty, and bracing, changed on Thursday morning to a state of bitter coldness, with a dull atmosphere, and a raw north-west wind. Notwithstanding, from an early hour in the forenoon crowds of well-dressed people began to assemble on all points of the route from Buckingham Palace to Old Palace-yard; and long before the usual hour of opening Parliament every available spot in Parliament-street, Whitehall, the Horse Guards, and along the Mall was occupied. Numbers of ladies crowded the windows, and platforms erected at various places were well filled. About half-past one the sun shone forth slightly, and lent a warmer hue to the scene. On every side a very eager interest was manifested, which rose into animation and enthusiasm when the Royal cortège passed. On no former occasion do we remember to have seen so numerous an assemblage, or so prevailing a sentiment of loyal curiosity.

At a few minutes before two o'clock her Majesty left Buckingham Palace, amidst the cheers of thousands of spectators who lined the Mall. In the State carriage, which was drawn by eight splendid cream-coloured horses, were, with the Queen and the Prince Consort, her Grace the Duchess of Sutherland (Mistress of the Robes), and his Grace the Duke of Wellington (Master of the Horse). The Marquis of Breadalbane, K.T. (Lord Chamberlain), and Earl Spencer (Lord Steward), occupied the Royal carriage which immediately preceded that of her Majesty. The other carriages forming the cortège contained the remaining high officers of the Queen's household. None of the Royal children were present. Besides her Majesty's Yeomen of the Guard, the escort consisted of two troops of the 1st Regiment of Life Guards and a troop of the Royal Horse Guards Blue; and the magnificent appearance and martial bearing of this fine body of soldiers evidently sent a thrill of pride through the bosoms of all who beheld them. The procession passed at a moderate speed down St. James's-mall, between two dense rows of anxious spectators, who from time to time burst forth into cordial cheering, which was gracefully acknowledged by her Majesty and the Prince Consort. At the Horse Guards, and through Whitehall, but more especially in Palace-yard, the crowd was immense. The loyal congratulations which rent the air were general and enthusiastic. Altogether it was a spectacle which, in its essential features, it would be impossible to witness out of England. Royal and Imperial pageants abroad may outstrip the scene of Thursday in military magnificence and pomp, and in all the material external indications of power; but where shall we seek for that warmth of loyalty—that devoted reverence and affection for the Monarch that unaffected interest in the personal welfare of the Sovereign—which Queen Victoria's subjects display?—and, on the other hand, where look for the perfect confidence with which our Queen's womanly virtues and purity of private character, no less than her irreproachable conduct as the occupant of the throne, enable her at all times to meet her admiring people?

Her Majesty reached the Victoria Tower, Old Palace-yard, at five minutes past two; and her arrival was announced by a discharge of cannon from the Horse Guards Parade and a flourish of trumpets. The Queen was received by the officers of the House of Peers, and immediately entered the House, led by Prince Albert, and preceded by Lord Viscount Hardinge, G.C.B., bearing the Sword of State; the Marquis of Winchester, bearing the Cap of Maintenance; and the Marquis of Lansdowne, carrying the Crown. A guard of honour, composed of a body of the 1st Life Guards dismounted, lined the entrance to the House of Lords, and a company of the Scots Fusilier Guards were drawn up in front of the Tower.

The interior of the House presented a more than usually animated appearance. Long before the arrival of her Majesty every seat, in every part of the vast and finely-proportioned hall, was occupied, with the exception of the small and insufficient space allotted to the members of the House of Commons. The features of the magnificent spectacle presented by the interior of the House differed little from those of former years. The diplomatic box was well filled, and glittered with every variety of uniform—with stars, crosses, sashes, and medals of the orders of merit of the great potentates; while the rich scarlet and ermine robes of the Peers contrasted agreeably with the colours of the dresses worn by the ladies, who, as on all such occasions, formed by far the most prevailing and striking feature of the scene. The number of Peeresses present was very considerable; but the Peers mustered weakly.

On the entrance of the Queen the assembly instantly rose, and remained standing until her Majesty had taken her seat upon the throne. The Queen, who appeared in excellent health, having courteously intimated her wish that the assembly should resume their seats, directed the Lord Chamberlain to command the attendance of the House of Commons. After a brief interval the Commons, headed by the Speaker, having presented themselves at the bar, the Lord Chancellor then, kneeling on one knee, presented her Majesty with a copy of the Royal Speech, which the Queen proceeded to read in her usual clear and distinct tone of voice.

Immediately after the delivery of the Speech her Majesty quitted the House, and, the Royal procession being again formed, it returned, by the same route by which it came, to Buckingham Palace.

### HOUSE OF LORDS.

Before one o'clock the galleries, and the whole of that portion of the body of the House not specially reserved for Peeresses, was filled by persons whose anxiety to procure seats as near as possible to the throne continually upset the arrangements of the indefatigable messenger, whose inexorable interposition caused the usual amount of fluttering from seat to seat of the fair occupants. About one o'clock the Ambassadors began to make their appearance, and amongst the earliest diplomatic arrivals was that of the sable representative of his Majesty of Hayti. About this time the Peeresses' seats began rapidly to fill; the Bishops' bench was occupied; the Judges were in their places; and the Peers, one by one, made their appearance. The attendance of Peers was unusually large.

At a quarter to two the Lord Chancellor took his seat, and about this time the House presented an appearance which, in point of brilliancy, exceeded, if possible, that of any previous opening of Parliament we have witnessed. Wherever the eye wandered it was attracted by brilliant beauty, heightened by matchless millinery; the brightness of the colours being at intervals set off by robes of a more sombre hue.

Precisely at two a stir was observable throughout the august assemblage, the little knots of Peers which here and there dotted the floor suddenly broke up, the whisper ran through the House "The Queen has arrived," and the seats were in an instant filled. A dead silence followed, and all eyes turned to the door on the right of the throne by which her Majesty enters the House.

In a few moments the Heralds made their appearance, followed by the brilliant cortège which attends her Majesty on such occasions. The Queen was then handed to the throne by his Royal Highness Prince Albert, the whole assemblage rising the moment her Majesty reached the throne. Her Majesty then seated herself, Prince Albert taking the throne on the left. On the right of the Royal throne stood the Duchess of Sutherland and the Duchess of Wellington, and the Ladies in Waiting. The Queen then signified by a graceful inclination of her head that the Peers might resume their seats, and the Black Rod left the House of Lords to summon the Commons to the bar of that House. After a little delay the members of the House of Commons, preceded by the Speaker, arrived, when the usual frantic struggle amongst honourable gentlemen for precedence ensued and distracted the attention of the House for a few moments. As soon as silence was restored, the Lord Chancellor (kneeling) presented the Speech to the Queen; who then, in that clear and distinct tone which is so characteristic of her Majesty's delivery, read the Royal Speech, a copy of which will be found in another column.

After the delivery of the Speech the Queen descended from the throne, and the procession left the House in the same order which had been observed in her Majesty's entry.

### THE QUEEN'S SPEECH.

At a quarter past five o'clock the LORD CHANCELLOR rose to read the Royal Speech, which being again read by the Clerk at the table,

The Earl of GOSFORD said that, in rising to move that an humble Address be presented to her Majesty, in reply to her Majesty's most gracious Speech, he should request their Lordships' indulgence, and at the same time he should endeavour to take up their attention for a brief a period as the importance of the occasion would admit of. A short time ago he should have felt very little difficulty in addressing their Lordships on a similar occasion, for at that time it would have been his duty to urge that House to the most vigorous prosecution of the war. But now he could not but feel some embarrassment, being as it were suddenly transformed from an advocate for the vigorous and, as far as the enemy was concerned, the most destructive prosecution of the war, to an advocate, he should say a reluctant advocate, for peace. For he could not but feel reluctance on this point, seeing the high state of efficiency to which our army was brought, the vast preparations that had been made for conducting the war with the utmost vigour, and anticipating, as he had done, the most triumphant success from the campaign of 1856. He thought, however, that circumstances had arisen under which it would have been impossible for him to throw any obstacle in the way of the conclusion of peace. The noble Lord, having explained the reasons which had induced him to come to this conclusion, proceeded to enforce some of the recommendations contained in the Royal Speech, and said that he concurred most heartily in that part of it which impressed upon their Lordships her Majesty's determination to conclude peace only on such terms as would be consistent in the highest degree with the honour and dignity of this country. The noble Lord concluded by moving the Address, which was an echo of the Speech from the Throne.

The Earl of ABINGDON seconded the Address. He confessed that he could not bring himself to share in the apprehension with respect to the terms on which peace might be established, because he was certain that the Government would never be parties to terms that would be ignominious to the British arms (Cheers). He felt equally convinced that if they were parties to such terms they would justly forfeit the confidence of their Lordships' House and of the other House of Parliament (Hear). If anything were required to convince him that due regard would be had to British interests it was the fact that the negotiations were to be conducted by the noble Lord who so ably conducted the affairs of the Foreign Office of this country (Hear), and who had shown so much zeal and ability and assiduity in the public service (Hear). He reminded their Lordships that, if the demands were not agreed to, they would be in a position to enforce the demands by the resumption of hostilities, and nothing could be more satisfactory than the declaration in the Speech that their efforts would not be relaxed until peace was satisfactorily obtained. He rejoiced that the negotiations would take place in the capital of that illustrious Prince who, forgetful of all former jealousies, had entered into an alliance with them for a great object, and he asked their Lordships to shew the feelings which actuated them by giving a unanimous vote in favour of the Address

The Earl of DERBY could assure the noble Earl that there was no desire on the part of himself or his friends—that there was no desire on their part by their vote that evening to prevent the adoption of the Address. He must complain, however, of the meagre character of the Speech; for, though he did not want them to rival the President's Message in point of length, he conceived the Government should, as was usual, have glanced in the Speech from the Throne at objects affecting the well-being of the country. It was usual on such occasions to make some reference to their foreign relations, and to the improvement of their finances; and some communication was also usually made with reference to the condition of their empire in India, and of their colonial possessions (Hear). It was also usual to give to Parliament directly through from the Throne some indication of the measures which it was proposed to submit to Parliament; and the Speech was so bare, bald, and meagre with regard to those subjects that he felt justified in speaking of it as he had done. He called their Lordships' attention to the passage in the Speech with respect to the capture of Sebastopol, and expressed his regret that more laudatory language had not been used in referring to the achievements of the British soldiery. He was sure that if her Majesty had been allowed to express her own feelings the language would not be cold, and that there would be something more contained in the paragraph than the mere announcement that Sebastopol—the stronghold of the Russian—had yielded to the force of their arms. They were now asked to thank her Majesty for this information, which for three months had been notorious to the world. But, unhappily, it was not the fact (A laugh)—unhappily it was but half a fact (Loud hear), because Sebastopol was not taken, and their ships were resting at a respectful distance from the northern part of that stronghold (Hear, hear). The first paragraph, therefore, contained an erroneous statement. Doubts had been expressed with respect to the success of the negotiations, and he considered that it would be a permanent disgrace to the country if they agreed to any peace that would fall short of the full accomplishment of their objects (Hear, hear). He thought the noble Earl opposite had overrated the state of exhaustion of their opponents; but he had not overrated the formidable extent of the preparations they were themselves making; and he was sure he had not overrated the steadfast and stern perseverance which the country had evinced in seeking the attainment of objects which they deemed to be just (Hear, hear). He could not blame the Government for having consented to enter into negotiations; but it would have been more gratifying to him if Russia had applied to the Emperor of Austria to use his good offices with the Allies to establish peace; because, in consequence of what had occurred, the impression in Europe was that they were virtually applicants to Russia for peace ("No, no!"). The statement was that the Emperor of Austria had applied for their consent to employ his good offices to obtain from Russia her assent to certain propositions which they had agreed to (Hear, hear). He must also express his regret that throughout the Speech the existence of the King of Sardinia was totally ignored, and from first to last there did not occur in the Speech the slightest allusion to the existence of Turkey itself. He regretted also that no reference was made to those men who had maintained the honour of their country at Kars (Hear, hear), and who had shown what could be done under foreign officers by the much despised Turkish army (Hear, hear). Perhaps his words would reach those gallant spirits—Williams, Lake, and Thompson—in the depth of their prisons, and they would thereby receive an assurance that that House sympathised with their sufferings (Hear, hear). He should not, however, be surprised if the hands of the Minister should become paralysed if he had attempted to introduce the name of Kars into the Speech. The garrison had kept up their spirit and refused to yield to the force of an overpowering foe; but they were at length compelled to yield to the irresistible force of famine (Hear, hear). He considered, therefore, that the name of Kars would be a lasting reproach to those by whom that gallant band was left without support or assistance (Hear). It was the opinion that their attention should be directed to the Asiatic coast, as the side at which their ally was in most danger from Russia; but it was said that an expedition to that coast had been abandoned in consequence of some petty jealousy that had arisen respecting the interest felt by this country in such an expedition. It was said that the English Government, through fear of being suspected of promoting an expedition, not for the interest of the Turks, but for their own interest, had abstained from pressing it; and he conceived that, while it would be disgraceful to promote such an expedition for their own interest, it would be equally disgraceful to give it up because such suspicions were entertained. He knew that there had been a public opinion to that effect, but he was confident it was unfounded, and he called upon the Government to give it the most prompt contradiction (Hear, hear). He could not believe it was true, as was stated, that Lord Stratford de Redcliffe had neglected to support British officers labouring under difficulties at Kars, but he felt it would be the duty of the Secretary of State to lay all the papers connected with the disastrous abandonment of that place upon the table, because, let the blame rest where it might, the country had a right to know on whose shoulders it should fall (Hear, hear). Then, with reference to the surrender of Kars, no efforts were made for the purpose of relieving the garrison—a garrison which had proved itself invincible to the enemy, but was forced to yield to famine (Hear, hear). He (the noble Earl) would add that there appeared to him ground for cause for a grave charge against her Majesty's Government in not having sent provisions while the place was open; and that no effort was made to break through the opposing army would require some explanation from the same quarter. He might be told that for such an object no man could be spared from before Sebastopol; but where, he would ask, was the Turkish Contingent, of which so much had been said, who their Lordships had last year been told were not raw recruits, but men trained to war? They had been sent to a point where they could be of no service. Why had 30,000 or 40,000 troops been sent up to Kertch, where their presence could answer no purpose? Next, her Majesty's Speech informed them that "in conducting the negotiations I shall be careful not to lose sight of the objects for which the war was undertaken; and I shall deem it right in no degree to relax my naval and military preparations until a satisfactory treaty of peace shall have been concluded." He (Lord Derby) had thought it his duty to express himself freely as to the past; but, in dwelling upon our future prospects, he thought it would be unwise, unsafe, and contrary to the public interests to make any remarks upon the nature of the conditions which might have been now under consideration. It would, however, be well to bear in mind the real objects of the war; amongst these was the independence of the Turkish empire, not less than curbing the ambition of Russia; with these effectually secured by the terms of the treaty he (the noble Earl) would be satisfied, but with less than these neither he nor this country would ever rest content (Hear, hear). He would, during the continuance of the negotiations, carefully abstain from any comments or observations calculated in the remotest degree unnecessarily to embarrass her Majesty's Ministers. He would, however, express the earnest hope that her Majesty's Government would not consent to any suspension of hostilities; and, above all, that they would not waste in negotiations the early months of the approaching season, for which such warlike preparations had been already made. He trusted Ministers would be careful how they consented to any armistice whatever. Such a proceeding would give to the enemy in the Crimea the power of moving troops and munitions wherever they desired, and of reinforcing relatively. By an armistice England had nothing to gain, but a great deal to lose (Hear, hear). Her Majesty, in her Speech, adverted to the North, in which treaty concluded between this country and Norway and Sweden. Now, as far as he (the noble Lord) could understand this treaty, to which such prominence had been given in the Royal Speech, it amounted to nothing more than this country had bound itself to prevent Sweden and Norway from being robbed, and on their parts those countries undertook to prevent themselves from being robbed, if possible (Laughter). While, however, her Majesty was contemplating the aspect of affairs in the North and South, he would wish to know what were the impressions on her Majesty's mind with regard to our relations in the East and West. With the Court of Teheran and Washington our relations were not on a settled factory state, and he (the noble Earl) would have considered these circumstances of sufficient importance to claim some mention in the Royal Speech. There was no country in the world with which our commercial relations were so close and intimate, and with which war would be so mutually suicidal, as America (Hear, hear). He trusted, however, that the American people would regard this identity of interests and the unfortunate nature of the provocation which had disturbed our friendly relations. In conclusion, the noble Earl signified his intention of not opposing any amendment to the Address.

The Earl of CLARENDON, on rising, said he would reply to the noble Earl who had just sat down, and would begin with the main topics touched upon by the Earl, first taking that of the diplomatic relations of this country with the United States. He wished to state that he entirely concurred in the views of the noble Earl upon one point, for there could not be two opinions on the plain common-sense meaning of the Clayton Bulwer treaty; and yet it was upon the construction of that treaty that a misunderstanding had taken place. Her Majesty's Government, aware that correspondence upon such a subject was all but useless, had lost no time in offering to refer the matter to a third Power. That offer had not been accepted by the United States, but it was the best way of settling the question, and he indulged the hope that it would be accepted shortly. With regard to the point to which no allusion had been made in her Majesty's Speech, he was of opinion that to discuss it was not the way to promote a friendly solution of the question. That subject could not have been alluded to in her Majesty's Speech; and, therefore, as correspondence was still in progress, he thought it better that the matter should not be touched upon. The demand of the American Government had been received only two days ago, and it would not serve the public interest to have introduced it into the Speech. Instructions had at first been sent to the Minister of Nova Scotia to see whether people from the United States could be procured; but it was at the same time made known that it was still more desirable that no violation whatever of the law of the United States should take place. This was communicated to Mr Marcy, Secretary of State for the United States; and Mr. Crampton desired that the statement might be publicly made, that Her Majesty did not wish to get too deeply into the question, but he said now that no soldiers had been enrolled in the United States. There had been some passage-money paid for persons who had taken service for recruiting, but it had been decided in the Court of Philadelphia that that act constituted no violation of the United States' law. He wished also to observe that persons going to Halifax with their passage-money paid were not bound to enlist when they arrived there; and it had happened that a great number of men had preferred not to do so. It was true there had taken place a correspondence on a not very amicable character; but he indulged the hope that, as it was the object of a bona fide transaction, no serious results would follow. In February last he had told Mr. Buchanan that her Majesty's Government had no intention to violate the law of the United States; and that, if such intention had taken place, it would have been without their sanction. Still, as it was maintained that the law had been violated, the regret of her Majesty's Government had been fully expressed; and he could not believe that two nations bound together by such unity of interest, and such an interest in not going to war—he could not believe that on such a question they would do so. He did not despair of a speedy and amicable solution. With respect to Mr. Crampton, he could only say he was convinced that he was quite incapable of violating the law of the United States. So he hoped the question would be brought to a satisfactory conclusion, but he did not think that their mooting the

STATE PROCESSION OF HER

O OPEN PARLIAMENT.—(SEE NEXT PAGE.)

question would tend to that result; and he should be sorry that their friends over the Atlantic should have any feeling of hostility excited towards them, either in the mind of that House or of the country. The next subject upon which he wished to touch was that of the fall of Kars, and he thought it hardly necessary to say that he concurred entirely in every word that had been said as to the magnificent fate of that disaster, and the greatness of the moral courage shown by its brave defenders. He could, in reply to the remarks of his noble friend, only say that the whole circumstances connected with that noble friend, only say that the whole circumstances connected with that place from the time when General Williams was first sent there up to the time of its fall would show when known that every preparation had been made in a proper manner by this country; and he would only ask them to suspend their judgment as to the person upon whom blame should fall until they were in possession of those particulars. But there was one point to which he would immediately reply in his remarks of his noble friend. The noble Earl had alluded to a report widely circulated with respect to a feeling which existed in the mind of the Emperor of the French and the French nation that the question was not called upon to make any effort on behalf of Asiatic Turkey, because its protection would be for the interest of England and not for the interest of France. He could give to that statement the most unqualified contradiction. He did not mean to say that in a portion of the French press such a view had not been expressed; but he could give the most unqualified contradiction to the idea that the Emperor of the French was himself concerned. He would now allude to a subject brought forward in her Majesty's Speech. His noble friend had expressed his regret that these terms had been offered to the Court of Russia by Austria. Upon the present occasion he could not be expected to give more information upon the subject than was fully justified by circumstances; and as the Speech had fairly stated the question he could hardly add anything to it. It seemed to him that, however necessary it was to enter upon the war in the first instance, it was quite unnecessary to carry it beyond the objects for which it was entered upon. Aid as for the interference of Austria, it was not for England or France to make overtures to Russia; and it certainly could not be expected that Russia would make overtures to them. Austria, however, was in a position to do so, and she probably chose a time when winter rendered the cessation of hostilities necessary. It was simply to ascertain, and a note from St. Petersburg, the terms on which the Allies were willing to treat, and it was but fair to the Austrian Government to state that that Government admitted the necessity that the terms should be accepted and distinct, so as to avoid all those misunderstandings and complications which last year brought the negotiations to a close (Hear, hear). It was impossible for her Majesty's Government to suppose any offered, however confident they might be that another campaign would elevate the military character of England; for the continuance of the war would be quite unjustifiable when the original objects of the war were attained. And, notwithstanding the spirit which animated the country, he believed that the conditions, if fairly carried out, would be satisfactory to the people of England (Hear). A proposition had been communicated to those terms at St. Petersburg without throwing any responsibility on the Allies. Austria became a party to the terms, and made herself responsible for them, and entered into an engagement to break off all diplomatic arrangements with Russia, if they were rejected. The terms were then taken to St. Petersburg by Austria through Prince Esterhazy, who was instructed to apply for a categorical answer, "Yes" or "No," and on no account to accept any new terms or modifications whatever. The answer was not in the form required by Austria, but contained some of the important points; and the Austrian Government then informed the Russian Minister in Vienna that, unless they received a categorical answer within a given time, the Austrian Minister, with the whole of the mission, would withdraw from St. Petersburg. This was communicated by Prince Gorischakoff to the Russian Government, and acceptance "pure and simple" was the result (Hear, hear). The Austrian ambassador stated upon the occasion, "I received by her Majesty's Government the day before yesterday, and it had been arranged that the terms should be agreed to by plenipotentiaries at Vienna, and that they should first sign a protocol, upon which an armistice should follow, and conditions for a permanent peace be entered into. He need not enter into this further, but he would take the opportunity of saying that the Conference would be as short as possible. Russia was now informed them what was the present state of the question; but he would not deny that grave doubts and anxieties existed in connection with the conduct of Russia. The very proposition shown by Russia encouraged such a feeling, and the more so when the proceeding of Russia last year, after an acceptance "pure and simple," were considered (Hear, hear). He could only hope that they were sincere; and he believed that she might be, for previous conduct might be no criterion on this occasion. He believed that Russia desired peace, and that the spirit of England and that great moral courage in accepting the terms of Austria. He hoped that we would show the same moral courage in accepting terms which, in his opinion, would bring the war to an honourable conclusion (Hear, hear). And he said a safe conclusion because any peace that degraded Russia could not be a safe peace. But, in accepting terms that put Russia in a position to feel that she could not renew her aggression had made her hostile to Europe, and therefore on that account peace was for her interest. And when it was said that Russia was not sincere in accepting the terms of peace, he asked, on the other hand, what the country had been called in question (Hear, hear). It had been said that although we accepted the terms we must continue the war, because we would not be satisfied with any definite object. He believed another campaign would be productive of a more abundant harvest of military glory to the country (Hear, hear). He wished this point to be known. It had been widely circulated and generally believed; and because on the part of her Majesty's Government he wished to give it a most unqualified denial (Hear, hear). Whatever might be the opinion of individuals, notwithstanding that the preparations for the war had been made without exception her Majesty's Ministers would not feel justified to carry on the war for the extension of the personal fame of England (Hear, hear). He hoped that peace would be the result of the present negotiations; but, if unfortunately it were not so, he believed that the people of England would be as one man, and not consider any sacrifice too great for a personal nature. Her Majesty had been pleased to desire that he should go to the Conference on the part of this country, and, however painfully unfulfil the duties in his own opinion, and however great the distress it let him feel, from a proper regard to the feeling of her Majesty he had come to the conclusion that it was his duty to obey her wishes. He would say that any chance of useful exertion on his part would be extinguished if he undertook the mission otherwise than to bring to an honourable and safe conclusion. He had himself no desire of a military career; and, before he accepted it, he thought he might say, without violation of official reserve, that the sentiments of her Majesty's Government upon the subject of the terms were entirely satisfactory to the Emperor of the French (Hear, hear), and the honourable and straightforward conduct of the Emperor of the French could not be too highly appreciated. He believed he had a perfect understanding with him, and there was no inconsistency with the honour of France; and he, like her Majesty's Government, was determined that naval and military preparations should go on with unabated vigour, in order that war might be carried on, if not on very day, should such happen, when the failure of the negotiations became known (Loud cheers).

The Earl of DERBY again rose and said their Lordships would probably pardon him for being again to allude to another subject. It appeared that her Majesty had been advised to convene upon a very extraordinary and unexpected occasion (Hear, hear). Under these circumstances, as the noble individual alluded to had no sons, it appeared to him (the Earl of Derby) that that Peerage had been conferred for no other purpose than to try the patience of the Crown (Cries of "Hear, hear"). Without fully discussing that question, he might say it was a subject not to be passed over in silence on the first night of their assembling after the recess, for there had been no similar act performed by the Crown for a period of three hundred, or perhaps four hundred, years. Such an innovation, for such a purpose, was a mere exercise of an unconstitutional prerogative, for the purpose of swamping them Lordships' House had never [illegible] (Hear, hear). The assumption of such a prerogative was matter of importance, and one which, if allowed to pass, upon the liberty and constitution of that House to which they could never submit (Hear hear). Such a prerogative, at all events, ought never to be sanctioned or recognised. He did not wish to say more, however, with to deal with the question himself, but trusted it would [illegible] into the hands of those who were better able to do it. Since then he was, and he hoped this was the one much as it was necessary for the Crown to possess without any admixture of party feeling. And he hoped that, without tying them to any notice, in consideration of the importance of the question, her Majesty's Government would give them a formal [illegible] upon which to bring it forward, by laying upon the table of the House at once the Royal patent by which the peerage of Lord Wensleydale had been conferred.

Earl GRANVILLE said the noble Lord had alluded to this appointment in very strong terms and he designated it a "unique, illegal and unconstitutional." And he had said that when [illegible] should be brought before their Lordships he hoped that it would be discussed in no party spirit. Most sincerely did he reiterate that sentiment of the noble Lord, for most sincerely did he feel that there was not one of their Lordships who did not feel an interest in this question. The noble Lord had come into this House entirely unfettered by his votes, either for or against her Majesty's Government. The noble Lord had expressed a desire that when the question should be brought into this House [illegible] half to the noble Lords learned in the law; and although, of course they would be glad to avail themselves of [illegible] of those learned Lords yet he felt that he could not [illegible] his advice; and he must protest against the question being so limited, for he was quite sure that the noble Baron would not be willing that the question should be taken out of their Lordships' hands, who had full power to deal with it.

Lord CAMPBELL said it was of importance to their Lordships, and it was desirable that it should be brought to their considera ion, whether what had been done was lawful; and, if so, whether it could be done without the authority of Parliament?

The Earl of DERBY said a few words across the table which were inaudible in the gallery.

The Address was then agreed to, and their Lordships adjourned at eight o'clock.

## HOUSE OF COMMONS.—THURSDAY.

At a quarter to four o'clock the Speaker took the chair.

### NEW MEMBERS.

The following new members took the oaths and their seats:—Sir C. Napier, for Southwark. Mr. Bouverie, for Kilmarnock; Major Sibthorp, for Lincoln; Mr. Hunt, for Huntingdonshire; Mr. Mowby, for the county of Meath; Captain Jolliffe, for Wells; Mr. Lowe, for Kidderminster; and Mr. Bond for Armagh.

### SESSIONAL ORDERS.

The usual sessional orders were considered and agreed to.

### NEW WRITS.

On the motion of Mr. HAYTER, new writs were ordered to be issued—for Taunton, in the room of the Right Hon. Mr. Labouchere, who has accepted the office of Chief Secretary for Ireland, in the room of the Right Hon. Mr. Baines, who has accepted the office of Chancellor of the Duchy of Lancaster; for Wigton, in the room of Mr. Dalrymple; for Edinburgh, in the room of Mr. Macvey Napier; for Newcastle-on-Tyne, in the room of Mr T.F. Blackett; and for Rochester, in the room of Mr. Villiers, who has accepted the Chiltern Hundreds.

A new writ was ordered for the University of Cambridge, in the room of the Right Hon. H. Goulburn, deceased; and for Midhurst, in the room of the Right Hon. S. Walpole, who has accepted the Chiltern Hundreds.

### MINISTERIAL BILLS.

Mr. WILSON gave notice that on Monday the Vice-President of the Board of Trade would move for leave to bring in a Bill to Amend the Law of Partnership, and a Bill for Regulation of Joint-Stock Companies and other Associations. On the same day the Secretary of the Treasury would move for leave to bring in a Bill for the Regulation of Certain Offices in the House of Commons. On Monday next Sir George Grey would move for leave to bring in a Bill to Amend the Acts relating to the Metropolitan Police, a Bill to Render more effectual the Police in Counties and Boroughs, and a Bill to Better Regulation of the Corporation of the City of London. On Monday the Vice-President of the Board of Trade would move to bring in a Bill for the Abolition of Passing Tolls and the Regulation of Dues upon Shipping. On Friday (last evening) Sir W. Somerville would move for leave to bring in Bills to Amend the Laws relating to Prisons in Ireland, and for the Better Care and Reformation of Juvenile Offenders in Ireland.

### NOTICES OF MOTION.

DECIMAL COINAGE.—Mr. SMITH gave notice of an address to her Majesty relative to a decimal standard of weights and coins

ARMY MEDICAL REFORM.—Mr. STAFFORD gave notice that on an early day he should call the attention of the House to the present state of the Army Medical Department (Hear, hear).

EDUCATION.—Lord J. RUSSELL gave notice that, early in March, he should submit for the consideration of the House certain resolutions with regard to education in England and Wales.

FOREIGN ENLISTMENT.—Mr. BAILLIE gave notice that on that day fortnight Le should move a resolution relative to our present mode of Foreign Enlistment, and to the powers possessed by the First Lord of the Admiralty with reference to the conduct of Admiral Stirling in the China Seas

THE EXPENDITURE OF THE COUNTRY.—Mr. WILLIAMS gave notice that he should move for a return showing the gross receipts and expenditure of the country, detailing the cost of collection, including those of the Crown and Priests and the Government of the Crown.

STATE OF THE ARMY.—Major REED gave notice that on Tuesday week he should move for a Select Committee to take into consideration the present state of discipline in the British Army.

JUVENILE CRIME.—Sir J. PARINGTON gave notice that to-morrow he should put a question to the Secretary of state for the Home Department relative to the juvenile criminal population of this country.

ECCLESIASTICAL LAW REFORM.—Mr. COLLIER gave notice of his usual motion with reference to ecclesiastical law reform.

### THE QUEEN'S SPEECH.

Mr. BYNG rose to move an Address to her Majesty on the subject. He adverted to the origin and conduct of the war, and referred in glowing terms to the beneficial effects of our alliance with the Emperor of the French and the gallant Army of France, and to the co-operation of Sardinia, Sir James Simpson, and the admirable body of nurses who went out under the auspices of Miss Nightingale. Looking to the future, he would argue in favour of peace, declaring the desire of the House unconditionally accepted the terms offered by the Allied Powers. Much might be modified and improved upon further consideration.

Mr. BAILLIE, in seconding the motion, [illegible] was bound to say they had rendered great [illegible] in carrying it on. He believed that the [illegible] anxiously anxious for peace, and that there was every reason to hope that an honourable and permanent peace would be the result. At the same time he held that the policy which the Government had pursued could not be explained away at the Council Chamber, but that we should be perfectly ready for another and a vigorous campaign, if it should be deemed necessary.

Mr. DISRAELI said he was only expressing the feelings of the House when he assured them of the gratification they must feel to the Queen for her assurance that she had entered upon negotiations which she hoped would lay the foundation of a safe and honourable peace. He was not in a position to enter upon any criticism of the proposed negotiations, because there was no authentic information in reference to them before the House. He did not intend by this remark to censure the Government, because he must believe that, under the circumstances in which they were placed, they could act with that wisdom which became the Executive. He trusted, however, that the House of Commons, while it showed a high-spirited reserve, would watch every proceeding of the Government with the utmost vigilance (Hear, hear). Statesmen acting on such principle would, instead of being vindicators of the public weal and conservators of public order, be degraded into the point of those who, for [illegible] advancement, would bring about the ruin of their countrymen (Hear, hear). Therefore he could not at all admit that the principle that they should continue this war in order to maintain advantageous negotiations was one which that House ought at all to sanction (Hear, hear); and he himself was afraid that autocracy of their friends in this country had been induced to fall into [illegible] but the very persons who indulged in these fancies were those who were most persuaded of the substantial and increased power of England herself (Hear, hear). If they looked to the authenticated [illegible] regarding the decline of the prestige of England, he did not inquire who they were or had been, whether journalists who had become statesmen, or statesmen who had become journalists ("Hear hear," and a laugh)—they would find generally that those persons were the most incompetent to understand the importance of England, and the last to underrate it (Hear, hear). When those persons attempted to disparage the power and prestige of England, they could not use the words applied to a great republic—"trembled while they sneered" ("Hear, hear," and cheers). There was one paragraph in the Address which he was sure would meet with the unanimous approval of the House, and which had been adverted to in very excellent terms by the honourable gentleman who had moved the Address. He alluded to that passage where her Majesty expressed her admiration of the persevering constancy and daring bravery by which the stronghold of Russia had been reduced in the Black Sea ("Hear, hear," and cheers). He hoped that, whatever might be their political differences, there would never in that House be any difference in the sentiments of admiration with which they should view the achievements and exertions of their fellow-countrymen abroad, when maintaining the honour and interests of her Majesty's realms ("Hear hear," and loud cheers). But he thought that there had been another siege, not less distinguished by persevering constancy and daring bravery, although it at constancy and that courage had not reaped the reward which in the case of Sebastopol had fortunately been acquired. He thought there was much to be proud of in the siege of Kars; but he hoped it would all be one the House of Commons to forget (Hear, hear). He was not on this occasion anxious to call on Government to explain the circumstances which had led to the unfortunate surrender of Kars; but he hoped it was fully understood that that was a subject on which this country and that House did expect and would require the most ample information (Cries of "Hear, hear"). However, on an occasion like the present, whether they were to have peace or war, they ought to express their admiration of those who had at last struggled in the cause of the honour even although they [illegible] had not been attended with success. He [illegible] members of that House express their sympathy for energy which had, perhaps, been betrayed, and for courage which they knew had been deserted (Loud cries of "Hear, hear"). At a moment when they were called upon—and rightly called upon—to express their admiration of great achievements which had rendered the name of the Allies illustrious in the Black Sea, let that House vindicate the conduct of those whose deeds, if they had not been crowned with success, had at least been crowned with glory ("Hear, hear," and cheers). Let it be fully understood by their absent countrymen that in that House the man who deserved, and not merely the man who achieved, success was honoured ("Hear, hear," and cheers). After the Address from the Throne that day—after the gracious expressions on the part of her Majesty with regard to the important negotiations [illegible] to resist the conviction that the prospects of peace were most favourable (Hear). It was true they might be disappointed—it was true that on this as on previous occasions in their history they might find that when the cup had reached the lips the draught might not yet be swallowed ("Hear, hear," and laughter). All this he admitted; but they had, at least, the satisfaction of knowing that, if her Majesty failed in the negotiations which were about to be carried on—if the conditions of peace of which the noble Lord at the head of the Government was cognisant, but with which the House and the country were unacquainted, did not effect that great result which now, he believed, was generally expected and generally desired they had the satisfaction of knowing that her Majesty might appeal with confidence to her Parliament to support her in the great struggle, and that there was no sum which Parliament would not cheerfully vote, nor her people cheerfully raise, to vindicate her honour and maintain the interests of her kingdom ("Hear, hear," and cheers). It was on this conviction that their negotiators would enter on their important duties (Hear, hear). After the intimation from the Throne that day—after the assent of peace was one in which, from them the House and the country were unacquainted, he trusted, they would not be disappointed. He (Mr Disraeli) thought that the observations of the hon. gentleman who seconded the Address were most just when he referred to the exhaustion of Russia as the best proof of the sincerity of the present acquiescence in the terms proposed to her (Hear, hear). Under these circumstances he could not but hope that they would soon have the satisfaction of announcing that a general treaty of peace having been successfully negotiated, and that that treaty would prove to be one which would accomplish the objects for which the war has been undertaken. (The right hon. gentleman concluded amid loud cheering.)

After a considerable pause,

Lord PALMERSTON rose, and said: Sir, I waited till the last moment, being anxious that any other member of the Opposition should have an opportunity of expressing his opinion on the subject under discussion if he thought proper to do so (Hear, hear). My hon. friends who moved and seconded the Address have performed the treatment of the subject before us in an eloquence, a good feeling, and an appreciation of the importance of the topics adverted to in her Majesty's Speech which I am sure could not have failed to be very gratifying to the House ("Hear, hear," and cheers). I am bound also to say that nothing could be more becoming than the position taken by the hon. gentleman who last addressed the House, or than the sentiments which he gave utterance to in the course of his observations (Hear, hear). Sir, I fully agree with him that whatever may be said or thought to the contrary, that when great national questions are pending, and have to be dealt with by the Government of this country, so far from the presence of Parliament becoming inconvenient or beneficial to the public service, it, on the contrary, gives the public service that, at a crisis when these great questions are about to be decided, there should be assembled the great council of the nation, to give advice if necessary, but at all events to give that support and strength which could only under such circumstances be derived from the presence of Parliament ("Hear," and cheers). The right hon. gentleman has very properly described to the House the course which we are about to take (Hear, hear). In the present state of matters it would be unbecoming in her Majesty's Government to enter into a detail of the position and the relations in which the questions stand. So soon as any step has been taken which will place the Government in the position in which they can lay before Parliament any conditions which have been actually agreed on, it will be the duty of her Majesty's Government to give Parliament every information which may be in their power (Hear, hear). I concur entirely with those who have stated that it is not the duty of Government to urge the country to continue the war, if they be able to obtain those objects for which the war was undertaken ("Hear, hear," and cheers). No doubt, bir, the resources of the country are unimpaired; no doubt the military and naval preparations which within the last few months we have been making, and which are now going forward, would, if the war were continued, place this country in a position with regard to the continuance of hostilities such as we have not stood in since the commencement of the war (Hear). We would, therefore, be entitled to expect that if another campaign were forced on us we would be in a position to carry it on with a degree of vigour which at the present moment offers; but, Sir, if the conditions which have now been agreed on should accomplish the objects for which we are contending—if the conditions which the objects for which we are contending—if the conditions which we think it our duty to propose are such as we believe the country will be satisfied with, are sufficient for this purpose—undoubtedly we would be glad to see peace restored to us, which, if not being in a manner unworthy of the conditions which the country has reposed in us, if we rejected these conditions merely to take the chances of greater successes in another campaign ("Hear, hear," and cheers). Though, like many in another campaign ("Hear, hear," and cheers). Though, like many others in the country, we felt that the future chances of war were in our favour, and that the resources of our enemy are daily diminishing, and our resources are increasing, we were of opinion that we would while ours are increasing, we were of opinion that we would while ours are increasing, we were of opinion that we would not be accomplished, we should show the country that the failure was owing to no fault of those who had the conduct of the negotiations, and we know that there is in this country strength and determination to make any sacrifice to its full accomplishment, and that this strength when put forth, and this spirit when aroused, will in the end, accomplish the objects we have in view. If our propositions are rejected (Hear, hear) in obtaining them (Cheers). I agree with the right honourable gentleman in his opinion of the gallantry, courage, and daring exploits of those who have been struggling in the Crimea. I mean the siege of Kars. Such an instance of bravery, mingled with extreme privation, as was shown on the part of General Williams, has not appeared in the pages of military history. I feel that we have been fortunate in their Majesty's Government having made use of all the means in their power to obtain the exchange of General Williams and his brave companions. It is the intention of her Majesty's Government to lay upon the table of this House estimates for the year, but we shall take only a portion of the year, so as to give the House an opportunity of reconsidering them. I should have risen at an earlier period to say something that I might have to say, but I felt quite sure that there were better observations to be made on this motion. I do trust that the House will agree upon the present address to her Majesty (cheers). Such an Address; and that, by adopting the general course, we may show to the world that, while, on the one hand, the people of England are desirous of establishing a peace so far as it is secure and honourable, they have confidence in those who are responsible for the conduct of their affairs; and that they will not impede the progress of the negotiations by premature discussions, reserving to themselves the right which the Parliament and the people of this country possess—to call to strict account those who have been invested with the management of public affairs, and to ensure them if they [illegible] that they have not been misapplied. We trust we shall be able to show that in the course of these negotiations we shall not abandon them any subject which we ought to sustain; but we shall show such a spirit as the country has a right to expect, and that we shall not forfeit the accomplishment of them by any desire inconsistent with what ought to animate the representatives of a great country, when entering into an important negotiation like that which we are now about to commence (Cheer).

Mr. ROEBUCK said he was at a loss to know what the noble Lord meant. He had stated that the interference of Parliament was of great importance in the negotiations, and at the same time he said that Parliament ought not to express any opinion. Now, he (Mr. Roebuck) wanted to know what the meaning of that was. His view of the matter was this:—the Parliament was there to watch over the interests and the honour of England; and that, although the objects of the negotiation were not presented to them by the Minister, yet they knowing what their duty called for, should point out to the Minister the course they ought to pursue. The right hon. gentleman the Member for Buckinghamshire said he also would not enter into any discussion of the objects of the negotiation; and he gave as his reason—he did not know the principles on which the negotiations were to be carried out. He (Mr Roebuck) was exactly in the same state of ignorance as that right hon. gentleman; but he thought it was the duty of that House to out

## THE COURT.

The Queen and Prince Albert left Windsor Castle at half-past eleven o'clock on Wednesday morning, attended by the ladies and gentlemen of the Royal household; and, travelling to London by special train on the Great Western Railway, proceeded from the Paddington terminus escorted by a party of the 3rd Light Dragoons, to Buckingham Palace, where the Royal party arrived at half past twelve o'clock. Her Majesty held a Court and Privy Council in the afternoon.

On Thursday the Queen went in state to the House of Lords, to open the Session of Parliament with a Speech from the throne. The Royal procession left Buckingham Palace at ten minutes before two o'clock, and after a brief sojourn in the Prince's room returned to the Palace at three o'clock, and afterwards left town on their return to Windsor Castle.

The fifth and last dramatic performance of the season took place at Windsor Castle on Monday evening. The pieces selected were a comedy, in three acts, by Mr. Tom Taylor, entitled "Still Waters Run Deep," and a farce, by Mr. J. M. Morton, entitled "A Game of Romps." The Court will remove to Buckingham Palace for the season on the 11th inst.

### THE QUEEN'S COURT.

The Queen held a Court and Privy Council at Buckingham Palace on Wednesday.

At the Court M Musurus had an audience of her Majesty, and delivered his new credentials as Ambassador from the Sultan of Turkey. Mr. Baron (George) Bramwell was presented to the Queen, at an audience, by Mr. Secretary Labouchere (acting for Sir George Grey), when her Majesty was graciously pleased to confer the honour of knighthood upon him. Viscount Gough had an audience of the Queen in the Royal closet, when her Majesty was graciously pleased to deliver to the Lordship his gold stick of office as Colonel of the Royal Horse Guards.

At the Council the Queen's Speech on opening Parliament was sanctioned by her Majesty in Council. The Queen pricked the list of Sheriffs for the different counties of England and Wales for the present year.

---

His Royal Highness the Duke of Cambridge entertained at dinner, on Saturday last, at his apartments in St. James's Palace, General Alphonse la Marmora. There were present to meet the gallant General the Duchess of Cambridge and the Princess Mary, the Countess Hélène Kielmansegge, Viscount Hardinge, the Marquis d'Azeglio, Sir Edmund Lyons, Sir Harry Jones, Sir Richard Airey, the Hon. R. S. Dundas, and Colonel Browning.

Viscountess Palmerston will commence the fashionable hospitalities of the coming season with an assembly this evening (Saturday.)

We are glad to learn that Lord Adolphus Fitzclarence is going on very favourably.

MARRIAGE IN HIGH LIFE.—The marriage of Captain Sayer, of the 23rd Royal Welch Fusiliers, to Miss Phipps, eldest daughter of Col. the Hon. C. B. Phipps, C.B., Keeper of her Majesty's Privy Purse, and niece of the Marquis of Normanby, took place on Tuesday, in St George's Chapel, Windsor. Her Majesty and Prince Albert, accompanied by the Princess Royal, the Prince of Wales, the Princess Alice, and Prince Alfred, were present at the ceremony.

---

## COUNTRY NEWS.

RETIREMENT OF SIR JOHN TYRELL.—The *Essex Herald* contains an address by Sir John Tyrell to the electors of North Essex, announcing that it is not his intention again to present himself to their notice for the honour of representing them. In the event of a dissolution of Parliament. "My determination of this resolution, Sir John says:—" Since my severe illness, some two years ago, I have never been able to discharge my duties in Parliament to my own satisfaction, nor, as I fear, to that of my constituents, in consequence of my inability to reside more than two or three consecutive days in London without injury to myself. Under these circumstances I consider myself no longer warranted in occupying a seat that requires the undivided attention of a member of Parliament."

PROPOSED COLLEGE OF MINING ENGINEERS AT NEWCASTLE-ON-TYNE.—The mining engineers of the north of England have for some time had it in contemplation to found a College in Newcastle, with a capital of 20,000 for instruction in the various branches of knowledge tending to the safe and effectual working of coal mines. In the spring of last year a meeting was held in London, attended by gentlemen from the various coal-mining districts of England, Wales, and Scotland, at which meeting the importance of the subject was fully recognised, and it was admitted that Newcastle was the most eligible and useful site for the erection of the proposed College. Since that meeting was held, Mr. Nicholas Wood, an eminent coal viewer and proprietor, and president of the Mining Institute of the North of England, has brought the subject of the proposed College under the notice of the Duke of Northumberland, requesting his Grace to lend his assistance to he undertaking and to become its patron. The noble Duke, with his characteristic munificence, responded to this appeal. A short time ago he signified to Mr. Wood his acceptance of the office of patron, and promised, in the event of the subscribed capital amounting to £15,000, he would increase it to £20,000; and, if it should amount to £30,000, his Grace would add the sum of £10,000, making it £40,000. The committee of the Mining Institute, encouraged by so liberal an offer, are intending forthwith to apply to the other leading coal owners in the district, including the Marquisions of Londonderry, the Earl of Durham, and Lord Ravensworth, for their support, and there can be no doubt of the success of the undertaking. The College will not be confined to engineering studies, but will include instruction in various important branches of manufacture

FINE-ART CONVERSAZIONE AT NORWICH.—On the evening of the 24th ult. a conversazione was held in the School of Art, St. Andrew's, Norwich, which was attended by a very large and brilliant assemblage, comprising many of the elite, both of the city and county. The statue gallery and upper class-rooms were also supplied with works of art. The walls of the lower class-room were also decorated with specimens of the drawings of the students of the school, illustrating the various stages of instruction from the most elementary to the most advanced, and with the designs which have recently obtained medals from the central school. In the small class-room on the same floor were a number of large volumes of Somerard's "Arts of the Middle Ages," which contained a great variety of splendid illuminated designs and copies These had been forwarded to the school by the Board of Trade department of Science and Art, who have also sent some valuable specimens of photographs and specimens of designs of manufactures. The photographs in this room were chiefly by Calame, a French photographer. In the upper room there was a gorgeous display of oil and water colour paintings, engravings, and Crimean and other photographs, which were much admired. Long tables were covered with illustrated books In every corner were relics of beautiful drawings and sketches. The principal paintings exhibited were by Goodall, Linnel, Pyne, Smith, Cromek, Montagu, and Dodgshun. After an able address by J. H. G. Money, Esq., the President, the company were briefly addressed by Sir E. Barnard, Bart., M.P., the Mayor of Norwich (J. G. Johnson, Esq.); and Sir Samuel Bignold, M.P. The ladies and gentlemen then repaired to the refreshment room, and these proceedings in the gallery of objects of the fine arts works of art which had been so profusely supplied for their amusement and gratification. Nearly two hours devoted to this occupation brought the proceedings to a close

AN UNLUCKY JOURNEY. A gentleman residing in the neighbourhood of Kinver sent, on Tuesday last, a large crate by railway from Stourbridge to Bristol, *en route* for Somersetshire. It contained four compartments, in which were a couple of rabbits, a brace of pheasants, two cages of fine fowls of a fancy breed, two couple of ducks, and a basket in which two ferrets were placed. These animals were all living when the train left Stourbridge, but by the time it arrived at Bristol a considerable change had occurred. The ferrets had broken out of their basket, and killed the two rabbits, the four fowls, and two of the ducks. One of the other ducks had been attacked, for it had lost an eye. The ferrets were secured, and the consignment sent back to the sender on Wednesday.—*Worcester Herald.*

ACCIDENTAL POISONING.—A calamitous occurrence took place at Dingwall, on Tuesday week, which has created a most painful sensation in that town and the neighbouring counties. It appears that Mr. John Maciver, Provost of Dingwall, had a private dinner party on Tuesday afternoon, consisting of Mr Lewis M. Mackenzie, of Findon, Mr. Macleod, Messrs. Mackenzie of Eskdale, and Gordon of Beauly, Rosmarkie, and Mr. John Macdonald, Cawdor, and the members of Mr. Maciver's own family. After dinner Mr. Gordon complained of a parched throat, and having taken a drink of water retired. Mr. Macdonald felt the same symptoms, and also withdrew for a short time, while the others remained at table. The Rev. Mr. Mackenzie was then taken ill, and a little afterwards Mr. Maciver and Mr. Mackenzie of Findon began to complain. Dr. Smith was sent for, but before his arrival the two clergymen, after violently vomiting, expired, and Mr Mackenzie of Findon quickly followed. Mr. Macdonald having left the house walked about, and to this and to his native vigour and activity his recovery may mainly be attributed Mr Maciver, we are glad to say, having been kept walking about in the house, is recovering From what has transpired, we may state that the cook sent the male servant to the garden for some basil to flavor the roast beef, and he, through mistake, took a nightshade-root to her, and this formed the sauce for the hash.—*Inverness Courier.*

## NOTES OF THE WEEK.

THE opening of Parliament on Thursday, and the debate on the Address, have, of course, been the topic of the week. With this exception, there has been but little domestic incident of much interest. The Cambridge election excites a peculiar constituency; and it is thought that the favour in which the resident members hold Mr. Denman, and the reluctance of the outlying voters, clergymen and others, to leave their homes and go up to the University, render the chances of the contest more doubtful than was at first supposed.

Sir Walter Scott tells a story of a certain farmer, called Fighting Charley, whom some thieves proposed to rob on his way home, and from whose pistols they drew the charges, substituting tow. Something excited Charley's suspicions, and he examined the weapons, discovered the stratagem, and, it need hardly be added, replaced powder and ball. He was stopped as he expected, and, drawing his pistols, warned the robbers off. They shouted valiantly that they did not care for his pistols. "Ay, lads," responded the deep voice of Fighting Cnarley, "*but the tow's out now*" Satisfied with this piece of information, the assailants decamped. Certain alleged news from America reminded us of this little anecdote. Mr. President Pierce is stated to be so excessively valiant in his electioneering devices as to have demanded the recall of our representative, and to be about to give an *exequatur* to our Consuls. The menace seems formidable; but when it was made Mr. Pierce had not heard that England was likely to be at peace, and to have no special use for the most splendid naval squadrons in the world. "The tow's out now." We fancy that the last news taken out by the *Persia* will modify the Presidential valour. Meantime Congress is still incomplete. No Speaker is elected in the House of Representatives; and the contempt in which the honest and sensible portion of the American nation hold the White House appears to increase daily.

The journal supposed to be in the confidence of the French Embassy confidently states that it has been resolved to exclude Prussia from the Peace Conferences in Paris, notwithstanding the desperate pains taken by her representatives to impress upon everybody's mind that it is to her agency that the acceptance of the propositions by Russia is due. The shameful, or rather shameless, timidity of the Prussian Government will, if the statement be authentic, be publicly and humiliatingly rewarded. Prussia is thus virtually degraded, by the sentence of her peers, from the rank of a first-rate Power, and placed in the category of the nations that are to register treaties, not to frame them. That such a degradation should be vehemently struggled against by the Court of Berlin is most natural; and it was reported that France had given way to the entreaties of Prussia, and that Lord Palmerston alone was obdurate in declaring that none but those who had either hunted the bear, or offered to do so, should divide the spoil. It is by no means improbable, however, that the state of the case is as represented by our contemporary.

Peace and war have been discussed by different orators. Admiral Sir E. Lyons has addressed his fellow-townsmen in Hampshire, and has sketched with a generous hand the exploits of the two services during the Russian war, giving a sailor's frank praise to the deeds of the soldiers, and asserting that circumstances only prevented the achievements of the navy from rivalling any recorded in history. He was introduced by Lord Malmesbury, whose appearance in public must remind people to be thankful that he is not now in office, while there is a possibility of behaving abjectly to a despotic Sovereign - especially an Austrian. The other orators have been Messrs. Milner Gibson and Bright, who have received by an exceedingly small number of the electors of Manchester. In 1852 there were 13,321 registered voters in that city, and the number has since largely increased. Nevertheless, only 700 and 800 only thought it worth while to muster in the Corn Exchange and hear Mr. Gibson express his "most profound contempt" for the press, and Mr. Bright declare that he "wished to make a loadstar of his political career." Mr. Cobden did not appear: but, when it was sought to get up a cheer for him, the effort met with no "audible response." Even on their own dunghills the crowing of the cravens is despised.

Mr. David Waddington, of the Eastern Counties, having pleaded his plea—which his friends declare to be a masterly answer, and his enemies an evasive juggle—has, after a fashion, gone to his constituents, and has triumphed. At a recent meeting of the shareholders a motion was made authorising the committee to continue their inquiry. To this an amendment was moved by which it was proposed to dissolve the committee and reinstate Mr. Waddington as salaried chairman. A poll has been taken, and a majority of 3421 votes pronounces Mr. Waddington to be a fitting man to conduct the company's affairs. The amount of stock represented by the votes on each side will show that those who possess property in the railway are not afraid to leave it to his direction—votes comprising £1,452,220 going with Mr. Waddington, and votes comprising £937,480 going against him. It is needless to say that the meaning at which the result was declared was a stormy one. Most railway gatherings are so; but some of the shareholders of the Eastern Counties appear to excel in disgraceful and vulgar demonstrations, which have the single effect of making decent people rather careless as to what sort of financial treatment is undergone by such a body. The proxies were a great grievance, as Mr. Waddington had 552, representing upwards of a million, while the adverse ones had but 175, representing but £281,500. The majority was alleged by one indignant speaker to be made up of "ladies and ladies'-maids;" but, as the poll-book is to be printed, this will be ascertained. Mr. E. Ball, a lachrymose member of Parliament, who often groans most energetically about the ruined farmers, got into rather a ludicrous position, being accused of having asked for a free pass on the line and a gold medal, for having saved some men from being killed by a collision. He got nothing in either sense, and was laughed at into the bargain.

Application has been made to the Queen's Bench, on the part of Palmer, the alleged poisoner, that his trial might take place elsewhere than in his own neighbourhood, where the prejudices against him are so strong that he could not expect an impartial jury. He desired to be tried in London, in order to be able to obtain medical evidences to rebut that of Professor Taylor, at a less expense than must be incurred to take it into the country. The justice of granting the former part of the application seems too evident to need much comment. In the present case one of the verdicts of the coroner's jury is palpably against evidence, and could have been given only in an unreasoning spirit of hostility to the prisoner. Lord Campbell himself remarked from the bench that "a coroner's inquisition was generally defective." Less reasonable was the suggestion that Lord Campbell or Chief Justice Jervis should be appointed to try Palmer, as if such justice as can be obtained before such judges as Cresswell or Willes is not good enough for any Englishman; or as if Lord Campbell, for instance, would try the case more skilfully than either of the other judges we have mentioned. Finally, why is a special distinction to be made in favour of any criminal, merely because his crimes are supposed to be specially flagrant?

A curiously impertinent quibble has been taken before a police magistrate by a cabman, who refused to convey one child, in addition to his regular fare, on the ground that one child was not a "person," though two had been held to be so; moreover, he disliked children in his cab. The magistrate, for some reason, allowed the man a week's adjournment, instead of promptly punishing what was simply an insolent and offensive cavil.

---

NEWCASTLE-ON-TYNE.—Under the belief that Mr. Blackett will resign his seat for this borough immediately on the reassembling of Parliament, the Conservatives are making arrangements to bring forward Thomas Bowman, Esq., one of the directors of the North British Railway Company, to contest the borough with any gentleman who may be brought forward by the Liberals.

---

RAMBLES IN THE EAST.—On Tuesday Mr. W. Boutcher gave at the Harveian Institution, Bayle, to the Folkestone Working Men's Educational Union, a lecture entitled "Rambles in the East," the striking features of which were the lecturer's researches at Nineveh and the site of Babylon. The chair was taken by the Rev. Dr. Pounds of Folkestone, and the audience numbered 400 persons. The lecture, extending to two hours, was listened to with great attention; and, in conclusion, upon the proposition of the Mayor, a vote of thanks to Mr. Boutcher was unanimously agreed to.

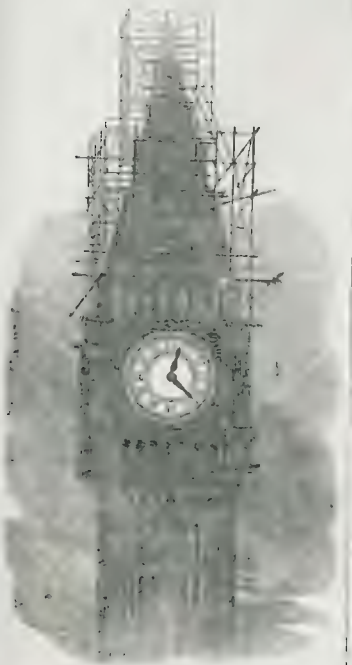
THE LATE MR. DYCE SOMBRE'S WILL.—On Saturday last, in the Prerogative Court, Sir J. Dodson delivered judgment in the case of Dyce Sombre against Troup Baird and Prinsep and the East India Company, touching the validity of the will of the deceased gentleman. The Court pronounced against the validity of the will and codicil, and condemned the executors and the East India Company in the costs. Administration was decreed to Mr. D. Sombre.

SUICIDE OF A YOUNG GERMAN AT MANCHESTER.—A young German, of a good and wealthy family, whose parents reside in Germany, committed suicide on Sunday morning in Great Ducie-street, Manchester, on Saturday last, whilst suffering from a state of temporary insanity produced by a love affair. It appears that the young gentleman, whose name was Edwin Carstein, and who was twenty-four years of age, had become passionately attached to a young waitress at one of the public dining-rooms of Manchester, but his parents had refused their consent to his marriage with her On Friday night he took some opium, which was inoperative, and on Saturday morning, whilst dressing, he stood on a chair through the night lamp, and expired instantly. A portrait of the young woman and some letters from her, were lying on the bed when he committed the rash act.

EMILY HAY—THE DÉJEUNER IN THE WATERLOO GALLERY, AT APSLEY HOUSE. (SEE PAGE 125)

## OPENING OF THE NEW CORN EXCHANGE, HULL.

SINCE the visit of her Majesty to Hull, two years ago, there has been no festival in that borough partaking so much of the nature of a public and general rejoicing as that of the opening of the New Corn Exchange, on Tuesday week. The event appears to have excited great interest far beyond the precincts of the town; and the number of influential persons from far and near who assembled to witness the ceremonial, and to partake of the opening dinner, bespeaks an amount of sympathy in the prosperity of that large and rising town and port of which her merchants and inhabitants have reason to be proud. The building occupies the site of the former Merchants' Exchange and Custom house, together with that of the Custom-house warehouse—of the two former of which edifices the annals of Hull record that they were commenced in 1618 and finished in 1627, at a cost to the merchants of £800. This is the third removal and enlargement of the Hull Corn Exchange within the present half-century; and the present is the fourth building, in succession, which some of the farmers still living have had to frequent, as the only authorised place for the holding of a corn market in that town. Those who wish to know what the accommodations of the corn market were less than forty years ago can visit the old Corn Exchange in the Market place, with its coffee-house adjoining. The New Corn Exchange is ten times as large. The increased space thus required is stated to be chiefly owing to augmented quantities of foreign corn imported into and sold in Hull. The frontage towards High-street consists of merchants' offices, on three floors, with cellarage underneath. The centre part is the magnificent Exchange-hall, 160 feet long by 45 wide, whose roof of glass is supported by fifteen arches



THE GREAT CLOCK-DIAL OF THE NEW HOUSES OF PARLIAMENT, ILLUMINATED.—(SEE NEXT PAGE.)

OPENING OF THE NEW CORN EXCHANGE, AT HULL.

WRECK OF "THE GEORGE LORD," OFF THE ISLE OF WIGHT.—(SEE NEXT PAGE.)

of wood and iron: and the entire absence of internal columns increases the grandeur of the effect. The social Refreshment-rooms, which cover the Free Market at the east end of the Exchange-hall, partake of the commodiousness of an hotel, and possess some very fine views of the Humber and of Holderness, as also the Lincolnshire coast. The buildings are all of very substantial character; the interior of the Exchange-hall has been painted by Mr. Wardale, and decorated for this occasion by Mr. Seaman. On entering by the great west door the effect was very pleasing, the interior of the roof being hung with three rows of flags and banners. Those in the centre consisted of the ensigns of the various corporations in Hull, and of the principal towns in Yorkshire—viz., Hull Dock Company, Hull Trinity House: Arms of Hull, Pontefract, Malton, Richmond, Halifax, Bradford, Sheffield, Beverley, Leeds, York, Middlesbro', and Wakefield. All these had been made expressly for this occasion. The colours on each side were those of England, France, Austria, Denmark, and other Continental nations. On each of the side walls were bracket gas lights, with ground-glass shades, between and on each side of the fifteen pilasters and arches; while up the centre of the room, springing from each of the tables, was another double row of gas-lights. The chairman's table, slightly elevated, together with two shorter tables, also raised, occupied the entire south side of the room; while fourteen or fifteen cross-tables completely filled the room.

H. R. Bright, Esq., occupied the chair; having on his right the Mayor, A. Bannister, Esq.; Lord Hotham, M.P.; W. D. Seymour, Esq., M.P.; Major Cairnes, 4th West York; Rev. J. Scott; Rev. G. B. Batho, Mr. Warden Sykes, Trinity-house; the Chairman of the Dock Company (James Hall, Esq., of Scarborough); the Stipendiary Magistrate; the Conservator of the Humber, &c.

On the left of the chair were Lord Worsley, the Hon. Captain Duncombe, R.N., W. H. Watson, Esq., M.P.; Sir Henry Cooper, M.D.; the Collector of Customs, Rev. Dr. Bromby; Mr. Warden Estill, of the Trinity House; Alderman Tull, Hanoverian Consul and Deputy Chairman of the Dock Company; the President of the Chamber of Commerce, the Town Clerk, the Comptroller of the Customs, &c.

The most remarkable feature in the various speeches made in the course of the evening was the very firm tone in which reference was made to the war with Russia. Nearly all the speakers, in alluding to the peace propositions favoured any attempt to give up the struggle unless upon such terms as will secure the cause of civilisation against Russian aggression. "No matter at what cost or privation," said the chairman, "We must go on with the struggle until we achieve the object for which we honestly contend, and bring about that peace, and thereby establish the best interests of Europe." Lord Hotham, in responding to the toast "The members for the East Riding of Yorkshire," was equally firm. "There is but one course for this country to pursue," said his Lordship, "viz., to put forth our best strength and energies to carry on the war to a successful issue. (Cheers)—until we obtain reasonable security that the peace of Europe should not be disturbed again in the lifetime of the youngest man present."

Mr. Hassell, as President of the Chamber of Commerce and Shipping, in replying to the toast "Prosperity to the Town and Trade of Hull," said there was no town in England which took a deeper interest in the war with Russia than Hull.

As a commercial man I do not wish the war to cease; but let me not be misunderstood: these has been fighting enough. Blockade her ports, stop up her rivers, send her to Coventry, not only by ourselves, but prevail her having intercourse with other countries, and you will reduce her to such a state that she will not be able to maintain herself. There is nothing in her really worth having. Though Russia has supplied us with large quantities of agricultural produce, she has not encouraged commerce. Since the Peace of 1815 she has been constantly endeavouring to make herself independent of this country, diminishing her imports and taking scarcely anything but colonial produce and machinery. The longer the war lasts the more independent shall we be of her. The war has caused a great amount of attention to be given to coal production in the Mediterranean and on the shores of the Black Sea, producing articles similar to those we have received from Russia; and from those countries and our East Indies possessions we shall get all that Russia has hitherto supplied us with.

## WRECK OF A SCHOONER OFF THE ISLE OF WIGHT.

We regret to announce the wreck of the *George Lord* schooner, which went on shore in Brook Bay, Isle of Wight, on the morning of Friday, the 11th of January. She was bound for London, and was laden with a valuable cargo of fruit from Zante. She encountered foggy weather in the Channel, and the master, being out of his reckoning, hailed a French vessel, the Captain of which informed him that he was off the Lizard Point. Altering his course in consequence, he let the ship directly upon a reef of rocks which jut out into Brook Bay. The coast-guard, seeing a vessel approaching through the darkness, burnt a blue light and fired pistols, but it was too late for the master to alter his course. She struck heavily, and her back was soon broken, through the heaviness of the sea. The crew were got off by the boats of the coast-guard, and a portion of the cargo was saved on Friday and Saturday. Early on Monday morning the stern was beaten in by the sea, and she immediately became a complete wreck. A good deal of the cargo was saved about the same time, but it was much injured by the salt water. This will probably be sold by auction, as well as the wreck. The Captain had commanded her for seventeen years, and had been round the world in her. Last year she was sent to the Crimea with a cargo of provisions, &c. She was insured, and the greater part of the cargo also. The accompanying Sketch was taken in the afternoon of Saturday, the 19th.

## THE NEW PALACE OF WESTMINSTER.

### THE PEER'S FRONT.

THIS portion of the new Palace of Westminster is situated on the western side, between the Victoria Tower and the southern end of Westminster Hall, and connects the two buildings admirably. It is an elegant addition, nearly, if not quite, three hundred and forty feet long; composed, or rather divided, into twenty bays, ten on each side the Centre Tower, alternately flat and oriel. This alternation gives much beauty to this front. There are three stories above the basement, divided by bands composed of shields—enriched with the arms of England, Scotland, and Ireland, over the oriel bays; and of England, Scotland, Ireland, and Wales, over the flat bays. The bays are divided by buttresses, each capped by a handsome pinnacle. The Centre Tower has four stories—the fourth, containing a clock; and the angles of the tower are covered by richly-crocketed turrets; and above the clock rises a gable, also crocketed. The porch forms a nice entrance for the Peers. It has four buttresses in the front—two on each side the entrance; and one on each of the sides. These have upon them in bold relief the portcullis, and fleur-de-lis; as have also the buttresses dividing the bays on the basement floor. The front is finished by an enriched battlement, above which rises the cresting of the roof. Our View of this front shows a good portion of the grand Central Tower rearing its elegant, three hundred and forty feet long; composed, and upwards of 275 feet. The amount of finish given to the appearance of the exterior of the building by the completion of this front is almost astonishing. The majestic Victoria Tower (now nearly 300 feet high) and the slender but beautiful Clock Tower, both assume an air of finish, and we begin to think the work is fast drawing to completion; and we should be led to think so the more were the ugly excrescences, the Courts of Law, away; yet there is much to be done to complete the structure, thus far so successfully carried out by its architect, Sir C. Barry.

THE GREAT CLOCK, we understand, is ready for being placed in the tower; the upper portion of which we have engraved from a Sketch taken during the experimental lighting of the Clock-dial, which, we should explain, is but a rough model, made merely for the purpose of trying the power of illumination. The precise details of the dial are not at present decided upon; these, with the beautifully-proportioned tower and architectural details, we reserve for future illustration.

The clock has been manufactured by Mr. Dent, of the Strand; and some idea of its magnitude may be formed when we state the diameter of the face is about twenty-four feet.

THE CASE OF COLONEL TURR.—We are glad to announce that the question involved in the arrest of Colonel Turr has been satisfactorily settled, the Emperor of Austria having granted, as a mark of consideration for his illustrious ally the Queen of Great Britain, a free pardon to Colonel Turr.

FALL OF A LARGE ELM-TREE IN MIDDLESEX.—On the afternoon of Thursday week, at about twenty minutes past one o'clock, the noble elm-tree growing in the grounds of Chiswick Lodge, and stated to be the largest in the county, was torn up by a whirlwind and raised into the air, and precipitated with a terrific crash to the ground upon its branches, so as to drive most of the strongest limbs several feet into the earth. The weight of the tree has been calculated by experienced persons at six tons, and the crash of its fall was heard at a furlong distance, amidst the noise of the storm. The tree is of immense size, and is supposed to be 300 years old. Chiswick Lodge, once the residence of Sheridan, is now the property of Mr. James Greene, who was very near the elm-tree when it fell, but fortunately escaped injury.

## MUSIC.

ON the evening of Tuesday last a concert was given at the Hanover-square Rooms, by the Amateur Musical Society, in aid of the funds of the Cambridge Asylum for the Widows of the Non-commissioned Officers and Soldiers of the British Army. The Asylum owes its existence to the Duke of Cambridge, whose humane and kindly spirit, as well as his heroism in the field, have so much endeared him not only to the British army but to the British people; and it is a gratifying proof of the attention now paid to the welfare of those ranks of our brave soldiery who were formerly too much neglected. The Cambridge Asylum is of five years' standing. It was established in 1851, and was thus not suggested by the Russian war, which was not then dreamed of, but by his Royal Highness's enlarged views of what is due to the service of which he is one of the most honoured members. The Asylum is a spacious, handsome, and comfortable building at Kingston, in Surrey, which, though not yet completed, is already partially occupied. Its present inmates are twenty-one aged women, widows of deserving veterans; accommodations are now being provided for ten more; and the number will be progressively increased as the buildings are extended and the state of the funds allow. The breaking out of the war, in which so many of our fellow-countrymen have fallen, has brought this institution more prominently before the public, and quickened the interest in its behalf. The Amateur Society, of whose musical merits we have often had occasion to speak, is a numerous and influential body of the upper classes of society, and, by its contribution on the present occasion for the benefit of such an institution; and this they have done by their concert of Monday evening. It was admirably got up, and of a high order of excellence, so that its intrinsic attractions, joined to its beneficent purpose, drew together one of the most brilliant assemblages that have been seen in the Hanover-square Rooms. His Royal Highness himself, the Duchess of Cambridge, several other members of the Royal family, many military officers of rank, and individuals distinguished in the circles of fashion, were among the audience. The room was tastefully fitted up with flags and other decorations suitable to the occasion. The orchestra, above a hundred strong, was in full force under their able conductor, Mr. Henry Leslie, whose symphony, composed for the society, and produced at one of their concerts last season, formed the first article in the programme. A second hearing strengthened the impression it had already made, and showed it to be a composition of a very high order, worthy of a place among the greatest orchestral works of the day. In every movement it evinces many genius, heightened by the most masterly display of art. It was played *con amore*, as if every performer felt a personal interest in his friend and conductor's success; and the result of this zeal was an energy, fire, and unity of execution which few professional orchestras could have surpassed. Next to this fine symphony the chief feature of the concert was Osborne's duet for two pianofortes on airs from the "Huguenots," played by the gifted young lady now so well known in musical circles by the name of "Angelina" and by Mr. S. W. Waley, who is also well known, not only as a most accomplished pianist, but as a masterly composer. The piece itself is one of Osborne's happiest productions; and its performance was so brilliant and beautiful that it was received with acclamations from all parts of the room. Several fine English part songs and madrigals were admirably sung by a party of amateurs, who practise under Mr. Leslie's direction; and Miss Dolby, the only solo performer, delighted the audience by singing a pretty English ballad of Mr. Waley's, and a brilliant cavatina by Donizetti. It is scarcely necessary to add that "God Save the Queen," "Partant pour la Syrie," and the "Sardinian National Hymn," were played with great effect, and received with due honours.

MADAME GOLDSCHMIDT-LIND'S second Miscellaneous Concert, at the Hanover-square Rooms, at Friday last week, was similar to the first in the character of the programme, the number and name of the room, and the enthusiasm with which the fair prima donna was received. An aria, sung by her, from Mazart's opera "Il Re Pastore," was an interesting novelty, as this work—one of the composer's juvenile compositions—is wholly unknown in this country. The air was an andante, in the Italian style of a hundred years ago, antiquated and formal, of course, in its construction, but full of charming melody. Her most striking effort of the evening was the grand scena from the "Freischütz," familiar in this country in its English version, "Before my eyes behold him." She sang this with such marvellous vocal power, such passionate expression and dramatic effect, that the audience seemed as much astonished and delighted as if they had never heard it before. She sung, moreover, some of her own Swedish airs with a quaint and original mixture of Scandinavian music. M. Goldschmidt, in his pianoforte performances, was even happier than at the preceding concert. His execution of Mendelssohn's concerto in G minor was in every respect one of the most finished things we have ever had the good fortune to hear; and in his "Studies" of his own he showed his genius as a composer. The concert was conducted, with his usual ability, by Benedict.

THE Birmingham Festival Committee have made arrangements for the appearance of Madame Goldschmidt at two great performances, to take place in their spacious town hall on the 21st and 22nd of February. The first is to consist of Mendelssohn's "Elijah," the second is to be a miscellaneous concert.

BALFE, after an absence of four years, has returned to London, where he means now, we understand, to fix his permanent residence. These four years have not been passed in idleness or obscurity: on the contrary, he has been received with the distinction due to his genius, both in Italy and Germany; and his principal operas—particularly the "Bohemian Girl" and the "Bondman"—have been produced with success at Berlin, Vienna, Trieste, and other theatres in those countries. He is now occupied with the musical education of his youngest daughter, who, it is said, promises to be one of the most accomplished vocalists of the day.

THERE are rumours current about the reopening of Her Majesty's Theatre by Mr. Lumley, and his having succeeded in engaging Madame Goldschmidt. We give them for what they are worth, being unable to discover that they rest on any foundation. What we know is, that some of the best-informed members of the profession know nothing of the matter.

HENRY RUSSELL.—This celebrated composer and vocalist has been singing during the week at the Eyre Arms with great success. He intends giving his popular entertainment at the Literary Institution, Edwards-street, Portman-square, on Wednesday next.

## THE THEATRES, &c.

COVENT GARDEN.—It was to be expected that Mr. Anderson would retort on Mr. C. Mathews for "The Great Gun Trick" at the rival house. A rejoinder was advertised, under the title of "Tit for Tat;" but, there having been difficulties in the way of its being licensed in its original shape, a slight sketch, under the name of "What does he want?" was produced on Monday. Mr. Leigh Murray was engaged to represent the pseudo Wizard of Drury, as Mr. C. Mathews had already the real Magician of the Lyceum and the Garden. These personal assumptions are not to be commended; and much offence was taken by the audience on the present occasion. The piece itself was introduced in the middle of Mr. Anderson's "Magic and Mystery," and the disapprobation expressed must be ascribed rather to the motive than to the demerits of the little drama, which had however, it was evident, been imperfectly rehearsed. The stiffness and application attempted to be mingled by Mr. Murray extending the imitations beyond Mr. C. Mathews to Mr. C. Kean and Mr. Anderson himself; but it appears to have been overlooked that this was unjustly attacking an unoffending person, the manager of the Princess' having had nothing to do with this absurd quarrel. Mr. Keene's constant care to maintain the respectability of his theatre should have preserved him sacred from so gratuitous an outrage. We trust that a speedy termination will be put to these indecent contests between the two large patent theatres; and that dramas worthy of the boards will, ere long, supersede the foolish trifles by which they are now usurped.

THE PRINCESS' Theatre was closed on Monday evening, in consequence of the Windsor Royal performances; and on Thursday "The Merchant of Venice" was revived, owing to its having been previously played before her Majesty. For the same reason, at the OLYMPIC, the clever piece entitled "Still Waters Run Deep," was reproduced on Tuesday, in which Mr. and Mrs. Alfred Wigan, who have been indisposed for some time, were enabled to reappear. At the MARYLEBONE, on Thursday, the tragedy of "Venice Preserved" was revived, the part of *Belvidera* being supported by Miss Edith Heraud.

"PATCH-WORK," DUBLIN.—This very refined and agreeable entertainment is from time to time judiciously varied by the introduction of new characters, new music, and a thousand little sparkling etceteras, which, whilst preserving and enhancing all its previously good points, impart to it a sufficient air of novelty to justify and reward a renewed acquaintance with the "Patch-work party." The dialogue is happily conceived and cleverly written throughout, and several very good allusions to the events of daily occurrence are introduced. The following are amongst the fashionables who have recently visited the *salon* of Mr. Howard Paul at the Rotundo:—The Right Hon. the Attorney-General and party, Lord and Lady Clonmurry, the Countess of Sefton, Lady Fanny and Miss Cole, Lady Kilmaine, Serjeant Howley, Mr. Marsley, Q.C.; Captain Massy, 19th Regiment; Captain Lindsay, &c.—*Saunders' News Letter.*

## NATIONAL SPORTS.

SPECULATION at Tattersall's is assuming a more lively aspect as the pioneer Lincoln meeting looms in sight, and the army of list-men who were so happily routed by the Attorney-General in 1853 are beginning to put forth their mysterious little announcements to the effect that they "may be seen and communicated with privately." Every turfite is on the *qui vive* to con the acceptances for the great hand-caps, three or four of which only have been published as yet. For the Newmarket Handicap thirty-five accept; while fifty-five and forty one are the respective "contents" in the Suburban and Great Metropolitan, for the latter of which Misbap (7st 4 lb.), looks wonderfully well. These results are highly satisfactory, and we trust the Northern handicappers will be alike favoured, especially as Mr. Johnson has made his "rating point" 8st 9lb., instead of the conventional 8st 7 lb., as a slight instalment of justice to heavy-weight jockeys.

CORONER is fast retreating from his position in the Chester Cup betting, and his stable companion, Scythian, to whose ridiculously light weight we pointed attention last week, will soon be at the fore with Misbap (who is absolutely "turned loose") and Stork. To show how little public running guides betting men, we need only refer to the coming Two Thousand Guinea race, for which Yellow Jack is now a better favourite by half a point than Fly-by-Night. Lord Stradbroke is supposed to have given about 1000 guineas for Virago; and we do not know whose stud-farm she is to grace this season. Besides her roaring, she had not a very happy turn of speed, and some of the "bad beginner" to boot; and hence we should fancy that a cross with Teddington, who possessed the opposite qualities in their very highest perfection, would be most suitable for her. George IV. purchased her grand-dam, Pucelle, when a brood mare, for 1100 guineas, and would have gone to 2000 guineas rather than lose her. We are glad to see that Robinson, the great ex-jockey, has a small string of horses under his care this season. Longstaff's lot consists already of thirty-six, and Thomas Dawson's of thirty-three.

THE Derby Sweepstakes were filled on Wednesday, and, as Manganese has 9lb. extra to carry at this second time of asking, it is to be hoped that the requisite ten entries will be procured at last.

Although the winter has not as yet been sufficiently severe to keep hounds constantly and comfortably in the field for more than one week, we never heard of so many strange winter birds falling to the lot of the sportsman. It was only last month, too, that we told of the Roodee being fairly covered with sea-gulls; and now a Yorkshire editor asserts that "six acres of larks" were lately seen near his town. Lord Stanford has had a monster eight days' battue in his preserves at Bradgate Park, where 5291 head of game fell before an average of nine guns. On one day the dead pheasants alone numbered 686, and on another no less than 1247 rabbits were carried away.

An enormous fox has been killed in Forfarshire, measuring 5 ft. 9 in. from his nose to his tag; and it is averred that four others have been wantonly shot near Ditcham, in the Hambledon country. These hounds, as well as the Cottesmore, the Crewkerne, and the Tisleden, have had a great run of late—one of them fifty minutes without a check, and only three up at the finish. We have heard a contradiction of the rumour that Mr. Richard Sutton has purchased Quorn Hall, the stables and kennels of which may not therefore be ready for Lord Stamford next season. At present Mr. R. Sutton is hunting the Quorn and Donnington country four days a week, while Mr. F. Sutton is also hunting them two days.

Three steeplechases are fixed to come off at Bristol on Tuesday, and two at Bath on Friday, but the horses are of an inferior caste, and all speculation and interest in this sort of sport seem to have died away. Rendall, for whom £1500 was subscribed when he won the Chester Cup, in his Dutch weight days, on Nancy, was successful at Bath the last week, on Tom Gurney, in the first steeplechase he ever rode. One of the other features of this meeting was a Welter steeplechase, in which one of the horses carried 16st 7lb., a performance somewhat on a par with the one-mile flat race at York, towards the close of the last century, when two horses were matched and ran at 30st.

If the frost keeps off, the ensuing week will be a perfect carnival for the coursers. The Whitehaven meeting is fixed for Monday; Wadding-ton (Yorkshire) and the York Gimcrack Club, for Tuesday; Bolsay, for Wednesday; Lanark, for Wednesday and Thursday; Spalthorne, for Wednesday, Thursday, and Friday; and Ridgway Club (Lytham) and Laurence Kirk, for Thursday and Friday. The great feature of the week, however, will be the Newmarket meeting, over which Mr. M'George will preside from Tuesday morning till Saturday afternoon.

## TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THE attraction of the week, as far as art is concerned, has been the Rogers bequest of three pictures to the National Gallery. The pictures have left their old quarters in St. James's-place, and are now to be seen in Trafalgar-square. Critics remark (not untruly) that they suffer a good deal by their new setting. It is a trial for a first-class picture by a first-class artist to be hung in gallery of selected pictures. Thus the Titian (the "Noli me Tangere") told immensely in Mr. Rogers's own room, while in the National Gallery (where it is now placed) it is seen to less advantage. "It looks small" (that is the remark); "but then (the critics add) it grows upon one—the Titian touch is unmistakable." The Guido is an addition of moment, so is the Giorgione.

This mention of Mr. Rogers's name reminds us of a pleasant piece of gossip for the information of collectors. In arranging "for the hammer" the many treasures which Mr. Rogers has left, Messrs. Christie and Manson have fallen on a collection of drawings by Stothard of all periods of his art, altogether unknown to the most intimate friends of the poet. Mr. Rogers was one of the first to purchase Stothards. A brother and sister caught the same taste, and followed it with equal judgment and liberality. To his own collection the poet was enabled (by death) to add the collections of his sister and brother, and the result is a series of Stothards that will delight "the town," and to the reputation of a favourite painter, and provoke public and private competition.

A friend has favoured us with a news-letter from Rome (of the 16th January), containing some art-gossip that will be read with interest:—

There are, this winter, some rather agreeable young artists in Rome. The first, in my opinion, is young Mr. Cockerell—a charm ng person, whom I often meet. Young Weigall is here also; and Mr. Goodall, on his way home from the Crimea, where he has been sketching for the ILLUSTRATED LONDON NEWS. Thorburn left before Christmas. Haag and Frippart still here, and hard at work. A Mr. Eeg es is (I think) the most promising young English artist in Rome; and a Mr. Jerningham a shortly distinguish himself in art. The older artists go on just in the same way—Gibson and Williams the great men, and Macdonald the great bust-maker. Spence has "come out strongly" as a dinner-and-ball giving artist. Woodburn, the dealer, is here also; and so is Hurtner. Mr. Page, an American artist, is going to send a picture to the Royal Academy which is safe to attract and deserve attention. Leighton's picture from Paris is spoken of as far superior to his first picture.

STRANGE news reaches us from the City of London respecting the Guildhall monument to the Duke of Wellington. A friend, on whose word we have every reliance, communicates the circumstance to us in these words:—

There was a meeting of the Committee of the Guildhall Wellington Statue on Saturday last, when a letter was read from Bell, the artist, suggesting the omission on the monument of all reference or allusion to "Waterloo."

It seems that some of the committee, with the artist and Mr. Bunning, the architect, have been to Paris, and have come back with (to them) very grave doubts: first, whether such a battle ever was fought; next, whether we or our good friends, the French, won it; and, lastly, that we ought to be ashamed of it. The flunkeyism of this (as Carlyle would call it) is traceable to—but never mind.

If we could wish (thus our friend continues) to affront any Frenchman o mind, it would be by such a snobbish attempt as this to ignore history. Are we, we let me ask, to rechristen Waterloo-bridge, and erase St. Helena and Trafalgar from our maps

What was the decision? some will ask. Why, we are happy to state—and our brave allies will hear it with pleasure—that the obliterators of Waterloo were in a minority of five to nine. Mr. Bell has recovered his courage, and is now busy with poetic and warlike conceptions of Wellington and his last great battle.

The "will" which we printed last week has been the means of inflicting on us a correspondence that will seriously affect the Post-office returns of the year 1856. This curious document—to be found in our last week's column of "Talk"—is not, we are told, the will of Sir Harry Vane, but the will of his son. Is this so? From this accumulation of letters on one subject, and that a very interesting one, we select the following:—

*(To the Editor of the* ILLUSTRATED LONDON NEWS.)

74, Eaton-place, Belgrave-square, 29th January, 1856.

SIR,—In the last number of your interesting journal, under the head of "Table Talk on Literature, &c.," your Correspondent mentions the want of a life of Sir Henry Vane the Yo , Knight, and seems to have fallen into an error with regard to the will.

The life will be found, ably written by Mr. Forster, in "Lives of Eminent British Statesmen;" and the will which you have set out is that of his eldest son, Henry Vane, who died on the 2nd November, 1680, aged only eighteen—the date of that will Sir Harry was in exile, and forthwith sent a prisoner to the Scilly Isles on the charges for which he, two years afterwards, so unjustly suffered. Describing himself as Esquire, and omitting all mention of landed possessions, and the reflection that Sir Henry had incurred forfeiture of his property, prove that the testator in question could not have been the murdered Knight.

The writer appears to have been led into this mistake owing to the coincidence of the christian name of the testator and his father being identical, and that of the mother of Sir Henry being the same as that of the excellent lady who took out the administration.

It is a curious fact that from the early time of Henry VI. the wills of the several members of the family in the direct male line, with the exception of that on y of the attainted Knight, are extant in Doctors' Commons.

Should any historian or writer of capability wish to undertake a work such as you ot mate to be requisite, the materials, which I have taken no small pains to collect, shall be at his service.

I am, Sir, your obedient servant, HENRY M. VANE.

We will only add to this, that we have heard from Mr. John Forster on the same subject. The "Life of Vane," by Mr. Forster, is not the best of the excellent series of lives included in his "Statesmen of the Commonwealth," but it is the best account we possess of that remarkable man. Why should not Mr. Henry Morgan Vane give us a life of his illustrious ancestor?

That incessantly amusing author, lecturer, showman, and friend, Mr. Albert Smith, has just published a most useful and readable tract (price sixpence), entitled "The English Hotel Nuisance." The Lord of Mont Blanc is up in his facts—is admirable in pointing out the nuisances he would reform—and has given us a pamphlet that will remind his many admirers of his attractive "show" at the Egyptian Hall. It will find many readers. This corrective pamphlet is addressed (we may observe parenth tically) in a capital dedicatory letter to Mr. Peter Cunningham, the author of "The Handbook of London," and the announced author of a "Handbook to the Environs of London"—environs that reach, now far, Mr. Cunningham?—to Brighton and Southampton? Peterborough and Margate—to Oxford and to Cambridge?

STATE OF MEXICO.—The present revolution in Mexico is the third since the fall of General Santa Anna. The Presidency of General Canero, who succeeded Santa Anna, lasted one month, and at the end of that term of duration was that of General Roncslo Diaz de la Vega The last-named General was succeeded by the chief of the conquering party of the revolution, General Alvarez, and it was a remarkable fact that at this time Mexico was apparently abandoned by men of prestige and merit, and was delivered over to the command of this little better than Indian chief. This country, which only reckons thirty-five years of independent political existence, appears to be bordering on dissolution. The projected new republic of Sierra Madre, composed of the States of Coahuhuita, Nuevo, Leon, and Tamaulipas, will ere long declare itself, and remain separated from the general Mexican territory. The chief of this movement is General Vidanin, who is justly believed to be the instrument made use of by the Cabinet of Washington, with the view to reduce the condition of the future Republic of Sierra Madre to that of TEXAS.—*Letter from Mexico, January 3.*

## MONETARY TRANSACTIONS OF THE WEEK.

*(From our City Correspondent.)*

THE dealings in the Consol-market this week have been comparatively limited. Prices, however, have ruled tolerably firm. Had the arrangements for peace assumed a more decided form, a considerable improvement would, no doubt, have taken place in the quotations; but there are not a few parties in the City who appear to be of opinion that the approaching Congress at Paris will not lead to a peaceable solution of our dispute with Russia. However, the firm and dignified tone of the Speech delivered by her Majesty at the opening of the Imperial Parliament will, no doubt, tend to dispel many doubts on the subject. There has been an increased demand for money out of doors, as well as at the Bank of England. In the Exchange from 10 to 13 per cent has been paid for carrying over share accounts; but the best bills, having sixty days to run, are still discounted at ⅝ to 6 per cent. In the Bank rate no change has taken place.

About £200,000 in gold and silver has arrived from various quarters. About one-half of the late import of gold from Australia has been placed in the Bank of England, the remainder having been forwarded to France. Evidently, the Continental demand for gold is falling off; indeed, the exchanges are rather favourable to an import of bullion. A more favourable turn in them may have the effect of easing the Money-market.

On Monday most English securities were rather inactive, but without leading to any important change in prices. The Reduced were done at 91¼ to 92; Consols, for Money, 91¼ to 91⅝; Ditto, for Account, 91⅜ to 91½; New Three per Cents, 91¾ to 92⅛; Long Annuities, 1860, 3⅛; Ditto, 1885, 16⅛; India Bonds, 5s.; Exchequer Bills, 3s to 6s. discount. The transactions on Tuesday were again moderate, both for Money and Time. The Reduced Threes marked 92 to 91⅞; Consols, 91⅛ to 91⅜; Consols for Account, 91⅜ to ⅝; New Three per Cents, 92⅛ to 92⅜; New Two-and-a-Half per Cents, 77; Long Annuities, 1860, 3⅛; Ditto, 1885, 16 9-16; Bank Stock, 210 to 211; India Stock, 222 to 219½; India Bonds, 2s. to 5s.; Exchequer Bills, 3s. to 6s.; Exchequer Bonds, 97½; Ditto, under £1000, 98¾. On the following day prices almost generally were slightly depressed. The Three per Cents Reduced sold at 91⅛ to 91⅜; Consols, 91⅛ to 91⅜; Ditto, for the Account, 90⅞ to 91⅛; New Three per Cents, 91⅞ to 92⅛; Long Annuities, 1885, 16⅛; Bank Stock, 212; India Stock, 224; India Bonds, 7s. 3s.; Exchequer Bills, 3s. 7s. dis. Exchequer Bonds were 98¾. The market opened on Thursday somewhat heavily, at 91⅛ and closed at 91, both for Money and Time. The Reduced were 91⅛; the New Three per Cents, 91⅞; Long Annuities, 1860, 3⅛; Ditto, 1885, 16 11-16; India Bonds, 4s. to 7s.; and Exchequer Bills, 3s. to 4s. dis. A few transactions took place in Exchequer Bonds at 98¾.

The following return shows the state of the note circulation of the United Kingdom in the four weeks ending on the 22nd December:—

| | | | | |
|---|---|---|---|---|
| Bank of England | .. | .. | .. | £18,679,169 |
| Private banks | .. | .. | .. | 3,844,998 |
| Joint-stock banks | .. | .. | .. | 3,366,765 |
| Scotland | .. | .. | .. | 4,650,763 |
| Ireland | .. | .. | .. | 7,461,379 |
| Total | .. | .. | .. | 37,021,304 |

Compared with the previous month, the above return shows a decrease in the circulation of £1,17-,889, and with the corresponding month in 1854 a decline of £233,896. The average stock of bullion held by the Bank of England was £11,146,000, being £2,315,670 less than in 1854.

The Foreign House has shown remarkable firmness, and prices have improved to some extent. Brazilian Five per Cents have been 100 to 102; Ditto, Four-and-a-Half per Cents, 92½; Granada Deferred per cent per cent deferred; Mexican Three per Cent, 20⅝; Peruvian Four-and-a-Half per Cents, 81; Ditto, Three per Cents, 56⅝; Pourtuguese Four per Cents, 48; Russian Five per Cents, 106; Ditto Four-and-a-Half per Cents, 93½; Sardinian Five per Cents, 89½; Spanish Three per Cents, 43; Ditto, New Deferred, 23½; Turkish Six per Cents, 92½; Ditto, Small, 82; Turkish Four per Cents, 102½; Turkish Two-and-a-half per Cents, 54½; Dutch Four per Cents, 95½; Equador—Peruvian Dollar Bonds, Four-and-a-half per Cents, 63; Chilian Three per Cents, 88; Danish Five per Cents, 103; Equador New Consolidated, 14¼; Ditto, 5½; Venezuela Five-and-a-Half per Cents, 64.

All Joint-Stock Bank Shares have been in good request, and the large dividends lately declared by the leading banks have caused prices to advance. Bank of London, 64½; City, 68; London Chartered of Australasia, 17; London and Westminster, 49; New South Wales, 40½; South Australia, 39; Union of Australia, 53½.

Miscellaneous securities have been in good request. Australian Agricultural have realised 20⅜; British American Land, 49; Canada Company's Bonds, 133; Ditto Government Six per Cents, 108½; Crystal Palace, 8⅜; Electric Telegraph, 21⅜; English and Australian Copper-Smelting Company, 14; General Screw Steam Shipping Company, 15½; London Dock, 100½; North of Europe Steam, 10½; Oriental Gas, 1¾; Peel River Land and Mineral, 3⅜; Peninsular and Oriental Steam, 63; Royal Mail Steam, 76, South Australian Land, 3⅝; Van Diemen's Land, 16½; Victoria Dock, 18⅜; Ditto New, 8⅜. Most other securities have realised fully the prices current in the previous week.

The Railway Share-market has been in a healthy state, notwithstanding that some few small failures have been announced during the settlement of the account. Prices generally show an advance compared with last week. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Ambergate and Nottingham, 4½; Caledonian, 65⅝; East Anglian, 13¾; Edinburgh and Glasgow, 58; Edinburgh, Perth, and Dundee, 59½; Great Northern, 92; Ditto, A Stock, 77; Ditto, B Stock, 125; Great Southern and Western (Ireland), 104; Great Western, 65⅝; Lancaster and Carlisle Thirds, 71 (remains); Lancashire and Yorkshire, 81½; London Brighton, 85½; London and North-Western, 90½; London and South-Western, 90; Manchester, Sheffield, and Lincolnshire, 25; Midland, 69½; Ditto, Birmingham and Derby, 49¾; North-Eastern—Berwick, 74; Ditto, Leeds, 84; Ditto, York, 107; North Staffordshire, 10½ ex div.; Oxford, Worcester, and Wolverhampton, 24½; Scottish Central, 105; Scottish Midland, 76; Shropshire Union, 45; South Devon, 12¾; South-Eastern, 61¼.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, 134; West Valley, 32.

PREFERENCE SHARES.—Great Northern, Five per Cent, 109; Great Western Four-and-a-Half per Cent, 89; Ditto, Chester, 16½; London and Brighton, 109 ex div.; Midland Consolidated Four-and-a-Half per Cent, 1 discount; North British, 100; Oxford, Worcester, and Wolverhampton, 95¾.

FOREIGN.—Bombay, Baroda, and Central India, 5½; Eastern of France, 37; Grand Trunk of Canada, 10½; Great Indian Peninsular, 20½; Great Luxembourg Shares, 5½; Great Western of Canada Shares, 20½; Ditto, New, 8½; Madras Four-and-a-Half per Cent, 19½; Northern of France, 35⅝; Paris and Lyons, 47½; Royal Danish, 20; Royal Swedish, 2½; West Flanders, 3½.

Mining shares have been in sale. United Mexicans were done, on Thursday, at 4½; and Cobre Copper, 66¼ ex div.

## THE MARKETS.

CORN EXCHANGE, Jan. 28. We had only a moderate supply of English wheat to-day's market, and the general condition of the samples was inferior. Nearly all kinds were offered for sale, at last Monday's currency. In foreign wheat no few transactions took p ace that the quotations were much the same. Flour is selling cargoes on a steady inquiry. There was a fair demand for fine barley, at full prices; but inferior qualities were dull. The malt trade is in a steady, on former terms. We find a dull sale for oats, the value of which had a downward tendency. Beans and peas rule much the same as last week. Linseed has realised 52s. per quarter. There was a moderate s e for flour on former terms.

Jan. 30. The supplies of most kinds of grain on sale to-day were but moderate. Generally speaking, the trade was in a sluggish state at Monday's quotations.

*English Wheat*.—Essex and Kent red, 56s. to 58s.; ditto white, 58s. to 63s.; Norfolk and Suffolk red, 52s. to 55s.; ditto white, 54s. to 57s.; grinding barley, 33s. to 34s.; distilling ditto, 35s. to 37s.; malting ditto, 38s. to 41s.; Lincoln and Norfolk malt, 72s. to 80s.; Ware white, 61s. to 68s.; Kingston and Ware, 70s. to 83s.; Chevalier, 51s. to 62s.; Yorkshire white, 70s. to 74s.; Scotch feed oats, 20s. to 23s.; ditto fine, 24s. to 25s.; Irish ditto, 19s. to 21s.; Dutch and Belgian feed oats, 20s. to 22s.; ditto fine, 23s. to 25s.; tick beans, 34s. to 37s.; grey peas, 37s. to 39s.; maple ditto, 40s. to 42s.; boilers, 42s. to 44s.; white, 42s. to 44s. per quarter. Town-made flour is 47s. to 48s.; Suffolk, 43s. to 45s.; Stockton and Yorkshire, 38s. to 40s. per sack.

Bread.—The prices of wheaten bread in the metropolis are from 10d. to 10½d.; of household ditto, 8d. to 9d.

*Imperial Weekly Average*.—Wheat, 74s. 9d.; barley 34s. 6d.; oats, 24s. 4d.; rye, 42s. 8d.; beans, 38s. 4d.; peas, 39s. 8d.

*The Seven Years' Average*.—Wheat, 72s. 9d.; barley, 34s. 10d.; oats, 25s. 6d.; rye, 41s. 1d.; beans, 38s. 6d.; peas, 38s. 2d.

*Liverpool Corn Market*.—Wheat, 71,21s.; barley, 10,730s. oats, 21,87s.; rye, 2,71s.; beans, 1,21s.; peas, 1,21s.

The potato trade is very dull, and prices are very moderate, yet prices generally are well supported. Onions are in good supply, and realise from 4s. to 5s. per bushel.

Considerable business has been transacted in clover seed all raw sugars this week, and prices have ruled in favour of buyers. The stocks are increasing, and a large supply is on the way. Refined goods are in moderate request, at from 51s. 6d. to 52s. per cwt.

*Coffee*.—Good ord. native has changed hands at 52s to 53s. per cwt. Plantation and other kinds support last currency.

*Rice*.—As very large arrivals are shortly expected, the rice trade is heavy, and prices have given way 2s. per cwt.

*Provisions*.—We have to report a better feeling in the demand for most kinds of butter, and fine foreign is held at an advance of 2s. per cwt. There is very little doing in bacon, yet hams are tolerably firm. Lard is rather cheaper. In other provisions very little is doing.

*Tallow*.—This article is in very moderate request, and P.Y.C., on the spot, is quoted at 59s. per cwt. Town tallow, 56s. net cash.

*Oils*.—Linseed oil has sold to a fair extent, at 33s. 6d. to 37s. per cwt., on the spot. Other oils are dull, and lower to purchase. There is a moderate sale for turpentine. Rough, 9s.; fine Spanish, 35s.; American ditto, 34s. 6d. per cwt.

*Spirits*.—The demand for rum is heavy, at 2s. 7d. to 2s. 8d. for proof Leewards. Brandy is steady, at former terms. Malt spirit, 2s. 8d. per gallon.

*Hay and Straw*.—Meadow hay, £4 10s. to £6; clover ditto, £4 10s. to £8 18s.; and straw, £1 4s. to £1 16s. per load. Trade steady.

*Coals*.—Tanfield Moor, 16s.; Goswicks, 16s. 6d.; Eden Main, 16s.; Hasewell, 19s.; Hetton, 19s.; Lambton, 19s. 6d.; Russell's Hetton, 19s.; Caseop, 19s. 3d.; Kelloe, 19s. per ton.

*Hops*.—There is still a fair demand for most kinds of hops, at full prices. Mid and East Kent pockets, £3 10s. to £6 10s.; Weald of Kent, £3 3s. to £5; Sussex, £2 to £4 15s. per cwt.

*Wool*.—Our market is very firm, and English qualities have an upward tendency.

*Potatoes*.—The supplies continue extensive, and the demand is heavy, at from 60s. to 100s. per ton.

*Metropolitan Cattle Market*.—The supplies of fat stock having fallen off, the trade generally has ruled brisk, and prices have had an upward tendency:—

Beef, from 3s. 2d. to 4s. 10d.; mutton, 3s. 2d. to 5s. 0d.; veal, 4s. 8d. to 6s. 0d.; pork, 3s. 6d. to 5s. per 8lbs., to sink the offals

*Newgate and Leadenhall*.—These markets have been very firm, as follows:—

Beef, from 3s. 10d. to 4s. 6d.; mutton, 3s. 0d. to 4s. 6d.; veal, 4s. 6d. to 5s. 4d.; pork, 4s. 4d. to 5s. 4d. per 8 lbs. by the carcase.

ROBERT HERBERT.

THE NEW HOUSES OF PARLIAMENT, FROM THE RIVER.

# THE NEW HOUSES OF PARLIAMENT.

## STATUE OF LORD SOMERS.

BY W. CALDER MARSHALL, R.A.

THIS, with our other Illustration, is one of the series of statues with

STATUE OF LORD SOMERS, BY W. C. MARSHALL, R.A.

which St. Stephen's Hall is being gradually ornamented. There is much repose and dignity in the figure. He rests upon the left leg, whilst the right is slightly put forward. In his left hand he holds the bag containing the seals of office: this is just carelessly held also by the right hand. The costume and detail are well conceived. The whole is a work of very great merit, and bears out the well-earned fame of the sculptor.

## STATUE OF LORD MANSFIELD.

BY E. H. BAILEY, R.A.

The effect of this statue is quiet, and may please many. To our mind, it is not the happiest effort of this well-known able sculptor. There is, however, much that is good in the work, and it will, from the character of the costume, vary these series agreeably.

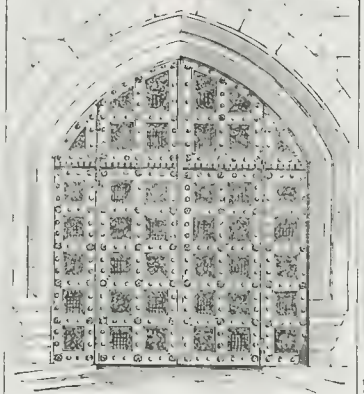
### GREAT GATE, VICTORIA TOWER.

The new gate, or door, as shown in our Illustration, is a fine bold piece of design; it is composed of solid oak, the panels being of pierced metal, consisting of the Royal badges and the arms of Westminster within quatrefoils of the same metal.

The hinges, which are very massive, to sustain the ponderous frame-work, are of pure gun-metal. The position of this gate is at the archway leading to the Royal Court, immediately opposite the entrance to the Victoria Tower—to the vast vaulted opening of which it adds its modicum of richness.

### THE LOWER WAITING-HALL.

This is a nice, square-proportioned Hall, and serves as a waiting-place for persons whose business may call them upon committees of the House of Commons. The opening on the right of our representation leads to the principal staircase to the Committee-rooms; the lower landing to this ascent is reached by five steps from the floor of the Hall. The large arch in the centre of our Illustration corresponds in size and form with the approach to this staircase, and has on each side a smaller arch, these leading to the same points viz., the Jerusalem Chamber, Coffee or Tea Rooms, and Corridors to the Libraries. The ceiling of the Hall is divided into nine principal compartments by bold beams, at the intersections of



GREAT GATE, VICTORIA TOWER, LEADING TO THE ROYAL COURT.

which there are handsome bosses. From these depend small chandeliers for gas. The ceiling is next subdivided into smaller panels; the whole being of carved oak. The Hall is lighted by three windows, situated on the side opposite the staircase entrance and over the fireplace: two have two lights, and the centre one three; these are filled in with a lozenge-shaped diapering, and have near the upper part a Royal badge crowned. The fireplace is a fine bold design, and has rich bosses on the sides corresponding with the fire-dogs of ancient days. The floor is composed of encaustic tiles, laid so as

STATUE OF LORD MANSFIELD, BY E. H. BAILEY, R.A.

to correspond with the divisions of the ceiling. Along these divisions occur these legends or inscriptions, in pale yellow letters on a blue ground—"Love and Fidelity," "To Our Country," "Virtue Advances," "Virtue Prevails," and "Faithful." The centre is filled in with large lozenges of variegated and black tiles. The approach to this Hall is by a small corridor from the Large or Central Hall.

LOWER WAITING-HALL.

## THE PARLIAMENTARY SESSION OF 1856.

The interval which has elapsed since the prorogation of Parliament and the opening of the Session on Thursday last—if not so full of rapidly-recurring and exciting events as the same period in 1854-55—has been productive of great results, of solid triumphs to the arms of the Allies, unchequered by disasters to the troops of England inflicted by the hands of her own rulers. The earliest discussions of the newly-assembled Senate will turn on the great European question of peace or war; and Great Britain, equally prepared for either fortune, will no longer be scandalised by the spectacle of debates half acrimonious, half mournful, on the miserable incapacity of our Administrative system. If the last few months have been pregnant with public events to which the deliberations of Parliament will be directed immediately on its assembling, they have been no less fruitful in changes in the *personnel* of the two Houses, and it is mainly to that subject that we now propose to direct our remarks. Everything that relates to the constitution and organisation of the great council of the realm must at all times be of interest to the general public; and it is peculiarly so at a moment like this, when matters of such vast interest to this country and to the world must be decided within the next few weeks.

In the House of Lords there have been many changes. During the last year there have died no less than twenty-nine peers. There have been one English and one Irish creation, one Scotch restoration, and one merger of an Irish Marquisate into a Barony. The Dukes of Manchester and Somerset have been succeeded by their sons, known in the House of Commons as Lord Mandeville and Lord Seymour, and as members for Huntingdonshire and Totnes. The Marquisate of Townshend has descended to a cousin of the late peer, Captain Townshend, until now member for Tamworth. The decease of the Marquis of Thomond has caused the Marquisate to become extinct, while his Barony of Inchiquin has descended to Sir Lucius O'Brien, elder brother of Mr. Smith O'Brien, the Irish exile. The Marquis of Ailesbury, famous chiefly for being the husband of one of the most beautiful women of her day, and for his liberal patronage of musical and operatic undertakings, having passed away at a full old age, has been succeeded in the title by his son, Earl Bruce, who has sat in t House of Peers since 1839 by virtue of a Barony conferred during the life of his father. The eccentric, but excellent, Earl Stanhope has yielded his place to his son, Lord Mahon—a name standing high in literature and science. The Earls of Antrim, Sefton, Caithness, Caledon, Carysfort, and Leitrim have made way for their successors; and the Earldom of O'Neill has become extinct. There are new possessors of the Viscounties of Boyne, De Vesci, Hereford, and Strangford: the latter title celebrated in the annals of diplomacy, while its present possessor has been as much distinguished in the worlds of letters, politics, and fashion, in the person of Mr. George Frederick Percy Smythe. Another diplomatic celebrity has passed away in Viscount Ponsonby, whose title is extinct. The death of the Baroness Bassett has caused the extinction of one of the few peerages in their own right enjoyed by ladies. The lowest rank on the Peerage roll, the Barons, has suffered mutations by the decease of Lords Decies, Delamere, De Mauley, Erskine (another diplomatist of the last quarter o f a century), Kenyon, Raglan, Ravensworth (causing a vacancy in the representation of Liverpool by the accession of Mr. Liddell), Truro (better known as Sir Thomas Wilde, a great advocate, and some time Chief Justice of the Common Pleas and Lord Chancellor), and Lord Wharncliffe, once distinguished in the House of Commons as a member for the West Riding of Yorkshire, and remarkable for having been the proposer of the motion which finally overthrew the Government of Lord Melbourne.

Of these new holders of peerages several will take their seats for the first time at the opening of the Session, having succeeded since the prerogation—viz., the Dukes of Manchester and Somerset, the Earls of Sefton and Carysfort, Viscount Hereford, Lords Raglan, Delamere, Truro, and Wharncliffe. A newly-created English peer will take his seat under somewhat peculiar circumstances, in the person of Sir James Parke, late one of the Judges of the Court of Exchequer, who has been raised to the dignity of Baron Wensleydale for "the term of his natural life!" This revival of the old custom of peerages for one life has been adopted in the present instance with great propriety. The position in which the House of Lords has been recently placed in its character of a Court of Appeal has been very unsatisfactory. It is obvious that the tribunal to which all questions of law from the whole United Kingdom must come in the last resort must really and practically consist of what are called the "Law Lords." Until the last Session the effective strength of the Court so constituted has been unusually great; for no less than four ex-Chancellors—viz., Lords Lyndhurst, Brougham, Truro, and St. Leonards—have been in the habit of attending occasionally aided by Lord Campbell, and presided over, as they were, by the Lord Chancellor, it would hardly be possible to indicate a more complete judicial force. Last year, however, Lord Lyndhurst and Lord Truro ceased to attend; Lord Campbell's duties as Lord Chief Justice prevented his appearing more than once; and the House sitting judicially was reduced to the Lord Chancellor, Lord Brougham, and Lord St. Leonards; and, in the occasional absence of one of these latter, if a difference of opinion occurred between the other two, the practical effect was that no real decision was come to on the question before the House. It was with a view to strengthen the judicial staff of the House that a life peerage was conferred on Sir James Parke, whose only child being a daughter made the transmission or non-transmission of the title a matter of little moment, while it added to the "Law Lords" a profound lawyer, a Judge of great experience, and a man of high character and dignified manners. Looking to the ages of the present "Law Lords," it would, perhaps, not be injudicious to extend the principle now adopted, still further, if the ultimate appellate jurisdiction of the House of Lords is to preserve the character which ought to attach to it. In the Peerage of Scotland the Earldom of Southesk has been revived, by a decision of the House, in favour of Sir James Carnegie, and the reversal of the attainder by which the title was destroyed in 1718. An addition has also been made to the Irish Peerage by the creation of the Barony of Fermoy in favour of Mr. Burke Roche, who for many years represented the county of Cork in the Lower House.

Several of her Majesty's Government appear in the House of Lords in different offices to those which they held last year. The Duke of Argyll, having ceded the office of Lord Privy Seal to the Earl of Harrowby (who exchanged the Duchy of Lancaster for it), has succeeded Viscount Canning (the new Governor-General of India) in the Postmaster-Generalship; and Lord Stanley of Alderley, the President of the Board of Trade, has been admitted into the Cabinet. Some interest will probably be attached to the reappearance of the Duke of Newcastle since his return from the Crimea, and many persons are not incurious to know what line he will take on the question of peace or war. Another wise man from the East may also be expected; for the Marquis of Dalhousie will soon leave his Indian Viceroyalty for an unofficial seat in the Upper House, whence, it is said, he will make no unequivocal biddings for a future premiership.

Before leaving their Lordships it may be mentioned that Sir Charles Barry is very busy in bringing towards completion the various offices attached to the business departments of the House. In the interior of that façade extending from St Stephen's Porch to the Victoria Tower, and which has been recently thrown open, workmen are vigorously employed in fitting up a vast suite of rooms. The vestibule which communicates with the Peers' entrance is finished, and forms a magnificent cloister, leading to an elaborately elegant staircase, from which access is gained to the Princes' Chamber, and the corridors on each side of the House proper. To the right and left of that staircase stretches a long corridor, which extends the whole length of the Old Palace-yard front; from this open a number of spacious apartments, fitted up in the style which characterises the whole of the building. Immediately over the highly-ornamented portico, which is to serve as the Peers' entrance, are placed the suite of rooms devoted to the use of the Lord Chancellor; and, on each side of them, the offices of the Clerks of the House, the Serjeant at Arms, the Printed Papers office, &c. A room at the bottom of the staircase leading to the Strangers' Gallery, and which last year was appropriated to the use of the reporters for the newspapers, has been converted into a very commodious room for the Chairmen of Committees; and immediately over that is a large waiting-room for strangers. In short, by Easter next it is expected that the House of Lords and its appurtenances will be, for all useful and practical purposes, out of the hands of the architect. It was expected that Gibson's statue of the Queen, which has recently arrived from Rome, would have been erected in its appointed position in the Prince's Chamber; but it is understood that, for some reason or other, it is not likely to reach its final resting-place until next year.

For some time past rumours have been current of the contemplated resignation of the Speakership of the House of Commons by Mr. Shaw Lefevre, and some show of probability was attached to it, from the fact that during the last Session the right honourable gentleman exhibited symptoms of failing health, and we believe for the first time in his career was obliged to ask the indulgence of the House for his absence from the chair, on the score of indisposition. It had so happened that measures providing against such a contingency had been for the first time adopted by the House last Session; and some not unkindly but jocose remarks were made on the singular effect on the Speaker which a provision against his being ill had caused. Considering, however, the high sense of duty which Mr. Lefevre has always shown, it was not thought likely that he would, without absolute necessity, take the somewhat unusual course of resigning his office at any other time than at the end of a Parliament, or put the House to the inconvenience of electing a Speaker merely at the beginning of a Session; although there are precedents for it; and even his predecessor (Mr. Abercromby) retired in the Session of 1839, when there was not a new Parliament. Of course, on the supposition of a vacancy in the Chair of the House of Commons, there were all sorts of calculations about Mr. Lefevre's successor. Among others named were Sir Frederick Thesiger, Sir George Grey, Mr. Baines, Mr. Walpole, and Mr. Fitzroy (the Chairman of Committees). It was even said that a party contest would arise on the choice of a Speaker, and that the Government would be beaten if they did not give up their man. However, all speculation of that kind seems to have been set at rest, for inquiries made of the officers of the House have resulted in a statement that the Speaker has given no intimation of his intention to retire. The only change, then, which has taken place in the official staff of the House is in the office of Second Clerk at the Table, which has been vacated by Mr. William Ley, the brother of the late chief clerk, Mr. John Ley, and uncle to the present Third Clerk, Mr. Henry Ley—this latter gentleman being the last of the family party which used daily to take their seats at the very comfortable table of the House of Commons. The vacant Clerkship has been conferred on Mr. May, one of the Examiners of Private Bills, and the author of a very useful work on the "Law and Practice of Parliament." The vacancy in the Examiners' Office, caused by his removal, has not yet been filled up.

The changes among members have been numerous since the prorogation. There have been six vacancies caused by the death of members; three by accessions to peerages; one on account of bankruptcy; two by acceptance of the Chiltern Hundreds for private reasons; and four in consequence of the acceptance of offices. The first vacancy in alphabetical order, although the most recent in date, is that for the University of Cambridge, caused by the death of Mr. Goulburn. That gentleman has long, and, on the whole, satisfactorily, served the public. He was successively and during a period of over forty years held the offices of Under Secretary for the Home Department, Under Secretary for the Colonies, Secretary for Ireland, being twice Chancellor of the Exchequer, and once Home Secretary. He contested the Speakership with Mr. Shaw Lefevre in 1839; and he held at the time of his death the office of paid Commissioner of Ecclesiastical Estates. He was a ready man of business, a fair pupil of that school of Parliamentary speaking of which Canning was the head, and of which the Marquis of Lansdowne is now the last representative. The places he represented in Parliament were about equal in number to the offices which he held; for he sat at different times for Horsham, St. Germans, West Looe, and Armagh; and he had been candidate for the University of Cambridge since 1831. Of late years he has taken no active part in politics. There will, doubtless, be a severe contest for the vacant seat. The candidates named at first were numerous. The first on the list is the Right Hon. Spencer Walpole, Lord Derby's ex-Home Secretary, who has already been appointed to Mr. Goulburn's vacant seat in the Ecclesiastical Commission. The next is the Hon. George Denman, third son of the late Lord Chief Justice, a barrister on the Home Circuit, who was at the head of the Classical Tripos in 1842. Another named was Mr. John Baily, Q.C., a Chancery barrister, and the leading counsel in Vice-Chancellor Kindersley's Court, and who was Second Wrangler in 1828. The Marquis of Granby and Lord John Manners have also been mentioned. Mr. Walpole and Mr. Denman, however, appear to be the only candidates likely to take the field.

Edinburgh has lost Mr. Macaulay, whom that city, repentant of a former captious rejection, chose again in 1852, without seeking on his part. The honour of being represented by such a man has involuntarily, on his part, been a somewhat empty one. His health has not permitted him to attend the House with any constancy, and only at early Judges' Exclusion Bill, a second time on the East India Bill of 1853, and a third time on the Edinburgh Annuity Tax Abolition Bill in 1854—the first and last at morning sittings. Those who were most delighted with the undiminished brilliancy of his eloquence were the most pained by the evident physical suffering which he underwent. His voice will be heard no more in the Parliament which he adorned and delighted; and it is to be hoped he will be spared to win further triumphs in the sphere to which he now confines himself.

The accession of Lord Mandeville to the Dukedom of Manchester, in October last, caused a vacancy in the representation of Huntingdonshire, which has been since filled up by the election of Mr. Rust, a gentleman connected with the county, whose opinions appear to be moderate Conservative, with a proper infusion of the warlike element. A seat for the borough of Hereford has become vacant by rather an unusual process, the bankruptcy of the late member, Sir Robert Price. A member becoming a bankrupt, by the law of Parliament, *ipso facto* loses his seat, a rule which does not extend to simple insolvency, however notorious; and it is seldom, indeed, that a member of Parliament appears in the least desirable part of the *Gazette*. The writ in this case must be moved for in the ordinary way, when the House reassembles. Mr. Baines's acceptance of an office in the Government of course vacates his seat for Leeds; and a new writ must issue on a motion made for that purpose.

For the last two years the late Colonel Sibthorp had considerably receded from the singular pre-eminence which he occupied in the House. It is to be feared that the more vigorous fooling of Mr. Henry Drummond has been the main instrument in pushing the gallant Colonel from his stool, although failing health and increasing years have had much to do with the comparative quietude of his recent Parliamentary life; and he will not, perhaps, be so much missed next Session as he would have been a year or two ago. He is said to have been an ardent lover of chine-ware;—who shall say that this passion for the chief product of the Celestial Empire may not have tended to imbue him with that almost Chinese adherence to the dog-latinised maxim, "Stare super antiquas vias," which was his prime characteristic? Through all his eccentricities there always ran a vein of shrewd common sense, and in his time he did the State some service. He sat long, and with little interruption, for Lincoln; and now his son, Major Sibthorp, reigns in his stead, in one of those boroughs which the most trenchant of Reform Bills can never cut from beneath the feet of certain families. It is said that Mr. Francis Villiers has been granted the Chiltern Hundreds, and that, after a delay of nearly a year, the seat for Rochester will be declared vacant. Simple people may ask why a "Levanter" should have been allowed to hold Rochester at his pleasure, while an unsuccessful trader was at once compelled to relinquish his hold on Hereford? Why should not the name of the one be struck off the Parliament roll as soon as it is posted at Tattersall's, and recorded in the Sheriff's book of outlawry, as well as that of the other on which the recording clerk pounces the instant it appears in the *Gazette*? However, at last there will be a new election at Rochester.

The vacancy in the borough of Southwark, caused by the death of Sir William Molesworth, has been somewhat eccentrically filled up by Sir Charles Napier. The candidate was eccentric and the election was eccentric. Sir Charles entered the field with an avowed determination to pay nothing; and sat almost alone all day in a lonely committee-room, while the premises of his rival, Mr. Scovell—a South wark magnate—were crowded with the chief managers of elections among the constituency, and by all the practised agents of the borough. But Sir Charles drew crowds to his public meetings, while a reticency on the part of Mr. Scovell about religious endowments turned the Dissenting interest against him, and the Admiral was left master of the field, and marched out with all the honours, including a splendid cocked hat presented to him by some enthusiastic workmen in a hatter's manufactory; he was dined and "feted," and sent full armed to the House for his expected duel with Sir James Graham. Sir Charles was rather a bore when he sat in Parliament before, without such a speciality in the way of a grievance as he has got now: let him beware how he rides his hobby, or he may look to the penalties of "Counts out" and "No Houses." The "Captain bold" who long, and at last successfully, contested the supremacy of the Peels at Tamworth, having become Marquis Townshend by the death of his cousin, a new writ for that borough will be moved for immediately. The only candidate yet in the field is the late member's son, Lord Raynham; and, no doubt, Tamworth will placidly and meekly do its duty to the hereditary claimant of its representation.

Mr. Labouchere having been advanced from the somnolent inactivity of the fourth bench, to a seat on the Treasury cushions, and in a stress of politicians, having accepted the Secretaryship for the Colonies (making the fourth occupant of the office in little more than twelve months), his seat for Taunton must be asked for before he can again appear in the House. As his long-vested interest in that borough is not likely to be disturbed, we shall soon have the pleasure of seeing that most respectable gentleman, but somewhat effete administrator, doing his duty to the Colonies as best he may. The removal of Lord Seymour to the Upper House has given his seat for Totnes to the Earl of Gifford, eldest son of the Marquis of Tweeddale, and brother-in-law of the Duke of Wellington and Sir Robert Peel. This young gentleman has been private secretary to Lord Panmure, and went through the campaigns of the Sutlej as an amateur (he is not in the Army) on the staff of Lord Hardinge. His constituents may obtain a portrait of him by buying a well-known print which represents the then Governor-General and his attendants going over the field of Ferozeshah the day after the battle. As Patronage Secretary to the Treasury, Mr. Hayter may be supposed to have some influence in the borough of Wells, of which he is one of the representatives; nevertheless, on the occasion of the election caused by the death of Mr. Tudway, last autumn, Captain Jolliffe, a Conservative, beat the Liberal candidate, Mr. Serjeant Kinglake—most probably by the judicious display of his Crimean medal. No one now has a chance against a hero, and Mr. Hayter has, from the army before Sebastopol.

The recent changes in the Irish representation have been few. In the borough of Armagh, Mr. Bond has succeeded, on the death of Mr. Ross Moore; and in the county of Meath the severe loss sustained by the Irish party by the decease of Mr. Lucas has been supplied, as well as that party was able to supply it, by the election of Mr. M'Evoy. The seat for New Ross is practically vacant by the departure of Mr. Gavan Duffy for Australia, and it is probable that a new writ will be moved for soon after Parliament has assembled. In the Scottish memberships no alterations have taken place during the recess. It is expected that Lord Haddo, eldest son of the Earl of Aberdeen, who, although elected for Aberdeenshire in 1854, has not yet taken his seat, owing to ill health, will do so in the ensuing Session. Among other changes in members there have been some changes of names: for instance—Mr. Booker, member for Dartmouth, has added the name of Blakemore to his patronymic; Mr. Scrope, member for Wiltshire, has taken, in addition to his own, that of Estcourt; and Mr. Christopher, for the second time in his life, and for the same cause—a large accession of fortune—assumes another designation than that with which he was born, and is now Mr. Christopher-Lindsay. There has been a somewhat remarkable decrease in the number of members who are serving in the Army abroad as compared with last year. At present there are, we believe, only three—Lord Adolphus Vane Tempest, member for Durham; the Hon. Percy Herbert, member for Ludgershall; and Lord George Paulet, member for Beaumaris. Several members will be present who have served in the Crimea, viz., Mr. E. Arthur Somerset, member for Monmouthshire; the Hon. Ashley Ponsonby, member for Cirencester; the Hon. James Maxwell, member for Cavan; Sir James Fergusson, member for Ayrshire; and Captain Jolliffe, member for Wells.

In the Ministerial phalanx in the front row the aspect of things is somewhat different from what it was in August last. As has been said, Mr. Labouchere sits there in right of the Colonies, and Mr. Baines as Chancellor of the Duchy of Lancaster and a member of the Cabinet; Mr. Bouverie appears in his new character as President of the Poor-law Board, and Mr. William Cowper as President of the Board of Health. Sir Benjamin Hall is now Chief Commissioner of Works, and will be called on to do battle for his projected road through St. James's-park; and Mr. Massey, the member for Newport, assumes his place as right of holding the Under Secretaryship for the Home Department.

As regards the Opposition, if rumours are to be credited, Ministers are to have to contend not only with their old legitimate foes, but must be prepared to meet a new organisation, composed of alienated friends and a section of the Tory party. In short, that Mr. Gladstone is to head a Peace combination, comprising Sir James Graham, Mr. Sidney Herbert, Mr. Cardwell, Messrs. Bright, Cobden, Milner Gibson, Laing, Roundell Palmer, Robert Phillimore, and as many proselytes as they can win from the Liberal side; strengthened by the accession of such Conservatives as the Marquis of Granby, the Marquis of Blandford, and any followers whom they can influence. What may be the situation of such a coalition if peace is obtained it is easy to predicate; but if the war goes on they will be found vigorous assailants of a Government which is singularly deficient in able and effective Parliamentary speakers; while the Peace party proper has almost every first-class debater in the House, except Mr. Disraeli, with them; and of his designs not much has been known. He made no sign during the vacation. If a blunder should be made with regard to the terms of peace he will have an opportunity, if he chooses, of appealing to the warlike tendencies of the country, and coming into power as a vigorous prosecutor of hostilities. Of course on that main question of Peace or War everything depends. If the war goes on, the Ministry of Lord Palmerston is probably safe enough; for the fall of Kars is the only rock ahead which he has to fear; and, as regards that, Lord Stratford de Redcliffe may be made a sufficient scapegoat. It is on the proclamation of Peace that Lord Palmerston's real difficulties will begin. But even if the war goes on there is not a little Parliamentary labour awaiting the Session. Taxation and Loans, Reform of the Corporation of London and the University of Cambridge, Education in England and Scotland, Church-rates, the Law of Partnership; Administrative Reform (the Association says it has been organised, but not heard of), and Lord John Russell is said to have a Reform Bill prepared, and which he is determined to launch—his last bid for power!

Full of interest and teeming with events must be the first month of the new Session. The position of Lord Palmerston is peculiar. No one since Chatham has been similarly placed. At a great national crisis, when all the picked statesmen and crack administrators of the day, who had been brought together by a well-conceived coalition, were floundering in the mud between Balaclava and Sebastopol the nation called with one voice on Lord Palmerston to assume the reins of Government, and to conduct the war. He is essentially a War Minister, and he has with tolerable success guided the State through the perils of war. Will he be equally successful amidst the perils of peace? Can he stand as the prime administrator of a policy of peace amidst the factious struggles for power which must follow the cessation of hostilities?

## THE WAR IN THE CRIMEA.

*(From our Artist and Special Correspondent.)*

CAMP, SECOND DIVISION, Jan. 12th, 1856.

THIS has been a week of mild weather and fierce gales. The severity of the cold caused by the north-east winds which prevailed for so many weeks had hardened the surface of the ground in to a mingled mass of earth and ice, whilst a sudden shift from the east to the north-west brought us two feet of snow. The soldiers had barely time to enjoy the game of the Siege of Sebastopol when the thaw commenced; the wind blew from the southward, and the camps were reduced to that state of mud and bog with which the sojourners in Crim are so well acquainted. Where for weeks past horses could scarcely pass because of the hardness and slippery smoothness of the roads, they had now to wallow in deep sloughs of mud, into which our best roads were speedily turned, notwithstanding all care and efforts. It is remarkable, however, with what rapidity the splendid highways would during the autumn have been brought into a fit state again. For four or five days, during which the south-west gale has been blowing, making the air so warm as to make fires a nuisance, the yellow M'Adam has been dried and swept, and the Army Works Corps have not failed to fill up all the gaps and ruts which had so speedily been made by our traffic. This not only proves the utility of this corps, and its activity, but says much in favour of the original execution of the highways and their efficient and excellent draining. The winter is now far advanced, and huts have not yet been provided for all the troops and land transport. But I am far from coinciding in the sweeping views of some of your correspondents, who assert that a month ago not one-tenth of the army was hutted. To this assertion I beg to give an unqualified denial. There is reason in the complaints of the Land Transport Corps, whose Turks and Croats are not housed. Nay, I fully believe that some of the officers of that useful body have remained unhoused much longer than other portions of the army; but there are other corps which have as much right to complain as the Land Transport, many regiments in the Fourth Division being at this moment partially under canvas.* The routine of service requiring that regiments should furnish the fatigue parties to bring up their own huts, the troops which returned from Kinburn have not all had the opportunity of making themselves comfortable as speedily as the rest. The officers, however, have made very nice places for themselves with double tents, which, when furnished with a stove, and dug out, are as warm as, and perhaps warmer, than any hut—the only drawback being that light is necessarily excluded by such an arrangement. There are not a few officers, indeed, who prefer this sort of habitation to that of the regimental hut, which is divided into compartments, where two officers are made to double up together. I mention these facts because I think the army has less reason to growl at its comforts than any of its neighbours, and certainly less real grievance to complain of than any army ever brought together in one place before. If anything is to be said on the subject at all it is that England has made her soldiers too comfortable, and spent too much money on one item. The French all live in single tents, which is undesirable. They are obliged to go on fatigue for the wood with which they cook their provisions. If they feel cold there is a mess-room for each battalion erected, called a *chauffoir*, in which the men assemble to warm and dry themselves. Under this system colds, catarrhs, fever, and disease are much more prevalent amongst our allies than with us; and I am not prepared to advocate economy so far as to say that we should imitate the example set us. But when we compare the two systems, let us be grateful for the improved position in which the great majority of our army is placed by our admirable, though not inexpensive, arrangements, and not grumble too hard because, in isolated instances, cases of individual hardship exist. "Correspondents," well housed themselves, have got up their comforts at their own expense; and it has not hitherto been their character to take the bright or sunny view of things in the Crimea, where every grievance has been fully exposed and dealt with. To accuse them of selfishness is therefore uncalled for and unjust.

The heaviness of the gale has prevented the arrival of shipping, but as they have favourable winds for the run from Constantinople, the mails have arrived with unusual rapidity. The prevalence of rumours respecting changes in the plans of the Allied armies is, however, an amusing much fluctuation in the movements of shipping. Under the impression that the British army will speedily change its base of operation, merchants and speculators are shy of sending up goods to Balaclava, and a notable increase in the price of every species of goods may be marked. The market, in fact, is worked upon by rumours of all kinds. According to some the British force is under orders to go to Asia; according to others the Crimea is to be abandoned altogether, with the exception of Kamiesch, where 30,000 men are to hold the lines. I need not say that these rumours, although very generally spread, can be traced to no certain source, and their only effect is to create doubts in men's minds and unsettle every one. In the mean while the armies are performing their usual routine. Field days are constant, and the men in excellent health and spirits. There is a revival of the idea that the Russians will attack us on their New Year's-day—that is to day; but although precautions are taken to avoid surprise along the whole of our positions from Inkerman to Balaclava, cannot conceive the Russians moving, especially as I believe their Crimean army to be a very small one at this moment.

Flying rumours come also to us of disasters at Kertch, but I can trace them to no source. The *Firebrand* is, I believe, under orders to go to Kinburn, where the ice, SIX feet thick, has frozen up the floating batteries. Large cuttings have, however, been made round these vessels to keep them from being damaged. The siege-trains of the Allies are both about to be dispatched away from the Crimea, their service being no longer required.

More explosions take place in the docks daily. Our loss continues extremely light notwithstanding the constant firing of the enemy.

* It may be gratifying for you to know that up to this week the hutting accommodation afforded to the Land Transport alone has been 143 huts, having room for 3080 men.

EXPORT OF SILVER.—During the year 1855 the Oriental Company's steamers took out to India and China silver to the value of SIX millions and a half sterling. It weighed about 720 tons; and if it had been sent from London at one time it would have taken a train of 150 waggons to convey it to Southampton. The South-Western Railway Company netted for conveying this specie upwards of £2000, and the freightage could not have been less than £180,000.

RUSSIAN SHARPSHOOTERS.—A few days ago a French officer wandering too near the Tchernaya river in pursuit of game was shot dead by a Russian sharpshooter. Two English officers, who had managed to get in front of the French sentries in the same valley, had a narrow escape of a similar fate the day before yesterday. They were wandering on, and had got some distance in advance towards the position of the Russian sentries. A French sentry, who had called in vain, at last hit upon the expedient of discharging his musket to attract their attention, and fired over their heads. This roused them quickly enough, and, on looking around, they discovered a group of three or four Russians partly concealed and apparently waiting their nearer approach, among some rushes at the opposite edge of the river. They at once turned back towards the French lines, and regained them, not without some risk, for the Russian shot grooved up the ground about them near enough to prove the necessity of the sentry's warning. The Russian sharpshooters line the whole length of the Tchernaya on the north side, and omit no opportunity of firing a shot at a casual straggler.—*Letter from the Camp, Jan. 14.*

## THE RECENT WEDDING BREAKFAST AT APSLEY HOUSE.

*(See the Illustration, page 116.)*

WITH the accompanying representation of this superb scene we complete our Illustrations of the recent Marriage of Sir Robert Peel and Lady Emily Hay.

The wedding collation was spread in the Waterloo Gallery at Apsley House, which was opened for the first time on this occasion since the last Banquet in 1852. The table, which was a miracle of ornamental decoration, extended from end to end of the gallery; and at each extremity rose high, ornamented with garlands of flowers, the two magnificent candelabra of Russian porphyry, presented to the late Duke by the Emperor Alexander of Russia. In the middle of the table was the celebrated Portuguese plateau, extending, in solid silver, five-and-twenty feet. From the centre of the table rose the elegant Wedding Cake (engraved last week), the artistic production of Carlo Brunetti, 21, Rathbone-place, Oxford-street.

We have not space to enumerate the articles of *virtu* which the table presented. The famous Dresden vases were filled with choice camellias, Indian azaleas, lilies of the valley, and hyacinths in full bloom and fragrance. Other vases displayed rare orchids, among which may be enumerated the Calanthe Vestita, the Anselia Africana, the Dendrobium Cambridgeanum, the Laila Anseps, the Barkeria Skinneri, the Triopoala Tortilis, and the Dendrobium Moreliæforme. These were elegantly arranged with rare and beautiful fern fronds, palm-leaves, epacrises, and camellias.

Orange-trees, bearing ripe fruit and blossoms, shed their odours upon the table; and other flowers of the choicest description. Such was the scene which opened upon the guests as they entered from the drawing-room

The Duke of Wellington led the way with the French Ambassadress, whom he seated upon his right hand, in the centre of the table—himself taking his father's well-known position before the middle fireplace. Lady Peel was conducted to a seat upon the Duke's left hand by the Marquis of Tweeddale, the Earl Stanhope (literary executor of her Ladyship's lamented husband) occupying the next place with Lady Palmerston. Lord Palmerston led in the Marchioness of Tweeddale, the mother of the bride. The Duchess of Wellington faced the Duke—having upon her right hand the Countess Bernstorff, wife of the Prussian Minister; and upon her left the Earl Granville.

The guests "assisting" at this memorable marriage festival included every notable person of the *haut ton* in town. One marked feature of the entertainment was the appearance at it of the representatives of some families of the midland counties distinguished, like that of the Bridgroom, for position and wealth acquired in the application of science and talent to the development of the staple manufactures of the country.

The manner in which the Duchess of Wellington discharged the duties of hostess on this occasion reflected the agreeable feeling which animated her in contributing to her sister's happiness, and receiving her own friends. On this, the first occasion of opening his father's house for the reception of guests, the study of the Duke of Wellington appeared to be to make every one perfectly happy. His Grace took an evident pleasure in exhibiting the trophies and treasures of art pertaining as heirlooms to his house, and seemed greatly to enjoy the happy scene which the united meeting of the three families occasioned.

A record of this interesting marriage would be imperfect without mentioning that the trousseau of the bride was of the most rich and elaborate description. It included presents from her Majesty the Queen and other members of the Royal family, and almost numberless gifts from her relatives and friends. The presents of the bridegroom were more than usually costly. One of them, a splendid ornamental jewel of emeralds and diamonds, added brilliancy to her bridal costume. The bouquet of the bride was composed entirely of white flowers. It consisted not merely of the white camellia, the orange blossom, and the lily of the valley, but comprised also gardenias of an exquisite perfection, and the Phalenopiss amabilis and grandiflora. The bouquet of the Duchess of Wellington was composed of white flowers, similar to those of her sister, but the addition of the pink geraniums and geraniums took off from it the bridal character. These bouquets, with the flowers whose decorative beauty has already been noticed in the description of the gallery, were furnished by Mr. James Veitch, jun., of the King's-road Nursery, the credit of their tasteful arrangement being due to Mr. Harding, of Clifford-street.

## A PIGEON EXPRESS.

### RECEPTION OF THE NEWS OF THE CAPTURE OF SEBASTOPOL AT CEYLON.

*(From a Correspondent.)*

CEYLON, NOV. 1855.

WITH the belief that it may interest the numerous and intelligent body of readers who derive pleasure and instruction from the ILLUSTRATED LONDON NEWS, I send you a Photograph representing the scene in the *Colombo Observer* office during the reading of a carrier pigeon despatch in the hands of Sir Henry Ward, the Governor, who, *ex-officio*, sits as President of the Council, and who, in the intervals of taking votes of money for public works, communicated to the assembled members the substance of the intelligence. As soon as the labours of the Council could be closed, his Excellency showed his appreciation of the intelligence received by acting in the manner described in the following paragraph, extracted from the *Colombo Observer*:—

ROYAL SALUTE.

In consequence of the news brought by our pigeons the following order has been issued:—

"HEAD QUARTERS.—GENERAL ORDER—Kandy, 27th October, 1855.—1. The Colonel commanding the forces is pleased to desire, in pursuance of instructions to that effect received from his Excellency the Governor, that a Royal salute be fired at Colombo this day in honour of the capture of Sebastopol by the Allied armies on the 8th September.

"2. On the day after the receipt of this order at Trincomalee, Galle, and Kandy, Royal salutes will be fired at one p.m.

"(Signed) J. R. BRUNKER, Col. D.A.G."

The above was issued as a separate slip with our EXTRA of Saturday to all our Colombo subscribers, and to some at out-stations. We took care, of course, to send a copy to Col. Dames; so that about eleven a.m. on the 28th the worthy Commander of the forces would be in possession of the order issued at Kandy, the 27th, and complied with at Colombo by the firing of a Royal Salute on that very evening. To prevent the future historians of Ceylon from being puzzled by the anachronism, it may be as well to record that, Sir H. Ward being Governor, and red-tape forms out of favour, his Excellency (Commander-in-Chief ex-officio) directed the order to be issued in the usual form, and the salute was fired at Colombo on the faith of intelligence transmitted by no more regular channel than the *Observer* carrier-pigeons.

Long previously to this Dr. Elliott's carrier-pigeon express had been recognised as a public institution of the greatest possible value, in the absence of a line of electric telegraph to connect Colombo, the capital of the island, with the port of Galle, at which the steamers touch. The distance is seventy-two miles, the road being almost a straight line, and our pigeons usually accomplish the passage, well laden with manuscript and printed slips, in from one to two hours. On their arrival not only is the news, sometimes in large detail, disseminated in the form of an *Observer* extraordinary, but the merchants, the post-office people, and the interlocked expecting community, are able to calculate the hour at which the coach with the mail-boxes may be expected, and make preparations accordingly. It is now fully five years since the idea of thus systematically employing carrier pigeons was suggested by me to Dr. Elliott, and by him carried out. The first despatch received announced the appointment of a successor to Lord Torrington, and from that time to the present the pigeons have continued to bring to the colony intelligence increasing in interest and importance. The scene in the *Observer* office, as soon as a special flag hoisted on the Fort Flagstaff announces that the pigeons have arrived with the overland news, is animated in the extreme. The military officers of the garrison are, of course, prominent in the crowd, anxious to know how their brethren in arms have upheld the glory of England, and listening eagerly to ascertain if, in the list of those who fell or received wounds in the latest conflict, the names of dear relations or valued friends occur. The European merchants, while not devoid of similar feelings, are equally eager to learn the position occupied by our great staple—coffee, and whether cocoa-nut oil, which has fluctuated so much in the progress of the war, and the negotiations that led to it, is up or down. There is the Chetty merchant from the coast of Coromandel, with his stout nude chest, and the copious turban surmounting a face whose duskiness is relieved by the sacred ashes spread over the forehead. In the hands of those half-clothed people, of simple and inexpensive habits, is concentrated the larger portion of the cloth and grain trade of the island. They also contract to deliver coffee to the European merchant, and probably the conclusion of a bargain and its terms depend upon the information brought by the carrier pigeon, as to whether native coffee, the "consols" of the coffee-market, is down to 42s or up to 52s. Watching with equal anxiety, but with more intelligence (for he can speak English fluently), is the fu ly-clothed Singhalese contractor, with his pettioat-like combuy, his clean white jacket, but with no covering on his head beyond that afforded by his long black hair, tied up into a knot behind, and secured with a handsome comb, such as may be still seen on the heads of young girls in the Highlands of Scotland.

Still more numerous and still more prominent in the crowd are representatives of the Moorman population of Colombo, whose addiction to the pursuits of jeweller, shopkeeper, and pedlar, has attached to them the designation of "the Jews of Ceylon." They are Mahometans of Arab origin, settled for generations in Ceylon, and amongst the most industrious and enterprising inhabitants of the island. Of course the great war undertaken between France and England in defence of the independence of Turkey has excited peculiar interest amongst these Mussulmans, to gratify which a Tamil newspaper was some time ago started, into which the principal portions of the war intelligence contained in the *Observer's* pigeon-express is regularly translated.

When pigeons occasionally go astray, driven out of their course by a strong wind, or bewildered by rainy or hazy weather, they are almost invariably caught and sent to the *Observer* office by the natives, who quite appreciate their value, many of them believing that the bird carries the despatch in its beak; and that on arrival the bird deposits it on the editor's table. Readers of intelligence will smile at this; but we have over and over again found it necessary to correct the popular impression amongst Europeans, that the despatch is attached to the pinion of the bird. This would impede the creature's flight, on the strength and rapidity of which, in conjunction with the strong instinct which impels it homewards, so much depends. Nor is the letter, as some imagine, strapped tightly round the leg of the bird. Our plan is to roll up the despatch lightly about the diameter of a quill, it is then doubled up and tied round with thread all but a loop, through which a piece of soft cord is run. This cord is then tied gently just above the claw, and the despatch hangs down. It cannot drop off, and, the instant the bird is let go, both leg and despatch are drawn up under the plumage, so perfectly protected from the weather that even the heaviest rain of the tropics, through which some of our birds have sometimes made their way, have scarcely affected the paper. By the employment of this paper and several birds we have received in this way matter which, when printed, has filled a full page, equal in size to those of the London daily papers. In the case of the mail which announced the fall of Sebastopol we had, besides the summary of our London correspondent, the despatch of General Simpson in full, the telegraphic despatches, and numerous details. In fact, I think I may safely assert that in the world's history the instincts of the carrier-pigeon have not been so usefully, so steadily, and for so lengthened a period rendered available, as in the case of the *Colombo Observer* expresses.

Our Engraving is from a photograph by Mr. Parting, of Colombo.

## OBITUARY OF EMINENT PERSONS.

### BRIGADIER WILLIAM MAYNE.

COLONEL WILLIAM MAYNE, of the Bengal Army, Aide-de-Camp to the Queen, and Brigadier of the Hyderabad Contingent, was the third son of the Rev. Robert Mayne, of Limpsfield, Surrey, by his wife, Charlotte Cunninghame, youngest daughter of Colonel Graham, of St. Lawrence House, near Canterbury, and great-nephew of William Mayne, Baron Newhaven, whose name he bore, and which title (having been created in the person of the late Lord) has long been extinct. Colonel Mayne was born in October, 1818. He died at Cairo on the 22rd Dec., on his way home to England. He had only returned to India after a short furlough in this country in September last, when he was almost immediately seized with a violent attack of dysentery, from which he never recovered. Colonel Mayne entered the service in June, 1837; in December, 1838, he joined the Army of the Indus, and in the following month was brought upon the effective staff of the 37th Regiment N. I., as junior Assign. He could not, however, distinguished himself above all others of his rank and standing during the war that ensued in Affghanistan, and most particularly at the siege of Jellalabad: where, having risen to the rank of Lieutenant, and being in command of a regiment of Irregular Cavalry, he was almost daily engaged in skirmishes with the enemy whilst employed in foraging for the garrison. On these occasions he was wont to ride a famous old grey charger, and among the Affghans opposed to him he gained the sobriquet of "Death upon the Pale Horse." On General Pollock arriving to the relief of Jellalabad, he was appointed Deputy-Assistant Quarter-master-General to the Infantry Division, and was engaged in all the actions that took place in the subsequent campaign, which ended so gloriously in the retaking of Cabul. He received medals both for Cabul and Jellalabad. He was subsequently present as second in command of the body guard at Maharajapore, and wears the star given in remembrance of that engagement. He became Captain in Jan. 1, 1845, was promoted to the rank of Brevet-Major in September of the same year, and, having succeeded to the command of the body guard, was gazetted as an Hon. Aide-de-Camp to the Governor-General of India in January, 1846. He was subsequently, in April, 1851, appointed to a Brigadiership in the Hyderabad Contingent, involving the independent command of over 6000 men of all arms; and in that capacity was frequently employed in repressing disturbances in the Deccan, and repeatedly received the thanks of the Governor-General in Council. It would entirely, however, exceed our limits were we to attempt to gives succinct account of all Colonel Mayne's services. Engaged with the enemy some twenty-five times during his glorious career, his name has been honourably mentioned in from fifteen to twenty despatches and general orders. Though never wounded himself, he had his horse killed or wounded under him on eleven different occasions His authority over the native troops he commanded was unbounded. He was believed by them to have a charmed life, and wherever he chose to lead they were ready to follow. Colonel Mayne is universally esteemed and beloved in the Indian army, and in him it is not too much to say that they have lost one of their brightest ornaments, and the Indian Government one of its most distinguished servants. Colonel Mayne became a Lieutenant-Colonel in June, 1854, and was gazetted as Aide-de-Camp to the Queen, with the rank of Colonel of Mahrajpore, in December, 1855. He married, in 1844, Helen Cunliffe, daughter of Thomas Reed Davidson, Esq., of the Bengal Civil Service, and niece of Lieut.-General Sir Robert Cunliffe, Bart., M.P., of Acton Park, Denbighshire, who, with one only son, survives to deplore his loss.

### SIR ALEXANDER MACKENZIE, BART.

THE death of Sir Alexander Mackenzie, of Coul, Bart., took place at Coul, in Ross-shire, on the 3rd ult. He had suffered severely from organic disease, under which his constitution, enfeebled by a long residence in India, has sunk at the comparatively early age of fifty-one. Sir Alexander was born 10th Jan., 1805. He succeeded, as eighth Baronet, upon the decease of his father in 1845, and retired from the Bengal Army, 1st Aug., 1851, after an uninterrupted service of more than twenty years. Besides minor campaigns for which medals were not given, Sir Alexander was present at the siege and capture of Bhurtpore, 1826-26, and had the medal. He served as Deputy-Judge-Advocate-General with the army of Gwalior, and had a horse killed under him at the battle of Maharajpore, in December, 1843. He took part also in the first campaign on the Sutlej, 1845-46, but was not engaged in any of the battles. During the few years that he enjoyed the patrimonial estate, the deceased Baronet was much esteemed as a landlord, and took an active interest in county and rural affairs. He was a staunch and consistent elector, and a zealous supporter of the Liberal interest. Sir Alexander was never married. His title and estate descend to his brother William, born 28th May, 1805.

The Mackenzies of Coul date from the seventeenth century. The founder of the family was Alexander Mackenzie, brother of Kenneth Mackenzie, Baron of Kintail. He died in 1650, and was succeeded by his son Kenneth, who was created a Baronet of Nova Scotia, 16th October, 1673. The representative of this family in 1715 joined in the Earl of Mar's rebellion, and was included in the act of attainder passed against Mar and his adherents; but, dying without male issue, and the attainder not extending to collateral branches, the title and estates devolved upon his brother, and have since continued in regular lineal descent.

### GEORGE BUCHAN, ESQ.

GEORGE BUCHAN, Esq., of Kelloe, Berwickshire, who died on the 3rd ult., was descended from one of the eldest Scottish families, the Buchans of Auchmachoy, in Aberdeenshire. Of this branch of the family, Lethara, in East Lothian, was the paternal estate. Mr. Buchan was son of George Buchan, Esq., of Kelloe, by Anne, his wife, fourth daughter of the Right Honourable Robert Dundas, of Arniston, late Lord President of the Court of Session, and sister of the late Lord Chief Baron Dundas (of Scotland). For several years Mr. Buchan held the office of Chief Secretary at Madras, where, from his commanding talents and high-toned public and private character, he left a name of distinguished reputation and honour. The same aptitude and intelligence for which he had been conspicuous when in office he continued to evince in the transaction of county business, when, after his return from India, he became resident at his family seat in Berwickshire. He was much loved there for his benevolence and charity. Mr. Buchan's estate descends to his nephew, Lieutenant-Colonel George W. Fordyce, of the Scots Fusilier Guards.

KINBURN FORT, AND THE SPIT OF OTCHAKOFF.—THE EXPEDITIONARY FLEET IN THE ICE.

## THE LAST OF KINBURN IN 1855.

Our gallant allies in the Sketch are left to withstand the assaults of General December as best they may, for one mass of ice extends from the Liman of the Dnieper to Nicolaieff and Kherson. The French withdrew their gun-boats early in December, and on the 7th the whole waters became congealed; which, being reported to Captain Hastings, the senior British naval officer, he most judiciously at once ordered all our gun-boats to return to Kinburn. It was fortunate he did so, for the day after nothing could have moved them. At Kinburn the ships were all fast, one mass of ice extending to the shore. On the 9th, the wind changing to the southward, the ice broke up from the rivers, and came suddenly down in such masses as to sweep everything before them. The French floating batteries, moored with two line-of-battle ships' anchors, were all driven on shore—the ice accumulating against their bluff bows till it reached nearly the hause-holes, when away they went as if anchored by straws. No ship stood the pressure, except an old French store-ship aground.

The English men-of-war, by force of steam and regularly pounding at the icy barrier, forced their way out, and anchored off Fort Kinburn in the outer roads. The next day all again became fast, under the influence of a strong N.W. wind the thermometer being at 6°.

To show the vicissitudes of this delightful winter quarter—every rope is like an iron bar, our decks and ships are one mass of ice, and boiling water is obliged to be poured on them to let anything go. As to telling how many fingers you have, or what your nasal organ is made of, is an impossibility. Our mess has even to be sawed up.

On the 14th the sun shone brightly, and the morning was delicious in spite of ice all round. The Captain went on shore to shoot some ducks, which are here in large quantities; swans and geese likewise abound, only one cannot show his head outside the lines or a little gentle recreation for fear of those rascally Cossacks, who have no feeling for sportsmen, they having captured six French officers one morning. After getting some teal the Captain walked off on the ice to the French Commodore, inside, to say adieu. The whole ice was alive with skaters, sliders, and troops carrying stores to the shore—our allies being most prudent in this respect. The galley was ordered at two o'clock, and on the way off the day became dark and gloomy; half a gale sprang up from the N.W. a slight fog enveloped the ships, and a most intense cold arose, the ships *Curaçoa* and *Tribune* looked strange to their eyes, and, on getting within a mile, they found them surrounded with ice. Several times they tried to force the galley through, but found it useless, the ice being too firm—it seeming to stretch for miles to seaward. To bivouac on the bleak shores of Kinburn, even with our good allies, was no joke, and as the ice appeared to be travelling at about two miles an hour, eventually, by pulling ahead, they got between the floes, and floated with the ice under the bows, which they were most delighted to make, being firmly persuaded that shooting at Kinburn had better be left alone.

The fort is now well secured against surprise; the men have received their new clothing, with plenty of provisions; the Commodore has no fear of the Russians getting hold of it again. The French have three floating batteries, two steamers, three gun-boats, and a hospital ship; and are in good spirits. We have a steam frigate and paddle-steamer between Kinburn and Odessa.

The *Curaçoa* and *Tribune* left for the Bosphorus on the 17th Dec., delighted to bid adieu to Kinburn.

The first Illustration represents Kinburn inside the Spit, as we left it on the 18th: ships covered with ice, all fast; soldiers and sailors shooting and skating, carrying hay on shore at the first pier other stores on the second. The spars of the raft, which have been hauled up by the *Sidon*, *Curaçoa*, and *Tribune*, covered with ice—fast on shore. French ships all housed in; the brig-steamer with a Commodore's pennant. A small channel was then open, which prevents an attack from Otchakof.

The second Illustration shows the *Curaçoa* and *Tribune* steam frigates, and *Beagle* gun-boat, beset with an immense floe of ice, with the Captain in his galley trying to get on board.

Behind the Isle of Berezan there is an extensive lake from whence the new gale most likely brought the ice out.

The small Sketch is a view of Serpents' Isle, off the mouth of the Danube (20 miles)—the first rendezvous of the fleet to Sebastopol. It seems placed there by Providence to mark the entrance of the great river, whose shores are low and dangerous of approach. It is uninhabited at present. They say it abounds with game, and has a small lake on the highest part.

SERPENTS' ISLE, OFF THE DANUBE.

KINBURN.—THE "CURACOA" AND "TRIBUNE" STEAM FRIGATES, AND "BEAGLE" GUN-BOAT, IN THE ICE.

"THE EMPEROR ALEXANDER II. AND HIS SISTER MARIE-NICOLAEWNA, IN THEIR CHILDHOOD."—FROM A PRINT PUBLISHED AT ST. PETERSBURG.

Upon a sunny day
Two children were at play;
Each, offspring of a king,—
Their toy a cradle-swing.

The garden's alleys rung
With sounds of laugh and tongue,
So jocund was the mirth
That in their hearts had birth.

An old man at his toil
Ceased for a while to moil,
And, leaning on his spade,
Thus to himself he said:—

"O gracious God of heaven,
How are thy mercies shown
To Emperor on his throne,
To serf who toils alone
From morn till dewy even.

Thou makest childhood blest,
That when years have pass'd by,
The harassed soul may fly
Back to one place of rest!

"Yon boy will be our Czar,
When he is in his prime.
But little recks he now
That his unwrinkled brow
Predestined is to wear
Great Peter's golden crown;
Whose rim though soft as down,
Will leave its lines of care.
And then this sunny time
And yonder little car
Will come to him again
With shadows of the joy,
That blest the happy boy,
And soothe his manhood's pain

"When on his father's throne
He reigns and reigns alone;

When at his word go forth
The legions of the north
To conquer and destroy—
To win or work annoy.
When at his lightest breath
We live or die the death,
And he doth stand apart
Above all men beside,
Until his despot-heart
Is swollen with its pride.
And serfs in soul bow low,
As though he were a God,
And if he give the blow,
Kiss the avenging rod.
And he believes it sooth.
But at his topmost height
A mightier than his might
Comes and declares the truth
That Wrong cannot maintain
Its hold upon mankind.
That all his power is vain
'Gainst Right and Might combined.

Then as he feels his crown
Is but a golden weight,
And gladly lays it down,
And puts aside his state.
Who knows but through his brain
May pass the shadowy joy
That blest the happy boy
And soothe his present pain?"

So be it! Though the wall
Of women fill our lands
For many gallant bands
That died, but did not quail,
Beneath the iron hail
This mortal Jove pour'd down
From granite shielding wall!
Though ghosts of legions call
From out their graves unknown
For vengeance on the One,
Who would not stay the strife,
But bloodier made his throne
With more red streams of life.

So be it! Though at night
A gory hand doth show
His hordes on Alma's height
Retreating from the foe.
So be it!—when the Man
Recalls that bloodier day,
The day of Inkerman.
When like gorged beasts of prey,
Before our small array,
His drunken legions ran!
Or when in regiments grim
Stand forth the wasted forms
Down beaten by the storms,
And point their hands at him.
And tell him that they died
From his cure'd lust of pow'r
And his Imperial pride.
O let him in that hour
His childhood see again;
And own if shadowy joy
Such visions can destroy,
Or soothe his present pain.—M. L.

## *FINE ARTS.*

Tam o' Shanter, by Robert Burns. Illustrated by John Faed, R.S.A., for the Royal Association for the Promotion of the Fine Arts in Scotland.

Scotland has just given us a very handsome volume in illustration of her greatest poet. The best painters Scotland has produced since the birth of Burns have been properly ambitious of illustrating a poet whose genuis is recognised wherever the language of the British Islands is known. Sir David Wilkie made a fine picture (in his latest style) from the "Cotter's Saturday Night." Sir William Allan gave us a happy embodiment of the inspired ploughman as he sat, fresh from the field, brooding over the daisy (the wee-modest-crimson-tipped flower) which he had crushed unwillingly with the coulter of his plough; John Burnet (better known as an engraver than a painter) has, on canvas and on copper both, put happily before us some of the most pictorial passages of the poet. Wilkie, Allan, and Burnet had, one and all, many special qualifications for the task of illustrating Burns. All three have in some degree served to extend a reputation that needs no false props. Each in rendering justice to himself was paying homage to the majesty of genius in the great poet.

There are, of course, many illustrations of "Tam o' Shanter." One of the best that we can call to mind is by the graceful and poetic Stothard. The scene is that which represents what we have heard a clever Englishman call the Turpin ride of Tam o' Shanter. It is full of spirit and poetry, but it is hardly the scene. It is not Scottish—it is not Robert Burns.

The stone figures (once so popular) of Tam and the Soutar, by the late Alexander Thom, with all their cleverness, caught only the familiar and coarse portions of the poem. No tale in verse abounds more with all the qualities of true poetry than "Tam o' Shanter."

In the handsome folio before us—got up at wise expense by the Royal Association for the Promotion of the Fine Arts in Scotland—it is easy to see that no common hand has been called in to illustrate the poem. The name of one Mr. Faed, through "The Mitherless Bairn"—that charming picture of last year's Exhibition—is now most honourably known among

British artists; the name of another Scottish Faed will be no less honourably known by the volume before us.

The subjects selected by Mr John Faed are six in number: 1, "Nursing her wrath to keep it warm;" 2, "The Souter tauld his queerest stories;" 3, "Nae man can tether time or tide;" 4, "And yow I'am saw an unco' sight:" 5, "But, scarcely had he Maggie rallied;" and 6, "As spring brought off her master hale." Of the six we prefer those which relate to common life. Nothing can be better than No 2—"The Souter tauld his queerest stories." It is worthy of Burnet, of Allan, or even of Wilkie. In the picture of the wife "nursing her wrath," the thick-set character of the Scottish wife, though in some respects true to nature, is a little overdone.

That Mr Faed has not succeeded so happily in the other subjects must be attributed to the lofty and grotesque union of sentiment and subject that has so charmingly thrown the poem. But that which is excellent in one art is seldom very well adapted for equal excellence in another. What really is in full harmony in the poem is not, and cannot be, in full harmony upon canvas. The grotesque association, so delightful in the poet, though it is treading on tender ground, becomes a little unpleasant when it is set before us in reality, as it were, by the hand of a painter so skilful as Mr. John Faed. Though every line in the poem is poetical, every subject is not pictorial.

The Royal Association for the Promotion of the Fine Arts in Scotland have not been sparing of pounds English in doing justice to the engravings from Mr. Faed's work. Of the six subjects three are engraved by Mr. Lumb Stocks, the newly-elected line engraver into the Royal Academy; and three by Mr. James Stephenson. The vignette (a view of Ayr) is engraved by William Miller, to whose graver Turner is materially indebted.

Portrait of the late Professor Edward Forbes. From a Photograph by Claudet. Engraved by Charles Cook.

This, though it does not altogether recall to our recollection the great man who played with knowledge, or the delightful companion who could forget in society how much he knew that others did not know, is still a most valuable portrait of a man who died too early for his friends and too early for science. There is a pensive cast about it, as if the hand of death was already on him. We have seen those features, here preserved in due proportion, lighten up in a way that gave innocent and well informed enjoyment to everybody around. Mr. Claudet's photograph is capitally lithographed by Mr. Charles Cook.

View of the Hotel de Ville at Hamburg. Engraved by Day and Son, after G. G. Scott, A.R.A.

Since that disastrous fire of 1842, which did as much to undo Hamburg as the Great Fire of 1666 effected to undo London, Hamburg has owed much to Englishmen. An English engineer (Lindley) arrested the still-spreading flames that threatened to leave the city like a desolation; an English subscription (given in no feeling of pride) materially assisted in rebuilding the city; the genius of one English architect, Mr. G. G. Scott, gave them their beautiful church of St. Nicholas; and now the genius of the same man supplies them with that magnificent Town-hall of which Messrs. Day and Son have published so admirable and so useful an engraving.

The town-halls of the Low Countries—Ypres, Ghent, Louvain, and Brussels—are the admiration of architects. Sir Charles Barry has built his Houses of Parliament partly on that plan and character. We wish he had gone still further and made more frequent use of them. He would have improved his work. In the spirit of the builders of these fine old halls Mr. G. G. Scott has wrought, and a nobler building of the kind than the one on paper before us it is hardly possible to imagine.

Alleged Cure for Hydrophobia.—M. Guérin-Méneville lately brought before the French Academy of Sciences a means of curing hydrophobia, which, he stated, is practised in Russia with success. A little insect, the Golden-Cetonia, found in considerable quantities in sea-trees, in powder, when pounded to a powder, and adm nistered internally, to produce a profound sleep, which sometimes lasts for thirty-six hours, and which has the effect in many cases of completely nullifying the hydrophobic dread. The distinguished entomologist of Russia, M. Motschoulsky, has tried several experiments with this insect, and in most cases with success.

University College Hospital.—Mrs. Nelson, who has been head nurse of University College Hospital during the last twenty years, indeed since the foundation of the institution, has just resigned the appointment, in consequence of her age and infirmities. A movement has been made amongst the former pupils of the hospital and college to raise a fund to purchase an annuity for her; and it is gratifying to find that the appeal has been responded to by the committee of the hospital, and also by the professors and medical officers of the institution. Amongst the names of the contributors are Baron Goldsmid (treasurer of the hospital), the Rev. Henry Stebbing, D.D., Chadwick, Dr. J. C. B. Williams, Mr Ashton, Professor Jenner, Mr. Howel Morgan, Mr. Gamgee (First Class Staff Surgeon in the Anglo-Italian Legion), Professor Wharton Jones, F.R.S., Mr. Keyser, Professor Wardle, Dr. Hilder, Professor Murphy, Mr. Alfred Haviland, &c. Dr. Quain has consented to act as treasurer to the fund. Mrs. Nelson was a most efficient nurse, and was greatly esteemed and respected by the medical officers for her punctuality, zeal, and attention, and for her unvarying kindness to the patients. The late Mr. Liston held her in high esteem, and frequently expressed an opinion that she might be considered "a model nurse."

The Weather in the Camp.—There has been a sudden and remarkable change in the weather. When the last mail left it was difficult to believe, judging from the temperature and appearance of everything around, that spring had not already arrived. On Saturday, the 5th, the sun shone brightly, and the weather was so mild and fine that the winter clothing was universally laid aside. The following day we had mists and constant rain until evening, when the wind, which had been previously blowing from the west, changed to the northward. The thermometer fell rapidly, and yesterday morning, at nine o'clock, indicated only 10 deg. F above zero. The temperature continued very low all day, and, being accompanied with a strong wind from the north, the cold was felt very severely. Snow found its way through every crack and crevice of the wooden dwellings, and every precaution was necessary in the open air to prevent frostbite. The roads, which were previously in an exceedingly muddy and uneven condition, became sudden y congealed, and have since been trying enough to the transport animals and passengers from their hardened, irregular, and slippery surface. The troops everywhere appear very healthy and vigorous, notwithstanding these sudden variations of climate. Some of the French troops in the plain are reported to be suffering from a form of scorbutic disease.—*Letter from the Camp, Jan. 15.*

Military Memorials.—An illuminated brass and alabaster tablet, of great beauty, has just been placed in the Wrottesley Chapel, at Tettenhall Church, beneath the one erected by the officers of the 43rd Light Infantry to their gallant and lamented companion in arms, the late Hon. Edward Wrottesley (fourth son of John, second Lord Wrottesley), who fell in action with Kaffirs, at Fuller's Hook, in Albany, Cape of Good Hope, on the 11th of March, 1852. The present tablet, which is a companion to the former, but varying in form and detail, records the "sad and early loss of the Hon. Cameron Wrottesley, of the Royal Engineers, distinguished alike by his amiable disposition, high mental powers, and his noble conduct; who was killed on the 15th of August, 1854, when on duty in the trenches before Sumarsund." His sorrowing and noble parents have caused to be erected this handsome and chaste memorial; and both works were designed and executed by Mr. Stokes Nelson, sculptor, of Melbury-terrace, Dorset-square.—*Wolverhampton Chronicle, January 23*

Brigands in Prussia.—The forests and mountains of the Eiffel, in the province of Treves, in Prussia, have for some time past been infested by a band of brigands, who robbed travellers and vehicles; they even stripped poor foot-passengers of their clothes, and some of these passengers were in consequence driven to death. The authorities have just sent detachments of cavalry and infantry to hunt out these brigands.

Blockade of the White Sea.—During the whole of the blockade maintained in 1855 by the Allied fleet of the Russian ports in the White Sea, not a single neutral vessel has appeared in that sea; many Russian vessels attempted to pass over to Norway by favour of the night or of fogs; but nearly all—that is to say, about six y vessels—have been captured by the squadrons. The inhabitants of many of the little towns on the White sea sold provisions to the fleet, but were directly menaced by the Russian Government with Siberia, if the sale was repeated. At the same time the Government excited the fanaticism of the inhabitants by the publication of a speech of an abbot, in which they were informed would preserve them from the arms of the unbelievers, as they termed the Allies. It is impossible to conceive the injury inflicted on Russian commerce by the blockade of the White Sea, where have formerly entered each year above 600 vessels of the combined bulk of 120,000 tons, independently of Norwegian and national vessels.—*Christiania Courier, Jan. 11.*

Navigation of the Danube.—Advices from Galatz of the 5th ult. state that despatches are arriving there every day from shipowners of the north, inquiring if their vessels have passed the Sulina or are still lying in the Danube. From the information of all parties interested, these letters state that Galatz has been, ever since the 16th of December, cut off from all communication with Tultcha and Sulina, in consequence of the Danube being frozen over, while the land-roads are at the same time impracticable. The road from Tultcha to Sulina labours further under the inconvenience of running through a perfectly desolated country, and being infested with banditti. From Rustchuk, however, under date of the 3rd instant, the statements run that the ice on the Danube is so firm that heavy loads are forwarded upon it by sledges and waggons. This species of communication has been for some days established between the towns lying up the river.

## THE MOTHERS-IN-LAW OF ENGLAND.

### MRS. GLASTONBURY.

There is a class of persons who, in our opinion, is most shamefully put upon, abused, and misrepresented—we mean the mothers-in-law of England. You may stare, Mr. Jones, and called aloud upon the father of lies!—and you, Mr. Brown, may exhibit the whole of your eyes and make a mute appeal to the chandelier over the dining-table, but we are prepared to do battle with you or any one else in defence of those injured ladies. We do not mean to say that they are faultless. What human being is so? Not you Mr. Brown, nor you Mr. Jones,—and you know it!

What would Mrs. Brown, *née* Glastonbury, have been but for the amiable woman to whom she is indebted for her birth, education, and knowledge of housekeeping and husband managing? When you returned from your blissful honeymoon, who received you on the doorsteps of your new home but Mrs. Glastonbury, smiling and crying at the same time, until the dimples in her cheeks were made into little puddles by her tears! You remember how you embraced her—how you swore that it was the kindest thing in the world of her to have left her own pretty home at Kensington to shed a lustre over your dingy dwelling-place, Buster-row. Did you not send for Mrs. Glastonbury's boxes the next day? Who but you, Mr. Brown, had the back room on the first floor fitted up with every conceivable convenience that an old lady could desire? And poor Mrs. Glastonbury, in the simplicity of her heart and the fullness of her affection, believed that she was the "one thing wanting" to complete your happiness, and consequently took up her quarters in Buster-row. We know what you would say if we chose to listen to you. You would say that, having been fearfully bored by your month's seclusion from the world, you were glad to welcome anybody, especially as Mrs. Brown appeared to be equally desirous of a change of society. But you did not expect her to live with you for ever. Nor does she, Mr. Brown. Some old gees at stated intervals, devoting herself (as she believes) to the best interests of you and your family. If you swear again we shall be silent. You know, or ought to have known, that she was a strong-minded woman when you invited her, and that Mrs. Brown had married you not only for your manly form and highly-cultivated intellect, but also to be less under the control of her too-anxious mamma. But now Mrs. Brown is in a different position her own mistress, a sharer of your name and dignity. Granted, and it was to make her worthy of such high honour that Mrs Glastonbury sought to guide her by her experience. You know, Brown, that those chintz curtains in the drawing-room were bought at a sale in Corsam-street; and that Mrs. Glastonbury was perfectly right to make you aware how much you compromised your respectability by not having figured damask. She was quite right to explain to you how much cheaper it was to have a hack broughan for morning calls than to pay cabs and omnibuses. Has not Mrs. Brown the bracelet you bought for her, at the urgent solicitation of her mamma, when Mrs. B. was in an interest——we mean, just before baby was born? Why do you refer to that event with a groan? Are you so unnatural as not to love that bright-faced rosy-mouthed round limbed little rogue, who is crowing like Chanticleer? It is not the baby! Oh! yes; you refer to the month when Mrs. Glastonbury took the sole charge of your establishment. Who else would have done so? It was her experience, her quickness, that discovered those faults in the servants which rendered warning *from* all necessary. You had rather it had been warning *to* all. Then why did you not speak first? Surely that interesting time was a fitting one for Mrs. Glastonbury to appeal to your feelings, as a father and a husband, if she had occasion to do so. She never did like the odour of tobacco, and (Mrs. Brown had inherited her objection), therefore, if she implored of you to give up smoking at home and abroad, and retire from your club, the 'Ringdoves,' was it not her duty to do so? If you did get your dinner after the ladies up stairs, Mrs. Glastonbury was right to make you sensible of the rights of woman on certain occasions. You blame your mother-in-law for persuading Mrs. Brown to have the boy called "Plantagenet"—why? As Mrs. Glastonbury said, had they not made a sacrifice for your sake? Had they not "droppeddown"—that was the phrase—dropped down from Glastonbury to Brown? She was quite right to recover nominal ground when she had an opportunity. What right has she to oppose your having a latch-key? Good gracious, Mr. Brown! Didn't she know Mr. P—l—r, who was found by the policeman every night on his door-step and put into the passage and left on the door-mat by that civil functionary? Hadn't he a latch-key! Had not she heard Mr. F—s—e, in the late Mr. Glastonbury's time, say over and over again "that he did not mind another rubber, as nobody was sitting up for him, and he had a latch-key"? Say that, too, when she and Mrs. Brown—quite a child at that time—were yawning their heads off, but afraid to retire to bed in case the gentlemen would never go? Mrs. Glastonbury knows the value of sitting up too well to consent to a latch-key. Glastonbury paid pretty dearly for all his "twelve o'clocks," though he was the first to come away from all bachelors' parties to which he was admitted. Nobody had such shawls and nickknacks as Mrs. Glastonbury, and her husband was not considered a liberal man by those who knew him only in the City. You are silent, Mr. Brown, and we acknowledge the compliment. We hope we have proved our case in this instance. We have shown, we trust, that Mrs. Glastonbury is a lady much more sinned against than sinning; and we shall endeavour, in another paper, to satisfy Mr. Jones how much injustice he has done to his excellent mother-in-law, Mrs. Grose.

M. L.

The Steam-Collier Association at Newcastle-on-Tyne are preparing a boiler to test the various designs sent in to compete for the £500 prize offered by the association for the effectual consumption of smoke with a due regard to the economy of fuel.

New gold-diggings, from which a very successful yield is anticipated, have been discovered near the Ovens, in Victoria, and at the Murrell brook, near Sydney.

The further sinking of the artesian well on Highgate-hill has been at length abandoned by the Hampstead Waterworks Company, after having reached a depth of 1300 feet, the indications of the strata not being such as to afford promise of a successful result.

The Musée d'Artillerie, Paris, has just added to its collection the pocket-book of Prince Menschikoff, taken at the Battle of the Alma, and one of the Jacobi infernal machines, fished up in the baltic by the French sailors.

The *Northern Examiner*, a newspaper published in Newcastle-on-Tyne, which tried a twice-a-week cheap issue, and did not succeed, expired on Friday.

In the course of the last campaign in Asia, more than 60 000 images of saints were dispatched from St. Petersburg for the edification of General Mouravieff's army.

Embezzlement by a Bank Clerk.—Last Saturday afternoon William Lawton, a clerk in the bank of Messrs. Palmer and Green, of Lichfield, at the time the bank suspended payment, was brought up on remand before the magistrates of that city. The facts of the case have already appeared. Lawton had been a confidential clerk in the bank for thirty-five years; the greater part of that period at a salary of £400 per annum. About ten days after the stoppage of the bank occurred, he made a confession of the fact of his having embezzled between seven and eight thousand pounds, the greater part of it by re-issuing notes which were considered to have been cancelled. He was committed to take his trial at the sessions.

Hanging by Way of Joke.—On Tuesday last a boy, twelve years old, named Abraham Longman, residing at Southampton, suspended himself by a leather strap to a beam by way of a joke, in the presence of his brother, aged five years, which unfortunately proved fatal, as, before assistance could be rendered, life had become extinct. A similar joke was played by a boy ten years old, on Saturday last, at Bermondsey; but happily aid was immediately at hand, and he was cut down; when by the exertions of a neighbouring surgeon, he was at length restored to life, but not until hopes of reanimation had almost ceased.

## *EPITOME OF NEWS—FOREIGN AND DOMESTIC.*

Prince Albert has presented to the Oxford Free Public Library, through Alderman Sadler, a splendid copy of "The Natural History of Dee Side," published by command of the Queen.

The Emperor of Austria has ordered the construction of three screw-steamers of war, which are to be completed in the present war.

The Bonapartist "poets" are said to be busily engaged in the composition of poems intended to greet the Imperial infant.

General Alfonso la Marmora, commanding the Sardinian contingent of the Allied armies, was last week invested by her Majesty, in the Royal closet, with the insignia of the Grand Cross of the Bath.

The King of Saxony has conferred the Grand Cross of the Order of Merit upon M. de Seebach.

The Greek *Moniteur* announces that Riza Bey, the Ottoman Envoy, has been received in audience by King Otho, and has been presented to the Queen.

At the last sitting of the Imperial Academy of Sciences at St. Petersburg Lieut. Maury was elected corresponding member in the section of geography.

In Piedmont the rumour gains ground of an approaching marriage between King Victor Emmanuel and the Princess Marie Charlotte, daughter of Leopold, King of the Belgians. The Princess was born on June 7, 1840.

The two portraits of the Empress Eugenie by Winterhalter, which were in the Paris Exposition des Beaux Arts, are about to be exhibited in the rooms of the Vienna Society of Arts.

The Crimean medal distributed to the French troops in the name of the Queen of England is so heavy that it breaks from the pin which attaches it to the coat. Among the articles picked up and deposited at the Prefecture for the last week are no less than twelve of these medals, which have been lost by the soldiers.

The French Emperor visited the Palace of St. Cloud, last week, to give orders for different preparations to be made for the reception of the Empress, who, it is said, is about shortly to take up her residence there until her confinement.

The Choral Union of Dresden went in a body on the evening of the 16th ult. to serenade the Duke of Coburg, who returned on the following day to Gotha.

Lord John Russell presided at a lecture delivered last week at the Strood Mutual Improvement Society by Dr. Humphreys. The subject of the lecture was the working men of Britain.

The King of Naples has it in contemplation to form in his army some battalions of riflemen similar to the Chasseurs de Vincennes. They will take the name of Calabrian Chasseurs, and wear a costume similar to that worn by the Calabrian peasants.

Prince Jerome gave a grand ball on Saturday evening last, in his apartments at the Palais Royal. The Emperor, after leaving the Grand Opera, honoured the fête with his presence, arriving there about ten o'clock, with the Empress.

The two mansions in the Faubourg St. Honoré, Paris, which were occupied by the Russian Embassy and Consulate before the war, are now being repaired.

The Royal Society of Literature has elected Cardinal Wiseman a member of that society.

The French Minister at the Hague gave a grand ball on the 22nd ult., to inaugurate a fine portrait of the Emperor, which had just been placed in one of the *salons* of the Legation. The King and Queen of Holland, and the other members of the Royal family, Duke Bernard, and Prince Gustave of Saxe-Weimar, were present at this *fête*.

The first meeting of the Middlesex Archæological Society took place on Monday night at Crosby-hall, under the presidency of Lord Londesborough.

The little Count of Nervi consists at this moment of the Countess de Reuilly, the Duke and Duchess de Vermours, their sons the Duke d'Alençon and Duke d'Evreux, Baron de Chabannes, Aide-de-Camp of the Duke de Nemours; the Countess Mercier, travelling companion of the Queen; the physician of the family, and some inferior employés.

The French Emperor honoured the Grand Opera with his presence on Saturday evening at a representation given for the army of the East. Marshals Vaillant and Magnan, and General Regnaud de Saint Jean d'Angely, were present in uniform, with the Generals and superior officers of the Guard, seated in the *stalles d'amphitheatre*.

Sir Montague Cholmley is named as the probable successor of Mr. Christopher Nisbet in the representation of North Lincolnshire.

General Prince Gortschakoff, commanding in the Crimea, served at St. Petersburg on the 24th ult.

The King of Sardinia returned to Turin on the 24th ult., to hold, it was said, important conferences with his Ministers, respecting the peace negotiations.

The Hospodar Stirbey and Mr. Colquhoun, the British Chargé d'Affaires, are still at drawn daggers.

The Princess de la Moskowa (the eldest son of the late Marshal Ney), who is now a General of Brigade, with a command at Valenciennes, has had an apoplectic fit.

It is rumoured in the fashionable world that Prince Poniatowski is about to be married to Mdlle. Lehon.

The Carpenter Rowe, Esq., Q.C., of the Western Circuit and the Parliamentary Bar, is appointed Chief Justice of Ceylon.

The Queen of Spain has conferred the Cross of Charles III. on Don A. de Guzman, the oldest actor of Spain.

General de Martimprey, Chief of the Staff of the French Army of the East, left for the Crimea after the close of the sittings of the Council of War.

The requisition of the electors of Edinburgh to Mr. Adam Black has already been so numerously signed as to ensure the return of that gentleman.

A letter from Paris, in the *Independance* of Brussels, states that pages are about to be created in the French Imperial household.

M. Niesard resumed his lectures at Paris on Saturday last. The room was full, three-fourths full; those who were present abstained from any demonstration.

The Hon. Colonel Butler is seeking to set aside the verdict obtained by the present possessor of the title and estates of the Mountgarrett peerage. On Saturday the case was reopened in the Court of Exchequer on a bill of exceptions to the reception of evidence in the last trial, in which Lord Mountgarrett, the defendant, obtained a verdict.

The Count and Countess of Chambord have returned from Modena to Venice.

Mademoiselle Rachel is reported to have left Havannah for Europe. Her health has much improved.

Jenny Lind has given forty guineas to the Cheltenham Hospital.

Mr. Malcolmson, of Porlaw, Waterford, the eminent steamship proprietor, is about to place a line of screw steamers between Liverpool and New York, touching at Queenstown on the outward and home voyages.

The Polytechnic School at Carlsruhe is said to contain amongst its 407 pupils, English, French, Russians, Poles, Norwegians, Swedes, Belgians, Dutch, Swiss, Italians, Hungarians, Gauchans, Moldaves, Serbs, Americans, and some youths from the East Indies.

M. Thiele, of Copenhagen, has published a work entituled "Theory, Art, and Copenhagen, from 1839 to 1854." It contains the correspondence of the great artist, and numerous *facsimiles* of his original sketches and designs.

Nine new statues have been placed on one of the galleries of the Cour Napoleon III. at the Louvre. They are those of Mathieu Molé, Turgot, Saint Bernard, Lafayette, Bossuet, Pascal, Bourdaloue, Racine, and Voltaire.

A Royal decree, issued at Stockholm, orders the immediate raising of 500,000 dollars banco for military purposes, on the extraordinary credit voted last year for the defence of the kingdom.

An official notice from the Venezuela Consul announces that the guano islands of that Republic in the Carribean Sea are transferred to an American association.

The Frankfort police have placed seals on the printing-office of the ultra-democratic paper the *Volksfreund*.

An order has lately been given to the dockyard at Cherbourg to construct three boats for landing troops, each of which is to carry a heavy gun of long range.

Upwards of 10,000 fish reared by the artificial process, which has been so successful, have been turned out into the waters of the river Dee.

Piedmont has, within the last six years, constructed 700 kilometres, or nearly 150 miles English, of railways, the receipts of which in 1855 amounted to 10,297,758f. Messrs. Stephenson, Sauli, Rasco, and other engineers of note, are now making surveys for driving a tunnel through Mount Cenis. M. Rasco is of opinion that this stupendous work may be effected at a cost of only 25,000,000f.

## JUVENILE REFORMATORY SCHOOLS.

MANY years have elapsed since men of foresight warned society that an expenditure on schools was a wiser investment than an expenditure on gaols;—that the true end of punishment was not vengeful, but reformatory;—and that the children of vice and destitution, when arrived at adult age, would lift their violent hands against those who had neglected the moral culture of their helpless and unfriended youth. These admonitions were unheeded both by the public and the Legislature. Reliance was only placed on punitive measures, and statesmen clung to prisons, hulks, and penal settlements. The spirit of progress has at length subverted these antiquated forms and processes; and it is now enacted, by 17 and 18 Victoria, c. 86, that juvenile offenders may be committed by the magistrates to reformatory schools, and be detained there for prescribed periods. It is also provided that Government shall be enabled to pay 5s. per week for every child sent to these schools, and recover that sum from the parents, who are justly held to be responsible for the crimes committed by their offspring against society; nor can parents take them away from the schools to which they are committed with a view to evade payment. On this important subject a great meeting was held, about a fortnight since, at Newcastle-on-Tyne. Earl Grey filled the chair, supported by the leading gentry of Northumberland, Durham, and Berwick-upon-Tweed; and were we to print the names of the eminent persons who attended, or sent letters pledging themselves to support the movement, we should occupy nearly one of our columns. Our purpose is to give the substance of the facts and arguments adduced.

The law, as it now stands, only permits those children to be sent to a reformatory school who have been convicted of some serious offence, and sentenced to a fortnight's imprisonment by a magistrate. Earl Grey justly remarked that this rule "was hardly consistent with the very principle of the law. We deal with these children not as culprits, but as victims of a treatment, the consequences of which we wish to remove. If so, surely the sooner society interposes, the better. You should not put off interference until the child has become perhaps hopelessly corrupted, or so corrupted that the task of reforming him has become infinitely more difficult than before." His Lordship contended that, so soon as parental neglect could be proved, the child should be removed. Although Government has given power to send neglected, or rather convicted, children to school, it has provided no means by which the schools are to be built and supported; and his Lordship proposed that they should be erected and maintained by a general assessment, like our prisons, penitentiaries, and workhouses.

The Hon. H. G. Liddell, M.P. gave some interesting statistics of the state of crime in the county of Durham. The number of prisoners committed in 1855 was an increase over the number committed in 1854 of 268, although in the former year the demand for industrial labour had been very brisk, and wages unprecedentedly high. On referring to the table of juvenile offenders of sixteen years and under, male and female, admitted to prison during the last five years, the total number was 753; but, deducting from that total 201 recommittals, the number still remains at 562, or an annual average of a little more than 112 criminal children.

The Rev George Hamilton, now Vicar of Berwick, but who had served the office of Chaplain to Durham Gaol for six years, compiled the statistics of crime in Northumberland and Durham with each other and with the rest of the kingdom. The whole kingdom is divided into 41 districts for these returns:—Middlesex has one male juvenile criminal in every 782 of the population; Somerset, one in 824; Surrey, one in 960; South Lancashire, one in 1075; Northumberland, one in 1176; while Durham, at the bottom of the list, marked 44, has only one in 4958. He attributed the relative innocence of Durham to the fact of its population being scattered in villages, where the receivers of stolen goods could not well secrete themselves; and, alluding to the difficulties of transportation into penal servitude, forcibly remarked, "If we took care of our youth we would get rid both of penal servitude and ticket-of-leave men."

As a proof that destitute children have already begun to appreciate these asylums, where both body and mind receive a healthy nutriment, Mr. Hodgson observed that, in a reformatory institution which he had visited in company with the Dean of Durham, 400 persons had been taken in—every one of them subject to a severe penalty for a fortnight before he could be received; the ac mission was limited to 400 persons; but during the few years it had been established, 8000 applications had been made for admission in these reformatory schools the necessity of classification was strongly insisted upon; and, in reference to the Newcastle institution, Mr. Burden Sanderson observed that when a boy of thirteen or fourteen years of age had undergone several terms in gaol, came into the institution, "he came there like a hero from the Crimea, telling all he had seen doing, the names of all the boys who were in gaol, why they were there, and giving a history of their intentions when they came out."

Mr. Hodgson Hinde raised an objection which he himself overruled, and it is proper to notice it. He stated that many just and benevolent persons, who agreed that education was one of the greatest blessings, nevertheless asked—"Are you to go out of your way rather to give it to the criminal than to the person who has committed no crime? And are you not in fact, to give it to the well-behaved and deserving youth until all those who come under the criminal category have been duly and fairly supplied with education?" Mr. Hinde admits the force of the argument, if the principle of benevolence alone prompted the establishment of reformatory schools; but that he denies, and advocates for establishment on the principle of policy, since we are all interest in the prevention of crime.

Mr. Pease, of Darlington, hoped that the system would be extended to girls as well as to boys, as the mothers of the next generation, noting the axiom, "Who rocks the cradle rules the world."

We take this opportunity of referring to the efforts of Mr. Edward Hardcastle, of Manchester, in reforming juvenile criminals. It appears that the number of committals to the New Bailey in the year ending 29th September, 1855, was 547 males, under 17 years of age, showing a large increase, the number having been 478 in 1854, and only 365 in 1853. In the city gaol the number for the two years 1854 and 1855 was the same—that is, 327 in each of those years; but as this includes recommittals in 1855 against 58 in 1854, the number of individuals committed in 1855 was 273 against 269 in 1854. Of these, 22 were under twelve years of age, 61 between twelve and fourteen, and 190 between fourteen and seventeen years of age. To a great has been the increase of crime in Manchester and Salford that it has been necessary to expend £24,000 for the enlargement of the new city gaol. Mr. Hardcastle states that case after case has been brought before the committee of the Angel Meadow and Ancoats Ragged and Reformatory Schools of young girls released from prison earnestly desirous of moral culture, but having no means of escape from their former associates, no hope of obtaining honest employment, and no prospect before them but that of an early return to gaol. Mr. Hardcast e says, that "a slight acquaintance with what may be called the criminal population of Manchester will suffice to show that the distinction between conviction and non-conviction is little more than that between detection and impunity."

It has often been remarked that the Goths and Vandals are encamped on our territory. We have, in truth, two populations within our shores—the conservative, the other destructive; and, though the latter are the agents of mischief, the former are responsible for that demoralisation and predatory habits. Truly has Robert Hall observed, that in the moral system it is a part of the wise arrangements of Providence that no member shall suffer alone; that if the lower classes are involved in wretchedness and beggary, the more elevated shall not enjoy their prosperity unimpaired." Great and successful have been the efforts to improve the culture of the soil and the breed of animals; but, in comparison, how insignificant have been the attempts to improve the race of men and women! This negligence is in itself a crime; and none ever brings its punishment. There may be instances so savage and intractable as to resist all moral training, but such cases are exceptional: for there are few indeed who are insensible to justice and kindness. The poor maniac used to be scourged, and his madness became incurable; gentle treatment has restored the equilibrium of many an unbalanced brain. We have tried the punitive system in almost every form on the criminal, and only hardened him in his guilt. Happily we have now grown wiser, and discovered that virtue in the adult depends on shielding the child from vice. The Reformatory School, when made a national institution, will raise up a new generation, before whom the treadmill and the hulk will disappear, and the Goths and Vandals will evacuate our territory.

## BANK QUESTION.

*(To the Editor of the* ILLUSTRATED LONDON NEWS.)

EVERY one who understands the subject must be struck with the singular similarity between the principles of the old Corn-laws, and the arguments by which they were supported, and those of the Currency System which is sought to be maintained. I have put a few of these in opposite columns:—

| CORN-LAWS. | CURRENCY-LAWS. |
|---|---|
| 1. The object was to fix the value of corn, independent of the laws of supply and demand. | 1. The object is to fix the value of gold, independent of the laws of supply and demand. |
| 2. These laws were carried and maintained by the influence of the agricultural class, whose rents were thereby increased | 2. These laws were carried, and are maintained by the influence of the moneyed class, whose profits are thereby increased. |
| 3. These laws inflicted far greater injury on the people than they conferred benefits to the landowners and agriculturists | 3. These laws also occasion far more misery and ruin to individuals than profit to the millionaire. |
| 4. The agriculturists induced the people to believe that a high price of corn was beneficial to them; for if corn was low, their wages would be decreased in greater proportion. | 4. The moneyed class have induced the agriculturists to believe that it is for their interest the present system should be maintained. |
| 5. On more than one occasion the high price of corn occasioned fearful riots. | 5. On more than one occasion the high price of gold, has brought the country to the verge of national bankruptcy. |

Since the Corn-laws have been abolished, every sensible man wonders they were ever passed, and that they continued in operation above thirty years—the same feeling will be produced after the present Currency System is swept away; and it cannot be too strongly impressed on the minds of the landowners, that the Corn-laws and the Currency-laws were a matter of bargain and sale—the landowners receiving the Corn-laws in consideration of their submitting to those on the Currency.

We all remember the powerful effect the Corn-law Catechism had in giving the *coup de grace* to the fallacies which were set up to support the Corn-laws: might not the same plan be tried with the Currency question. Here is a beginning.—Faithfully yours, EX. M.P.

### CURRENCY CATECHISM.

What is Currency?—Currency is of two kinds, general and partial.

What is general currency?—That which is established by law, and made a legal tender for a certain measure of value.

What is partial currency?—That which individuals choose to accept instead of the general currency as country notes, bills of exchange, promissory notes, cheques, Exchequer Bills, &c.

What is the use of a measure of value?—To prevent the necessity of barter and facilitate transactions between man and man.

What is the difference between the terms "measure of value" and "currency"?—The same that there is between a yard measure and a yard of silk or other article.

Is not a sovereign both "the currency" and the "measure of value"?—Only when it is of a certain weight. It is the weight which renders it the measure of value. No one is obliged to take a light sovereign.

Is there any difference between the practical working of the general paper currency, and of the partial one in bank-notes?—Yes, one of the utmost importance, but which has been kept in the background by the bullionists, for it not only upsets many of their dogmas, but affords the best solution for the problem which the Act of 1844 has been incapable of solving.

What is that problem?—That the currency should expand or contract according to the wants of the country.

Does the difference extend to a) country notes or only to those of a first-rate character?—To all without exception; the difference is, *that the amount of all country notes naturally and inevitably adjusts itself to the currency wants of each district*, whereas the general paper currency, as the Bank of England note, cannot possibly effect this important object.

By what means is this object effected?—It effects itself according to the laws of supply and demand. A basin will not contain more than a certain quantity of water, and if it is the interest of parties that it shall always be full, full it will be.

Then can you give a very good illustration; but how is the object effected?—In this simple manner: suppose three or four banks in a country-town having a sufficient paper currency, and one of them discounts a bill for £10 000, or lends that money on mortgage using its own notes. A B, who receives them must, of course, part with them to other persons, and such notes, not being wanted for currency, are taken to the bank which issued them for payment.

How would such payment be effected?—By the State paper.

If there was only one bank in the town, would the system operate in the same manner exactly: if the average circulation of notes required by a district was £10 000 in bank notes; if an additional £1000 was issued by a loan or discount, it would infallibly return before the end of the week. People cannot use a greater amount of currency than is necessary for their wants, any more than they require food after they have dined

Was not the principal object of the Bank Charter Act of 1844 to expand or contract the currency according to the wants of the country?—Yes, it was the sole avowed object; but, instead of ascertaining when were the wants of the country by the simple and intelligible mode of letting the people decide what was the demand, our legislators decreed, or, rather, Lord Overstone decreed for them, that the quantity of currency required in each district was determined by the quantity of gold in the Bank coffers.

How did his Lordship arrive at such a conclusion?—I really cannot say, except upon the American plan of telling the length of a man by the length of his speech.

But surely Parliament would require some reason to show how the currency wants of a mining district in Cornwall, or an agricultural parish in Yorkshire, could be determined by the quantity of gold in the Bank coffers in Threadneedle-street?—Yes; one or two did venture to ask the question

And how was it answered?—Why, by half-an-hour's speech on the question of exchange, which had just as much to do with the question as the gold in the Bank. The country gentlemen did not understand the question, and voted with those who called themselves safe men.

Are all parties agreed as to the article which would be the best measure of value?—No; there are many opinions on the subject: gold, silver, corn, labour, and other articles, have each been advocated as the best measure of value, on the ground that their value was least fluctuating.

Have all parties agreed upon the article which is best adapted for currency?—No; there are also different opinions on this subject; although, on account of the necessity of its being portable, only three articles—gold, silver, and paper—are named as the most eligible for currency.

Cannot disinterested persons agree upon some element or test, which ought to be the characteristic of the best article of currency?—Yes; they have long since agreed that the test of the best article of currency should be that it is less liable to fluctuation than any other; if, in addition to this, it were portable, it would be the perfection of currency.

How can it be difficult to determine whether gold, or silver, or paper is least liable to fluctuation?—Nothing can be more easy. The price or value of each of these articles in the London market, as well as abroad, is as well known as the price of corn.

Which of these articles have fluctuated the most in value?—First silver (especially of late years), then gold

And then paper?—No; paper has never fluctuated in value; although only the representative of gold, the £5 note has always remained of the same value, although the weight of gold it professed to represent was of more or less value

If paper never fluctuates in value, and is so portable, why is it not the currency of this country?—Because it would be contrary to the interest of the most powerful class in this country; namely, the moneyed class.

Surely no class in this country can compel the others to submit to bad currency laws?—They do not think of compelling; they obtain their end by the more certain mode of deluding their opponents. As the landed interest cheated the working classes into believing that their wages depended upon the price of corn, so the moneyed class cheat the landowners into believing that the present system of currency is for their benefit.

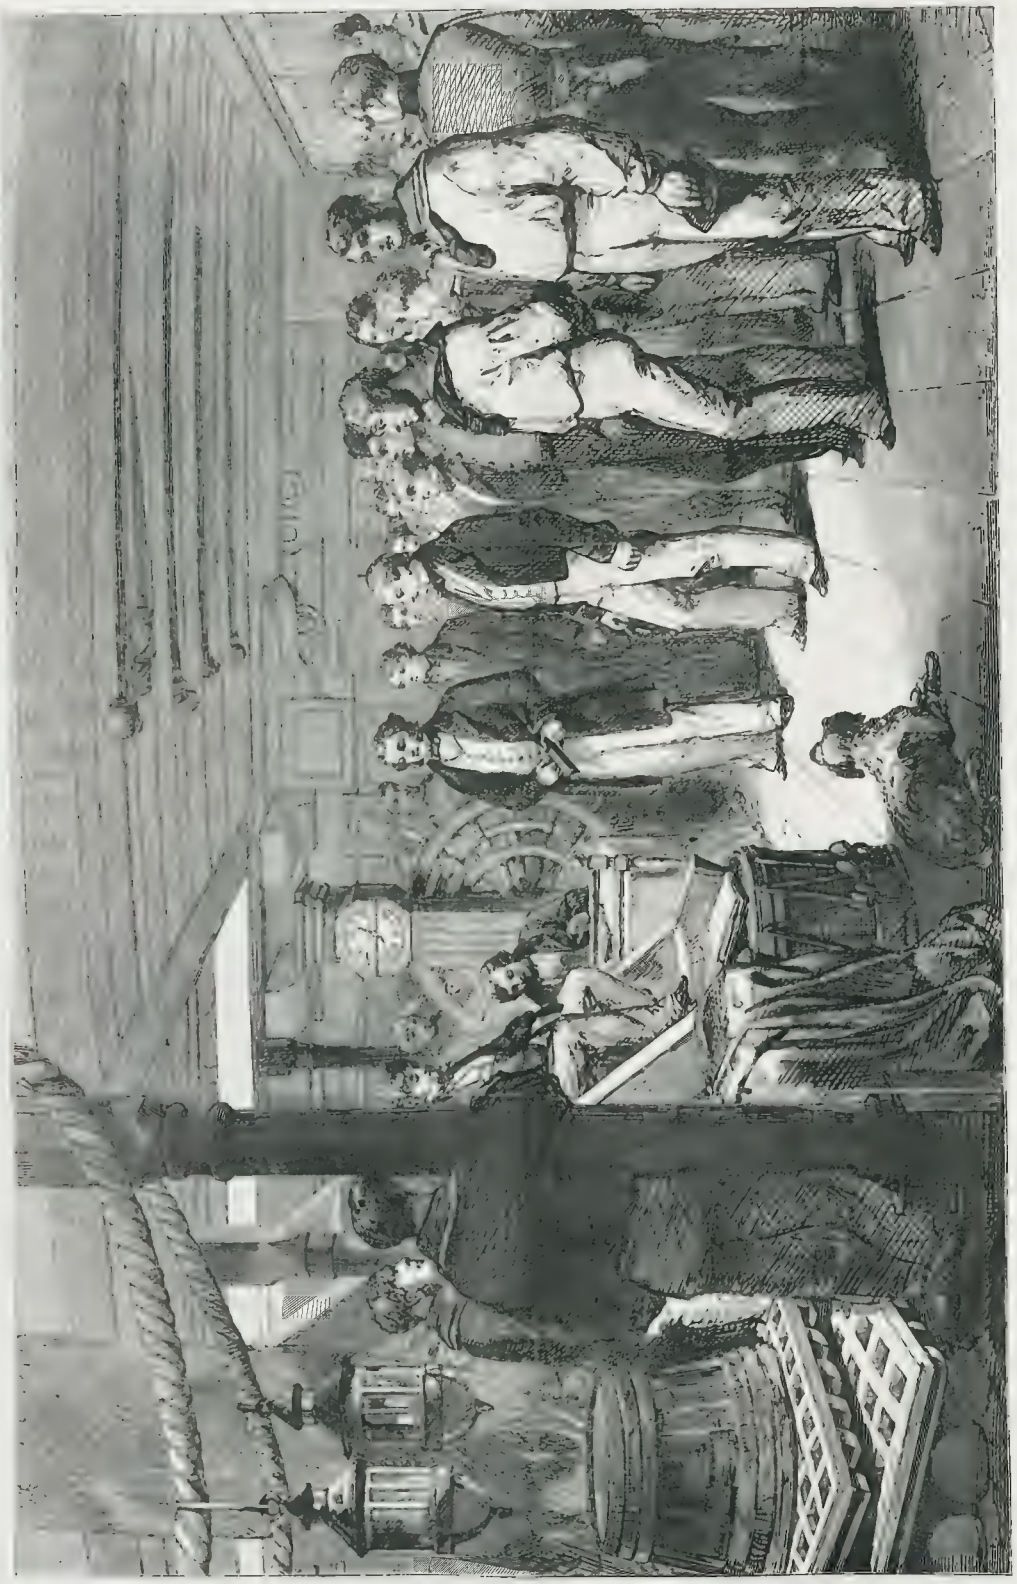
Is the interest of the landowner and of the moneyed class different on the subject of the currency?—Very different on some important points, although similar in others. In fact, their interests on the subject of the currency stand in precisely the same relation to each other as those of the corn producer and of the corn consumer previous to the abolition of the Corn-laws.

*(To be continued.)*

## SOIREE TO THE MEMBERS FOR MANCHESTER.

ON Tuesday evening last the annual soirée to the members for Manchester before the assembling of Parliament was held in the Corn Exchange, Hanging Ditch, which was densely crowded, including a sprinkling of ladies; there being seats provided for 800 persons. From five o'clock till six there was a rattling of tea equipages, &c., which subsided towards six o'clock, the hour fixed for the chair being taken. After some introductory remarks in laudation of the Manchester party by Mr. George Wilson, who presided, Mr. T. M. Gibson addressed the meeting at considerable length in vindication of the support he had given to the Peace party in the House of Commons. Mr. Bright, who was received with several rounds of cheering, made a long speech against the war, which, he said, had been a monstrous blunder from the beginning. We had blundered into the war and it seemed as if we were going to blunder out of it. The lying newspapers tried to make their readers believe that Russia was greatly humbled, and that she had accepted terms which would impose a complete check upon her in future. He contended that that was all a delusion. The terms of peace that were accepted by Russia were very much the same as the Four Points proposed last year. He then went on to abuse the newspapers for their attacks upon the Peace party

Now, take the tone of the newspaper press (laughter); these gentlemen who come out, many of them every morning, great numbers of them every week, and who do not scruple, in the most violent manner, to misrepresent the opinions, to attack the sentiments, and to vilify the motives of anybody who happens, as I have, to oppose them upon this war, they turn round with a face of effrontery perfectly inconceivable if anybody says a single word against them (Laughter). I suppose, at any rate, if I only speak once in two months I have a perfect right to say a little in my defence; and these men attack me every morning (Laughter and prolonged cheering). Now, what have they told you? They have told you—and they made many men believe—I presume they consulted the Lord Advocate of Scotland—there are other means of convincing Lord Advocates, I know;—they have told you that this Russian Power was a colossal power, which not only threatened Turkey—poor, emaciated, degraded Turkey—but robust France and robust England. There was not a soul of



SUNDAY MORNING SERVICE IN THE BALTIC FLEET. (SEE PRECEDING PAGE.)

THE FOURTH DIVISION BURIAL-GROUND, ON CATHCART'S HILL, CRIMEA.

## THE BURIAL-GROUND ON CATHCART'S HILL, IN THE CRIMEA.

This Illustration possesses a melancholy interest, and will naturally be appreciated by those in England whose relatives and friends have fallen in battle and at the siege, and now rest upon Cathcart's Hill. The Correspondent to whom we are indebted for this Sketch has rendered the deceased officers' tombs, with their names, according to the list at the foot of the Illustration.

The tombs of the officers of the 68th Regiment are alike—red Maltese marble; those of the 57th, white marble; and the 63rd, stone crosses. A very handsome memorial is shown, in jet-black marble, to Sir R. Newman, Grenadier Guards The monument erected to General Cathcart by the officers of the Fourth Division is one of the finest works; and the stone slab to poor Curtis, of the 46th, has been much admired. The situation is on the highest ground occupied by the Allied armies, commanding a view of the remains of Sebastopol.

## SYRA, IN THE ARCHIPELAGO.

Syra, one of the islands of the Grecian Archipelago, lying among the Cyclades, twenty miles north-west of Paros, has since the Greek revolution attained a rank for commercial importance next to Athens It is the residence of consuls of most European States, and a principal station of the Mediterranean steamers going to and from Constantinople. Hence Syra has been a point of considerable interest during the progress of the war.

The island has an area of fifty five square miles, and a population of 30,000. As our Artist sketched it from the sea, its mountainous surface, rising northward 4000 feet, had a striking appearance. Many parts are fertile, producing corn, wine, figs, silk, and cotton. The capital - Syra, or Hermopolis—lies on the eastern shore, around its harbour, at the foot of a conical hill, whereon was built the ancient town

In a pleasant volume just published, entitled "Greece and the Greeks of the Present Day," from the French of Edmond About, we obtain a passing glimpse of Syra. "I have known many travellers," says the author, "who had seen Greece without leaving the deck of the steamer which took them to Smyrna, or to Constantinople They were all unanimous as to the sterility of the country Some had landed for an hour or so at Syra, and had finally convinced themselves that Greece has not a single tree. I confess that Syra is not a terrestrial paradise; you do not see there either river, or stream, or brook; and water is sold at a penny a glass. The few trees Greece cherishes in her valleys, far from the sea breezes, are not visible to

SYRA, IN THE ARCHIPELAGO.

the passing traveller. But the interior of the country must not be judged of from the coasts, nor the continent from the islands." M. About adds a piece of useful information :—" Travellers who go to Greece without knowing a word of Greek need not fear a moment's embarrassment; they will find already at Syra, not only Antonio, but five or six other servants, not less gilded, who speak French, English, and Italian, and who will conduct them almost without cheating them to one of the hotels of the town."

# Memorabilia,

## LITERARY, ANTIQUARIAN, SCIENTIFIC, AND ARTISTIC.

*" A little chink may let in much light."*—OLD PROVERB.

### RARE OR UNPUBLISHED LETTERS.

In the volume of Haslewood's "Life of Ritson," in the Grenville Library, there are several MS letters and observations relating to the subject of the biography, and among them the following characteristic epistle from Francis Douce, which we believe has never before been published :—

MR DOUCE TO MR HASLEWOOD.

Kensington, 5th Nov., 1823.

My dear Sir,—I have given a very attentive perusal to your "Life of Ritson," and am very glad to think that it is not to go to the *Gent. Mag.*, a place quite unworthy of so interesting and excellent a memoir. I could certainly have added more than is contained in the annexed paper and pencil notes in your MS.; but I fear you will think I have added more than enough. Could I beg of you to dispose of it in any way you think proper, reserving a part, or destroying the whole. You have left little if anything undone that is fit for the world to know, and have mixed up the faults and good qualities of poor Ritson in a very just and skilful manner. The summary of his character at the end is in a masterly style, and very much to my satisfaction; for, in spite of himself, and what I might very justifiably term his ingratitude, I really loved the man to an extent that he little dreamt of.

The concluding sentence appears, to me at least, rather obscure. It is not easy to perceive what particular edition of Shakespeare is alluded to, nor, indeed, how the sharp and severe animadversions of Ritson should have operated to so great an extent as there suggested.* My copy of Gammer Gurton a Garland has no date, and the diminutive (Ritsonian) form induced me to take the liberty of substituting 32mo for 12mo. Your fears about Steevens' * * * * are certainly well founded in these miasmah and methodistical times.†

* * * * * * * *

But even our Bibles have been reformed and purified, as appears by a recently-published Bible, omitting all that might offend or corrupt our modern schoolboys, and I am still apprehensive of an inquintorial vint from a committee of the blessed Society for the Suppression (or as my friend Roger Wilbraham calls it "propagation") of Vice, to burn, or at least deface many pages in certain editions that I possess of the above Sacred Volume.

I shall conclude with a few scraps about poor Ritson, as you take so much interest in all that concerned him; but these are only for your private ear. His father left him a debt of £50, which I think he said he paid. He was himself almost always in debt, and had lost £1000 by speculating in the Funds, and with money that he received as Bailiff of the Savoy.

He professional gains were scarcely adequate to his support, and I know that he underwent many privations that rendered him unhappy.

Though he did not indulge in animal food, he too often did in wine, and this made him ten times more irritable and quarrelsome than usual. I was returning with him from a dinner at Twine's, at Bush-hill, when he stopped the chaise near a crowd assembled about a Mhodist fie.d preacher, and in the most vehement manner, and with as loud tones as he could use, poured out a torrent of abuse against the preacher, so that I was fain to push on to escape the vengeance of the mob that was gathering round us, and which he would have braved.

It would have been dangerous to have struck him in any dispute, as I believe he always carried a dagger about him, with an intention to defend himself. He had a collection of daggers, some of which were on the walls of the rooms I conceive that his unfortunate insanity was brought on by a want of sleep, that he had a long time been almost whol y deprived of.

I remain, my dear Sir, very faithfully yours,

J. Haslewood, Esq. F. DOUCE.

### NOTES.

TRUNK-HOSE.—The following amusing anecdote is from Peck's "Desiderata Curiosa" :—"When the fashion for wearing trunk-hose came up, some years men used so to stuff them with rags, and other such-like things, that you might find some who used such inventions, to extend them in compass with as great eagerness as the women took pleasure to wear great and stately verdingales. For this was the same affectation, being a kind of verdingales-breeches. The author of the 'Speculum Gallant' tells us a story of what happened to one who thought he excelled much in this fashion. He had stuffed a follado of velvet, which he did wear, with brunes; and being set in seemly manner among some ladies to whom he desired to show his bravery and neatness, as he was talking merrily of something that pleased him, he was so taken with the delight which possessed him, that he could not take notice of a small rent which was made with the nails in the top, in one of his wrie pockets of brunes. (The harm, indeed, was but in his hose, yet he found it afterwards in his heart) For as he was moving and stroaking himself with much gallantry, the brunne began, by little and little, to drop out, without his perceiving it. But the ladies who sat over against him, and saw it (it being, by his motion, like meal which cometh from the mill as it grindeth), laughed much at it, and looked one upon another. Our gallant also (supposing that his good behaviour, mirth, and sporting was pleasing to them) laughed with them for company. And it so pleased him that he took yet more pains to be merry. and the more he strove to delight the company, the more the male did grend forth the braune (the boy's p ay of bomb-barrel would have fetched it out rarely). So that the laughter increased still, and he appeared still as confident as any of the whole company, till he espied the heap of braune which came out of his hose And then he began to recall himself, and, dissembling his shame, took his leave and departed.—HOLL.

THE AUTHORITY OF THE LORD MAYOR OVER THE TEMPLE DEFINED, WHEREUPON HIS LORDSHIP GETS DRUNK IN A PET.—I send you the following extracts from the Hon Roger North's autobiographica. ms unscript circa 1790—in Baker's Collection. After giving an account of the commencement of the great fire which took place at the Temple, where he was then in chambers, he thus proceeds :—" As to the care about the engines, which on that and the season (winter) would permit—engine, water from the Thames, and, at last, blowing up. Several grand men and officers of the Guards, with soldiers, came by direction from White-Hall, where the light was seen in its most terrible posture The E of Craven, who was ever seldom absent on such occasions the D of Monmouth, who was setting up to be popular, and the E of Feversham, who, by adventuring too far upon a blowing-up, when it was thought the train must, it happened to take, and a beam fell on his head for which he was obliged to undergo the Trepan; and though dangerously wounded, recovered. About midnight, the Lord Mayor and Sheriffs came downe, but the Gentlemen of the Inner Temple affronted him, not owning his authority there, according to old Tradition among them, and would not be help, rather than comive at such a Presedent to be made in Derogation of their Liberty. Whereupon, they beat down the Sword, and would not permit it to be borne erect. At the, he went over the way, to a Taverne, where some say he first got drunk, and then returned, disowning the Quarrell, as mad coming from the City, and some of his people were so kind to say, 'Let's bow 'em up round, and save Fleet Street.'"—E. K.

SQUABBLES AT DULWICH COLLEGE.—"AS IT WAS IN THE BEGINNING, IS NOW, AND EVER SHALL BE."—North, having been appointed Standing Counsel, and Steward of the Courts to Sancroft, Archbishop of Canterbury, gives this account of one of the cases in which he was emp oyed. This prediction has been fully verified; your own columns have shown within the last few weeks that the college dispute is as brisk as ever. "The first thing the Archbishop concerned me in, was a Visitation of Dulwich Colledg, which is a lay Hospital founded by one Allen, for support of his kindred and name. We found that, which was impossible to correct, an Invincible humour of Quarrelling among themselves. The Master and Brothers, sometimes one, and sometimes the whole, were perfect mad. The business of the Colledg, as the making leases, and disposing the revenues, which was like interest in the world abroad, the true Bonfefon managed accordingly; and often the neighbours troubled with their disorders, and forc'd to come in, and appear to prevent worn Inconveniences than scolding and railing, which was the daily conversation, we found; ever since the Foundation, it had been so, and saw no cans to think it would ever be otherwise. Whereupon, the matter fell, and nothing could be done, unless the nature of the men could be altered. His Grace used all the meanes and Authority he had, to coerce the contentious humour of this Colledg, but did not proceed to any legall executions upon them, nor had he, though Visitor by the Statutes, sufficient power to make an effectuale Reforme of them."—KELLEN.

HOLLAR'S ENGRAVING OF GREENWICH.—An impression of the engraving by Hollar of Greenwich has been recently purchased by the British Museum, of considerable interest, having on the scroll, in the left-hand corner, where the four Latin lines by H. Peacham are usually found, the following dedication to Henrietta Maria, Queen of Charles I. :—

Serenissimæ Potentissimæ et Excelsæ Principissæ Henriettæ Mariæ, Dei gratia, magnæ Brittaniæ Francie et Hiberniæ Reginæ, hanc Grenovicensis tractus Tabellam, manu sua delineatam Wenceslaus Hollar, Bohh, Excellentissimi Arundeliis et Surriæ Comitis Custator humillime dedicat, consecrata Anno 1637.

Vertue, who had access to all the celebrated collections of Hollar's works when engaged in compiling the catalogue of his engravings, was evidently unacquainted with the print in question in this particular state, for he describes it thus, "A Prospect of Greenwich for many miles to London," &c. (near a yard long) *with four Latin verses thereon.* Neither was it in the fine collection formed by Mr. John Townsley. No other similar impression being known, is it possible this was the one specially presented to the Queen, or was the dedication suppressed on account of her Majesty's unpopularity at the time?—W. C.

A BROADSIDE BY JOHN TAYLOR, THE WATER POET.—The following is a description of an exceedingly rare, if not a unique, broadside now for sale, and which we believe was purchased at the Stowe Sale. It is called :—

An Unpartiall Memorial of the late Valliant and bloody bickrings, and Battailes, betwixt the Warlike Dynasts of the Hollanders, on the Coast of England, or Kent; which Battailes were manfully fought on two severall Fridayes, the 8th of September, and the 11 of October last, 1639. there were in the 66 Spanish Ships, 1824 peeces of Ordnance; in whom the 120 Sayle of Dutch men were not inferiour, in number or Vallour: as these following lines doth demonstrate.

Then follow 132 lines of verse, beginning—

Great Neptune late, prepar'd a bloody Feast,
And mighty Mars invited was a Guest,

And ending—

Whilst Christians thus doe make each other sad,
The Divell, and the Turke are onely glad.

By John Taylor, (etc).

FINIS.

Printed at London, by Lo. 1639.

In three columns, the first containing 38 lines, the second 50, and the third 44 (total 132). The upper portion is a view of a naval engagement, at the top corners of which are two portraits in ovals—the one to the left being Martin Harper Trvmp, that on the right Don Anthonio de Ocqvendo; and just beneath is a cartle with "Douer" over it. This curious production of the Water Poet is not in the folio edition of his works, nor, as far as we can learn, is it mentioned in any list of them known to collectors.

### QUERIES.

CRICKET.—Has history preserved the name of the man who invented the game of cricket? Strutt gives no other account of it than that it gradually arose out of ruder games of ball which preceded it. But, surely the presentscientific game, with its accurate d.stinctions and skilful arrangements, must have had a more definate origin than that. Considering its national character and its recent existence, one would suppose its history might easily be g.ven. —BEEM

GREAT BED OF WARE.—What is the date of the Great Bed of Ware? For whom made? and, is there any account of its origin extant?—MIRATOR.

CHAPTER AND VERSE.—What, is the origin of the expression "Chapter and Verse"?—JACOBUS

[According to D'Israeli it originated just before the civil wars under Charles I., from the frequent use of quotations to the Bible by those whom South called, "Those mighty men at chapter and verse."]

RITSON'S SHAKESPEARE NOTES.—The last lot in the sale of Mr. Ritson's library consisted of "Shakspeare," by Johnson and Steevens, 8 vols., containing a great number of Manuscript Notes, Corrections, &c., &c., together with three volumes of "Critical Notes," by Mr. Ritson, prepared by him for the press, intending to publish it. This sale was as far back as 1803. But I am not aware that the manuscript in question has ever turned up. Perhaps some one of your innumerable readers may throw a light on their present "whereabouts"?—D. D.

SWEARING ON THE NEW TESTAMENT.—A Subscriber requests to be informed at what period the form of administering an oath by giving the witness the New Testament to kiss was first adopted in England. Also, whether the Jews had any popular form of oath in their law trials? -AN ENQUIRER.

CHARTER HOUSE.—By the terms of the charter, no candidate was eligible for a Poor Brother if he possessed £24 per annum, or an estate in value worth £200. This was in 1627. Would any of your correspondents inform me what the equivalent would be, respectively, of these sums in money in our day?—A FRIEND OF THE POOR BROTHERS.

WIFE 'SELLING.—English journals notify so frequently public sales of wives, with halters round their necks, by their husbands, that I have found it difficult in many parts of the Continent to convince foreigners, that all such transactions were illegal, and were punishable as misdemeanours *contra bonos mores.* I wish, therefore, some one of your many correspondents would be so good as to state the origin and object of that indecency; and whether at any period, and to what extent, it was countenanced by the law of England. Happily it does not appear to have ever extended to Scotland, Ireland, or perhaps to Wales.—GEO. BAILLIE, Glasgow.

### ANSWERS TO QUERIES

CIVIC POETS.—In reply to the queries of your correspondent "CIVIS," in the Number for December 22, on this subject, I beg to say that the first establishment of a City laureate is involved in doubt. The follow ng is the most complete list I have been able to obtain:—George Peele, John Taylor, Anthony Mundey, Edward Gayton, Thomas Decker, T. B.* Thomas Middleton, John Tatham, John Squire. Thomas Jorson, John Webster, Matthew Toulman, Thomas Heywood, and Elkanah Settle, with whom the office expired.

GUISERS.—A correspondent in your "Memorabilia" requests some information concerning the origin of the masking and amateur acting of our Scottish boys at Christmas. These "guisings" (for that is the proper spelling) are nothing more than a remnant of those mummings or *disguisements* which, some three or four centuries ago, were wont to delight the hearts of our ancestors both north and south of the Tweed. Although original y connected, no doubt, with the Christmas "Festival of Fools," they now retain nothing of their ancient coarseness, or rather *irreligious*, character, and are but surviving manifestations of the exuberance of spirit which pervades all classes in this carnival time of our northern latitudes. A sketch of ancient "mummers," taken from a manuscript of Edward III.'s reign, may be seen in Strutt's "Sports and Pastimes," and in Fosbroke's "Encyclopedia of Antiquities."—T. P. JOHNSTON, Edinburgh.

BALAAM'S ASS.—Reuben, in the "Memorabilia" of Dec. 29, asks some queries respecting a pamphlet entitled "Balaam's Ass." The following extract, found amongst some MSS of Dr. Birch, may interest him:—"In June, 1613, a proclamation was issued against one Cotton, a native of the West of England, and a recusant, charging him with high treason against the King and State, for having published a very scandalous and railing book against his Majesty, under the title of 'Balaam's Ass,' which was dropped in the gallery at Whitehall. Just at the time of the proclamation, Cotton happened to cross the Thames, and inquired of the watermen 'What news!' They, not knowing him, told him of the proclamation; upon which, on landing, he muffled himself in his cloak to avoid being known, but had not gone many paces when a friend met him and warned him of his danger, and advised him to surrender himself to the Earl of Southampton. He denied himself to be the author of the libel; but, his study being searched, amongst his papers were found many parts of the book, together with relics of those who had been executed for the gunpowder treason: one of Sir E. Digby's thighs, a leg of Thomas Percy, a bit of Catesby or Rookewood, and a piece of one Peter Lambert's ribs. Cotton was kept in the Tower till March, 1619, when the true author was discovered. It was said to have been Sir Robert Cotton who was imprisoned, but it was a noted Papist from the West of England of the same name."—J. T., Exeter.

TAYLOR, THE WATER POET.—I beg to inform your Correspondent, who inquired for Taylor, the Water Poet's Works in a recent Number, that I have at present three copies which I shall be happy to show him at any time.—JOSEPH LILLY, 19, King-street, Covent-garden

* Of the name of this poet nothing is known.

* e suspect Mr. Douce refers to the last paragraph, not the last sentence, which merely says, "Still shall not their high exceeding smother a long-entertained opnion of what might have been the result had chance or the protecting voice of the public called into action, the integrity, talent, and perseverance of Honest Joseph Ritson."

† The reader curious to understand the allusion here must turn to the volume whence we have extracted this letter, and he will find it explained in a MS note, beginning, "The wayward humour of George Steevens found a blacklead pencil record in the fly-leaf of his copy of ancient songs perpetuating the dagger thrusts of Ritson at Percy," &c.

## CHESS.

### TO CORRESPONDENTS.

DELTA, W. F. T., and others.—THE NEW SERIES OF "LA REGENCE."—From a letter we received, we learn that the appearance of the opening number of this magazine is unavoidably deferred for a few days. It will, probably, be published on the 1st of February.

C. P. J., Sanford.—Our opinion shall be given next week.

TROMADINI.—They shall be examined: but such communications, we may say at once, in reply to your query, are of no pecuniary value.

A JOHNSON.—You may have two or more queens on the board at once besides the original one as we have had occasion to repeat so often, that we are tired of the question

H MORRIS.—The games forwarded shall be reported on shortly.

S. B., Tiverton.—You are mistaken look again.

A. B.—When Salamone occurs the game is drawn.

T. N.—The Laws in question are not published.

E. J. H.—You may procure the best Chess diagrams of Messrs. Ashbee, &c., lithographers, Bedford-street, Covent-garden.

CHECKMATE.—1 Problem No 623 cannot be solved as you propose 2 There is no difference between a Chess Problem and a Chess Enigma.

J. H. W.—Neat and promising, though very easy.

V. d. L., Brussels.—The long-delayed reply was dispatched a day or two since.

DICK, Perth.—We await impatiently the arrival of your first Number. For the rest the inquiry shall be made, and the result made known to you immediately

B. FLETCHER and others Problem 623 cannot be solved in three moves. You fail e observe that, if the Q Pawn is advanced, Black can take it in passing.

C. W.—One of the best books for you purpose is "Bonlinois's" Amusements of Chess."

F. M., Bootle Hall.—You must have taken down the position wrong, for the moves you suggest to solve Problem No. 621, are impossible.

E. S. B. thanked. The book shall be returned, although we regret to say, from want of leisure, it has not even been opened

SOLUTIONS of PROBLEM No. 621, by Signor Aspa, Delta, F. P., B. E., Q. R., Rarefus, M. P., Major, Exeter, D. D., Ethelreda, Fidis, Sphynx, Onyx, Beta, J. Lodge, Philip Henry Peters, Jacobus, Omicron, are correct.

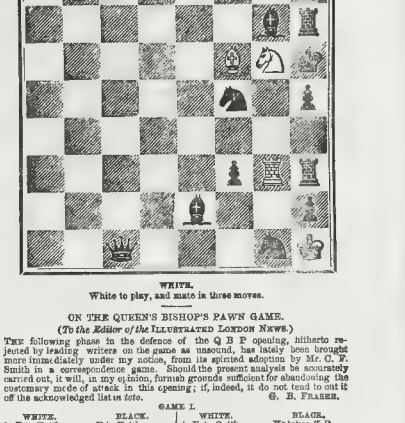
SOLUTION of PROBLEM No 622, by Alpha. J. T. Bishop, D. D., A. G. Legard, F. M., Liverpool, Malta-tops, A. McD., E. B., of Manchester; W. D., J. W., M. G. G., J. C. S., Peter, Q. K., Omicron, J. Lodge, Old Harry, Omar Pasha, W. W. G., S. T., Cantab, F. R. S., Frank are correct

SOLUTIONS of ENIGMAS, by Derevon, Meph, Black, Simpleton, Malta-tops, F. M., Craigielaw, A. B., Fluino, Alpha, Onyx, Julius, Fido, Chesseo, M. N., S. P. Q. R., Rex, Brent, Philip, Beta, Bustos, Old Salt, D. D., Gregory, Dickey, Bruff, F. S. A., Cantab, Lynx, J. Y., Bishop, Sacripanta, are correct. All others are wrong.

### PROBLEM No. 624.

By Mr. H. TURTON.

BLACK.



WHITE.

White to play, and mate in three moves.

### ON THE QUEEN'S BISHOP'S PAWN GAME.

*(To the Editor of the* ILLUSTRATED LONDON NEWS.)

THE following phase in the defence of the Q B P opening, hitherto rejected by leading writers on the game as unsound, has lately been brought more immediately under my notice, from its spirited adoption by Mr. C. F. Smith in a correspondence game. Should the present analysis be accurately carried out, it will, in my opinion, furnish grounds sufficient for abandoning the customary mode of attack in this opening; if, indeed, it do not tend to out it the acknowledged list as *tote*.

C. B. FRASER.

GAME I.

| WHITE. | BLACK. | WHITE. | BLACK. |
|---|---|---|---|
| 1. P to K 4th | P to K 4th | 4. P to Q 4th | Kt takes K P |
| 2. Q Kt to B 3rd | Q Kt to B 3rd | 5. P takes K P | |
| 3. P to Q B 3rd | K Kt to B 3rd | | |

The foregoing moves constitute the usual and most approved method of playing the opening. The present sketch will be devoted to an examination of the reply 5. *B to Q B 4th*, adopted by Mr. Smith (as referred to above), and which renders White's game seemingly indefen sible.

6. *B to Q B 4th*

Two of the principal authorities on this opening seem at variance in regard to White's best rejoinder at this point: Mr. Jaenisch recommending—6. Q to Q 5th; while Mr. Staunton (p. 185, "Handbook") counsels White to play 6. B to Q B 4th.

I propose to examine the consequences of 5. Q to Q 5th here. (The result 5. B to Q B 4th, shall be shown in Game II.)

| | | |
|---|---|---|
| 6. Q to Q 5th | Btakes K B P (ch) | |
| 7. K to K 2nd (best) | | |
| (He may also go to Q sq, for which see *Variation A.*) | | |
| 7. | P to K B 4th | |
| 8. Q Kt to Q 2nd | | |

(It is apparently disadvantageous to capture P *en passant* 8. Q Kt to K 2nd (best)

(If, instead of the move in text, Black adopt 8. Kt takes Kt, White gains speedy advantage. See *Variation B*).

White has now the choice of the three following replies to Black's eighth move; viz., Q to Q B 4th—Q to Q Kt 3rd—and Q to Q 3rd (best); each of which shall respectively examine.

*First.*

| | | | |
|---|---|---|---|
| 9. Q to Q B 4th | P to Q 4th | 11. Q to Q Kt 3rd | R to Q Kt 3rd |
| 10. P takes P *en pas.* | Kt takes P | With an unquestionable advantage. | |

*Second.*

| | | | |
|---|---|---|---|
| 9. Q to Q Kt 3rd | P to Q 4th | 12. K takes B * | P takes Kt |
| 10. P takes P *en pas.* | Q takes P | 13. P takes P | Q B to K 3rd |
| 11. Kt to K 2nd | P takes Kt | And wins. | |

* 12. Kt to K Kt 5th | B to K B 6th | 13. Q to K 3 7th (ch) | K to Q sq | and wins.

*Third.*

| | | | |
|---|---|---|---|
| 9. Q to Q 3rd (best) | | P to Q 4th | |
| | (If, instead of the move in text, Black adopt | | |
| 9. | Kt takes Kt | 12. Q to Q B 6th (ch) | K to R sq |
| 10. B takes Kt | B Q Kt 3rd | 13. Q B to Q sq | |
| 11. B to K Kt 5th | Castles | (With a fine game.) | |
| 10. P takes P *en pass* | Q takes P | 12. Kt takes Kt | P takes Kt |
| 11. Q takes Q | | 13. Kt to Kt 5th* | Castles |
| (This is evidently better than | | 14. Kt takes K P | B to K Kt 5th (ch) |
| 11. Kt takes Kt) | | 15. K to Q Kt 3rd | |
| 11. | P takes Q | And White has an inferior game. | |

* 12. K takes B | Castles | 13. B to Q B 4th (ch) | K to R sq
14. B to K Kt 5th | Kt to Kt 3rd | 15. Q to Q sq. - White will ultimately lose

*Variation A.*

Commencing after Black's 6th move.

| | | | |
|---|---|---|---|
| 7. K to Q sq | P to K B 4th | 10. Q to Q 3rd | P to Q 4th |
| 8. B to Q B 4th* | Kt to K Sq (best) | 11. P takes P *en pas.* | Q takes P |
| 9. Q Kt to Q 2nd | Q Kt to B 3rd | 12. Q takes Q | Kt takes Q |
| | With the superior game. | | |

* 8. B to Q 3rd | Kt to K 2nd | 9. Q to Q Kt 3rd | P to Q 4th, and

*Variation B.*

Beginning at Black's eighth move.

| | | | |
|---|---|---|---|
| 8. Q Kt to Q 2nd | Kt takes Kt | 11. Q to Q B 4th | P to Q 4th |
| 9. Q B takes Kt | B to Q Kt 3rd | 12. P takes P *en pas.* | Q takes P |
| (best) | | 13. K to Q sq | B to Q 2nd |
| 10. Q R to K sq (best) | Kt to K 2nd | 14. K to Q B 2nd, with best position | |

In the above variation, White cannot with advantage adopt 10. *P to K Kt 5th*, instead of the move in text.

GAME II.

The first five moves the same as in Game I.

| | | | |
|---|---|---|---|
| 5. | B to Q B 4th | | |
| 6. B to Q B 4th | Kt to K B P | 8. B to K B sq | Kt to Kt 5th |
| 7. Q to Q 5th * | Q to K 2nd | And wins. | |

* 7. It takes B P (ch) | K takes B | 10. Q to Q 5th | Kt to K 2nd
8. Kt to Kt 5th (ch) | K to K sq | 11. Q to Q B 4th | P to Q 4th
9. Q to K B 3rd | K to K sq | And wins.

If the foregoing variations be correct, the attack in this opening will in future require to be a modification lately brought into vogue which consists in first player moving—6. P to Q 5th (instead of P takes K P), and to which I invented the defence—5. *B to Q B 4th*, leaving Q Kt en *prise*.

## IMPROVEMENT OF ESTATES.

The land, though devised in portions to individuals, is still considered, as a whole, to belong to the nation; and the Legislature, in its name, exercises over it a controlling power. That it be properly managed and efficiently cultivated are in every sense subjects of great public importance. But complaints are continually made both of the management and cultivation; and of the landowners being, in most cases, poor in relation to their rank;—while the land is entailed they cannot improve it, nor sell a part of it, nor place a present incumbrance on it in order to provide for its future improvement. On this account Sir Robert Peel, when he proposed in 1846 to abolish the Corn-laws, also proposed, to enable the landowners who wished to drain their estates, to borrow money for the purpose, and charge their estates with the annual payment of the interest, and an additional yearly sum to liquidate the debt at the end of thirty years. That nothing unfair might be done to the heir, the outlay, it was proposed, should be sanctioned by a public officer. Such an Act was passed, and it was accompanied by an additional boon to the landlords, as a compensation for their supposed loss by the abolition of those laws, which turned out not to be a loss, but a very great gain to them. The Act authorises the Exchequer Bill Commissioners to issue £4,000,000 of the public money, in loans, to the landowners who might apply for them, to execute drainage works on their estates. When a portion of the works is completed it is examined by an Inspector of the Inclosure Commission; and on his certificate that the undertaking is proper, and the annual payment for it will be a fair charge on the estate, the money necessary to execute the works may be obtained from the Government. The payment of the interest and the repayment of the principal by annual instalments, are fixed as a first charge on the estate, so that the nation cannot lose by the advance, unless the land be swept away or become sterile and valueless. The landlords have made great use of this Act: they have borrowed almost the whole sum, and the drainage and cultivation of their estates have been much improved. But the Act is limited to drainage works, which were then in fashion; and, to manage land well, many other other things are requisite besides drainage. It must be divided into farms of a size suitable to the cultivation of each district and circumstances of society. For example, in the immediate neighbourhood of large towns it must be appropriated in comparat. vely small lots, well provided with all the fixtures necessary for horticulture: in such a neighbourhood a few acres are sufficient for a garden. Far away, among the hills of Northumberland or Scotland, it must be divided into much larger portions, with proper appliances to carry on the business of a grazier: there, farms may consist of many hundreds or thousands of acres. In Mexico, and other half-peopled countries, they are measured by square leagues. Every farm, in whatever situation, must have proper buildings, proper inclosures, proper and easy means of communication with every part, and it should be supplied with all kinds of machinery. In the modern system of cultivation each farm may be considered as a great factory, on which a large amount of fixed capital must be expended to make it a fit instrument for the abundant production of food.

To provide one kind of fixed capital—the drains underground, &c.—the nation has been willing to make advances to the individual landowners; and now Mr. Humbert stops forward and proposes, in a pamphlet—that is the subject we give below*—that an Act be passed to enable landlords to borrow money from the public, on similar easy conditions to those just stated, in order to effect any and every kind of necessary improvement requiring fixed capital that may be supposed to add to the permanent value of an estate. Whether the money be advanced by the Government or private individuals, the landowners neither ought to nor do expect to obtain it without paying interest for it; and in the long run it might probably be as well for them to obtain it from individuals or companies as from Government; as the fixed rate of the latter, though it makes calculation easy, may be sometimes above and sometimes below the market rate. The source of the loan is, therefore, of little consequence. The great object is to enable the owners of settled and encumbered estates to obtain advances for the purpose of permanent improvements. To relieve them from their present restrictions, to set the landowners free, as traders have been set free, to make the best use possible of their power and of the land in their possession, seems a public duty. Indeed, such is now the pressure of population on the means of subsistence—and such it is likely to continue, while communication is becoming so cheap and easy as to bring the virgin soil of the far west of the United States into competition with our own soil—that it has become a matter of great public necessity to remove every legal or legislative obstacle to making the best use possible of every acre of land in the country. This is now required to ensure the national greatness. So far as Mr. Humbert's pamphlet tends to this end it obtains our hearty support. Such an Act as he proposes, though a poor substitute for freedom of property, will be useful. Judging from our past experience of the working of Sir Robert Peel's Act, Mr. Humbert seems quite justified in expecting, from extending its provisions, great improvement. It would enable landlords who, on entailed estates, are mere tenants for life, and very often will not lay out a farthing of their annual income on permanent improvements, of which their heirs—sometimes persons with whom they are not on friendly terms—would reap the chief advantages, to build and to plant, to make little railways throughout their estates, to erect machinery; and, in short, to make every farm a perfect instrument of production which every farmer of skill and capital would be glad to hire.

It is somewhat astonishing, however, to find the landowners—the rich aristocracy of the country—complaining, by their agents, of their disabilities, of their means being inadequate to secure the effective cultivation of their own estates, and coming to the public and the Parliament for help, for which they submit their labour to public inspection, and their estates to public control. Instead of being free, independent, and powerful, they are hampered, dependent, and almost helpless. Their present condition is the necessary consequence of the circumstance on which they most pride themselves—viz., the preservation by entails of their old feudal power; and it is for us an additional recommendation of Mr. Humbert's plan, that it is virtually an interference with entails. It gives future pecuniary advantages for a present outlay, and thus substitutes, as far as it goes, the commercial principle for chieftainship in the appropriation, use, and management of land. The subject is one on which there is at present considerable agitation amongst landlords and tenants; and probably the efficient action between landlords and tenants, will speedily engage much attention. It is for the interest of all that restrictions should be quickly got rid of, entails gradually abated, and the occupation of the soil brought into harmony with the present circumstances of society, and be regulated consistently with the principles of freedom under which its chief business is now carried on.

* "On the Advantages that would accrue to the Landed and Agricultural Interest of the United Kingdom, from a general Act of Parliament (analogous in principle to the Private Money Drainage Act of 1846), to enable Owners of Settled and Encumbered Estates to Borrow Money for their Improvement upon the security of the estates themselves. A Letter to the Right Hon. the Earl of Essex, by Charles F. Humbert, Land-agent."

## LITERATURE.

The History of England, from the Accession of James II. By Thomas Babington Macaulay. Vols. III. and IV. Longman and Co.

(THIRD NOTICE.)

There is a very curious moral principle perpetually at work among the majority of men, making them spectators of the world rather than observers of it; and this principle, of which great artists become very soon aware by a sort of instinct, assiduous students, endowed with sufficient ability, learn by experience. Let us suppose that any ten persons in the casual throngs of some great town see for a few moments a face which is not very "marked." At the end of the week—nay, sooner—nine out of the ten on beholding the same face again would not be conscious that they had ever looked on it before. Were it a little more "marked," a smaller proportion of the ten would exhibit equally unconscious of any previous view of it. Were it some very unusual face, nine out of the ten would probably remember that somewhere or other they had noticed it before; but where, they would not remember, nor when. Their attention was fixed for a moment by the peculiarity of it, and this momentary arrest of the attention is the cause of their subsequent recollection. Now it is the very first object of all art to fix, to arrest attention,—and this is effected, as we thus perceive, by what we have called a "marked" trait of any kind. The less remarking your auditors are, it is quite obvious that more remarkable must be that on which you wish to detain the volatility and dissipation of their minds. That is the reason why, in proportion as the class for which the writer or the artist works, is large and miscellaneous, in the same proportion he is obliged (under pain of being disregarded, and of failing to get *that* audience or *that* circle) to use ruder and more exaggerated touches, more glaring hues, more startling contrasts, and a more sustained audacity and breadth of manner. To an habitually observant person, and habitually closely observant, the face which would commonly be termed "a marked face" is not more marked than a thousand others. He will admit that there is some feature very prominent, and that it does help to individualise that countenance; but to him, in other less-noticed countenances, there is something equally notice-able. He knows, however, that this is not practically the case with the crowd; and if he wished to paint (for the crowd) one of those less-pronounced faces, he would not leave that which produced upon himself its proper and individualising effect in the relative modesty and the subdued proportion of nature, but he would bring it into even still greater prominence. It is true that this departure from the reality makes the result more real to the mass of minds; and that by means of a likeness thus judiciously altered, but altered by carrying out the truth a little further in its own direction, most people would recognise the original more quickly than by means of a portrait strictly—and, if we may so say, servilely—faithful to the absolute life. A few would murmur, but the multitude would be struck. The performer will suppose him some gifted author—could say, not "*populus me sibilat, at mihi plaudo ipse domi*," but *judices me sibilant, at plaudit mihi populus*.

Where there is a perfect honesty of purpose this literary juggling may be used with even an increased truth of result; but as it consists simply of altering a little the proportions of those elements which constitute character, without eliminating any of them, and, therefore, without the hazard of being generally suspected of imposture, a dishonest writer, possessed of the requisite skill, could alter these proportions with the like impunity for a false result. He would not make that predominant and sovereign expression which was truly the most marked, the most remarkable; but would deepen by the same art some subordinate feature, and obscure those which controlled it

A precisely similar impression is practicable with respect to events and to the general features of affairs. Here, however, it must be allowed that a writer holds even his ordinary readers less at his mercy. Description and epithets are not the sole weapons which he must use. He is obliged to employ reasonings to a certain extent; he asks for conclusions from principles, as well as for impressions about characters; he must argue sophistically concerning what is still notorious, as well as revive in dis-torted effigy what has faded from unlettered remembrance. It is easier to guard ourselves against the fallacies of a historian's disquisitions than against the feelings excited instinctively by the lineaments of a historian's gallery of actors.

We need not say that Mr. Macaulay, all through the four volumes of his history, labours directly in some places, indirectly everywhere else—to raise our estimate of William III. The public is at present aware of this pervading tendency, as well as of the author's consistent Whiggery and unintermitted partisanship. Indeed, the more this fact is stated, the more generally it is proclaimed by critics, the better for the book. We are certain that its character was less grudgingly, and more unanimously, allowed precisely because everybody feels that everybody else will refuse it as a tribunal from which the memoirs of our ancestors can receive judgment. Thousands would be unjust to its surprising merits, only that they are assured that its own injustice is innocuous.

This is the broad view which we venture to take of the performance. We were rather pained by the line into which a powerful morning contemporary chose to deviate, after comments more worthy of the theme. It is not a few trivial and clerical mistakes in subordinate facts—the statement or the omission of wh en would be about equally important—that ought to determine our estimate of this stupendous effort of uncandid genius. Few writers are less obnoxious to this sort of criticism than Mr. Macaulay. His knowledge is as startling for the minuteness of its accuracy as for the amplitude of its range. What matters it that the corpse of Jeffreys should be rotting, not in the Tower, but in the cemetery of St. Mary's, Aldermanbury? Even the Duke of Schomberg is a more important memory than his very life and soldier death than for the spot which may have received his ashes. Nor are the circumstances cited from a contemporary journal by Mr. Macaulay quite irreconcilable with Swift's mortuary Latin; though, when the historian had pathetically the leaden coffin which was to secure the embalmer's labour, he might, undoubtedly, have also well noticed the poet's epitaph which recorded the final destination of what that coffin held. It is equal secondary that Craggs was the Duchess of Norfolk's footman, not the Duchess of Cleveland's; but as to Mrs. Bracegirdle's residence, which was in Howard-street, not Drury-lane (*never* in Drury-lane!), we really feel astonishment that such infinitesimal errors should be mentioned at all in an article proposing to note the characteristics of a work, in which they are not characterist.cal, but exceptional. The truth is this, that with regard to minor details Mr. Macaulay has taken much more pains to restore to the public knowledge any circumstances which might have fallen out of it than to make sure of a perfectly exact re-statement of more accessible and better-known particulars. His minute additions to the stores of our memory are all debts which we owe to his research; his inadvertent misstatement of more easily attained parts of history cost us nothing. He has used trouble to increase our information; and, if in a few other cases he has been less on his guard, the remissness is only where he knew there was no danger of permanently misleading his readers To this we must in conscience add that, when laboriousness so immense is manifested, it refutes the insinuation of negligence, and ought to atone a thousandfold for such trivial blunders,—which *e nemb e but* the occasional hesitations of an accomplished orator, who, nevertheless, transports his audience, though he does not exhaust his subject. Great labour, in fine (to dismiss the question), inevitably entails these sparse inequalities Diffuseness, not parsimony, in details is the true fault of the author. There is a passage, however, in which, under its very prudent se well as most justifiable, form, appears that spirit which is the grand vice of Mr. Macaulay's history—the universal, the omnipresent endeavour throughout the work to deduce from even the least apt conditions, some moral or lesson of Whig edification, or of Glorious-Memory panegyric. Nay, he bends into his apology the reluctant evidence of the most refractory facts:—

It was well known that the King, who treated the English nobility and gentry so ungraciously, could, in a small circle of his own countrymen, be easy, friendly, and even jovial [query, "very convivial"?], could pour out his feelings garrulously [query, "with fluent coarseness, and hideous brutality"?], could fill his glass, perhaps, too often [indulgent, nay tender historian!]; and this was, in the view of our forefathers, an aggravation of his offences. Yet our forefathers should have had the sense and the justice to acknowledge that the patriotism which they considered a virtue in themselves, could not be a fault in him.

We pause here, not to refute—for it would occupy us through many of these columns—the enormous daring, the unblushing hardihood of this complicated sophism, so succinctly and so neatly condensed into one essay-flavoured sen ence; but we beg the reader to meditate well on what the author here means, and bring to the criterion of the same political morality Mr. Macaulay's doctrine, William's sentiments, and the conduct of another *Anglais* Sovereign who afterwards filled the throne:—

It was unjust to blame him for not at once transferring to our island the love which he bore to the country of his birth. If in essentials he did his duty towards England, he might well be suffered to feel at heart an affectionate preference for Holland. Nor is it a reproach to him that he did not in this season of his greatness discard companions who had played with him in his childhood, who had stood by him firmly through all the vicissitudes of his youth and manhood, who had, in defiance of the most loathsome and deadly forms of infection, kept watch by his sick-bed; who had, in the thickest of the battle, thrust themselves between him and the French swords, and whose attachment was not to the Stadtholder, or to the King, but to plain William of Nassau. It may be added that his old friends could not but rise in his British estimation by comparison with his new courtiers. To the end of his life all his Dutch comrades, without exception, continued to deserve his confidence. They could be out of humour with him it is true; and, when out of humour, they could be sullen and rude; but never did they, even when most angry and unreasonable, fail to keep his secrets, and to watch over his interests with gentlemanlike and soldierlike fidelity.

Now, both in this passage and in a passage immediately following it there is the one-sided dexterity of an advocate, not the judicial serenity of the historian. "Our ancestors should have had the sense and justice to acknowledge that"—In short, that William's "affectionate Dutch preference" *were a merit in an English King!* For what did our forefathers make William their King? Over whose "interests" was it that they intended there should be the necessity for "watching with gentlemanlike fidelity" under William? Was the compact under which they retained this new accolate, was the bargain under which they hired this new soldier, that English interests, English resources, and English dignities should all be used—not primarily in an English sense, but as *subordinate* to William's previous Dutch quarrels and Continental policy?

Well,—then Mr. Macaulay proceeds to describe the hideous maladministration which existed under the new Sovereign. The reader might expect, perhaps, that the historian would abstain from commentary here—the circumstances of excellent government being generally more creditable than bad government can ever be to the Head of a State. The reader would be very much mistaken. Mr. Macaulay turns even the maladministration in question into a double party profit. Causes precede effects; the causes of this evil were due, therefore, to Charles and James and their Tory rule. A rebuke for his enemies. See from what William delivered the land—not a moment too early! A eulogy for his friends.

In short, there is no phase of the time which the untiring ingenuity and inexhaustible skill of the author do not force into an appearance calculated to enhance our ideas of Whig wisdom and probity, and to estrange our feelings from Tory wickedness and folly. And all this is done with a gravity of tone, a fullness of matter, a rotundity of language, and a richness of imagination which enchant the most wary reader, and transport him, for a moment, out of a sense of the deliberate and methodical partialities which have coloured the whole tenour of the work.

---

Wills.—The will of Field-Marshal the Right Hon. Fitzroy J. H. S. Baron Raglan, G.C.B., has been proved in London under £20,000; it was made in England in April, 1854, bequeathing all to Lady Raglan.—The will of the Hon. Augusta Georgiana Frederica Fitzgerance, £1000. The Right Hon. Lady Frances Anne Hope, £30,000.—Samuel Rogers, Esq (the poet and banker). of Clement's-inn, and St. James's-place, Westminster, £40,000.—Sir John Robert Dave Brown Cuyo, Bart., of Kenilworth, £4000 personalty.—Dame Frances Gardiner, of Roche Court, Southampton, £2000.—W. F. Chambers, M.D., Southampton, £35,000.—John Bennett, Esq., Saleston, Glamorgan, £8,000.—Captain T. W. Rooke, R.N., £40,000.—Rev. John Eagles, Clifton, Bristol, £6000.—John Ledsam, Hilstery Knight, Windsor Castle, £1000.

Charitable Bequests.—John Jarvis, Esq., Circus-road, St. John's Wood, personalty £90 000, has bequeathed to St Mary's Hospital, £500; School of Industry for Female Orphans, £500; and to the Aged and Infirm Journeymen Tailors, £500.—Mrs. Jane Herbert, Queen-square, Bloomsbury, £70,000 personalty, has bequeathed to the National Benevolent, the Spitalfields Benevolent, the Shipwrecked Mariners', and to the Society for Promoting Christian Knowledge, £100 to each, and £750 to each of the following:—London School for the Blind, Wanstead Infant Orphan Asylum, the Free Hospital, Church Missionary, Bible, Pastoral Aid, and the Friendly Female Societies.—Miss Mary Crank, of Liverpool, has bequeathed £100 to St James's School, and £50 to each of the following:—Liverpool Infirmary, Blue Coat Hospital, School for the Blind, Leaders' School, St. Mark's School, and Liverpool Dispensaries.

Clearing Away of the Exhibition Building.—The part of the Champs Elysées near the Exhibition Palace is clearing its appearance. The Rotunde des Panoramas is cleared out, and the old doors and windows are being replaced. It is said that Colonel Langlois will soon establish there a panorama of Sebastopol. The bridge thrown over the Cours la Reine to pass from the Rotunde into the Long Gallery, appropriated to the machines, is being taken down, as well as the gallories for agricultural products and carriages. The Government will sell all the timber, planks, &c., on the 26th. The Palace of the Beaux-Arts will also soon disappear.

An Anti-Russian Drama at Berlin.—The performance of a new piece in one of the minor theatres of Berlin was prevented last week, by an application from the Russian Minister there, who protested against a dramatic representation, having for its title "Merely a Soul," and its subject one that turned upon the fate and fortunes of certain Russian serfs. In spite of the pieces having been altered so that a generous Russian Prince is made to interfere, one unit the lovers, and make everybody happy at the end, the interdiction was not withdrawn.

Austrian Religion Statistics.—It appears from certain statistical data recently published that the number of Protestants of the Helvetic and Augsburg confession in the Austrian empire amounts to 3,450,000; whilst the number of those who belong to the old Greek confession amounts to 3,192,000; and the number of Unitarians amounts to 60,000. It follows, therefore, that nearly one-sixth of the population of the Austrian monarchy consists of non-Catholics.

Literature in France.—The *Journal de la Librairie* has just published a statistical account of the literary and artistic productions of France during forty-four years. From 1st November, 1811, to 31st December, 1855, inclusively—that is to say, in forty-four years and two months—there were published in the 46 books, Latin or Greek classics, and in foreign languages, 271 994 works on different subjects; 47,125 engravings, drawings, lithographic prints, &c.; and 17 449 musical works: making altogether a total of 336,568 publications. In the year 1855 itself produced 6,000 works in French, classics, and foreign languages, 1105 musical works, and 2857 engravings, lithographic prints, and photographic prints: making a total of 12,197 publications. The year 1855, as regards books, has been the most prolific of the whole forty-four years.

The Corn Trade with Russia.—An eminent firm in the corn trade in Dublin received on Thursday a communication from the house of Messrs Brandt and Co., of St. Petersburg, authorising them to take orders in Ireland for wheat, to be delivered free on board in the Neva, at from 18s. 6d. to 21s. per quarter, according to quality. Adding present rates for freight and ordinary charges, the cost would be about 19s per barrel at an Irish port. This, with anything like present prices in our markets, would leave a large margin for profit, supposing there should be no blockade of the Baltic after the opening of the navigation next spring.—*Dublin Paper.*

---

## GRAND MUSIC HALL, IN THE SURREY GARDENS.

The well-conducted place of amusement known as "The Royal Surrey Zoological Gardens," having for a quarter of a century been largely patronised by all classes of visitors, is about to present several new alterations for the holiday-seeker. To carry these arrangements into effect a Company has been formed, embracing the names of gentlemen high in the musical profession, with M. Jullien as musical director and conductor. The projectors of the enterprise state that London is deficient in musical establishments of the above description, a deficiency which this Company propose to provide for, by the erection of a superb Music Hall; and, when we consider that it will have the advantage of being located in a space of ten acres (so difficult to be procured at a convenient distance from the heart of London), the prospect of success is very promising. It is proposed to lay out the ground, embracing the names of gentlemen high in the landscape surveyor, after the most approved fashion; to erect arcades, fountains—every variety of flowering plants; buildings for the display of antique and interesting exhibitions; and a grand pictorial design by Danson, will be a prominent novelties. In the said Royal and Instrumental music of the highest class will be performed. The auditory will be capable of accommodating 10,000 persons; access being had under a covered way, thus securing the visitors against unfavourable weather; whilst a noble terrace, surrounding the building, will enable promenaders to enjoy the music in fine weather.

We are glad to learn that the public have already responded most liberally to the proposed enterprise; more than three-fourths of the capital being subscribed. The building has been already commenced, from the designs of Mr. Horace Jones, the eminent architect, 16, Furnival's Inn.

We should add, that the design includes a suite of refreshment-rooms, which it will be the purpose of the management to provide with the best refreshments on the most economical scale.

## CHARLES KEAN.

Charles John Kean, the second and only surviving son of that great original genius, Edmund Kean, was born in Ireland, at Waterford, where his father happened to be performing with the company which annually paid a short visit to the "*urbs intacta*." His mother, Mary Chambers, was also a native of Waterford, descended from the highly-respectable family of Cuffe, long settled in that county. In his fourteenth year he was placed at Eton to complete his education, his father fixing his allowance for board and tuition at £300 per annum. His tutor was the Rev Mr. Chapman, afterwards Bishop of Ceylon. Many of his contemporaries at that seat of classic learning have won fame and fortune by personal ability, integrity, and perseverance—innate elements which raise men above the crowd, even when unassisted by the accidents of fortune. The same impelling causes have placed his own name high in the distinguished list.

When Charles Kean entered Eton, in the happy sunshine of boyhood, and with bright prospects before him, he had been led by both his parents to expect the inheritance of an ample fortune, and had been repeatedly assured that he should choose his profession. His mother preferred the Church; his father inclined to the Navy, but his own predilection was decidedly for a military career. There can be no doubt whatever that Edmund Kean might have maintained his family in all the elegances of life, and have left behind him a realised sum approaching to £100,000. Since the days of Garrick no actor had received so much money in so short a space of time. But clouds had been gradually darkening, and a crisis was at hand. It is needless here to dwell on particulars, or to say more than that, in his seventeenth year, the subject of this brief memoir was compelled to adopt the stage as the only possible channel through which he could obtain subsistence for himself and his mother. Thus Charles Kean became an actor. Necessity, and not preference, decided his lot in life. His first appearance took place at Drury Lane, in the character of *Young Norval*. He was totally without experience or preparation; yet some good judges who were present, and unswayed by prejudice, could detect, even through all the rawness of an unformed style and the embarrassment of a novel situation, the germs of latent ability and the promise of future excellence. The audience received him with kindness and indulgence; but the published criticisms were unanimous in condemnation. The crude effort of a schoolboy was dealt with as the matured study of a practical man. Discouraged, and almost in despair, he toiled through the season, obtaining few opportunities and little encouragement. He then betook himself to the provinces and commenced the drudgery of a long apprenticeship, with hard labour and slow advancement. During this interval he made his first visit to the United States, where he was received with warm cordiality, and whence he returned with reputation and profit. In 1833 he was engaged by Laporte, at that time manager of Covent Garden, and acted *Iago* to the *Othello* of his father, on the night when the great tragedian faltered and broke down during his last performance. The hour had not yet arrived when the son was to be acknowledged as his legitimate successor, and he had yet much pertinacious opposition to encounter before he was to reach the eminence to which he aspired, and which something within him whispered that he was surely destined one day to attain. He left London again, resolved to return no more until in a position to stipulate for his own terms.

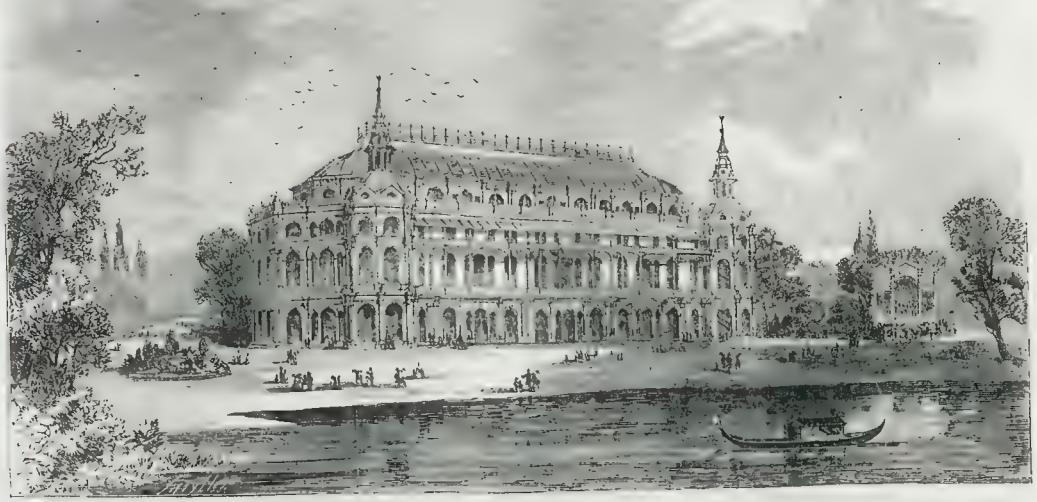
MR. CHARLES KEAN AS "HAMLET."

In a few years he reached this long-coveted point of his ambition; and in 1838 reappeared in the metropolis with a degree of fame which no country actor had ever achieved before, and repeated his opening character of *Hamlet* for twenty-one nights (twelve without intermission) to a succession of houses more crowded than any that had been attracted since the first appearance of his father in 1814. During this season he received the high compliment of a public dinner in the saloon of Drury-lane Theatre, on which occasion he was also presented with a magnificent silver vase, value £300. At this dinner Lord Morpeth, now the Earl of Carlisle and Lord-Lieutenant of Ireland, was to have presided; but he was detained unexpectedly in the House of Commons, and the chair was taken, and most ably filled, by the Vice-President, the Marquis of Clanricarde. Above 150 persons were present, including many names eminent by their talent and literary reputation. A similar tribute has been often paid to celebrated men on the close of a long public career; but to a beginner on his outset this was without precedent. The speeches, as may be supposed, were eloquent and characteristic. That of Charles Kean in particular was remarkable for the modest and unassuming tone in which he spoke of himself and his pretensions.

From the period of this great success in *Hamlet*, followed up by *Richard the Third* and *Sir Giles Overreach*, there remained no longer any doubt as to the position which Charles Kean was thenceforward to hold. His place in the foremost rank of the profession was established. From this he has advanced step by step, outstripping competition, until he has reached the summit, and stands enrolled on that exalted level with the most illustrious of his predecessors.

In January, 1842, Mr. C. Kean married Miss Ellen Tree—an attachment of long standing, and in every respect "a well-assorted union." With this amiable and accomplished lady he not only obtained a large addition to his worldly store, but an endowment of more inestimable price—the certainty of domestic happiness. They have only one child, a daughter, now in her thirteenth year. In 1851, in conjunction with Mr. Keeley, Charles Kean entered on the management of the Princess' Theatre; but the partnership was dissolved by mutual consent, at the close of the first season, and he has since then wielded the dramatic sceptre alone. How he has done so, with what satisfaction to the public, and increased reputation to himself—with what unprecedented accuracy and effect, with what magnificent acting, as well as the most minute attention to all the subordinate mechanical appliances—the great plays of Shakspeare, such as "Hamlet," "Henry the Fourth," "King John," "Richard the Third," "Macbeth," and "Henry the Eighth," have been placed before the public, are subjects of recent notoriety and universal encomium.

When her Majesty commenced the series of private performances at Windsor Castle, which have had such a beneficial influence on our national drama, and restored the prestige of fashion which had long been withdrawn, Mr. C. Kean was selected as director, a post of great honour, and a most flattering mark of Royal favour, but one at the same time beset with difficulties, and requiring in its discharge the most consummate tact, impartiality, and delicacy—all of which rare qualities he has exhibited on many trying occasions. It was at one time very currently reported that he was about to receive a more permanent and substantial token of the satisfaction he



THE MUSIC-HALL TO BE ERECTED IN "THE SURREY ZOOLOGICAL GARDENS."—(SEE PRECEDING PAGE.)

"HAMLET'S GRAVE," ELSINORE.—(SEE NEXT PAGE.)

had given in the highest quarter. We feel quite certain that the realisation of this rumour would have been hailed with equal delight by the public and the profession of which Mr. C. Kean is such a distinguished ornament. Whether in his private character, or on public grounds, as an actor and manager, a more appropriate instance could scarcely be selected as an exception to the rule of precedent. Poets, painters, and sculptors, scientific and scholastic professors, have often been distinguished by titles, pensions, and honorary degrees; but the art which combines to some extent the blended qualities and excellences of all has never yet (in England) been made the subject of equal consideration.

## FRAGMENT OF THE BLACK FRIARS' MONASTERY IN THE "TIMES" OFFICE.

Beneath the office in which the *Times* is printed there existed until lately a portion of the ancient wall of London, about the time of Edward II. To this spot the Black Friars came from Holborn, in 1276, to a piece of ground procured for them by Rooksley, Mayor of London. Robert Kilwarby, Archbishop of Canterbury, built for them a church early in the reign of Edward I. In 1282 they obtained license to break down the City wall, and remove it westward, for the enlargement of their church. Edward and his Queen Elinor were great benefactors to the new convent: here the King kept his charters and records, and great numbers of the nobility dwelt in the precinct. In 1522 the Emperor Charles V. of Spain was lodged here by Henry VIII. In the church divers Parliaments and other great meetings were held. The precinct was very extensive, was walled in, had four gates. In the View of London, in 1543, in the Sutherland Collection, the Church of the Blackfriars is shown with a lofty tower and spire, and the end towards the Fleet River is flanked with two large turrets. After the Dissolution part of the church was fitted up for parochial use, but it was destroyed by the Great Fire of 1666. Taking advantage of the privilege of sanctuary which the precinct enjoyed, Burbage, the player, when ejected from the City, built in Blackfriars a theatre, and here maintained his ground against the City and the Puritans. Shakspeare had a share in this theatre, and part of its site is now called Playhouse-yard. The poet possessed other property here, as attested by a deed of conveyance to Shakspeare of a house bought by him in 1612-13; and the deed is preserved in the City of London Library, at Guildhall.

The Church of the Black Friars immediately adjoined the site of the theatre; for a plinth and foundation of one of the buttresses of the church have, according to the *Builder*, "been brought to light after being buried 200 years; to turn up in such a position, too—in the midst of the printing-house of the *Times* newspaper. The plinth stands on a mass of ragstone and chalk, six feet high. The plinth itself projects from what was the face of the wall, 4 feet 5 inches from east to west; in 2 feet 6½ inches wide, and 2 feet 4 inches high, including a chamfer, 2 inches high which runs round it. Close to the buttress, on the south side of it, is what would seem to have been the jamb of a doorway. It is interesting to reflect on this remnant of the Mediæval Church, grown round and pressed out of sight by the most wonderful and momentous result of intelligence, organisation, and capital in the world. The conjunction is a fit subject for a poem."

These interesting relics had long been preserved at the *Times* office but, their removal being inevitable, to gain room, our Artist has placed the fact upon illustrative record, beside another group of fragments of Old London.

FRAGMENTS OF THE BLACK FRIARS' MONASTERY, PRESERVED AT THE OFFICE OF "THE TIMES."

FRAGMENTS OF ST. JOHN'S-GATE, CLERKENWELL.—(SEE NEXT PAGE.)

## HAMLET'S GRAVE, ELSINORE.

The view which our Artist has pictured in the accompanying Illustration is a scene of very varied interest. A short distance north-west of Elsineur is the small Royal château of Marienlist. The pleasure-grounds behind the château are open to the public. They occupy the site of an old fortification on the crest of the hill. Nothing can be more lovely than the views from hence, as seen beneath the luxuriant shade of the fine trees. At one sweep the eye ranges over the town of Elsineur, the noble fortress of Kronberg, the Sound, the town of Helsingborg on the opposite coast, and the plains of Sweden, with the blue waters of the Baltic bounding the horizon on the south in the far distance. Towards evening it becomes additionally interesting, as in summer there are usually a number of vessels entering the Sound, previously to anchoring for the night.

In a very pleasant work, entitled "The Log of the Pet," by the Rev. R. B. Hughes, lately published, we find this glimpse of the scene of our Artist's picture:—

> We dropped down to Elsineur, where we stayed Sunday, and saw Hamlet's walk, "the dreadful summit of the cliff" of Shakspeare; the "wild and stormy steep" of Campbell.
>
> In reality, however, it is a very meek little hillock, not very much higher than Tower-hill, and not for a moment to be compared in wildness, storminess, or steepness, to Greenw.ch-park.
>
> The castle, however, is a beautiful building; some parts are of great antiquity, and the chamber where Holger Danske, the indigenous hero of the Danes, was imprisoned, in the year two of the Creation, is still to be seen.
>
> The fortifications are very slight, and altogether unworthy of the important position which they occupy; the garrison consists chiefly of Holsteiners, whose fidelity cannot be trusted among their own kinsfolk and acquaintance.
>
> Hamlet's grave is marked by a single stone obelisk, evidently of very early date; it is surrounded by tables and chairs, where citizens from Copenhagen consume beer and coffee, and dcdle with their heeltaps the sepulchre of a King.
>
> Elsineur, though by no means the wild romantic spot described by poets, is a very pretty and interesting place. The roads are usually crowded with shipping, and the straits, two miles wide, are dotted with the sails of ships of every maritime people. All vessels, except yachts, and I suppose men-of-war, pay certain dues to the Danes on passing through the Sound, and formerly it was customary for every passing ship to lower her topsails, in honour of the Danish flag. This usage has been abandoned, I suppose only because the Danes had not the power to enforce it; and the Yankees declare that the Sound dues shall follow

## RELICS OF ST. JOHN'S GATE AND BERKLEY-HOUSE, CLERKENWELL.

Many a curious matter connected with old London is turned up and passed over without notice. In this instance, however, the care of Mr. W. P. Griffith, of St. John's-square, has enabled us to engrave the accompanying remains.

No. 1 has formed part of the basement of the present gate, which was erected A.D. 1504—this was turned up in the hay-yard situated a short distance from the structure which has so many literary and other associations.

No. 2 is still more venerable, and is part of the old gate raised by the Knight's Templars about A.D. 1113, and destroyed by Wat Tyler and the rebels. The zigzag ornam nt and central flower are in panels very perfect and beautifully chiselled. The scallops still on the badges of the Crusaders have particular interest. On parts of the stone the traces of fire are distinctly visible. This antiquity was built into a wall in Berkley-street, Clerkenwell, and was, when Mr. Griffith found it, covered with numerous coatings of whitewash.

No. 3 is also from Berkley-street—it is a Moulded Brick of large size, of the date of Queen Elizabeth's time — perhaps earlier; and is no doubt a portion of the mansion of Sir Maurice Berkley, standing nearer to Henry VIII., Edward VI., and Queen Elizabeth. These moulded bricks, which form such a picturesque ornament on various buildings, both religious and domestic, might be used to a greater extent with much advantage at present, the removal of the Excise duties on bricks having put an end to existing difficulties.

No. 4 is a Mediæval Corbel, of a cruciform device.

## *NAVAL AND MILITARY INTELLIGENCE.*

A sword of honour has been presented by the inhabitants of Beaumaris to Lieutenant Hampton, of the 5th Dragoon Guards, who attained his majority on Wednesday last.

On Saturday Mr. Francis P. Smith received a letter from the First Lord of the Admiralty communicating the intelligence that, on the recommendation of Viscount Palmerston, her Majesty has been pleased to confer upon him a life pension of £200 per annum, in consideration of the services he has rendered his country as the first proposer and fitter of the screw to the mercantile marine and fleet of Great Britain.

The number of men to be voted for the fleet in the forthcoming Naval Estimates is 76,000 (including 10,000 boys and 16,000 marines). The number voted last year was a total of 70,000. The increase in this year's estimates is 6000 men and officers to complete the complements of the gun and mortar-boats, the expense of whose wages will be about £172,000, and about £140,000 for victualling; making a total increase under this head of the war service of about £312,000.

The following ships are in harbour at Spithead, and in dock and basins, fitting out or refitting, at Portsmouth:—*Duke of Wellington*, 131; *Marlborough*, 131; *St. Vincent*, 101; *Conqueror*, 91; *Victor Emmanuel*, 91; *Rodney*, 90; *Exmouth*, 90; *Calcutta*, 84; *Colossus*, 81; *Blenheim*, 60; *Shannon*, 51; *Impérieuse*, 51; *Arrogant*, 47; *Pylades*, 21; *Falcon*, 17; *Rosamond*, 6; *Volage*, 6; *Dragon*, 6; *Cordelia*, 6; *Beatrice*, 6; *Fury*, 6. Eighteen gun-boats and several mortar-vessels, besides tug, gunnery, training, and depôt ships, tenders, receiving ships, yachts, tenders, hulks, and other craft. It is stated that we have at the present time forty-five sail-of-the-line in commission, with upwards of 170 heavy frigates and corvettes, supported by 200 screw gun boats and mortar-vessels, manned by 70,000 disciplined sailors and 15,000 available marines, beside 240 of the finest transports in the world, employed to convey troops and provisions wherever required.

Mr. Watts, chief assistant to the Surveyor of the Navy has been down in the north among the shipbuilders, to see how many gun-boats and mortar-vessels they can construct between this time and the advance of the fleet for the next campaign in the spring, and contracts have been entered into with firms at Newcastle, Liverpool, and elsewhere; so it may be expected that a large flotilla of these important adjuncts to our fleet will be ready for service by the time the Baltic shall become navigable.

The *Chesapeake*, 50, screw, in Chatham dockyard, fitting for commission, is progressing very fast, both with her internal fittings and rigging, and is expected to be ready early this month. The *Sapphi*, 12, will be out of the hands of the dockyard by the 15th inst. The sawmills in the dockyard are working night and day to keep pace with the shipwrights on the *Mesa*, floating battery, and other pressing works. The workmen at the metal-mills are also employed night and day to meet the wants of the service.

Recruiting is proceeding in the metropolis with much vigour, not only for the regular troops, but for the auxiliary forces, Land Transport Corps, &c.

Prince Albert inspected the Hants Constabulary at Aldershott yesterday, under the command of Captain Harris. His Royal Highness admired the appearance of the men, as likewise the condition of their horses. His Royal Highness afterwards went round the huts, stables, stores, &c.; the whole of which met with his approval.

The steam-ship *Great Britain*, having been again taken up by Government, is being refitted and repaired, to be made available for the conveyance of troops to the East. She will sail from Liverpool on the 9th of February, with about 1100 troops for Malta. The screw-steamer *Sarah Sands* is also being refitted at Liverpool for the transport service.

The shipwrights and sawyers employed in the construction of the gun and mortar vessels on the Tyne, have demanded, and very last week paid, a second advance of wages—the shipwrights 6d. per day extra, making their pay £2 8s. per week; and the sawyers 3d. per 100, making their pay 5s. per 100 feet for oak. The wages at the yards on private work remain the same—namely, shipwrights 6s. per day, and sawyers, 4s. 3d. per 100 feet for oak. There are upwards of 300 men employed on the gun-vessels, four of which are nearly ready for launching.

Public Income and Expenditure.—An account ordered to be printed last August, but not published till Monday, gives the income and expenditure of the United Kingdom for three years, ended the 31st of March, 1855. In the year ended the 5th January, 1853, the income was £57,755,571, and the expenditure £55,229,267. In the year ended the 5th of January, 1854, the income was £55,992,519, and the expenditure £56,709,952. Thus far there was an excess of income over expenditure; but in the year ended the 31st of March, 1855, the former amounted to £54,091,571, and the latter to £70,350,817; leaving a deficiency of £6,145,246.

## EMIGRATION—WORK AND WAGES.

A most remarkable circumstance has occurred lately in Ireland. Many—we believe, hundreds of—emigrants have returned thither from New York and other parts of America. Ireland becoming a better home for the Celt than the United States is an extraordinary, but, we believe a transitory, circumstance. So late as August, 1854, it was supposed that too many labourers could not be brought into the States; but then a great interruption to traffic, to railway extension, and to business generally occurred, and through the greater part of 1855 employment was extremely scanty in the cities of America. At the same time Ireland was flourishing; labour was required; and the stream of emigration for a moment, but only for a moment, rolled back from the west. Permanently, however, the stream must go the other way. "The soil of Great Britain and Ireland is so monstrously monopolised in large pieces by a few thousand families," says Mr. Vere Foster, in a little pamphlet entitled "Work and Wages," "and the laws so impede its sale during the life of the owner, or the division at his death," that it cannot be rendered available for the people. Across the Atlantic there are, however, nearly millions of acres annually disposed of to be had for the small sum of 5s. an acre;—last year, as we learn by the President's message just arrived, 15,000,000 acres were sold;—and the stream of population must permanently continue to run from Ireland and England, and from Europe generally, to the continent of America. This is as certain and as natural as that the air rushes in to fill up a vacuum. More human beings have already gone from Europe to America within our own time, in a peaceful, new-home seeking spirit than all the Goths, Vandals, and Huns, with the other barbarous tribes who sufficed to overthrow the Roman empire. They will continue to go in great multitudes, and whoever contributes to make the voyage easy and comfortable materially promotes the welfare of millions. In an eminent degree Mr. Vere Foster has done this. Regardless of his own ease, he crossed the ocean as a steerage passenger, to learn the hardships of the voyage and suggest amendments. Twice on this errand of real utility has he visited America, and with zeal and diligence almost unexampled has he circulated, by a quarter of a million copies of his penny pamphlet, the results of his observations. To intending emigrants a more valuable work at such a price never issued from the press. His penny pamphlet contains a whole bible of practical information for emigrants. He has changed its title in the fifth edition, injudiciously we think, to "Work and Wages;" for, though the workman is informed where he can get good wages, the pamphlet is essentially an emigrant's guide. In no other book can the emigrant find so much practical information and so many useful directions; and, as a great demand for labour is returning and will be sure to increase in the States, this little penny pamphlet is likely to be of immense service. If it have not been, it ought to be, translated into German; for, latterly, more Germans even than Irish have gone to America. We are astonished, however, to learn from Mr. Foster that the rich heritage of our people in Upper Canada is already wasted, and that no more land remains for sale in Canada West in the hands of the Government or public than a small peninsula containing half a million of acres. Land companies have received in monopoly the national estate. We learn, with some surprise, too, from Mr. Foster—after Parliament has busied itself much with the subject—that emigrants can best secure good treatment in future by publishing their solemn thanks to captains of emigrant ships for attention, and the ir equally solemn condemnation for neglect. It becomes therefore their duty to reward and punish in this manner those who treat them well or ill. Mr. Foster shows a generous spirit in his creed that men can be thus improved by their susceptibility to honour and shame. By this test he himself is deserving of great confidence. He is of gentle birth and excellent conduct. He forsook the enjoyments of society to lessen the wretchedness and the affliction of the poor emigrant, and has contributed more, we believe, than any man of the age to speed forward in comfort his sorrowing and almost despairing countrymen to improved and happier homes.

## CHARADES.

BY T. K. HERVEY.

IV.

The earth was green, and the sky not blue,
For the sun was drinking the salt dew,
When a Knight drew rein, to slake his thirst,
As he started to hear from a cloud my First.

He shook out his bridle:—"My steed, we're late!
She goes to chapel at half-past eight;
We have far to travel through glen and glade!"—
And he summoned my Second his hint to aid.

The steed like a hurricane swept the way:—
For the rider had started at dawn of day,
To carry my Whole to his lady fair,
Ere she passed from her bower to the morning prayer.

When the lady came forth, in her judgment cool,
She thought that her knight was a very great fool;—
That to put on my Second, and rise with my First,
And gallop so madly, and look so accurst,
For a banquet—though there had been roses at worst,—
Not such mean little children of sunshine and showers
As are called by the name of my Whole among flowers!

V.

When autumn winds are drear and chill,
And tempests o'er my Second hurst,
I shun the heath and quit the hill,
To seek for shelter with my First;

But when the happy flowers are nest
By July's soft and fragrant breath,
My Second wins me *from* my First,
Back to the scented hill and heath.

My Second takes a golden grace
From beam and breeze, on plain or knoll,—
My First, to help its pleasant face,
Demands the service of my Whole.

VI.

A traveller supped at a wayside inn,
Where the bacon was thick, but the ale was thin,—
So, it was not the latter that ran in his head
When he snatched up my First as he hurried to bed.

He rose from his couch at the dawn of day,
He shouldered my Second and went his way,—
His mind had a weight, and his pocket a load,
So, he needed my Second to lighten the road.

Speed, traveller, speed! Alack! alack!
There are following those who would bring thee back!
Oh! they collared our friend are the dark fell down,
Or his feet could reach to the nearest town!

He'd forgotten his supper of yesternight
When he "stole a march" in the morning light!
But, alas! besides the *march* he stole,
They found in his great-coat pocket my Whole.

ANSWER TO CHARADE No. III.
Jackboot—Bootjack.

## STATE OF FEELING IN RUSSIA.

Whatever dissatisfaction there may be in England at the prospect of an inglorious, and consequently insecure, peace, the people of Russia do not seem to look with much approbation on the readiness of the Emperor to accept the proposed conditions. If the following letter from St. Petersburg, of the 17th ult., may be relied on, the war party is likely to give the young Czar some trouble:—

> The war agitators are indulging in the most violent diatribes against Prince Gortschakoff and against Austria, who, they say, was saved by the Russians from a catastrophe in 1849. According to them, Russia should not accept a peace which will cost her a part of her territory, and impose on her the most humiliating of conditions—that of levelling her fortresses on the coast of a sea which is for reality a Russian lake; and certainly not before the Russians were able to redeem the honour of their arms by some other exploit than the taking of Kars—a peace, in short, which, according to them, will destroy the influence exercised by Russia in Germany for the last quarter of a century. The old Russian party predict some terrible disaster, if the present Emperor should, without being compelled by force of arms, subscribe to such conditions as have been officially submitted to him by Count Esterhazy. They say that no Russian diplomatist will sign the treaty of peace on these bases; for according to them the present state of things is far from that of 1634, when, by the treaty of Wiasma, Wladislaus, King of Poland, prohibited the Czar Michael from taking the title of Autocrat Czar of All the Russias; and from 1711, when by the treaty of the Pruth Achmet compelled Peter the first to level the fortresses of Taganrog, Camennoi, Zatoum, and Samara. As to the interview of the two younger brothers of the Emperor Alexander, on the subject of the decision which the Grand Duke Nicholas was expected to make known to the Grand Duke Constantine—an interview which only took place this morning—I shall merely assure you that it was a very stormy one. Whatever may be said by those who expected another *dénouement* than the admission of the Emperor Alexander, and news is official, and the Czar has been officially informed "that the Austrian conditions would serve as the bases of ulterior negotiations, and may at present be considered as the true preliminaries of peace." It was doubtless to spare himself any painful explanation with the Grand Duke Constantine that the Emperor sent his brother Nicholas to him. The Grand Duke Constantine is much irritated against his brother the Czar. The viceroyalty of Poland, which has been reserved, some say for the Grand Duke Nicholas, and others for General Gortschakoff, and which, according to Duke Nicholas, have come to him, is one of the principal causes of his irritation. Placed at the head of the eccentric fraction of the Russian party—of those who are styled the "Intractables"—the Grand Duke thought to render himself popular, and has not succeeded. The amiable Nicholas enjoys the most inconteatable popularity. This young Prince, who has been hitherto loved for himself alone, has increased the good feeling of the Russian nation towards him by his betrothal with the Princess Alexandra Petrowna, a Princess born and bred in Russia.

The *Constitutionel*, in an article on the immense impulse given to British commerce by the war, contrasts the prosperity of England with the exhausted condition of Russia:—"Admirable power of commercial genius, which draws confidence from war itself! Remarkable situation, that of a country whose unexampled prosperity discovers a base of fresh prosperity in what has often proved the ruin of empires! When we compare this situation with that of the commerce of Russia, we have the right to repeat that Russia is more interested than any other country in the re-establishment of peace. This empire, from which its last master wished to extend his domination over the whole of Europe, has no other railroads than that of St. Petersburg to Moscow, and the one which terminates at Warsaw. The roads are horrible, and the difficulty of communication is increased by a system of passports which is expensive and injurious to the circulation of the upper classes, and completely destructive to that of the poor. If you wish to go from St. Petersburg to Moscow you are compelled to be at the station two hours before the departure of the train. This first hour is devoted to the examination and vise of the passports, the second to the distribution of tickets. After this you are often informed that the train is full, and that you must return on the morrow. It has never been known for extra carriages to be added to a train. This is the facility of locomotion afforded to the wealthy travellers of Russia; and now let us pass to the poor. These may have an interest in passing from one government to another when hands are wanting and wages higher. But their expenses on the road, the cost of the passport to go and return, more than compensate for the difference of wages. Also the peasant, when free, never changes his residence. He lives where he is born, and exists in misery at a few leagues from a spot where workmen are wanted and well rewarded. The crops are often consumed on the spot which produces them, and in the more fertile provinces that the land is uncultivated. Such is the ignorance of the peasants that manure is massed up outside of the villages, and the idea of employing it never enters their minds. When we observe this systematic indifference displayed by the Russian Government for the last fifty years towards the interests of commerce and industry, the true civilising elements of States, we cannot help asking what it would have done with Europe, which it wished to dominate? Russia is the country most gifted with means of establishing communication. She is covered with a network of rivers, which would permit navigation over the whole of the empire. The Volga, which by its tributaries connects the Caspian and the Baltic, might have access to the Euxine. It would only necessitate a canal between that river and the Don. Now this work, so easy, so incanal between that river and the Don. Now this work, so easy, so inexpensive, and of such capital importance, has been renounced by the Russian Government, which has exhausted all its resources in favour of the army."

A Crédit Mobilier Society is decidedly to be established at Barcelona, and it is to undertake works of public utility.

The *Baltimore American* states that a number of vessels were icebound in Chesapeake Bay, and that the crews could walk on it to the shore.

The Porte and the Servian Government have at last come to an understanding respecting the projected Constantinople-Belgrade Railroad.

## THE ANCIENT PALACE OF ST. CLOUD.

In the Illustrated London News for August 11, 1855, we gave an interesting *resumé* of the history of the Palace of St. Cloud, from its earliest foundation, and the name of Gondi, the grandson of the earliest founder, and the namesake of the present Emperor Napoleon. By favour of a Correspondent, we are enabled to engrave the original Palace, from a painting on vellum, executed in the same style as the Sèvres porcelain, by one of the artists of the period of the edifice. It may be as well to quote the substance of its eventful history, commencing with 1647, when we find in the village of St. Cloud an episcopal palace, sufficiently magnificent to be used for that long and grim solemnity—the funeral service of Francis I. Here the effigy of the King was placed, and the officers came, and did duty as though he were alive, during eleven days. They served his dinner, and went through all the etiquette of the Royal repasts, in solemn silence; and then the clergy of Paris carried off the corpse to St. Denis. During the reign of Henry III., and Louis XIV., accompanied by his brother, he paid the Chancellor a visit, and dined with him. The King was delighted with the house and grounds. Already water-works enlivened its undulating park; since we find that Hervard had bought all the waters of Garches from the Lady Duchess of Montbazon. The satisfaction of Monsieur and Monsieur probably cost the proprietor his pleasant retreat. A few days after the Royal departure Mazarin paid Hervard a visit, and, artfully questioning the Financial Minister on the value of his splendid residence, contrived to force him to declare that, for a trifle, he should be too narrowly queried as to the sources of his wealth. It is said that on the morrow of this visit the Cardinal sent Hervard 300,000 livres, with a letter informing him that the King wished to possess his house to the Duke of Orleans, his brother. A notary was the bearer of the letter and the money; the contract was drawn up, and the proprietor dared not refuse his signature. Thus, according to one authority, the Maison Gondi passed into Royal hands, and an unscrupulous Comptroller was made to disgorge a large proportion of his ill-gotten gains—the real value of the property being nearly one million of francs. According to the archives of the Crown, however, Monsieur bought the Maison Gondi for 240,000 livres. This old residence formed the nucleus of the present spacious château.

## AMUSEMENTS, &c.

MISS P. HORTON (Mrs. T. German Reid) will give her POPULAR ILLUSTRATIONS, for a few nights' only, at the GALLERY OF ILLUSTRATION, 14, Regent-street, commencing MONDAY, FEBRUARY 4th.

DR. KAHN'S ANATOMICAL MUSEUM, consisting of 1000 highly-interesting Models, representing every part of the Human Frame in health and disease; also the various Races of Men, &c. Open (for Gentlemen only) from 11 till Ten. Lectures delivered at Twelve, Two, and Four, Morning; and Half-past Seven, Evening, by Dr. KAHN, and at Half-past Eight by Dr. KAHN. Admission, 1s.—4, Coventry-street, Leicester-square.

THE LION-SLAYER at HOME, 232, Piccadilly.—Mr. GORDON CUMMING DESCRIBES every Night (except Saturday), at Eight, what he SAW and DID in SOUTH AFRICA. Morning Entertainments every Saturday, at Three o'Clock. The Pictures are painted by Messrs. Richard Leitch, Harrison Weir, George Thomas, Wolf, Charles Bentley, and Phillips. The Music conducted by Mr. J. Colson.—Admittance, 1s., 2s., and 3s. The Collection on View during the day, from Eleven to Six, 1s. Children Half-price in the Reserved Seats and Stalls.

ROYAL ASYLUM of ST. ANN'S SOCIETY, 32, Streatham, Surrey, and Aldersgate, London, for CHILDREN of those once in prosperity, Orphans or not. The next Election will take place on 5th February, 1856. New Candidates should be nominated immediately. Donations and Subscriptions gratefully received by

Office, 2, Charlotte-row, Mansion house.

Donations are earnestly solicited for the "Special Fund" for repairs, &c.

AUSTRALIAN JOINT-STOCK BANK, 8, Sy'ney, Melbourne. LETTERS of CREDIT and DRAFTS are GRANTED upon these places by Messrs. HEYWOOD, KEWARDS, and CO., No. 4, Lombard-street, the agents of the Bank. They also undertake to negotiate Bills and to make advances on securities at the bank's office.

By order of the Court of Directors, Australian Joint-Stock Bank, Sydney. EDWARD WESTROP, Manager.

UNIVERSAL LIFE ASSURANCE SOCIETY, 1, Essex William-street, City, London. Established by Special Act of Parliament, 6 Will. IV., cap. 34. Sir Henry Willock, K.L.S., Chairman; John Stewart, Esq., Deputy-Chairman. The succeeding Annual Meeting of this Society have enabled the Directors for the last twelve years to reduce the Premiums on Policies entitled to participate in profits by 40 per cent, which will be found a most liberal reduction of the original premiums be compared with those of other offices adopting a similar plan of division of profits. Weekly Collection day Thursday, at One o'clock. MICHAEL ELIAS IMPEY, Sec.

SPRING GROVE STATION, on the Windsor Line, Eight Miles from Hyde-park corner. Trains every hour to and from Waterloo Terminus. SUBSTANTIAL VILLA RESIDENCES are erected and elegantly finished on any approved plan on the Spring Grove Estate, which is delightfully situate on a soil of pure gravel, between Osterley-park and Richmond. These Houses have good Gardens attached to them, and additional land may be obtained if wanted. Particulars for Rent on Lease, or Purchase, may be had from the Manager, at the Estate Office, opposite the Station by the Town, at 17, Warwick-street, Regent-street.

FAMILY, COMMERCIAL, and PRIVATE BOARDING-HOUSE, 3, Queen-street-place, Upper Thames-street, Cheapside, London.—Mr. and Mrs. HOPLISH respectfully recommend their Establishment to Ladies and Gentlemen visiting London, who prefer the arrangements of a private family. The situation, while central, is quiet, open, and pleasant.

BREIDENBACH'S FROBET ME NOT [illegible] price 2s 6d—1726, New Bond-street.

FISHER'S DRESSING - CASES, 185, Strand (Lyceum). Catalogues post-free.

FISHER'S PAPIER MACHE, For CHRISTMAS PRESENTS. Show Room on the first floor. 185 Strand.

NEW WORK for LADIES.—The PATENT IMPERIAL APPLIQUE for slippers, cushions, smoking-caps, &c., may now be seen at the principal Berlin houses in the kingdom. Ladies in the country can have a descriptive circular forwarded free on enclosing a stamped and directed envelope to the inventor—C. G. HOPE, Hastings, Sussex.

DR. ARNOTT'S SMOKE-CONSUMING GRATE and SMOKE-CONSUMING COOKING-APPARATUS, for their owners of which a first-class medal was awarded to E. EDWARDS, SON, and CO. at the Paris Exhibition. By means of which grate no coly chimneys are smoked, and an economy of from 40 to 50 per cent is effected in the consumption of fuel. It continues to give every satisfaction, and is now manufactured at prices commencing at £6. To be seen in daily operation at the Show-Rooms, 77, Strand, corner of Bedford-street, Oxford-street. A prospectus with testimonials sent on application.

SHRIMPTON and HOOPER'S GRADUATED GROOVELESS NEEDLES.—"Lieut. Shrimpton has received the commands of his Royal Highness the Prince Albert to thank Messrs. Shrimpton and Hooper for the very supreme specimens of the perfection to which has been brought the art of making the eyes of needles.—Buckingham Palace, July 21, 1855."

On the 30th May, 1844, Messrs. Shrimpton and Hooper obtained an Injunction from his Honour the Master of the Rolls against a Manufacturer at Redditch for imitating the Labels of their Highly-approved Needles.

Some last Floreat Glass Goods made by SHRIMPTON and HOOPER. Established more than a century.

Albion Works, Bradley; and 19, Bagley's-square, London.

FROM ABBEY, and CASTLE, and TOWER—from Rectory, Priory, Vicarage, and Parsonage—from Manse and Grange—from Palaces and Parks, and Cottages and Halls, and Scenes in every class through the land, by means of which approval and from day to day received by Messrs. MARION and MAITLAND, proprietors of the sizes and quality, accuracy of fit, and comfort of the RESILIENT BODICE and CORSALETTO DE MEDICI, father acknowledgments of satisfaction they could not desire, is one more valuable testimony they could not offer or receive. Those notes, their own evidence of veracity, are in volumes, open to inspection of visitors.—236, Oxford-street, Hyde-park-corner.

MARION'S RESILIENT BODICE and CORSALETTO DE MEDICI, combine firmness with elasticity, fit closely, fasten easily in front, and are adapted to every age and figure. Prospectuses, illustrated, self-measurement papers, post-free. All country orders sent carriage paid or post-free. Manufactory, MARION and MAITLAND, Pimlico, 23b, Oxford-street.

ROUSSILLON, 30s. per dozen (from the Pyrenées Orientales). The importation of this wine for three years past are as follows, viz.—for 1852, 300 pipes; 1853, 1000 pipes; 1854, 1600 pipes. The progressive increase of consumption, as shown by the above figures, is the strongest possible proof of the high estimation in which this noble wine is held by the public, and the unanimous testimonials daily received of approval by the advertisers are the best evidence of its excellence and its title to rank as a first-class wine. (For particulars see ILLUSTRATED LONDON NEWS of 16th February.) Dinner Sherry, 30s., 36s.; Standard, or Natural, 36s.; Old Ruby Steaming Port, 42s. WANTED, for the Colonies, LEFT-OFF CLOTHES, of every description, either good or inferior. Also Naval and Military Uniforms, India Goods, Jewellery, and miscellaneous property of all kinds. Ladies or Gentlemen will be waited upon at any time or distance, and have the highest price given, by addressing a letter to Mr. or Mrs. LEVY, 76, Wych-street, Strand. Museum-square; or 36, Devereux-street, Dover-road. N.B. All Parcels forwarded from here or country, the full value, by Post-office order, will be remitted per return of post.—Established 1835.

WANTED, LEFT-OFF CLOTHES for Exportation.—Mr. and Mrs. ISAAC, 31, Newcastle-street Strand, beg respectfully to acquaint Ladies and Gentlemen that they continue giving the highest price in Cash for every description of Wearing Apparel—including Bankrupt velvet, satin, and silk dresses; diplomatic, naval, military, and livery suits; coats, boots, hats, canes, trinkets, court trains, furs, table linen, shawling, furniture, books, miscellaneous property, &c. Ladies or gentlemen wishing to dispose of any of the articles named, will be punctually waited upon at their residences, any time or distance, by a letter addressed to Mr. or Mrs. Levy, Whitechapel (Bethnal-green), Strand (opposite Twining's Banking Establishment). All parcels from town or country will meet with prompt attention, and a post-office order remitted by return. N.B. And at 241, Strand, near Waterloo-bridge.—Established 63 years

WANTED, LEFT-OFF CLOTHES for Exportation.—Mr. and Mrs. ISAAC, Successors to Messrs. Hanson, of 281, Strand, beg to acquaint Ladies and Gentlemen that they give a liberal price for every description of Wearing Apparel, including Velvet, Silk, and Satin Dresses, Regimental Swords, Sporting Guns, Watches, Plate, Jewellery, Trinkets, Court Suits, Coats, Linen, Furniture, Books, Boots, &c. Ladies or Gentlemen wishing to dispose of any of the above will be punctually waited on at their residence, any time or distance, by a letter addressed to Mr. or Mrs. Levy, Whitechapel (Bethnal-green), Strand (opposite Twining's Banking Establishment). All parcels from town or country will meet with prompt attention, and a post-office order remitted by return. N.B. And at 241, Strand, near Waterloo-bridge.—Established 63 years

## WOUVERMANS.

Philip Wouvermans (born at Haerlem in 1620) was the son of an artist of some repute, and far eclipsed the renown of his father. From the latter he learned the first rudiments of the art according to the old hackneyed forms and methods; his special taste for animal-painting—more especially the horse—he perfected under the celebrated John Wynants. In all that related to the study of Nature, however, Wouvermans was his own guide, and he displayed his judgment and talent as well in the fine selection of his subjects as in the truthfulness and grace which he threw into their representation. He was more especially fond of hunting and hawking parties, battle-pieces and encampments of armies, farriers'-shops, and all kinds of scenes which gave him a proper opportunity for introducing that noble animal the horse, always his favourite study. With a special view to effective colour, he almost invariably introduced a grey horse in a prominent position, and with the happiest result. For the rest, in this artist's works our admiration is divided between the remarkable and masterly correctness of his design; the fine taste thrown into his characters, in which he rivalled Terbourg, the painter *par excellence* of the *genre* of high life; the sweetness and mellowness of his colouring; the grace and variety in the treatment of his figures, both men and horses, or the admirable selection and composition of his landscapes. We speak of him, of course, as he was in his best day: towards the latter part of his career his pencil lost some of the warmth of youth, and a greyish or bluish tint sometimes prevailed with him which distinguishes his late from his earlier works.

Such was Wouverman's fine talent; in the exercise of which he shared the discouragement and injustice which are too frequently the lot of genius. As was the case with Cuyp—and as, to this day, is the case with too many of our brightest and most industrious art-creators—so was it with Wouvermans. The merit of his pictures was not acknowledged in his lifetime; their exchangeable value was not known to him in his own day; so that although he worked with extreme assiduity down to the period of his death, in the prime and vigour of life (1668), it was with difficulty that he earned the pittance wherewith to maintain himself and his family. A perfect child in world-knowledge, passionately devoted to his art, he was easily imposed upon by designing men—mere picture-dealers, (for there were merchant patrons of art even in those days)—who, with immense professions of admiration for his genius, and interest in his advancement, monopolised the works of his pencil, and kept him in distressed and narrow circumstances, whilst ostensibly supplying him with means. Wouvermans became at length keenly alive to the neglect and injustice with which he had been treated; and a few days before he died ordered a box filled with his studies to be burned, declaring, as his motive, that, having been so ill rewarded himself in the service of art, he would not leave behind him anything which might allure his son to embrace so miserable and uncertain a calling. After his death Wouvermans became fashionable, his pictures rose rapidly in esteem and value; they were sought out by the most illustrious collectors throughout Europe; the Dauphin of France and the Elector of Bavaria buying up all that could be procured at large prices.

Fine specimens by Wouvermans are not so numerous in this country as those by Cuyp. In the private collection of her Majesty are several of a high class, including the celebrated "Hay Harvest" and "Le Coup de Pistole." Sir Robert Peel boasts six very fine specimens. The Dresden and Madrid Galleries are rich in works of this master.

# HISTORICAL SUMMARY OF THE RUSSIAN WAR.

## FROM THE LANDING OF THE ALLIED ARMIES AT OLD FORT, TO THE ACCEPTANCE OF THE AUSTRIAN PROPOSALS OF PEACE, JANUARY 16, 1856.

(*Continued from Page 330, Volume XXV.*)

THE acceptance of the terms which Austria and the Allies have imposed upon Russia is a natural signal for reviewing the means which have, from step to step, enforced this issue. We resume, then, that succinct and collated account which we left waiting for events at the close of Omer Pacha's imperishable campaign, and the opening of our own share in active hostilities.

The object at which we aim is to "get the mean time," if we may borrow a scientific figure. To tell the tale earliest has its attractions; but to tell it most correctly is the main point in the end.

We said, in the few remarks with which we introduced our last account, that a man of ordinary intelligence would probably have an idea of the main events of the first great period of the war, but that he would scarcely be able to give any friend a very lucid or instructive view of the campaign; and that his impressions—though vivid respecting the principal particulars—would be, after all, but "a mass of anachronous entanglement and historical confusion." To a certain extent this is true of the second great stage of the war. But it is no longer true of the first. We have received thousands of communications acknowledging, not only that the events were all narrated in an order easy to recall, but that the various causes, strategic and political, were ever made to cast their light upon the several results We purpose to endeavour here to do towards the story of the Second Campaign what we were fortunate enough to accomplish for that of the First. And, alas! the Second concerns us much more personally. We were spectators in the beginning, or, at most, encouragers; we have acted since. Our readers have followed with emotion the deeds, struggles, and sufferings of others; our own are mingled in the narrative which now awaits us.

We also said—it will be remembered—in those introductory remarks, that the very facilities which existed for publishing diurnally every premature version which might arrive of affairs interesting to the public had contributed to confuse the true chronicle of *facts*; and we pointed to that newspaper mass of first, second, and third versions, which already exceeded in bulk the history in which Gibbon depicts the countless occurrences of thirteen hundred years of European annals. How true and just were our words! A prodigious example of the incertitude and immaturity of such intelligence (not to talk of its bewildering self-corrections) occurred almost before the ink of our narrative was dry, Sebastopol was taken! It was deemed so certain, that the Queen of England and the Emperor of France solemnly proclaimed their gratitude to Heaven; and public rejoicings stultified the two greatest nations in the world; while placards, announcing full particulars of the capture, were hoisted before the offices of some of the daily papers. We need not add that, in lesser matters, the mis-statements have been almost innumerable. Doubtless, with what is erroneous, almost all the truth at length is likewise given; and he who has regularly kept *all* our newspapers, and who feels that he is competent to winnow the realities from the rubbish, might, after some toil, set up for himself that which a certain daily journal (despising its contemporaries) has boasted that it bestows upon the public—viz., "*a running picture of events.*" For most people it is, indeed, a picture that runs—and that runs away. We want "a sitting picture" of events—an account reliable, clear, explanatory, durable. Let us therefore, try to give one compendious story, and to eliminate

REVAL, AT THE SOUTH ENTRANCE TO THE GULF OF FINLAND.—(SEE PAGE 143.)

inexactitudes—whether they have arisen from natural partialities or from necessary hurry.

## THE SECOND CAMPAIGN.

### THE LANDING AND ADVANCE ALONG THE SHORE FROM OLD FORT.

Thus is our campaign and that of the French. When the great Armada of the Allies reached Kho-loff (or Eupatoria), the Commanders found that it would sufficiently isolate that *place d'armes* to disembark the troops some fifteen or twenty miles further down the coast of the Crimea, besides affording this advantage—that the invading force would thus slight so much the nearer to Sebastopol. The debarkation, which was accordingly effected at Old Fort, occupied part of four days, ere the cavalry and the last guns touched the soil of Russia. On the 17th of September, 1854, we and our allies had fairly committed the combined army to its fortunes in Crim Tartary. By a back-handed blow, Eupatoria was now doomed inevitably and at once to the possession of the French. Had a Russian column, sufficient to dispute the destination of the French occupying detachment, been employed to defend Eupatoria, that column would have been sacrificed uselessly, and must have all either perished, or become the prize of the troops who had landed at Old Fort.

By night, on the 17th of September, the entire force, and all their fighting implements, were safely arrayed on the beach. They rested on the 18th; and, at daybreak on the 19th, leaving the long lake or swamp of Old Fort to their left flank, they immediately, but in a circumspect and leisurely manner, began their advance towards the Bouljanak stream. We must here beg the reader to bear constantly in remembrance the geographical shape of the Crimea, the lower half of which has a very rude resemblance to an equilateral triangle—the apex pointing southwards a considerable way below Sebastopol. Chronology and Geography have been called the two eyes of History—as, without the latter we see nothing; and without the former we miss the sequence of cause and effect. This triangular peninsula, with its apex pointing to the south, was reached by the naval armament where the real promontory begins; so that, sailing east, the ships encountered a coast sloping far down to their right. By following the seaboard, the disembarked troops would evidently arrive at Sebastopol on its northern side. And here we must notice a truly important fact—first observing that we view the events with the most complete freedom from every partiality and every prejudice. So far from entertaining any sentiment of hostility towards the English Commander, we feel, if anything, that criticism at home has treated him with more than sufficient rigour and austerity. We are sovereignly indifferent to all personal considerations; and the reader will, we flatter ourselves, discern that to tell the truth in a manner worthy of so vast and momentous a crisis in this country's history, is our one, our constant object—and that he may refer, without misgiving, to our statements for an unbiassed exposition of the facts. Premising this much, we must say that, in some of the earlier proceedings adopted by him, the English Commander, whose abilities we fully recognise, appears to have fallen into methods which were carefully avoided by his French colleague. Conscious, perhaps, of the peculiarities of his own experience, alive to the probable effects of that office-life, that desk-life, in which he said (in effect) he had acquired his military education—he exhibited in the beginning the spectacle of a man only too much on his guard, too mistrustful of the chances of the field. But disasters may be incurred by over-caution —the "*nimia prudentia.*"

For example, at the first operation of magnitude, there were two nations engaged, and two Commanders present. The French General had passed his military days out of doors, and he was personally the hero of many desperate encounters in the active service—the positive fighting—part of a soldier's profession. Unlike the Imperialist Marshal (then actually dying "in his harness"), the English Chief had been mostly occupied with the superintendence, and what our neighbours call the civil administration of troops. Though now taken away from it, he was consummately experienced in all that relates to this. Yet, the practical mind of Marshal de St. Arnaud recoiled from putting his forces upon a hostile soil without their "kits." He had often gone upon a "razzia" with fourteen days' provisions. He knew what the soldier could do; but he also knew and remembered what the soldier indispensably requires. Whereas, strange to say, the reasons from mere military considerations had never been absent, undervalued them when he came to act; and he executed the debarkation of a great part of his force (*our* force) not only without the bât horses of the officers, but without the knapsacks of the men, and without the tents of either class, in many cases. Lord Raglan, we repeat, had been engaged in the practice of business, and he perhaps feared that he might prove unmindful of it at this emergency. The consequence was that his principal care was how to use the army in the field; and, practically, he forgot that it was first necessary to keep the army. The primary thought of him who wishes to employ a force, might clearly be to remain in possession of a force. Lord Raglan landed his men "*in light order, to meet the enemy.*" No military foe could have inflicted the losses which that "light order" subsequently entailed. The French did not yield to us—they surpassed us—in the rapidity of their debarkation; yet they landed with their tents, and, considering the want of camp-pace, with all the provisions possible against that climate in which they had come to fight. Our Fusiliers had positively not one tent among them. There has been no dissension between the forces of the two great allied nations; but there have been many signal differences of management, and that was the first. In this important operation much admiration was elicited by the energy and skill of our sailors under the command of Sir Edmund Lyons.

Of the plan of seizing Odessa at an earlier date, or at the least of destroying it, and thus either gaining an excellent place for the winter-quarters of our men, or hindering the enemy from first fortifying, and then employing that place as a grand *point de départ*, and a warlike emporium against ourselves, we will not speak; for such a plan now belongs not to history. It was neither done nor attempted; and if this was an error, it was an error in which our allies had as much part as we. Doubtless, many moral and strategic considerations arise at the mention of this once debated project. But we must dismiss it, and proceed with our narrative.

### THE BATTLE OF THE ALMA.

Adopting the obvious tactics of Lord Wellesley in his first Peninsular campaign (that against Junot), the Allied forces commenced their march from Touza along the beach—the ships being not only within sight, but within cannon reach. And, indeed, as the naval army advanced in a parallel line, the shore of the seaward side of the ranks. A few had even died of cholera on the line of march—victims of that dreadful disease which they had brought with them from their beautiful but pestilential camp near Varna, and from the Baltschik cantonments. The want of water was the principal privation of which they complained. We have ourselves seen soldiers thrust their lips into the fetid mud of a half-dried morass to slake the fever of a *marching thirst.* Just at the hour we have named, and when the troops were about to bivouac, the sound of artillery boomed sullenly along the front. The enemy's cavalry had been engaged with the allied advance, and it appeared inclined to question our further progress. Memorable was the effect upon our stragglers and laggards. Those shots were certainly the first that most of them had ever heard fired in earnest. They immediately found their places again in the columns, zealous at the first offer of what they deemed an opportunity of real and bloody service.

An eye-witness declares that lame men seemed lame no longer. A short skirmish ensued; our Light Horse retiring, without disgrace, under the cover of our field-guns, before a mass of cavalry. We had only four or five men wounded. Lord Cardigan was praised for his self-possession in this little encounter. The arrangements which had been interrupted were completed, and our troops bivouacked in the open air, while the French edged towards the sea, and seemed full of preparation.

That night many speculations were interchanged among our men about the fate which awaited, not, indeed, the expedition (for of this nobody then doubted) but individuals next morning. It was evident they had now arrived at the point where they would have to force their further way against a resolute adversary defending his own soil. The meanest soldier could understand this. As yet but four men had been wounded, belonging all to the Artillery and 4th Dragoons. At half-past eight on the morning of the 20th September the whole army was in motion. The Russians retreated, and our onward march was resumed till, a little before one o'clock, the Allied columns reached the village and river of Alma. A village called Boulluk is also there. On the opposite bank of the stream and behind this village, as well as in it, the Russians were visible in very great force; on the heights beyond the river, they were intrenched "up to the teeth," as Voltaire describes them at the battle of Narva.

Since it is unquestionably true (for the evidence is another than Prince Menschikoff's) that, first and since it is also very significant, we may record the fact that the Russians not only counted upon here beating us, but that they defied any strength which England and France united could bring to the assault of their position; and Prince Menschikoff had even assured his master that he undertook to hold the heights behind the river Alma, covering Sebastopol, against the whole world in arms for six weeks, at the least. In the immortal battle which ensued, he maintained this vaunted ground for six hours only, instead of six weeks.

The beginning of that great action proceeded from the sea; and one of our steamers opened a contest of extremely long range with a Russian battery on the shore. Our land artillery soon joined in this experiment; and, meantime, Lord Raglan received an important communication from Marshal de St. Arnaud. Availing himself of the protection of the fleet, he determined to push forward his right wing so as to overlap the Russian left, and, by storming the heights from the beach, to render the whole Russian position untenable. Meantime he begged Lord Raglan to occupy the Russians energetically along their front and right. It is very curious that the enemy does not appear actually to have anticipated this manœuvre, or to have thought any serious attack possible upon the redoubt by which they commanded the strip of low strand between their western wing and the sea. All their attention was at first concentrated upon the movements of the English, in whose lines the greatest activity was now visible. The Russians never intended to dispute the northern bank of the Alma, or to defend the village which stood on that bank. Their real position, in which they meant to make an invincible stand, was on their own side of the brook, at the brow of a semicircular range of hills, on which their general artillery was massed, and where earth works of various kinds and numerous skilfully-placed redoubts, guarding each other, formed a virtual fortification of a very formidable kind. So secure were they of repulsing with ease the threatened attack, that it is credibly stated that several ladies from Sebastopol were to have been present, on Prince Menschikoff's special invitation, and were to have been accommodated with lofty seats, like the reserved places at a Spanish bull-fight, or in some festive amphitheatre, from which seats they were to witness the overthrow of the impious invaders. Forty-five thousand resolute infantry, and (compared with ours) an immense cavalry force, reckoning upwards of six thousand sabres and lances, were ready to dispatch that shattered remnant of the assailants who might succeed, despite of the fire of the Russian artillery, in reaching the table-land. This host was, moreover, in excellent condition, wanting for no supplies, and it was not, like our army, fatigued by a march.

We think Prince Menschikoff in the right not to have opposed the debarkation, but rather to have reserved himself for a resistance in this strong and well-chosen ground where he was equally able to guard either Sebastopol or Simpheropol and the communications with Perekop. Hardly ever has the landing of a great army under the guns of a powerful fleet been successfully opposed; for this, among other reasons, that the defenders of the shore cannot be certain, beforehand, of the point of debarkation along an extensive seaboard; and therefore must either scatter their forces too much to be strong anywhere, or submit, if they concentrate them in one spot, to be driven altogether to the left hand, or the right. We therefore consider that, up to this date, he displayed judgment. His unaccountable mistake was in assuming that no serious attack could be made by the French upon his western flank next the sea. For it is certain that this attack—the decisive fact of the action—was a positive surprise—the Zouaves and Chasseurs de Vincennes arriving at the very brow of the heights before they were discovered.

The English began the engagement a little later than the Marshal wanted, but crossed the river and reached up the heights a little sooner. Their attack was not at first a feint, as it ought to have been, more especially for this excellent reason, that where they were first drawn up, the fire of the Russian guns (24 pounders for the most part) fell rather short, the pieces not being properly elevated. We virtually corrected the error by advancing within it *before* they had begun to feel the effects of General Bosquet's diversion.

He, meantime, had stolen considerably forward along the coast, and about a quarter past one o'clock his riflemen dislodged the Russians from an embankment which was taken in reverse; that is, the discharges of the French musketry fell upon the defenders from behind the embankment. The enemy fled from this post, in which the French now halted till reinforced. It was now that, by their powerful fire, two French steamers and one English (the *Vesuvius*, Commander Powell) forced the whole Russian left to shrink backwards. Meantime the French reinforcements arrived rapidly; for, as the gaining fire which had swept all beneath the front of the already mentioned embankment had ceased, the French were no longer obliged to make a circuit to reach it, but clambered up in swarms by the direct line. Once firmly established there, and constantly strengthened by fresh columns, they began to win their way steadily along the table-land towards the Russian centre. Such was the condition of the combatants somewhat before two o'clock. About three quarters of an hour earlier, the Russians in front of the English had set fire to the village of Boulouk, and independently of the smoke and flames between and four assailants, retired across the Alma. The practice of their artillery was soon felt most severely by our advancing divisions, which, spreading to left and right of the burning houses, pressed onwards, leaning rather to the outside of the Russian lines, while a wide interval divided them from the French. These last also were now preparing to advance across the Alma, when that one grand charge, in which a series of charges indeed may be said to have blended, was executed by three divisions—the Light Division, the Second, in reverse, and the Guards; by the Coldstream and Fusilier Guards, the 1st, the 2nd, the 30th, the 55th, the 33rd, the 77th, and 88th Regiments, the Grenadiers, &c.; while our artillery, which was throughout conducted with admirable vigour and skill, endeavoured to cover the attack by the most spirited reply to the enemy's guns. The Allied shups, at long range, threw shells at the same time into the enemy's lines, and the whole was, in fact, a most casual reflection upon the situation of the two Allied armies—the one arrayed against the strongest part of the enemy's lines, and comparatively remote from the assistance of the fleet, and the other not only less exposed in these respects, but favoured by the results of the skilful flank movement which we have described—like another casual reflection, we say, upon these differences will prepare the reader for a much greater slaughter in the British than in the French ranks, and must likewise justify Marshal de St. Arnaud's subsequent remarks. Indeed, that magnificent and almost unparalleled advance of the Second Division, the Light Division, the Guards, the Highlanders, and their supports; and the exploits performed in its execution by not only the Highlanders, Connaught Rangers, and Guards, but by every regiment engaged, without exception, were attended with murderous loss. When the Russians had, under this attack, fairly abandoned the slopes of the hill, and, retiring to the summit, had taken shelter behind their batteries, and had reopened fire at short and point-blank range with grape, there were moments, amidst the clouds of smoke, in which the red lines, notwithstanding their numerous advance, seemed to gain no ground, but to disappear before that iron storm. Sir Colin Campbell shouted to his Highlanders to trust to their bayonets, and as a personal favour to him to fire no more till they were fairly within the batteries before them. The 33rd were met by a hurricane of canister. But all the troops, with a fury that astonished the enemy, roughly and hastily re-forming their gaps, pushed their way straight to the top, giving the Russian ordnance less and less time for each successive discharge, and swiftly changing the aspect of combat, and the order of attack and resistance, to a wild medley composed of pursuers and pursued. The Russian field-pieces were, one by one, hurried backwards; many of the drivers escaped; the gunners were killed by hundreds—the Russian infantry, receiving the deadly fire (so heroically reserved by our men for that decisive moment), cannot be said to have anywhere in a mass awaited the rush "in close quarters" of our now victorious but much-diminished battalions, when the personnel afterwards pronounced to be rather demons clad in red than ordinary soldiers. But although the Russian infantry had everywhere shown an inclination to avoid the test of this supreme collision, they were not always in time to escape it; and besides, the very disorder of victory and the long thin lines in which our men were formed (with one exception, which we will presently specify), reversed the respective effects of the firing; the dense masses of the foe suffering incomparably more, at this stage of the action, than their assailants The resistance became more feeble every moment, and the carnage of the Russians was enormous. They knew not even for some time in which direction to escape; for as the French were still clearing their way latitud.nally through the Russian camp, the disorder of a position thus doubly broken, was hopeless. Now began to be seen in what particular the Allied army was really weak, and how an enemy, so utterly routed, lost nevertheless hardly a single unwounded prisoner, and only two disabled guns. But before we allude to this, we must mention a rather singular circumstance which occurred in the great combined charge made by the English army. In Sir George Brown's (the Light) Division was comprised General Buller's Brigade, of which, if the contemporary statements are true, the 77th and 88th Regiments, were actually held for a considerable time in square under the hottest fire. This monstrous error, supposing the statements true, appears to have escaped the attention of the officers more immediately concerned with the superintendence of the various formations required in presence of the enemy during the progressive changes of an arduous battle; and the circumstance was not, it is said, observed until it attracted the notice of Sir Colin Campbell, who, though not charged with the command of those regiments, instantly galloped to the spot, and, with a decision which would do honour to any general officer in a similar situation, ordered the men to deploy into line at once. By saying this order they suffered, from that moment, much less in proportion.

When the hostile artillery had limbered up, and, excepting two damaged carriages, had galloped off with all the pieces, the men, panting and exhausted, were already forming upon the plateau which they had so gloriously won. But little do they, or the rear of the Russian centre there was still a strong body of Russian infantry, which stood unbroken, returning our volleys with great steadiness, and apparently determined to await the bayonet. But, just as our line, in straggling order, the nearest first, were beginning to advance upon this remnant, it suddenly disappeared under the shock of the French divisions, which, starting from the extremity of the Russian left wing, had thus, like some corros.ve acid in chemistry, penetrated through the whole substance of the hostile position; sweeping everything before them, they effected their junction with the English at the moment of completed victory on this memorable field.

It now remained only to secure the fruits of such a combat, and to annihilate the Russian army.

### RESULTS OF THE BATTLE.
